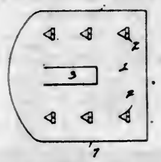
2. An electric battery, combining with the usual positive and negative elements, a depolarising mixture comprising 50 parts of manganese dioxid compound, 49 parts carbonaceous materials, 10 parts sal ammoniac, and 12 parts of a zinc chlorid 45° Baumé solution, the manganese dioxid used being of such a character that when leached with a 30% zinc chlorid solution, saturated with sal ammoniac, substantially no trace of poisonous metal is shown.

1,352,088. ICE-CREEPER. THOMAS SAIA and MIKE BUTERA, Pittsburgh, Pa. Filed Feb. 11, 1920. Serial No. 357,901. 2 Claims. (Cl. 36—62.)

1. An ice creeping device comprising a rubber heel cap including a heel tread portion and integral breast and elastic band portions, adapted to fit over a shoe heel and be retained thereon by the band portion, said tread portion of the cap being provided with openings therethrough, a removable creeper having its prongs extending through the said tread openings, and a plate disposed in said cap to retain the creeper in place.

1,352,089. SPARK-PLUG. ALBERT SCHMIDT, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Nov. 8, 1918. Serial No. 261,702. 14 Claims. (Cl. 123—169.)

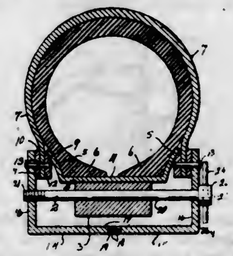


1. A spark plug comprising a shell having a center bore, a central electrode, an insulator surrounding said electrode and fitting within the inner bord of said shell, and a spring surrounding said electrode and acting upon said insulator for retaining said insulator in place within said shell.

1,352,090. LOCK-NUT. LAWRENCE J. SCHNELL, Portland, Oreg. Filed Nov. 26, 1919. Serial No. 340,892. 3 Claims. (Cl. 151—25.)

2. A lock nut having a curved recess formed in a face of said nut with its curved portion forming a tangent with the root of said thread in said nut, a curved wall formed on the side of said recess adjacent to the thread, a section of thread adapted to be wedged between said curved side of the recess and the bolt member, a wire slide for said wedge and attached thereto, a coil spring member mounted on said wire slide and adapted to force said wedge member into a wedging position, a means for holding said wedge member out of position consisting of a bent end on said wire slide, and a recess in said nut adapted to receive said bent end, a means for preventing the escape of said wire member when the nut is not on a bolt, consisting of a second recess in said bolt positioned to engage said bent end after it has been released from its aforesaid position, a means for preventing the escape of said wedge member and its slide and spring, consisting of a counter sunk bolt whose head is adapted to cover a portion of said wire slide member.

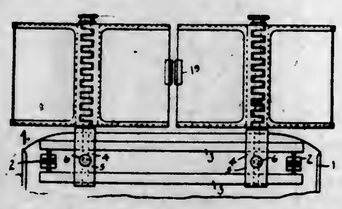
1,352,091. SPLICER FOR SASH STRAPS AND CORDS. E BLAKE SHAND, Detroit, Mich. Filed Apr. 15, 1918. Serial No. 228,538. 3 Claims. (Cl. 24—124.)



1. A splicer for splicing a cord to a tape consisting of a blank of comparatively soft metal having a substantially central tongue on one side of the body thereof and prongs provided on the same side adjacent each longitudinal edge of the blank, the tongue providing a means for attaching a tape thereto and the device adapted to be folded about the sash cord and tape with the prongs engaging the cord.

1,352,092. SPRING CLASPING TERMINAL FOR ELECTRIC CONNECTORS. HOWARD B. SHERMAN and FRANK D. MALTBY, Battle Creek, Mich.; said Maltby assignor to said Sherman. Filed Jan. 22, 1919. Serial No. 272,488. 6 Claims. (Cl. 173—269.)

6. In combination, a sleeve adapted to be connected with an electrical conductor; a terminal having a shank detachably engaged with said sleeve, and a projecting tongue having its outer end bent at substantially a right angle and adapted to engage a binding post; and a helical expansion spring strung on said tongue between the shank and bent end and having an extension on its outer end bent opposite the bent end of the tongue and adapted to engage the binding post opposite the bent end of the tongue to yieldingly hold the tongue in engagement therewith.



1,352,093. TIRE COVER OR PROTECTOR. MARCUS A. SHOTWELL, Miami, Fla. Filed Jan. 7, 1920. Serial No. 349,885. 2 Claims. (Cl. 152—17.)

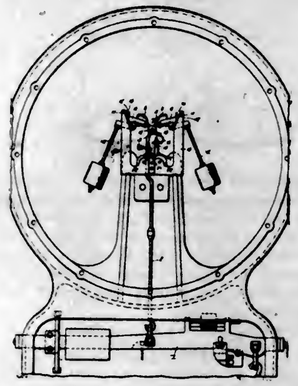
1. In a tire cover or protector comprising segmental cover sections engaging over the tread and adjacent the sides of the tire, right angle clamps disposed with relation to the felly of the wheel, whereby certain of their arms are positioned radially and spaced from the opposite sides of the felly and other of their arms positioned in spaced parallel planes with the inner cylindrical surface of the

felly, the radial arms being connected to the ends of the cover section, means connecting the adjacent ends of the arms which are disposed in a plane parallel with the inner surface of the felly, bolts passing through the felly and adjustably connecting the radial arms of the right angle clamps for adjusting the same and regulating the clamping action of the clamps, whereby the clamps may give with respect to the felly.

1,352,094. WINDSHIELD. HARVEY G. SMITH, Los Angeles, Calif., assignor of one-half to Verna B. Liebmann, San Diego, Calif. Filed Nov. 12, 1919. Serial No. 337,539. 5 Claims. (Cl. 296—85.)

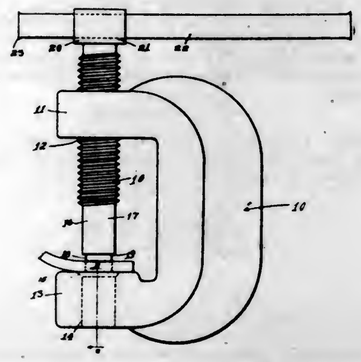
5. In a wind shield, a bar or bars adapted to be attached to a vehicle, one or more brackets adapted to slide laterally on said bar or bars, a hinge post vertically mounted in said sliding bracket, one or more windows or frames or both mounted on said hinge post by means of interlocking hinge eyes and adapted to rotate around said hinge post, and means for locking said frames or windows and said sliding bracket or brackets; all substantially as shown and described.

1,352,095. CUFF-BUTTON. WALTER HUGH SMITH, Oklahoma, Okla. Filed Apr. 10, 1920. Serial No. 372,828. 2 Claims. (Cl. 24—102.)



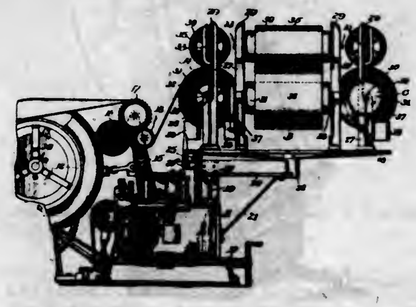
1. A cuff button comprising a shank which is ogeed shaped in side elevation, a head provided at one end of the shank, an arrowhead shaped portion provided at the opposite end of the shank, said arrowhead shaped portion having barbs extending along the intermediate portion of the shank.

1,352,096. VEHICLE TAIL-LAMP. LYLE K. SNELL, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 1, 1916. Serial No. 134,512. 2 Claims. (Cl. 240—46.)



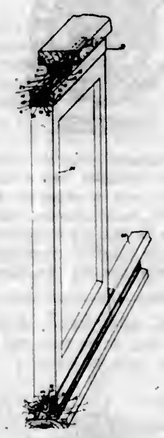
1. A vehicle tail lamp comprising a hollow casing of substantially triangular form and having substantially flat and parallel front and rear walls, a lower substantially horizontal open side within which opening a transparent member is held, and a license supporting flange or bracket depending below said opening; a lens held in place within an opening provided in the rear wall of said casing; a transparent member held in place within an opening provided in the front wall of said casing; a hollow tubular supporting member for supporting said casing from a vehicle; a lamp located adjacent the inner end of said supporting member and within said casing; and an electrical supply conductor extending through said supporting member for supplying current to said lamp.

1,352,097. SCALE. ANDREW SONANDER, Rutland, Vt., assignor to Howe Scale Company, Rutland, Vt., a Corporation of Vermont. Filed Aug. 11, 1919. Serial No. 316,715. 6 Claims. (Cl. 265—62.)



1. In a scale, the combination with a counterbalancing device, of a draft rod provided with a roller arranged in a plane containing the axis of said draft rod, a band having running engagement with said roller and connected to said counterbalancing device, a rack bar centrally disposed with respect to said plane, and means yieldably suspending said rack from said roller.

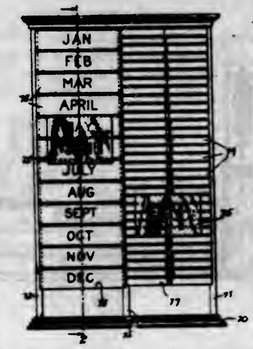
1,352,098. PRESS FOR REMOVING BUSHINGS AND THE LIKE. JOSEPH H. STALEY, Knightstown, Ind. Filed Aug. 11, 1919. Serial No. 316,634. 2 Claims. (Cl. 29—88.2.)



1. In a press, a body including arms extending at right angles thereto, one of said arms having a threaded opening, the opposite arm having an opening extending therethrough, a power element including a threaded rod positioned in the threaded opening, said threaded rod having a reduced portion and a relatively smaller reduced portion forming a part of the first mentioned reduced portion to provide an annular shoulder, the first mentioned reduced portion being equal to the length of the thickness of the arms.

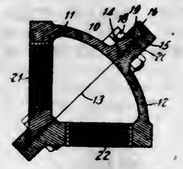
1,352,099. MACHINE AND METHOD FOR BUILDING TIRES. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 31, 1913, Serial No. 782,174. Renewed July 22, 1918. Serial No. 246,232. 25 Claims. (Cl. 154—10.)

1. In a tire making machine, the combination of a tire form, a single means for stretching the tire fabric as it is applied to said form, a plurality of fabric stock rolls, and means for permitting said rolls to be brought selectively into coöperative relation with said tire form and fabric stretching means, substantially as described.



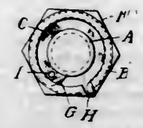
1,352,100. TRACK FOR SLIDING DOORS. JOSEPH SURPRISE, New Haven, Conn. Filed Sept. 6, 1919. Serial No. 322,024. 2 Claims. (Cl. 20—16.)

1. A track for the tops and bottoms of sliding doors formed with longitudinal ribs and with a central longitudinal groove, runways formed with bearing edges for the track, with shoulders to form a bearing for the ribs, and with a central longitudinal channel, a metal U-shaped ball bearing strip located in said channel and extending into said groove and formed with ball seats and balls located in said seats.



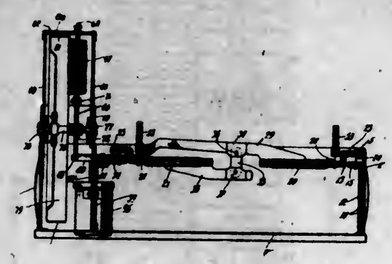
1,352,101. CABINET. ALBERT B. SWALES, London, England. Filed June 3, 1919. Serial No. 301,493. 4 Claims. (Cl. 129—15.)

2. An article of the class described, comprising a casing having adjacent compartments therein, a predetermined number of trays in each compartment, and a cover connected to each tray and adapted to normally lie within



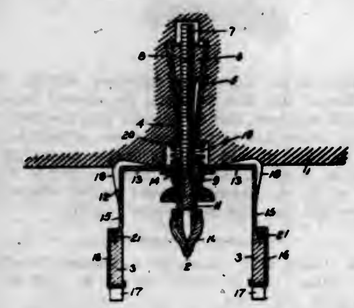
the same and also to be moved to position exteriorly thereof.

1,352,102. PIPE-FITTING. ADELOR E. TATRO, Everett, Mass. Filed May 19, 1919. Serial No. 298,198. 3 Claims. (Cl. 285—137.)



1. A pipe fitting comprising an elbow divided transversely thereof into two members, an annular flange on each of said members, and an annular ring provided with an annular recess fast to the face of one of said annular flanges, the other of said annular flanges projecting into said annular recess whereby said members may be rotated from 0° to 90° to assome different angles relatively to each other and may also be fastened together.

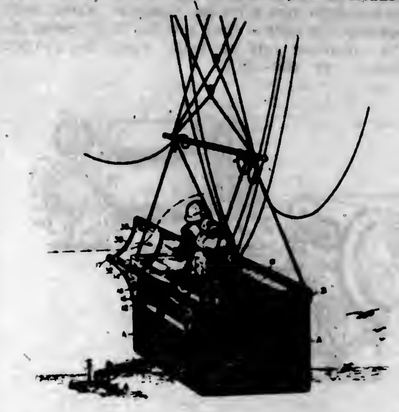
1,352,103. LOCK-NUT. NAPOLEON R. THIBEAT, Worcester, Mass. Filed Apr. 4, 1919. Serial No. 287,482. 1 Claim. (Cl. 151—25.)



A lock nut comprising a screw-threaded nut having a circular grooved recess therein provided with a plane bottom sunk below the end or face of the nut and with a slot, a partial circular wire spring fitted in said recess to bear against the wall thereof all around, one end of said spring being sharpened and bent inwardly for pawl-like engagement in the thread of the bolt, and the other end being bent for engagement with the slot in said nut, the bottom of said circular recess being formed with a hole located at the side of said sharpened end opposite said slot, whereby an implement can be inserted in said hole to engage and move said sharpened end of the spring circumferentially and hold it out of engagement with the thread of the bolt when it is desired to unscrew the nut.

1,352,104. SCALE. JAMES M. TRINER, Chicago, Ill. Filed Apr. 23, 1917. Serial No. 163,935. 43 Claims. (Cl. 265—71.)

1. In a scale, the combination of scale levers, supports for the same, and flexible steel tape fulcrums inserted edgewise between said supports and levers, said flexible steel tape fulcrums being provided with portions causing the bending of each of said fulcrums along a predetermined line if a motion of said scale levers relative to said supports occurs.



1,352,105. COMBINED TROLLEY-WIRE AND GUARD HANGER. THOMAS W. TWYMAN, Avella, Pa. Filed Apr. 6, 1918. Serial No. 227,116. 3 Claims. (Cl. 191—35.)

1. In a combined trolley wire and guard hanger, the combination with an anchor structure, of means carried by the anchor for supporting the trolley wire and means carried by the said anchor for supporting a trolley wire guard, said latter supporting means including a bracket having spaced apart depending arms, and a spring interposed between the bracket and anchor structure and exerting pressore on both to aid in maintaining said structure and bracket in position.

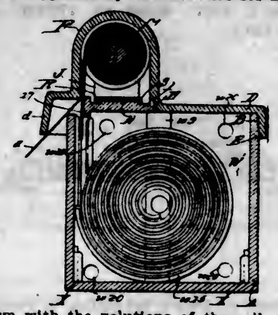
1,352,106. AERIAL OBSERVER'S WINDSHIELD. RAYMOND T. VREDENBURGH, Brookline, Mass. Filed June 21, 1918. Serial No. 241,249. (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.) 2 Claims. (Cl. 244—1.)

1. The combination with a balloon basket, of a wind-deflecting member disposed externally thereof and extending above the rim thereof, brackets secured upon the outside of the basket and extending outwardly therefrom and supporting said wind-deflecting member, and means for connecting the brackets and basket, said means being

movable to release positions for enabling gravital descent and separation of the brackets from the basket.

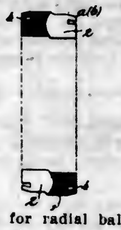
1,352,107. PUMP OR COMPRESSOR. JAMES H. WAGENHORST, Akron, Ohio. Filed Aug. 11, 1915. Serial No. 44,909. Renewed Jan. 29, 1919. Serial No. 273,883. 9 Claims. (Cl. 230—30.)

5. In a pump, a rotatable cylinder, a piston eccentrically mounted within said cylinder, and a blade connected to one of said members and working in a slotted portion of the other member, said cylinder and piston rotating in unison, said blade having a reciprocating and vibrating movement during such rotative movements, said cylinder and piston having openings for the passage of fluid.



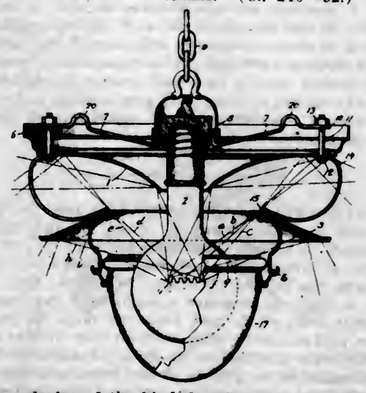
1,352,108. OYSTER-SHUCKING KNIFE. KEMP B. ARTHUR, Norfolk, Va. Filed Nov. 15, 1919. Serial No. 338,248. 4 Claims. (Cl. 17—31.)

2. In an oyster shucking knife, the combination with a knife blade comprising a body and a blade proper, and a handle carried by the body at its opposite end, of a U-shaped guard pivotally mounted upon one end of the body of the blade and being in conformation with the blade proper to receive and guard the same when the knife is not in use.



1,352,109. ROLL-FILM-DEVELOPING APPARATUS. GEORGE C. BEIDLER, Rochester, N. Y. Filed July 10, 1917. Serial No. 179,748. 38 Claims. (Cl. 95—90.5.)

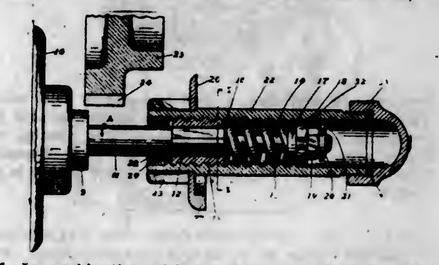
1. In a device relating to photography, a receptacle and a closure therefor, members in the receptacle, means for supporting them in spaced relation to each other, coil form film holders supported by the members for holding a film



in coil form with the volutions of the coil of the film in spaced relation to one another.

1,352,110. BALL-RETAINER FOR RADIAL BALL-BEARINGS. CARL ALVAR BERNHARD RUNSTEN BRÄKENHIELM, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Nov. 30, 1918. Serial No. 264,801. 4 Claims. (Cl. 64—59.)

1. A ball retainer for radial ball bearings consisting of a ring having laterally open recesses serving as pockets for the balls, the intermediate walls separating the said recesses being provided with notches, said notches being arranged closely adjacent to one periphery of the ball retainer ring, so that each intermediate wall forms partly a rigid part serving as a support for the balls and partly a yielding tongue, said tongue slightly bent in a direction toward the rigid part and serving as a resilient retaining member for the balls.



1,352,111. LIGHTING-FIXTURE. PAUL A. BREDSVOLD, Chicago, Ill., assignor of five-twelfths to Frank P. Thompson, two-twelfths to Frank M. Fairfield, and five-twelfths to Norine Bredsvold. Filed Sept. 4, 1917. Serial No. 189,594. 5 Claims. (Cl. 240—92.)

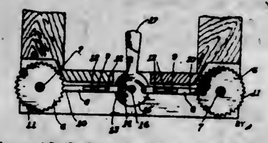
1. In a device of the kind described, a main reflector, a supplemental reflector in combination with spacing

means maintaining the supplemental reflector in spaced relation to the main reflector, said spacing members being extended and constructed to support a bowl.

1,352,112. MOTOR-DRIVE. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 14, 1919. Serial No. 276,950. 3 Claims. (Cl. 74—7.)

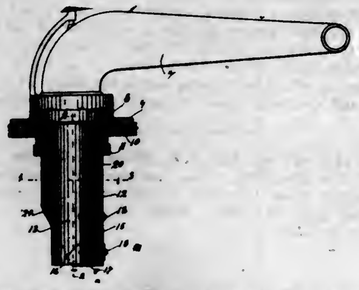
1. In combination with a motor driven shaft having a free extremity, a cylinder mounted upon said shaft, means within the cylinder operatively connected with the shaft for imparting a limited longitudinal movement to said cylinder, said means at the termination of said longitudinal movement locking the shaft and cylinder together rotatably, said cylinder being closed at its outer end and having an oil tight bearing upon the shaft at its inner end, and a driving wheel mounted upon said cylinder.

1,352,113. TUBULAR ICE-SKATE. WALTER T. K. BROWN, Branford, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Apr. 19, 1920. Serial No. 374,915. 2 Claims. (Cl. 46—50.)



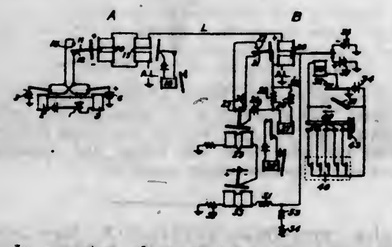
1. A tubular ice-skate, having a tube, a runner, heel-and sole-plates, tubular supports for mounting the heel-and sole-plates upon the tube, and vertical struts interposed between the said plates and runner and respectively located within the said tubular supports.

1,352,114. WINDOW-LOCKING DEVICE. JOHN CHOMOS, Toledo, Ohio. Filed Dec. 19, 1919. Serial No. 346,103. 1 Claim. (Cl. 292—22.)



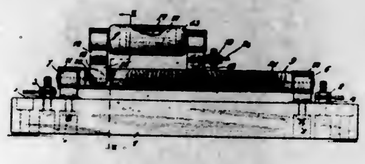
In combination with a window sash having an upwardly extending groove cut in the lower rail thereof, a stationary rack, a revoluble pinion in said groove revolubly mounted in the corner of said lower rail for engaging said rack, a slidable member having a longitudinal slot therein positioned in said rail groove, station-

ary pins in said rail passing through the slot in said member for allowing only longitudinal movement of said member, a tooth on the end of said member for engaging one of the spaces between the teeth of said pinion, a pin on the other end of said member, a slotted cam disk, said last mentioned pin being arranged to engage one of the



cam slots in said disk, a stud mounted in said rail on which said disk is mounted, and a handle on said disk projecting upwardly through said rail for rotating said disk to cause said member to engage and to be disengaged from said pinion whereby rotation of said pinion is prevented.

1,352,115. TONE-MODIFIER FOR TALKING-MACHINES. FRED W. COOLEY, Minneapolis, Minn. Filed Mar. 29, 1920. Serial No. 369,529. 5 Claims. (Cl. 181—27.)



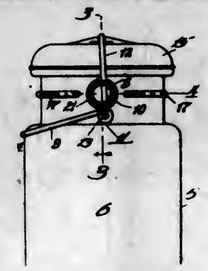
1. The combination with the tone arm of a sound reproducing machine, of a resilient tube spaced therefrom and located where the sound waves will pass therethrough on their way from said tone arm into the sounding chamber of said machine, a block secured to the interior of said resilient tube, and a spring tension device anchored to said block but capable of axial adjustments in respect to said block in a direction axially of said tube.

1,352,116. TELEGRAPHY. GEORGE O. CUMMINGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 16, 1918. Serial No. 245,144. 3 Claims. (Cl. 178—22.)

1. In a system of secret telegraphy, a plurality of stations, a line conductor joining said stations, means for telegraphing from one of said stations to another over said line conductor, means at one of said stations for transmitting current impulses to another of said stations, and means at said last-mentioned station for retransmitting those current impulses back to the first-mentioned station during said telegraphing.

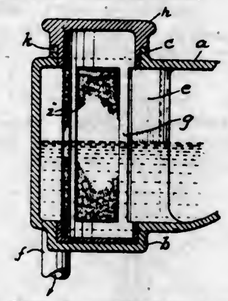
1,352,117. PROTECTING DEVICE FOR ELECTRICAL INSTRUMENTS. MINOR M. DAVIS, New York, N. Y. Filed June 5, 1917. Serial No. 172,866. 8 Claims. (Cl. 200—115.)

1. In electric protective apparatus, in combination, a block of insulating material provided with line terminals, a tubular member provided with metallically capped ends adapted to be detachably connected with said terminals, means provided within said tubular member including a spring and a body of fusible material adapted to establish an electrical connection between said terminals, a lightning arrester mounted upon said tubular member, one terminal of which extends into said tubular member and is mechanically connected with said body of fusible material, and the other adapted to connect with ground, the connection between the terminal of said lightning arrester and said fusible material being adapted mechanically to conduct heat from the former to the latter.



1,352,118. PIPE-COUPLING. FLOYD DOW, Wyanet, Ill., assignor of one-half to Llewellyn D. Edminster, Wyanet, Ill. Filed Apr. 7, 1919. Serial No. 287,991. 4 Claims. (Cl. 285—180.)

1. A coupling for pipe-sections formed on its inner surface at its opposite ends with circumferentially extending grooves extending at substantially 90° to the axis of the coupling and continuous or substantially continuous, with notches opening from said grooves through the ends of said coupling whereby said pipe sections and coupling are secured together and axial adjustment of the parts may be effected, for the purpose set forth.

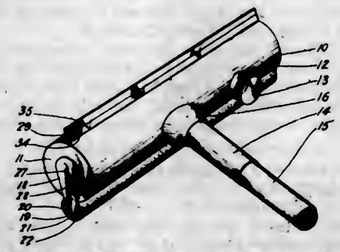


1,352,119. FRUIT-JAR FASTENER. LEO A. DREY, St. Louis, Mo., and JAMES L. HIATT, Sapulpa, Okla., assignors to Schram Glass Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed May 17, 1919. Serial No. 297,901. 2 Claims. (Cl. 215—88.)

2. A fruit jar fastener comprising a jar having on opposite sides of its neck relatively large integral trunnions, said trunnions being provided with circular grooves, a lever wire provided on its opposite ends with circular loops seated in the grooves of said trunnions, eyes formed in said lever wire below the circular loops and a clamping wire having formed on its ends hooks seated in the eyes formed in the lever wire, the pivotal connections between the clamping wire and the lever wire being so

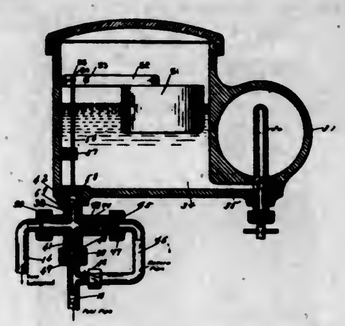
arranged as to provide relatively short lever arms between the trunnions and said pivotal connections.

1,352,120. OIL-STRAINER. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed Nov. 4, 1919. Serial No. 335,626. 7 Claims. (Cl. 210—154.)



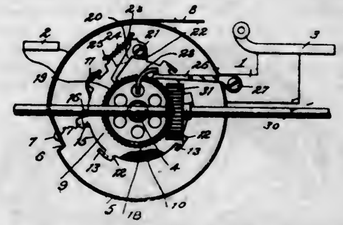
1. In an oil filter, in combination, a casing provided with an aperture in its top and having a depression in its bottom, wings extending into said casing, a frame terminating in a cap, forming a cover for said aperture, at one end, and in a cup, adapted to fit into said depression, at the other, a curved screen partially surrounding said frame throughout the greater part of its length, and means to so position said frame that the unscreened portion will be between said wings.

1,352,121. PERFORATED PELLET OF EXPLOSIVE POWDER AND PROCESS OF MAKING SAME. FRANCIS I. DU PONT and ERNEST DU PONT, Wilmington, Del. Filed June 12, 1918. Serial No. 239,530. 17 Claims. (Cl. 52—4.)



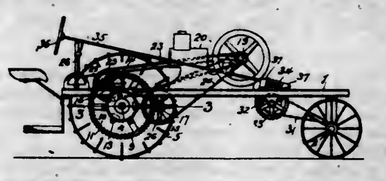
8. As a new explosive product, black powder dust cemented together into masses by means of a collodion.

1,352,122. WINDOW AND WALL CLEANER. HENRY ENGEL and EDWARD FELDMAN, New York, N. Y. Filed Mar. 19, 1920. Serial No. 367,063. 3 Claims. (Cl. 15—53.)



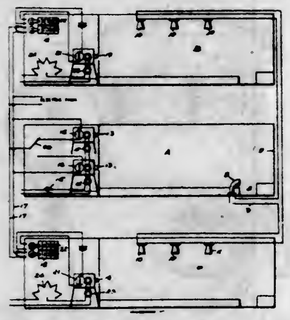
1. A cleaning appliance comprising a portable handled tank having a longitudinal concave perforate recess, a felt covered roller, slotted guide brackets engaging said roller to said tank, and springs for drawing said roller into the mentioned recess.

1,352,123. FUEL-FEED SYSTEM. CHARLES F. GREEN, Defiance, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 14, 1918. Serial No. 262,532. 5 Claims. (Cl. 158—36.)



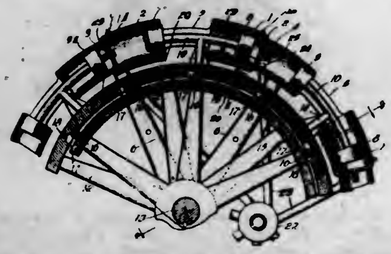
1. A device of the class described comprising a receptacle having inlet and outlet passageways leading to and from the same, a check valve in said inlet passageway opening in the direction of the receptacle, an arm pivotally mounted in the receptacle having a float thereon, a slidably mounted member pivotally connected with said arm and normally independent of said valve and adapted to hold the same closed when said float is moved to a predetermined position in said receptacle.

1,352,124. MAIN-SHAFT DRIVE. JOHN A. HAGERSTROM, Scranton, Pa., assignor to Victor Typewriter Company, Scranton, Pa., a Corporation of New York. Filed Sept. 29, 1917. Serial No. 194,079. 3 Claims. (Cl. 197—151.)



1. In a typewriter, a main spring shaft, a crown wheel journaled on said shaft, a main ribbon shaft, and a gear on said main ribbon shaft and meshing with the crown wheel on said main spring shaft, and a dog having ratchet engagement with said crown wheel, said dog being provided with a guard arm adapted to engage said crown wheel for limiting the displacement of said dog with respect to said crown wheel.

1,352,125. DRIVING-GEARING FOR TRACTORS. HILLIS A. HARBAH, Kansas City, Mo., assignor of one-half to Lizzie T. Leimbach, Rosedale, Kans. Filed June 24, 1918. Serial No. 241,486. 4 Claims. (Cl. 74—59.)



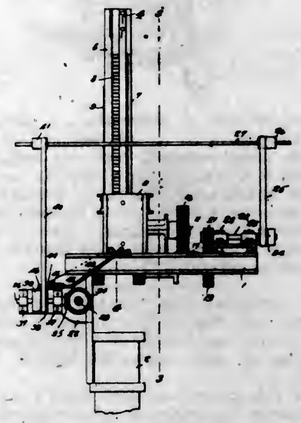
1. In a tractor, two traction wheels, a gear wheel having external and internal teeth, means actuated by the gear wheel for driving said traction wheels, two pinions respectively meshing with said two sets of teeth, a driving shaft, and means actuated by the driving shaft for independently rotating said pinions in like directions.

1,352,126. MEANS FOR SYNCHRONIZING AND HARMONIZING MOVING-PICTURE EXHIBITIONS. RICHARD H. HATFIELD, Brooklyn, N. Y. Filed Sept. 26, 1919. Serial No. 326,562. 7 Claims. (Cl. 88—16.2.)

1. Means for synchronizing and harmonizing moving picture exhibitions comprising, a master stereopticon projecting machine; a plurality of branch projection machines located at distances from said master machine; a plurality of electro-mechanically actuated devices for indicating, visibly, at the operating station of said branch machines, the movement of said master machine; means operatively connecting said devices, said means embodying an electrical supply and distributing circuits connecting said devices for operating the same in unison, and means for varying the speed of said branch machines.

1,352,127. INTERNAL-COMBUSTION ENGINE. JOHN HENDERSON, Chicago, Ill. Filed Oct. 8, 1917. Serial No. 195,341. 8 Claims. (Cl. 123—18.)

1. In an internal combustion engine, the combination of a plurality of cylinders, each comprising a pumping chamber and an expansion chamber, said cylinders being arranged in a circle and disposed with the pumping chamber of one cylinder opposed to the expansion chamber of the adjacent cylinder, means providing communication between the adjacent pumping and expansion cylinders for transferring gas from one to the other, pistons in said chambers, means connecting the pistons in opposed chambers, an oscillating member connected to said piston-connecting means, a rotating member, and means connecting said oscillating member with said rotating member.

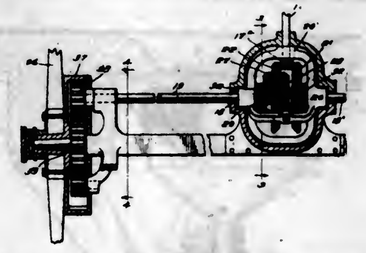


1,352,128. CONCRETE PILE CONSTRUCTION. CLARENCE S. HOWELL, New York, N. Y., assignor, by mesne assignments, of one-half to Lawrence McGuire, New York, N. Y. Filed Sept. 1, 1915. Serial No. 48,533. 13 Claims. (Cl. 61—74.)

1. A device of the class described comprising a solid, precast concrete pile, a reinforcing member embedded in the pile and extending substantially throughout the length thereof, a driving point to which said reinforcing member is permanently and securely anchored, and an exterior driving form adapted to receive the entire driving force and to transmit driving force to said driving point whereby the head of the pile is not subjected to any part

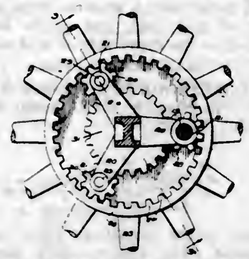
of the concussion of the driving force and whereby the entire concrete portion of the pile is pulled into the ground by the said driving point.

1,352,129. COTTON-TRAMPER. ERNST A. H. JACOB, San Antonio, Tex. Filed Aug. 25, 1919. Serial No. 319,556. 4 Claims. (Cl. 100—25.)



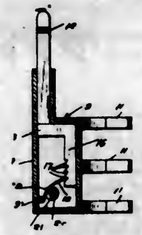
1. A cotton tramper comprising a frame; a trunk; a plunger mounted to reciprocate in the frame and coöperating with the trunk, the plunger including a double-sided free-ended rack; a radius arm mounted at its lower end to oscillate in an arc on the frame; a pinion carried by the upper end of the radius arm and coöperating with the rack; and means for rotating the pinion.

3. A device of the class described, constructed as set forth in claim 2 and further characterized by the fact that the eccentric means embodies disks fixed to the shaft and provided with cam tracks, the ends of the carriers being supplied with projections traversing the cam tracks.



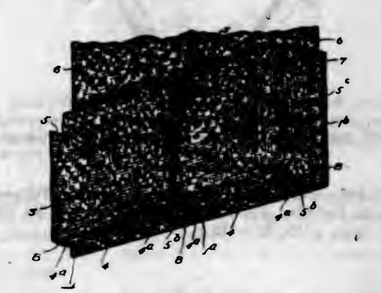
1,352,130. AUTOMOBILE-DRIVE. EDGAR JAMES, Lincolnton, N. C. Filed June 21, 1919. Serial No. 305,752. 2 Claims. (Cl. 74—99.)

1. In a device of the type described, a yoke, oppositely extending shafts having their inner ends rotatably mounted therein, said yoke having spaced arms thereon, a gear rotatably mounted on each of said shafts, one of said gears being provided with openings, pinions rotatably mounted upon the arms of said yoke and meshing with said gears, gears mounted on the inner ends of said shafts and disposed on opposite sides of one of said first



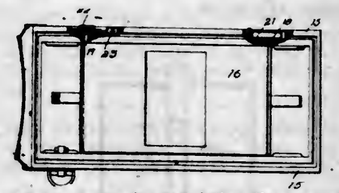
named gears, and pinions mounted in said openings and meshing with said last named gears.

1,352,131. AUTOMOBILE-DRIVE. EDGAR JAMES, Lincolnton, N. C. Original application filed June 21, 1919, Serial No. 305,725. Divided and this application filed Apr. 19, 1920. Serial No. 375,050. 2 Claims. (Cl. 74—7.)



1. In driving gearing for motor vehicles, an axle, a driven wheel, embodying spokes, mounted upon each end of said axle, a plurality of arms mounted adjacent each end of said axle, one of said arms adjacent each end of the axle being in substantially horizontal alinement with the axle, a drive shaft mounted in said last named arms, driving pinions mounted on the outer ends of said shaft, idler pinions mounted on the other of said pinions, and an internally toothed gear carried by and arranged inwardly of each of said drive wheels and meshing with said pinions.

1,352,132. AUTOMOBILE-LOCK. ROBERT C. JENKINS, Bessemer, Ala. Filed June 5, 1919. Serial No. 302,027. 1 Claim. (Cl. 70—129.)

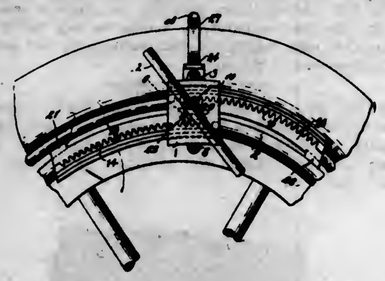


A lock adapted to be applied to the steering shaft tube of an automobile machine for locking the steering wheel with relation to the tube, said lock comprising a casing, means for securing the casing in position upon the tube, said casing being provided at the top side and in the vicinity of its front face with a guide sleeve, a bolt having end portions which are offset with relation to each other and which are parallel, one end portion of the bolt being slidably received in the sleeve and provided with a fork adapted to engage a spoke of the steering wheel, the other end portion of the bolt being provided with notches, a key barrel journaled in the casing and disposed transversely under the intermediate portion of the bolt and tumblers pivotally mounted in the casing and disposed transversely across the key barrel and having free ends which are engageable with the notches at the inner end of the bolt.

1,352,133. WOVEN POCKETED CARRIER. VICTOR H. JENNINGS, Worcester, Mass., assignor, by mesne assignments, to Frank R. Batchelder, Worcester, Mass. Filed Aug. 14, 1917. Serial No. 186,214. 22 Claims. (Cl. 224—23.)

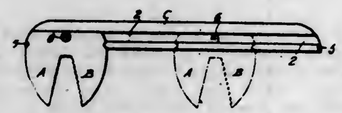
1. A woven carrier having a square-bottomed pocket comprising pocket-front, pocket-bottom, pocket-back, and side-wall web-portions, all woven in one piece, with said side-walls formed with lower edges corresponding in direction with the top edge of the pocket at a distance therefrom determining the height of the pocket, and said bottom extending beyond said lower edges and formed with terminal ends at an agle to said lower edges of the side-walls, and united thereto by applied fastenings, thereby forming at the ends of the pocket-bottom corners projecting forward from the pocket-back and disposing the said bottom at angles with the front and back so as to square the pocket.

1,352,134. CAMERA. CARL G. JOHNSON, Eau Claire, Wis. Filed Oct. 8, 1917. Serial No. 195,406. 1 Claim. (Cl. 95—11.)



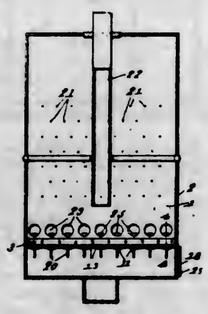
In a camera, means for restricting the amount of film exposed to the light during exposure and movable to vary the position of the film exposed, the camera having auxiliary sight openings on each side of the usual opening for the position indicating numerals, and arranged in spaced relation, said restricting means comprising a curtain having an opening, a spring roller journaled in the camera and supporting the curtain at one end and upon which the curtain winds, a widing roller journaled in the camera for the other end of the curtain, said spring supported roller normally winding the curtain, and a releasable catch for the other roller.

1,352,135. DEVICE FOR REMOVING TIRES FROM RIMS. GEORGE G. JONES, Cleveland, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed June 13, 1917. Serial No. 174,426. 13 Claims. (Cl. 157—6.)



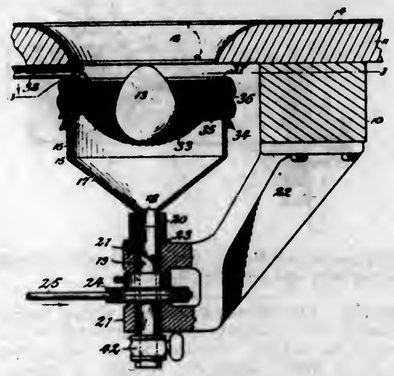
1. In a tire removing tool, the combination of a plurality of parallel separable fingers adapted to be thrust

under both beads of the tire between them and both flanges of the rim, and means for causing the separation



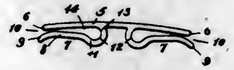
of such fingers laterally and in an arc practically corresponding to the periphery of the rim while preserving their parallelism and while they are between the tire and rim.

1,352,136. WRENCH. OLIVER R. JONES, Welland, Ontario, Canada. Filed Aug. 11, 1919. Serial No. 316,769. 1 Claim. (Cl. 81—119.)



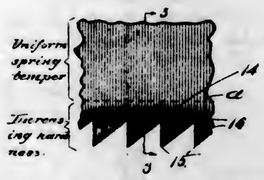
In a device of the class described, comprising a bar handle member regular in cross-section from end to end, a jaw-carrying member slidable on said handle from one extreme end to the other to a position when at said ends the edge of said jaw-carrying member is flush with the corresponding end of said bar handle, substantially as and for the purpose set forth.

1,352,137. TOY PIN-BOARD. WALTER LENCHARD, McKeesport, Pa. Filed Oct. 17, 1919. Serial No. 331,435. 5 Claims. (Cl. 46—61.)



1. In a game apparatus, a board provided with a plurality of openings for passage of a game piece, a bridge member, a plurality of disks pivotally mounted adjacent said bridge member for movement toward and away from the same, means for releasably securing said disks in raised position, means actuatable by a game piece passing through said openings for releasing said disks, and means for pivotally supporting the disks and for returning the same to raised position.

1,352,138. EGG-WASHER. GUILFORD MCCRAY, Tomales, Calif. Filed Mar. 27, 1920. Serial No. 369,405. 10 Claims. (Cl. 146—14.)

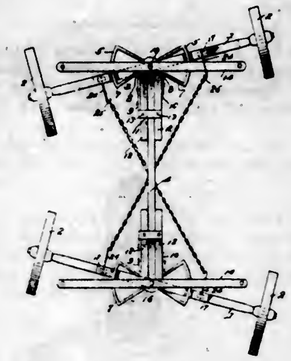


1. An egg washer comprising a rotary bowl having an outlet in its lower part, a washing cloth mounted on the upper part of said bowl, and means for supplying a washing liquid to the upper side of said cloth.

1,352,139. COLLAR-HOLDER. JOSEPH A. MARINER, Chicago, Ill. Filed Jan. 6, 1919. Serial No. 269,941. 3 Claims. (Cl. 24—81.)

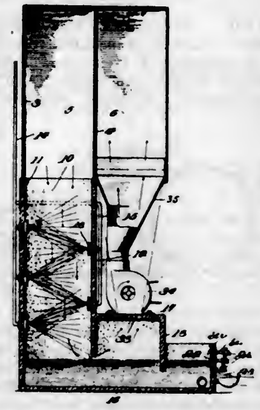
1. A collar holder comprising a bar consisting of a single unfolded strip, and clamping members coacting therewith connected directly with the bar at points between the ends thereof, and extending outwardly in clamping relation with the end portions of said bar.

1,352,140. TEMPERED BLADE. CHARLES NAPIER, Springfield, Mass., assignor to Napier Saw Works, Inc., Springfield, Mass., a Corporation of Massachusetts. Original application filed Dec. 9, 1918, Serial No. 265,836. Divided and this application filed Jan. 30, 1919. Serial No. 274,006. 6 Claims. (Cl. 29—95.)



1. A blade having a hardened cutting edge and a body integral therewith and in a state of spring temper, joined by an edge region gradually varying in hardness between said states, whereby the hard but brittle edge is supported against permanent bending and breakage upon a strip of metal at least as hard as the body of the blade, and decreasing in hardness as the edge is receded from.

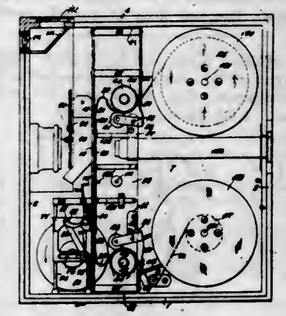
1,352,141. RUNNING-GEAR FOR WAGONS AND AUTOMOBILES. ANDREW S. OUTCALT, Ironton, Wis. Filed Oct. 8, 1919. Serial No. 329,261. 4 Claims. (Cl. 280—102.)



3. In a running gear, the combination of a pair of axles, bearing plates resting upon said axles, each bearing plate provided with a depending lug extending into the axle, bound frames resting upon said bearing plates, bolsters resting upon said bound frames, a coupling pole

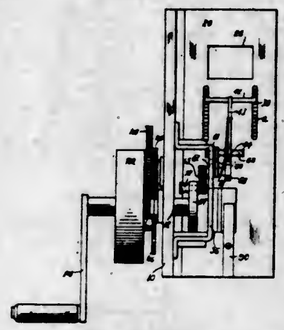
connected to said bolsters, draw bolts extending into said axles and into said depending lugs of the bearing plates,

and flexible connecting means attached to the outer ends of the draw bolts.



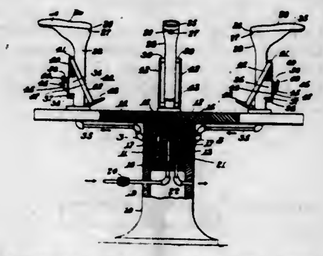
1,352,142. SMOKE-FILTER AND FORCE-DRAFT DEVICE FOR FURNACES. HARRY ROOS PALMER, Harrisburg, Pa. Filed Aug. 15, 1919. Serial No. 318,431. 4 Claims. (Cl. 261—117.)

1. An apparatus of the character described, comprising a housing having an inlet at its upper end, spray nozzles arranged in the sides of the housing, a tank in communication with the lower end of the housing, and having a portion thereof closed, and having a discharge opening in its upper end, a baffle plate between the housing and discharge opening, and means for maintaining a predetermined water level in said tank.



1,352,143. MOTION-PICTURE CAMERA. WALTER PARKES, Cleveland, Ohio, assignor, by mesne assignments, to Henry C. Osborn, Cleveland, Ohio. Filed July 21, 1917. Serial No. 181,943. 8 Claims. (Cl. 88—18.4.)

1. In a motion picture camera, the combination, with means for guiding the film, of a reciprocating member, a crank, means connecting the crank pin with said member, a hook pivoted to the member, a rock arm connected with



the hook, and a link connecting said rock arm with the crank pin.

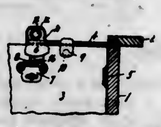
1,352,144. MECHANISM FOR FEEDING FILMS. WALTER PARKES, Cleveland, Ohio, assignor, by mesne assignments, to Henry C. Osborn, Cleveland, Ohio. Filed Dec. 19, 1917. Serial No. 207,974. 19 Claims. (Cl. 88—18.4.)

5. The combination of a reciprocating carriage, a claw pivoted thereto, a rock shaft carried by the carriage, a cam on the rock shaft adapted to swing the claw, an operating crank, and a connection between the crank and rock shaft.

1,352,145. INNERSOLE-APPLYING DEVICE. GEORGE F. QUINBY, Dorchester, Mass. Filed Nov. 3, 1919. Serial No. 335,538. 20 Claims. (Cl. 12—33.)

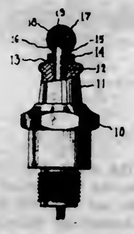
1. In a device of the class described, a shoe support having a depression in the top thereof adapted to receive a complete inner sole; an expansible pad positioned in said depression; and means for inflating said pad.

16. In a device of the class described, a pedestal; a revoluble table mounted thereon; a plurality of shoe sup-



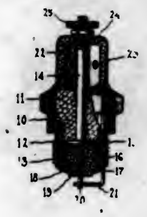
ports on said table; an inflatable pad on the top of each shoe support; and means whereby during the rotation of said table air is admitted to each pad retained therein for a predetermined time and then exhausted therefrom.

1,352,146. STEEL WHEEL. LAWRENCE MERLE RICKETTS, Baltimore, Md., assignor of one-half to Walter A. Harman, Baltimore, Md. Filed Aug. 23, 1919. Serial No. 319,365. 2 Claims. (Cl. 21—69.)



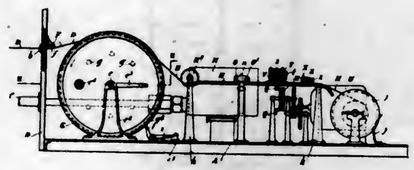
1. A steel wheel having an annular body portion near its rim lying at its inner part in a plane substantially at right angles to the wheel axis and at its outer part at an angle extending to one side of the said plane, said body portion merging into an overhanging rim at the extreme outer edge thereof, the center of said rim lying over the inner part of said body and substantially centrally in relation thereto, said rim being flanged at its inner edge, the outer edge of said rim being flangeless, and means for holding a tire demountably on said rim, substantially as described.

1,352,147. DOOR-STOP. ARTHUR CLARKE SARGEANT, Agawam, Mass. Filed May 13, 1919. Serial No. 296,773. 7 Claims. (Cl. 292—230.)



1. The combination, in a door stop, with a lug carried by the door, of a swinging latch supported from a member of the door casing, and provided on the bottom with a notched keeper located normally in the path of said lug, and adapted to be swung to permit said lug and the notched part of said keeper to become engaged, when said door is opened.

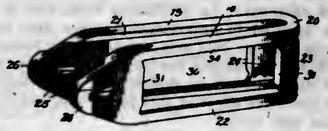
1,352,148. SPARK-PLUG. ALBERT SCHMIDT, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 25, 1918. Serial No. 255,574. 8 Claims. (Cl. 123—169.)



1. In a spark plug, an insulating element and an electrode secured therein and sealed at the protruding end thereof by a sealing member having a compression bearing against said insulator about the lower and outer periphery and against said electrode about the upper and inner periphery thereof.

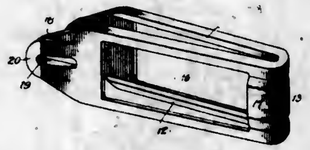
1,352,149. SPARK-PLUG. ALBERT SCHMIDT, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 25, 1918. Serial No. 255,579. 6 Claims. (Cl. 123—169.)

1. A spark plug comprising a hollow external shell or casing; an insulator secured in place within said casing and located at the lower end thereof and filling the same at the said lower end, so as to prevent gases from accumulating between said casing and said insulator, and which insulator extends beyond the lower or inner end of said casing; a plurality of concentrically arranged ridges formed upon the exposed inner end of said insulator, and which ridges are located beyond the end of said shell or casing; and an electrode extending through a passage provided for it in said insulator.



1,352,150. RECORDER FOR FLUID-PRESSURE PRESSES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,492. 4 Claims. (Cl. 234—1.)

2. An improved apparatus for drawing automatically a curve whose coördinates correspond respectively to the movements of a press ram and to the time periods during which the said movements take place, said improved apparatus comprising an endless belt driven at a constant speed over suitable guides by the action of a motor across a paper strip which is to receive the record, the said belt carrying a series of pencils or styluses spaced apart in such a manner that one pencil will come under the said strip near one edge of the latter at the instant when the preceding pencil has left the opposite edge, the said pencils projecting through a slit of the table over which the paper strip travels, and pressing the paper strip against an inked web, and means actuated by the movement of the press-ram for moving the paper-strip across the table.

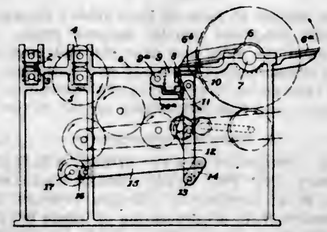


1,352,151. YOKE FOR RAILWAY DRAFT-GEARS. SIGVARD SIMONSON, Butler, Pa., assignor to Harry Vissering & Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1918. Serial No. 233,021. 11 Claims. (Cl. 213—42.)

1. A draft-gear yoke consisting of a forging having sides and a connecting back integral with said sides, the latter having their front ends separated and formed for keying to the coupler shank and having longitudinally extending

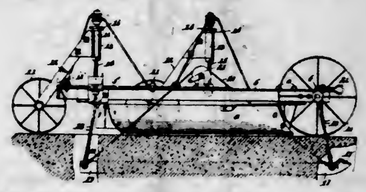
openings therein between the back and the front ends adapted for the lateral insertion of the draft-gear.

1,352,152. MANUFACTURE OF RAILWAY DRAFT-GEARS. SIGVARD SIMONSON, Butler, Pa., assignor to Harry Vissering & Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1918. Serial No. 233,022. 8 Claims. (Cl. 29—167.)



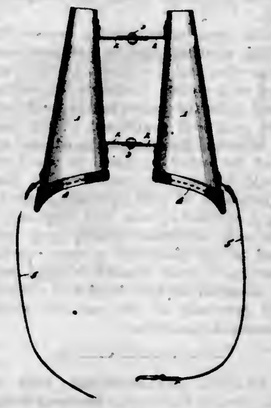
1. That improvement in making railway draft-gear yokes which consists in forming a blank of metal of sufficient length to form the sides and back of a yoke, shaping and forming reinforcements on the end portions of the blank for attachment to a coupler-shank, cutting draft-gear openings in the blank, and bending and doubling the blank about its medial portion to form a one-piece yoke and to bring the openings into juxtaposition to form a draft-gear pocket in the yoke.

1,352,153. SNAP-FASTENER. ELIZABETH JANE SMITH and DOUGLAS SMITH, Larchmont, N. Y. Filed Jan. 14, 1914. Serial No. 811,971. 2 Claims. (Cl. 24—218.)



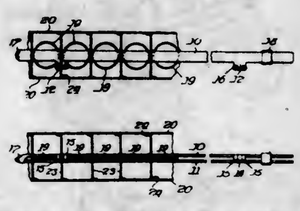
1. A member of a separable fastener having prongs thereon, a projecting socket-piece, a spring attached to said fastener and having parts adapted to project through said socket-piece to engage a ball-member when inserted in said socket-piece, said fastener member having a base-portion against that face of said base portion from which said socket-piece projects.

1,352,154. APPARATUS FOR CUTTING ROOFING-SHEETS. ALEXANDER S. SPEER, Chicago, Ill., assignor to The Roofing Patents Company, a Corporation of Delaware. Filed Apr. 5, 1919. Serial No. 287,819. 7 Claims. (Cl. 164—68.)



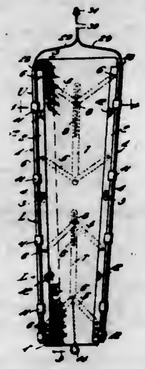
1. Apparatus of the character described comprising means for feeding a sheet of material, a pair of alternately acting cutters having different profiles, a stationary die for coöperating with one cutter, and supplemental die means movable into and out of juxtaposition to said stationary die for coöperating with the other cutter.

1,352,155. DITCH-FILLER. GUSTAV F. STORM, Sanborn, Iowa. Filed Jan. 11, 1918. Serial No. 211,329. 8 Claims. (Cl. 37—7.)



1. A ditch filler comprising a frame; a scraper blade on said frame; and a vertically adjustable guide on said frame arranged to run in a ditch, substantially as described.

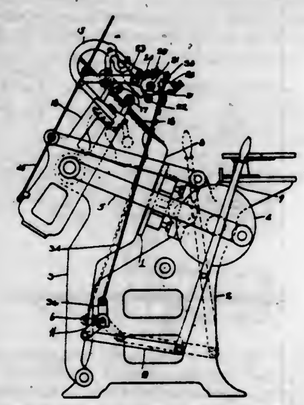
1,352,156. EYE-GUARD. GUSTAV F. STORM, Sanborn, Iowa. Filed Jan. 11, 1919. Serial No. 270,760. 2 Claims. (Cl. 2—149.)



1. An eye guard comprising forwardly tapering tubular members, the rearward ends of which are shaped to fit the face of the wearer; adjustable cross-bars securing said tubular members together; and a head band secured to the rear ends of said tubular members and adapted to embrace the head of the wearer, substantially as described.

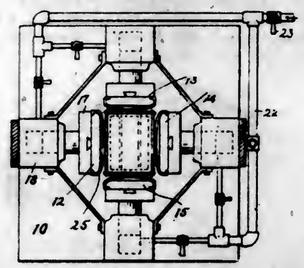
1,352,157. SPRING-INSERTING TOOL. LOUIS A. SUEKOFF, Chicago, Ill. Filed Sept. 5, 1919. Serial No. 321,977. 8 Claims. (Cl. 29—87.1.)

1. A tool of the class described, comprising separated parallel elongated members adapted to receive a series of coiled springs in compressed relation and to hold the same compressed, and means arranged on said members for guiding the same in their introduction into the position of discharge of the springs therefrom.



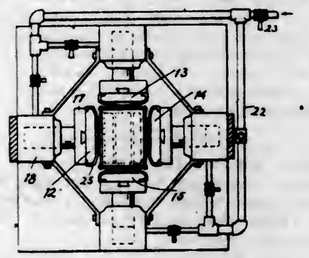
1,352,158. GARMENT-PRESSING DEVICE. JAMES F. THOMAS, Clarinda, Iowa. Filed Jan. 2, 1919. Serial No. 260,241. 7 Claims. (Cl. 100—57.)

1. A garment press comprising a crease clamp consisting of two leaves hinged together at one edge and means for holding said leaves closed, and electric heating means for said leaves extending along the hingedly connected edges thereof.



5. A garment press comprising a crease clamp formed of two sections abutting end to end and means for detachably connecting said sections, electric heating coils carried one by each section of said clamp, wiring connected to one of said coils for supplying the current, a pair of terminals for each coil positioned at the inner ends of said clamp sections, the terminals of one coil coacting with those of the other to complete the circuit of said coils when said sections are connected, an insulator from which the terminals of said one coil project, said insulator having a recess between said terminals and a bore parallel with said terminals leading from said recess to the outer end of the insulator, a stem rotatable in said bore and having a head located in said recess, and a bridge plate mounted on said head and adapted to bridge between said terminals of the one coil when the other coil is disconnected therefrom.

1,352,159. INKING MECHANISM FOR PRINTING-PRESSES. RALPH S. TYLER, Cleveland Heights Village, Ohio, assignor to The Chandler and Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1919. Serial No. 292,137. 6 Claims. (Cl. 101—341.)



1. In a platen printing press provided with a throw-off adapted to shift the bed of said press without interrupting operation of the platen, the combination with an ink fountain mounted above the inking disk of said press, said fountain including an ink-feeding roller, a ratchet wheel connected therewith, an oscillatory arm, and a pawl on said arm adapted to progressively rotate said wheel; of connections between said arm and the roller frame of said press adapted to operate the former in unison with the latter; a disk adapted to shroud said wheel and thereby limit the operative effect of said pawl; and means adapted to position said disk.

1,352,160. APPARATUS FOR FORMING STORAGE-BATTERY JARS AND THE LIKE. THEODORE A. WILLARD, Cleveland, Ohio. Filed Aug. 9, 1915. Serial No. 44,375. 8 Claims. (Cl. 18—19.)

1. In an apparatus for forming vessels from plastic material, a mandrel, a plurality of plungers arranged opposite the mandrel and adapted to compress plastic material in sheet form between the plungers and the mandrel, and material squeezing devices carried by said plungers and movably mounted thereon for shaping the corners of the vessel and for uniting the material of the sheets at the corners.

1,352,161. METHOD OF FORMING HARD-RUBBER STORAGE-BATTERY JARS. THEODORE A. WILLARD, Cleveland, Ohio. Original application filed Aug. 9, 1915, Serial No. 44,375. Divided and this application filed Sept. 12, 1919. Serial No. 323,258. 7 Claims. (Cl. 18—56.)

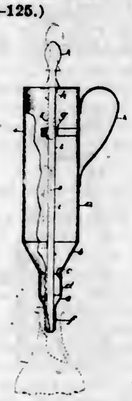
1. The method of forming hard rubber storage battery jars which comprises placing uncured rubber in sheet form around the sides and over the end of a mandrel, applying pressure simultaneously and uniformly over all parts of each robber covered face of the mandrel, relieving the pressure, and then vulcanizing the jar on the mandrel.

1,352,162. PRODUCTION OF SUBSTANTIALLY PURE CARBON AND THE LIKE. ROGER WILLIAMS, Providence, R. I., assignor to Nitrogen Products Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 24, 1918. Serial No. 213,507. 11 Claims. (Cl. 252.)

9. The process of producing ashless carbon which comprises converting carbon monoxid to carbon dioxid while causing a precipitation of substantially pure carbon therefrom at a temperature below 700° C., in part at least by means of a mass of catalytic material, and agitating said mass to favor said conversion.

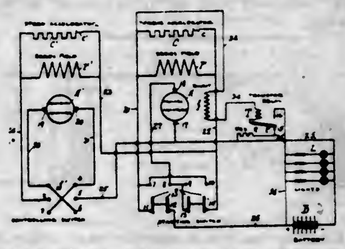
1,352,163. COATED FABRIC AND PROCESS OF PRODUCING THE SAME. JOHN A. WILSON, Elizabeth, N. J., assignor to The Duratex Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 19, 1919. Serial No. 346,160½. 8 Claims. (Cl. 91—70.)

1. The process of producing a waterproof fabric, consisting in coating a fabric with rubber, applying a liquid coating constituting a clear vulcanizing varnish, embossing said coated fabric, and then vulcanizing both said coatings simultaneously.



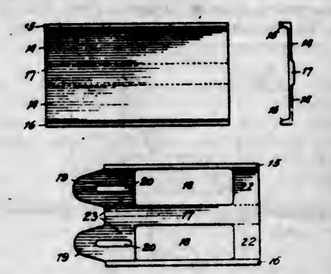
7. A waterproof fabric composed of a textile fabric, a coating of rubber, and a coating of vegetable drying oil and sulfur, both of said coatings being embossed and vulcanized simultaneously on the textile fabric.

1,352,164. REPAIRED TIRE. CHARLES W. YELM, Denver, Colo., assignor to The Gates Rubber Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 11, 1920. Serial No. 365,030. 2 Claims. (Cl. 152—17.)



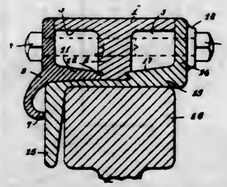
2. In combination, a worn casing, a repair tire applied thereto, and a layer of rubberized compound establishing a bond therebetween, said layer being unvulcanized before putting into use, and of such consistency that it fills any unevenness in the adjacent faces of the parts and of such character and thickness that the bond is maintained during road use.

1,352,165. BOTTLE-FILLER. GIUSEPPE AGRILLO, Brooklyn, N. Y. Filed June 16, 1920. Serial No. 389,381. 1 Claim. (Cl. 226—125.)



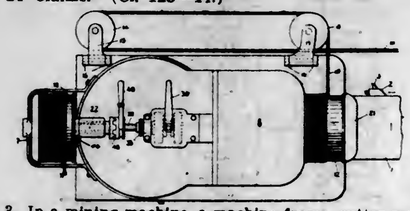
In a pulp producer and bottle filler, the combination consisting of a cylindrical vessel provided with a funnel shaped portion and nozzle integral therewith, a removable cap provided with a conical shape and depending nozzle, a plunger rod guide with enlarged opening arranged within the cylindrical vessel aforesaid near its upper end, a plunger rod guide arranged on the top of the cylindrical vessel aforesaid, and a manually operated plunger rod substantially as described.

1,352,166. BATTERY-CHARGING AND STARTING SYSTEM FOR AUTOMOBILES. CHARLES E. F. AHLM, Cleveland Heights, Ohio. Filed Oct. 31, 1918. Serial No. 260,441. 15 Claims. (Cl. 172—239.)



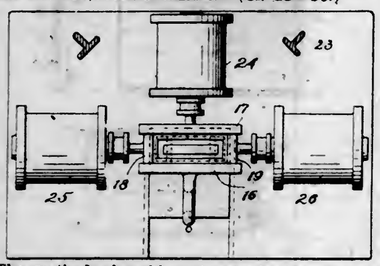
1. A generating unit having a series field winding, a shunt field winding in combination with a resistance and a battery, and a transfer relay adapted to transfer current through the shunt winding either through the resistance or battery.

1,352,167. MANUFACTURE OF YOKES FOR RAILWAY DRAFT-GEARS. HARRY T. ANDERSON, Butler, Pa., assignor to Harry Vissering & Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1919. Serial No. 305,075. 4 Claims. (Cl. 29—164.)



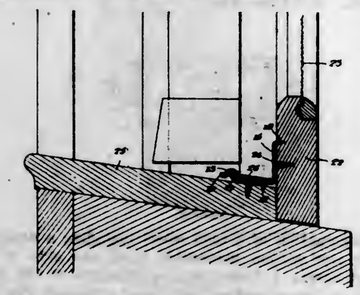
4. That improvement in the manufacture of yokes for railway draft-gear which consists in folding a blank comprising a web, longitudinal marginal flanges, and a central thickened zone along longitudinal lines to bring the flanges into abutting relation, cutting draft-gear openings in the web, trimming one end of the blank, forging reinforcements adjacent the trimmed end and cutting key-slots adjacent said ends.

1,352,168. VEHICLE-WHEEL. ALFRED S. BALDWIN, Syracuse, N. Y. Filed Sept. 14, 1915. Serial No. 50,594. 1 Claim. (Cl. 295—8.5.)



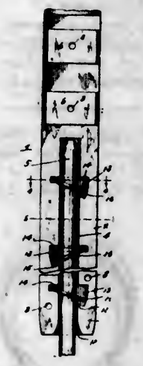
The combination of a road wheel including a demountable tire rim section mountable upon one side of the felly and having a flange lapping the side of the felly, fastening means extending transversely through the felly to hold the rim section in position, a rail tire having a flange lapping the other side of the felly and coacting with said fastening means, and a peripheral flange adapted to seat on the demountable rim section, substantially as and for the purpose described.

1,352,169. MINING-MACHINE. ALBERT BALL, Claremont, N. H., assignor, by mesne assignments, to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 26, 1909, Serial No. 509,579. Renewed Nov. 26, 1919. Serial No. 340,799. 24 Claims. (Cl. 125—14.)



3. In a mining machine, a machine frame, cutter mechanism carried thereby, a rope winding drum rotatable on a horizontal axis on said frame for pulling the frame laterally, a coaxially disposed rope winding drum on said frame for retarding the rear end of said frame, a coaxially disposed driving motor carried on said frame between said drums, and driving connections between the rear end of said motor and each of said drums.

1,352,170. METHOD OF MAKING RUBBER STORAGE-BATTERY JARS. HARRY L. BOYER, Trenton, N. J., assignor to Joseph Stokes Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 23, 1917. Serial No. 150,346. 5 Claims. (Cl. 18—56.)



1. The method of making storage battery jars which comprises placing sheets of uncured rubber over the end and around the sides of a rectangular core with the edges of the sheets overlapped, applying pressure by flat pressure applying devices simultaneously to the sides and end of the jar thus formed on the core, removing the pressure and vulcanizing the jar on the core.

1,352,171. WINDOW-SCREEN CATCH. JOSEPH BENSON BRADLEY, Miami, Fla. Filed Jan. 3, 1920. Serial No. 349,137. 1 Claim. (Cl. 292—76.)

A window screen catch consisting of a striker plate having a flat body portion provided with an opening to receive a fastener, and with one bent edge extending in one direction to provide latch engaging means and with a bent edge extending in the opposite direction and sharpened, and a latch plate having an opening to receive a fastener and an angular sharpened edge at one end, said latch plate having an angularly projecting latch arm provided with a bent edge at its free extremity and with a transverse rib adjacent to said edge forming a channel thereunder to receive the latch engaging edge of the striker plate as described.

1,352,172. DRILL-RETRIEVER. JARVIES DANIEL BRANDON, Lancaster, Ohio. Filed Jan. 15, 1920. Serial No. 351,734. 3 Claims. (Cl. 294—102.)

1. A drill retriever comprising a body portion having a longitudinally extending open ended bore formed therein, said bore being longitudinally intersected by a plurality of ring sockets, and a plurality of angularly disposed clamping rings loosely positioned in said sockets and situated substantially in alinement with said bore, whereby said rings will be enabled to frictionally grip and retain the shank of a tool positioned within said bore.

1,352,173. MILK-BOTTLE CARRIER. WILLIAM CHESTER CAMPBELL, Denver, Colo. Filed Apr. 24, 1919. Serial No. 292,282. 3 Claims. (Cl. 215—2.)

1. A milk bottle carrier, comprising a closed loop, larger at one end than the other, the two ends being bent toward each other, the opening in the larger end being of sufficient size to allow the top of a milk bottle to pass through while the opening in the smaller end is too contracted for such passage, but large enough to receive the neck of the bottle just below the top, the opening in the part between the bent ends being also large enough to receive the neck just below the top, but of less width than the outside diameter of the top.

1,352,174. PRODUCTION OF AMMONIA. JOHN COLLINS CLANCY, New York, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 23, 1916. Serial No. 86,078. 4 Claims. (Cl. 23—21.)

2. The process of producing ammonia which comprises passing a gaseous mixture containing nitrogen and hydrogen under high pressure in contact with a catalytic agent which comprises an alkali metal cyanamid.

1,352,175. PROCESS OF OBTAINING THE CYANOGEN COMPOUND OF AN ALKALI METAL. JOHN COLLINS CLANCY, Freeport, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed July 13, 1917. Serial No. 180,331. 1 Claim. (Cl. 23—13.)

The process of producing an alkali cyanid which comprises effecting a cyanid forming reaction of free nitrogen upon the carbonate of an alkaline earth metal by initially admixing a cyanid with said carbonate, reacting upon the alkaline earth metal cyanid produced, with the carbonate of an alkali metal to reform said carbonate of an alkaline earth metal and to form the product sought, and extracting the latter from the former.

1,352,176. PROCESS OF AND MEANS FOR FORMING NITROGENOUS COMPOUNDS. JOHN COLLINS CLANCY, Freeport, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 1, 1917. Serial No. 189,290. 31 Claims. (Cl. 23—1.)

1. The process of producing a carbonitrogenous compound which comprises effecting a nitrogen fixing reaction by subjecting a carbo-nitrogenous catalyzer to free nitrogen and to a carbonaceous gas capable of acting as the source of the carbon for the carbo-nitrogenous compound to be formed.

21. A gaseously expanded, catalytically-active carbo-nitrogenous substance.

1,352,177. AMMONIA SYNTHESIS CATALYST AND METHOD OF MAKING SAME. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 25, 1918. Serial No. 241,758. 12 Claims. (Cl. 23—28.)

1. As an article of manufacture, a catalyst for the synthesis of ammonia from its elements, comprising a cyanamid compound in highly porous form.

9. The method of obtaining an efficient catalyst for ammonia synthesis, which comprises producing a carbo-nitrogenous material for said catalyst at a low temperature in particularly reactive condition through the intermediacy of liquid ammonia as a solvent for a constituent of said material.

1,352,178. AMMONIA SYNTHESIS AND CATALYST THEREFOR. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 17, 1919. Serial No. 283,012. 30 Claims. (Cl. 23—21.)

1. The process of synthesizing ammonia which comprises forming a catalyst which includes a nitrid-forming metal, the nitrid of which is capable of reacting with hydrogen, at an ammonia-forming temperature, to yield ammonia vapor, said catalyst also including a combination of an alkalinous metal and carbon, which combination is capable, at said temperature, of fixing free nitrogen and thereafter, at the same temperature, of yielding said fixed nitrogen to said nitrid-forming metal, and reacting upon said catalyst at said temperature, with free nitrogen and hydrogen, to form ammonia.

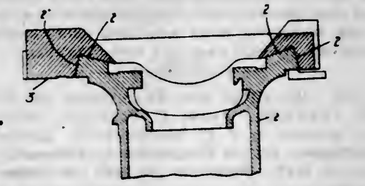
30. A catalyst through the intermediacy of which ammonia may be synthesized from its elements, which comprises an alkalinous metal, intimately associated with carbon, manganese, and iron.

1,352,179. AMMONIA SYNTHESIS. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Original application filed June 25, 1918, Serial No. 241,758. Divided and this application filed Sept. 8, 1919. Serial No. 322,420. 13 Claims. (Cl. 23—21.)

1. The process of synthesizing ammonia from its elements which comprises effecting said synthesis at a temperature below 550° C. by subjecting hydrogen and nitrogen under pressure to the influence of a catalytic compound which includes an atom of carbon united to two atoms of nitrogen, said compound being one produced at a temperature less than 550° C. and having a tendency to dissociate, in part at least, when subjected to a current of nitrogen and hydrogen at the same temperature at which said synthesis is effected, but at atmospheric pressure, the pressure aforesaid to which the nitrogen and hydrogen are subjected when in contact with said catalyst being such as to overcome said tendency and stabilize said compound while yet leaving it catalytically active.

1,352,180. PRODUCTION OF AMMONIA. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Original application filed Mar. 23, 1916, Serial No. 86,078. Divided and this application filed Jan. 14, 1920. Serial No. 351,360. 6 Claims. (Cl. 23—21.)

1. The process of producing ammonia which comprises passing a heated gaseous mixture, under pressure, containing nitrogen and hydrogen, in contact with a catalytic agent which comprises a cyanamid composition in which cobalt is included as a base-acting constituent.

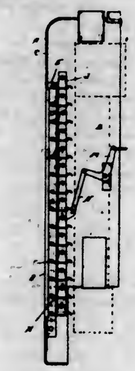


1,352,181. PRODUCTION OF AMMONIA. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Original application filed Mar. 23, 1916, Serial No 86,078. Divided and this application filed Jan. 14, 1920. Serial No. 351,361. 4 Claims. (Cl. 23—21.)

1. The process of producing ammonia which comprises passing a heated gaseous mixture containing nitrogen and hydrogen under high pressure in contact with a catalytic agent which comprises a cyanamid composition in which manganese is included as a base-acting constituent.

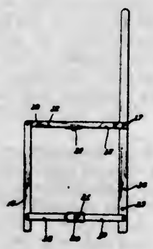
1,352,182. PRODUCTION OF AMMONIA. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Original application filed Mar. 23, 1916, Serial No. 86,078. Divided and this application filed Jan. 14, 1920. Serial No. 351,362. 3 Claims. (Cl. 23—21.)

1. The process of producing ammonia which comprises effecting a reaction between heated nitrogen and hydrogen to synthetically yield said ammonia by passing a gaseous mixture containing said nitrogen and hydrogen under a high pressure in contact with a catalytic composition an active constituent of which is a cyanogen compound having potassium present in the base thereof.



1,352,183. CARRIAGE-BED FOR LATHES. CONRAD M. CONRADSON, Madison, Wis. Filed Jan. 3, 1917. Serial No. 140,339. 1 Claim. (Cl. 82—82.)

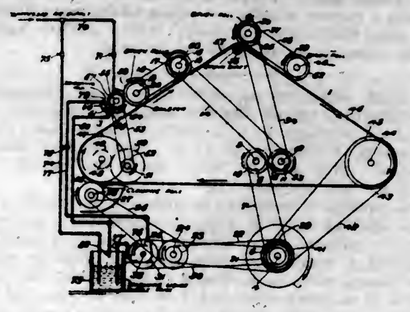
The combination with a lathe carriage, of a bed for the carriage having oppositely disposed correspondingly



formed guides, the upper surfaces thereof having a slight downward and inward inclination from a horizontal and the side surfaces a slight downward and outward inclination from a vertical plane, said carriage being formed with grooves correspondingly shaped to the guides to receive them.

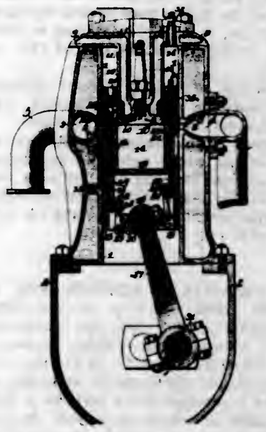
1,352,184. RADIATOR-SHIELD. HOWARD H. CRAWFORD, Detroit, Mich., assignor to Detroit Motor Appliance Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 18, 1916. Serial No. 120,863. 11 Claims. (Cl. 257—132.)

1. The combination with a radiator core, of a shell forming the regular outer finishing piece for said core, having an open panel for exposing the air and water tubes and being extended beyond the front plane of the same, and shutters mounted and operable within said shell between the front face thereof and the front face of the core.



1,352,185. FOLDING CHAIR. SANDOR FEDOR, Oxford Furnace, N. J. Filed Oct. 22, 1919. Serial No. 332,411. 1 Claim. (Cl. 155—141.)

In a folding chair, the combination with the back and legs thereof, of a transversely divided seat, a hinge connecting the elements of said seat, said hinge permitting folding, hinged braces pivotally attached to said legs, rectangular tubular slides engaging and locking said braces when in extended position, said slides having slots formed upon one side, and projecting pins located upon the rear legs, engageable in the mentioned slots whereby said seat and legs are held when in a folded position.

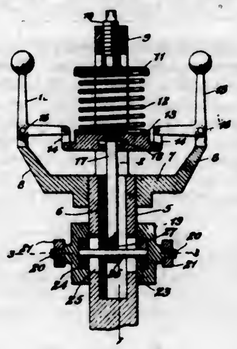


1,352,186. MACHINE FOR SEASONING OR FINISHING LEATHER. JAMES U. FLANAGAN, Wilmington, Del., assignor to F. F. Slocomb & Co., Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Nov. 13, 1917. Serial No. 201,741. 20 Claims. (Cl. 91—40.)

2. The combination of a leather seasoning machine, a season liquid pan therefor, a feed roll rotatably mounted in said pan, a brush roll coacting with said feed roll, and means for conducting compressed air into said liquid below the level thereof.

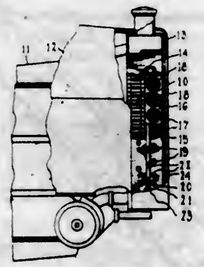
15. In a leather finishing machine, a skin carrying apron, means to actuate it, means comprising a rotatable crown shaft located above and between the outer portions of said apron for producing a crown or bend in said apron, a brush roll for initially applying seasoning liquor to said skin, a second brush roll in proximity to said crown, a pan for the seasoning liquor, and means for pneumatically agitating the contents of said pan.

1,352,187. INTERNAL-COMBUSTION ENGINE. GEORGE BALDWIN GERAU, Miami, Fla., assignor of one-half to Sol L. Smith, Williamsburg, Ky. Filed Mar. 8, 1918. Serial No. 221,246. 6 Claims. (Cl. 123—47.)



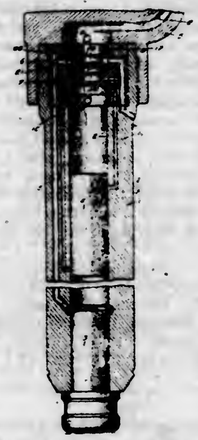
1. An internal combustion engine, comprising a cylinder with an inward extension, supporting a spark plug and defining an annular space, a piston partially working in the annular space, having a depressed head coöperating with the extension and defining an explosion chamber; and an insulated contact plug engageable by a portion of the piston in the annular space, to complete a primary electrical circuit and produce a spark at the plug in the secondary branch of the circuit.

1,352,188. TRESTLE-JOINT. EDGAR BIRD GILES, Los Angles, Calif. Filed Apr. 7, 1920. Serial No. 373,927. 6 Claims. (Cl. 304—5.)



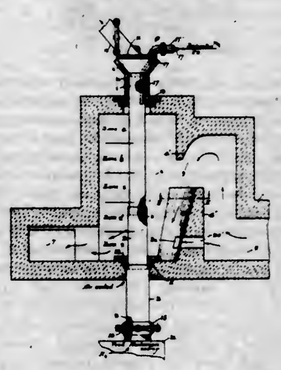
1. A trestle joint comprising two relatively adjustable socket sections; means for fixing said socket sections to the side of the trestle-back, and adjustable means for clamping said socket sections upon a trestle leg.

1,352,189. FLY-BALL GOVERNOR. MAX HAEBERLEIN, Mountain Lakes, N. J. Filed July 5, 1919. Serial No. 308,853. 3 Claims. (Cl. 264—15.)



1. In a governor, a rotatable spindle, fly ball levers mounted on said spindle, a collar freely slidable longitudinally upon the spindle in immediate juxtaposed relation thereto, but normally free from static frictional contact with the spindle, speed control means connected to said collar, and means connected to the interior of the collar and to the fly ball levers to shift said collar upon the rotating spindle and actuate the speed control means.

1,352,190. RADIATOR FOR MOTOR-VEHICLES. ALEXANDER C. HAMILTON, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 17, 1918. Serial No. 229,000. 7 Claims. (Cl. 257—132.)

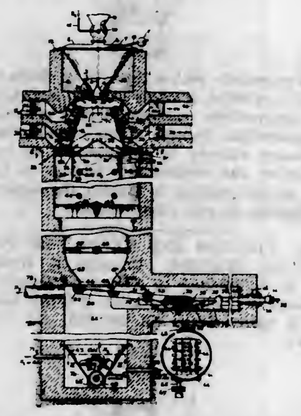


3. In a radiator for motor vehicles, a radiator core; a plurality of plates arranged edgewise relative to said core and extending outwardly therefrom in a forward direction; and a plurality of pivotally supported oscillating shutter blades located within openings provided for them in said plates, and between the forward ends thereof and said core, to thereby control the flow of air through the radiator.

1,352,191. PNEUMATIC TOOL. FRANK L. HENIG, Chicago, Ill., assignor to Henig Engine Co., Chicago, Ill., a Corporation of Illinois. Filed July 14, 1919. Serial No. 310,813. 12 Claims. (Cl. 121—26.)

1. In a pneumatic tool, a cylinder, a piston therein, an inlet for the cylinder, a single exhaust outlet, an exhaust and an intermediate passage in the cylinder, a compression-controlling passage in the cylinder, and a valve having means whereby in one position to connect said exhaust outlet and intermediate passage to the cylinder and in a second position to connect the compression-controlling passage to said exhaust outlet.

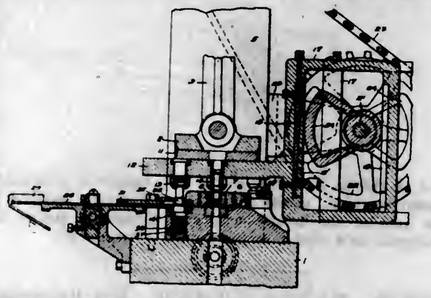
1,352,192. PROCESS AND MEANS FOR PRODUCING METALLIC CYANIDS. CHARLES P. HIDDEN, Providence, R. I., assignor to Nitrogen Products Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 18, 1918. Serial No. 262,925. 17 Claims. (Cl. 23—13.)



1. Apparatus for converting an oxygen compound of an alkali metal into alkali metal cyanid, which comprises a furnace having therein a continuously downwardly feeding retort in an intermediate portion of which the charge feeding through said retort is subjected to heat treat-

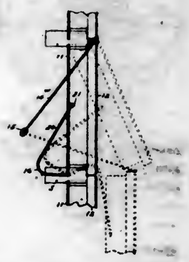
ment, said furnace having means for unequally heating said intermediate portion to develop copious formation of said cyanid only well down toward the lower end of said portion, while yet gradually and substantially uniformly heating said charge during its downward travel through said intermediate portion toward said lower end, and provisions for abruptly cooling the cyanized charge directly upon its emergence from said lower end, said provisions including means to introduce a current of nitrogen into said retort for passage upward through said charge.

10. A process of forming alkali metal cyanid, which comprises subjecting a mass containing carbon, alkali metal carbonate and catalytic material, while in the presence of free nitrogen, to heat treatment, while effecting substantially continuous movement of said mass along a determined path, so regulating the temperature of, and the atmosphere around, said mass, during said movement as to preserve said carbonate and substantially prevent formation of said cyanid therefrom, during the greater part of said treatment, relatively suddenly changing the temperature of said mass and the atmosphere therearound, to favor the formation of said cyanid, and substantially directly thereafter cooling the non-gaseous products of said reaction to prevent loss of said cyanid by volatilization.



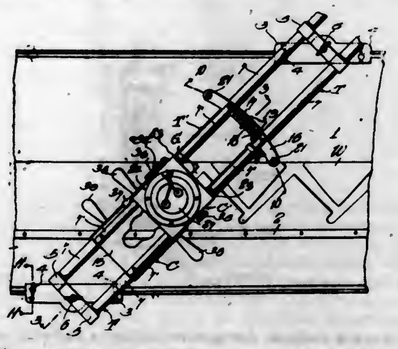
1,352,193. PROCESS FOR FIXING ATMOSPHERIC NITROGEN. CHARLES P. HIDDEN, Providence, R. I., assignor to Nitrogen Products Company, a Corporation of Rhode Island. Filed July 5, 1919. Serial No. 308,772. 20 Claims. (Cl. 23—13.)

1. In the art of fixing nitrogen by cyanizing a porous charge, constituents of which are capable of combining with free nitrogen to form a cyanid and carbon monoxid,—the improvement which consists in first internally heating said charge, treated as a batch, substantially to cyanid-forming temperature, by direct gaseous convection, the gas employed to carry heat into the pores of said charge being incapable of supporting cyanid-forming reaction, then passing into said charge substantially pure nitrogen preheated to a temperature at which said reaction will occur, and again changing the atmosphere in the pores of said charge by passing relatively cool nitrogen therethrough, to sweep out the carbon monoxid formed by said reaction while lowering the temperature of the batch being treated, below that at which carbon monoxid can deleteriously react upon the cyanid present in said batch.



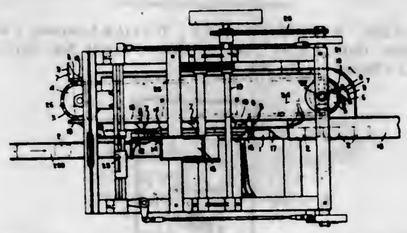
1,352,194. MACHINE FOR MAKING CARTRIDGE-SHELLS. LESLIE E. HOOKER, Lowell, Mass. Filed Apr. 6, 1918. Serial No. 227,026. 4 Claims. (Cl. 207—6.)

1. A machine for extruding tubes from cup-shaped blanks, comprising the combination, with the die-holder and reciprocating plunger, of a slide guided on the bottom of the plunger, a cam for reciprocating said slide, means to drive said cam in timed relation with the plunger, an extruding punch and a trimming punch carried by said



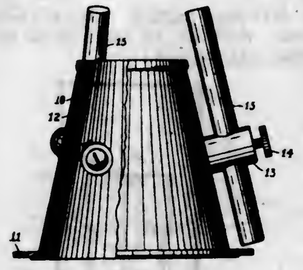
slide, a die mounted in said die-holder, and a pocket into which the blanks are fed successively and from which they are lifted by the extruding punch.

1,352,195. SECTIONAL BOOKCASE. HARRY BELL HUNT, Foremost, Alberta, Canada. Filed Dec. 29, 1919. Serial No. 348,137. 6 Claims. (Cl. 45—1.)



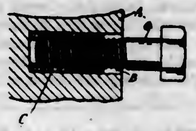
1. In a sectional bookcase, a casing having an open side, a door forming a closure for said opening, pivoted rods connecting corresponding side corners of said door with the corresponding ends of said casing, a rod pivoted at its ends to substantially the centers of opposite ends of said door and extending rearwardly and outwardly parallel with said ends and curved forwardly and extending around the front lower edge of said casing and with the aforesaid rod forming supports adapted to permit of said door sliding to a plane parallel with said opening.

1,352,196. ELECTRIC ROUTING-MACHINE. SAMUEL HUNTER, Bellevue, Pa. Filed Apr. 21, 1919. Serial No. 291,525. 6 Claims. (Cl. 144—136.)



1. A routing machine comprising a track and means for holding it in operative relation to the work, a carriage slidable along said track, a second track pivotally mounted on said carriage for horizontal movement, a second carriage slidable on said second track, and a routing tool carried by said second carriage.

1,352,197. MACHINE FOR SEALING CARTONS. HARRY L. JOHNSON, Boston, Mass., and MORRIS RAYMER, Battle Creek, Mich., assignors to Percy E. Ginn, Boston, Mass. Filed Apr. 1, 1918. Serial No. 225,878. 5 Claims. (Cl. 198—8.)



1. In a carton-sealing machine, the combination with a guideway, of an endless chain element extending longitudinally thereof, a sprocket wheel at the entering end of said guideway around which said chain passes, a plurality of pushers pivotally connected to said endless chain and by which cartons are propelled along the guideway, said pushers being constructed to fold back against the chain, and means carried directly by the sprocket wheel to positively position each pusher in its operative position relative to the chain.

1,352,198. X-RAY CONE. HECTOR P. MACLAGAN, Park Ridge, Ill., assignor to McIntosh Battery and Optical Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1918. Serial No. 255,213. 7 Claims. (Cl. 250—34.)

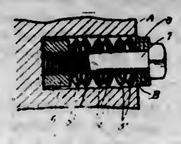
1. In combination, a tubular shield for the local application of X-rays, and rods projecting from the end of said shield for engaging the surface treated.

1,352,199. BOLT-ANCHOR. JOSEPH KENNEDY, Richmond Hill, N. Y., assignor to The Clements Co., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1917. Serial No. 187,064. 2 Claims. (Cl. 72—105.)

1. The method of anchoring a threaded element which consists in forming a recess in the body to which the threaded element is to be anchored, inserting a deformable sleeve of relatively soft ductile material in said recess and then outwardly expanding said sleeve by holding the inner end of the sleeve against inward longitudinal movement and holding at least a part of the wall of the bore of the sleeve against inward lateral movement, and applying inward longitudinal pressure to the outer end of the sleeve, whereby said sleeve is brought into tight engagement with said body, and thereafter screwing the threaded element directly into the bore of the sleeve.

1,352,200. BOLT-ANCHOR. JOSEPH KENNEDY, Richmond Hill, N. Y., assignor, by mesne assignments, to The Orsbee Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1917. Serial No. 187,065. 3 Claims. (Cl. 85—2.4.)

1. Means for anchoring a bolt or other fastening device in an aperture in a wall or other building construction, comprising a plug of hard metal having a flange and a smaller non-tapering portion, said flange forming an outwardly facing shoulder, a similar plug having a flange and a smaller non-tapering portion, said flange forming an inwardly facing shoulder, and a separate independent deformable hollow sleeve of relatively soft material arranged between said shoulders and fitting over the smaller non-tapering portions of the plugs, and means for moving said plugs toward each other to thereby cause outward expansion of the sleeve by longitudinal pressure of said shoulders thereon.



2. Means for anchoring a bolt or other fastening device in an aperture in a wall or other building construction, comprising an internally threaded plug of hard metal having a flange and a smaller non-tapering portion, said flange forming an outwardly facing shoulder, a similar plug provided with a central clearance hole having a flange and a smaller non-tapering portion, said flange forming an inwardly facing shoulder, and a separate independent deformable hollow sleeve of relatively soft material arranged between said shoulders and fitting over the smaller non-tapering portions of the plugs, and a bolt adapted to pass through the clearance hole in one of said plugs and to engage the threads of the other plug arranged to move said plugs toward each other to thereby cause outward expansion of the sleeve by longitudinal pressure of said shoulders thereon.

3. Means for anchoring a bolt or other fastening device in an aperture in a wall or other building construction, comprising an internally threaded plug of hard metal having a flange and a smaller portion, said flange forming an outwardly facing shoulder, a similar plug provided with a central clearance hole having a flange and a smaller portion, said flange forming an inwardly facing shoulder, and a pair of independent deformable hollow sleeves of relatively soft material arranged between said shoulders and fitting over the smaller portions of the plugs, the outer ends of said sleeves fitting against said shoulders and with their inner ends projecting beyond the smaller portions of the plugs, beveled inwardly and abutting against each other, and a bolt adapted to pass through the clearance hole in one of said plugs and to engage the threads of the other plug.

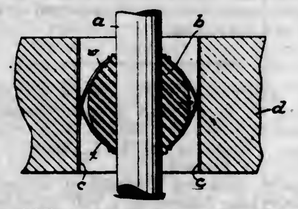
1,352,201. BOLT-ANCHOR. JOSEPH KENNEDY, Richmond Hill, N. Y., assignor, by mesne assignments, to The Orsbee Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1917. Serial No. 187,066. 4 Claims. (Cl. 72—105.)

1. Means for anchoring a member in an aperture in a wall or other body comprising a pair of washers of deformable material in the aperture transversely bent to reduce their external dimension and placed with substantially similar surfaces facing each other, and means for

pressing said similar surfaces together by longitudinal pressure to flatten the washers within the aperture to

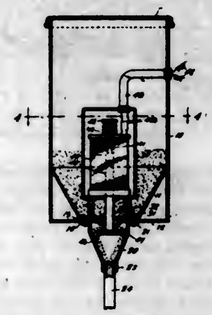
thereby obtain a double toggle grip on the wall of the aperture.

1,352,202. HATCH-COVER. KNUT KNUTSON, Bergen, Norway. Filed Feb. 11, 1919. Serial No. 276,378. 8 Claims. (Cl. 114—201.)



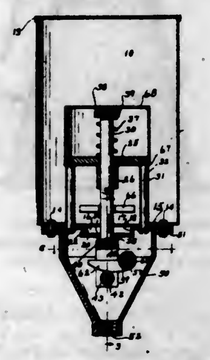
1. A hatch cover comprising a hatch cover frame for connection with a hatch coaming and a corrugated plate secured to said cover frame and extending from side to side of said frame arch-shaped in section and the corrugations arranged transversely of the arch.

1,352,203. FENCEPOST. GEORGE L. LARIMORE, Oklahoma, Okla. Filed Aug. 26, 1919. Serial No. 319,855. 1 Claim. (Cl. 256—58.)



A fence post comprising a cement body, a reinforcing bar therein having one edge projecting beyond the surface of the body and having its lower part curving inwardly, and entirely inclosed by the base of said body and prongs on said projecting edge for receiving the fence wires.

1,352,204. YIELDABLE BEARING FOR CENTRIFUGAL MACHINES. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 8, 1919. Serial No. 270,138. 9 Claims. (Cl. 64—48.)

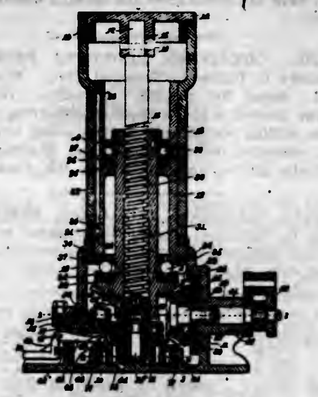


7. In a yielding support for a rotatable spindle, the combination with the spindle, of a bearing guiding the spindle and presenting a sphere-like surface, a spring support presenting an inner cylindrical surface, and two sets of spring fingers anchored on the support, one set being curved downward and inward and contacting with the lower part of the bearing and the other set being curved upward and inward and contacting with the upper part of the bearing, so that, as the spindle moves away from its central position the points of contact of the fingers on the side toward which the spindle moves approach the center of bearing, thereby shortening the effective length of the fingers and causing them to offer relatively great resistance to further movement.

1,352,205. SANDING DEVICE. WILLIAM LINTERN, Cleveland, Ohio. Filed Apr. 3, 1919. Serial No. 287,209. 12 Claims. (Cl. 291—23.)

1. In a sanding device, the combination of a receptacle having a discharge orifice, a valve below the orifice and movable downwardly to open the same, a housing within the receptacle, a member extending from within the housing to the valve for operating it, and electromagnetic means within the housing for operating said member.

1,352,206. SANDING DEVICE. JOHN B. LINTERN, Cleveland, Ohio. Filed Jan. 29, 1920. Serial No. 354,969. 20 Claims. (Cl. 291—36.)

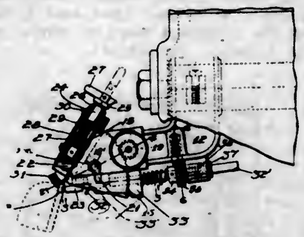


1. In a device of the character described, the combination of a receptacle having a discharge orifice, a member movable through the orifice, a closure for the orifice on said member below the orifice, means within the receptacle for urging the member upwardly, and means below the receptacle for moving the member downwardly.

1,352,207. LIFTING-JACK. WALTER E. LOMBARD, Arlington, Mass. Filed Mar. 26, 1919. Serial No. 288,863. 39 Claims. (Cl. 254—103.)

1. In a lifting jack, the combination of a non-revoluble lifting screw; a revoluble nut for moving said screw endwise; driving-mechanism for said nut including means

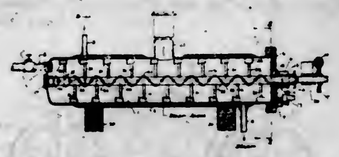
for positively actuating said nut in one direction only; means for preventing end movement of said nut; and



means for controlling the rotation of said nut during the lowering operation.

1,352,208. METHOD OF PRODUCING OXID OR OXIDS OF MANGANESE. BENJAMIN F. LOVELACE, Baltimore, Md. Filed Apr. 24, 1919. Serial No. 292,390. 7 Claims. (Cl. 204—9.)

7. A process of producing an oxid or oxids of manganese comprising electrolyzing with a manganese containing anode in a single compartment cell at a temperature below 35° C. a solution of ammonium carbonate.

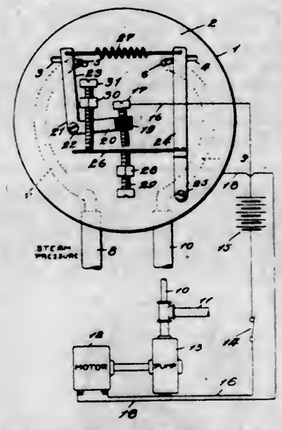


1,352,209. SOLE-EDGE-TREATING MACHINE. ANDREW J. MCCORMACK, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 2, 1918. Serial No. 260,819. 9 Claims. (Cl. 12—32.)

1. In a machine for treating the edge and top marginal faces of a shoe sole, the combination with the edge and top tools and a holder therefor, and means for fixing the adjustment of one tool in the holder with relation to the other tool, of means detachably connecting the adjustable tool with the adjustment determining means and permitting the tool to be removed and replaced without disturbing the adjustment.

1,352,210. APPARATUS FOR RECOVERING MATERIAL FROM SOLUTION. WILLIAM D. MOUNT, Saltville, Va., assignor to Nitrogen Products Company, Providence, R. I., a Corporation of Rhode Island. Filed June 27, 1918. Serial No. 242,331. 3 Claims. (Cl. 127—9.)

1. In apparatus for treating a solution to recover the solute therefrom, the combination of a cylindrical casing, means to support said casing substantially horizontally, means to heat said casing to hasten the evaporation of the solvent therein, combined agitating and unloading means in said casing capable of being driven rotarily in either of two directions, said means having elements, which when driven in one direction tend to agitate the mass being treated by driving portions thereof back and forth between adjacent pairs of said elements and when

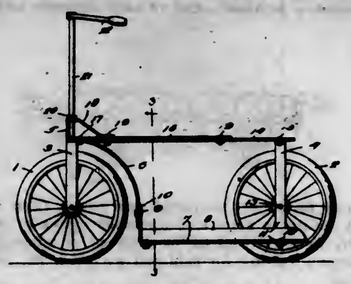


oppositely driven act to unload said casing from one end thereof, means to drive said combined means in either of said directions as required for agitating or unloading, and a removable closure for said end at which the casing is unloaded.

1,352,211. METHOD OF PRODUCING SODIUM BICARBONATE AND HYDROGEN. ADRIAAN NAGELVOORT, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 7, 1920. Serial No. 357,042. 6 Claims. (Cl. 23—22.)

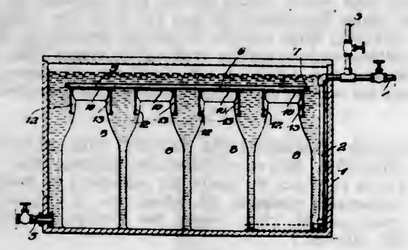
1. The improvement in the effectuation of the ammonia soda process which comprises reacting upon ammoniated brine with carbon dioxid diluted with hydrogen to prevent undue development of heat and favor the formation of relatively large crystals of sodium bicarbonate, while simultaneously separating said carbon dioxid from said hydrogen, and collecting said hydrogen preparatory to using the same in an ammonia synthesizing operation.

1,352,212. CONTROLLING DEVICE FOR ELECTRIC CIRCUITS. EDWARD C. NEWCOMB, Scituate, Mass., and LEWIS L. SCOTT, St. Louis, Mo., assignors to Standard Engineering Company, St. Louis, Mo., a Corporation. Filed Jan. 31, 1919. Serial No. 274,222. 9 Claims. (Cl. 200—81.)



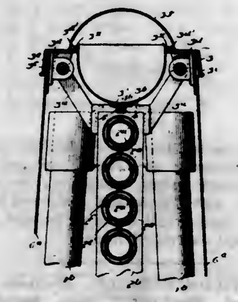
6. A circuit-controlling device having two members actuated independently by forces developed by different agencies, an electric circuit controlling the action of one of said forces, and differential make-and-break contact mechanism for said circuit actuated by said members and regulated by said controlled force.

1,352,213. CHILD'S VEHICLE. MICHAEL J. O'MEARA, Anderson, Ind. Filed Oct. 2, 1919. Serial No. 327,895. 4 Claims. (Cl. 280—87.5.)



3. In a child's vehicle, the combination of alined front and rear wheels, forks for said wheels, a frame rigidly

connecting the forks, a bracing head member mounted on the front fork and having a brace extension attached to the aforesaid main frame, horisontally extending twin

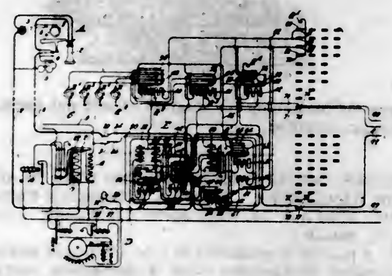


steps on either side of the rear wheel and positioned a considerable distance below the axle, rear fork extensions to which the rear portion of the rear steps are attached, and means supporting the forward end of the twin steps.

1,352,214. MACHINE FOR PASTEURIZING MILK AND OTHER LIQUIDS. GEORGE E. PAGE, Rochester, N. Y., assignor of one-half to Paul C. Zaenglein, Rochester, N. Y. Filed Oct. 8, 1917. Serial No. 195,283. 3 Claims. (Cl. 126—272.)

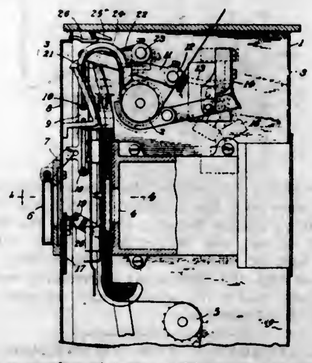
3. A pasteurizing apparatus comprising a receptacle provided with means for supplying fluid to the bottom thereof and also with a draining means, a plurality of containers in said receptacle, and a cover provided with a plurality of hoods for said containers having walls extending below the tops of the containers, said cover being supported in spaced relation to said containers to form an air seal for said containers.

1,352,215. LIQUID-TREATING APPARATUS. LEROY S. PROUTS, Canton, Ohio, assignor, by mesne assignments, to The Miller Pasteurizing Machine Company, Canton, Ohio, a Corporation of Ohio. Filed June 16, 1916. Serial No. 104,128. 16 Claims. (Cl. 257—184.)



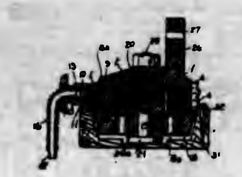
3. A liquid distributer formed with a discharge opening and a flow wall extending from the discharge opening in the direction of its axis and disposed in alinement with the side wall of the opening, in combination with a temperature changing medium circulating pipe arranged in position to have the liquid from the opening discharged thereagainst.

1,352,216. OBTAINING PRODUCTS FROM FILMS. WILLETT C. PIERSON, Cleveland, Ohio. Filed Nov. 27, 1917. Serial No. 204,298. 5 Claims. (Cl. 23—24.)



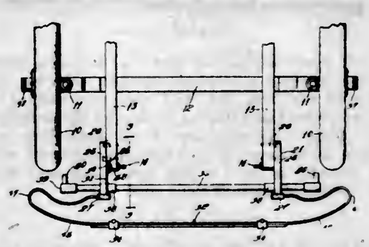
1. The method which comprises dissolving celluloid in acetone, adding water until a thick mass collects in the liquid, removing the thick mass and washing the same, and finally drying and pulverizing the washed mass.

1,352,217. SELECTIVE SIGNALING SYSTEM. WINFRED T. POWELL, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1916. Serial No. 116,481. 30 Claims. (Cl. 179—17.)



1. In a telephone system, means comprising a selector and connector switch for connecting a calling and a calling line, together with means individual to said selector for selectively signaling the stations on the called line controlled in a preliminary operation of the selector switch separate from the trunk selecting operation thereof.

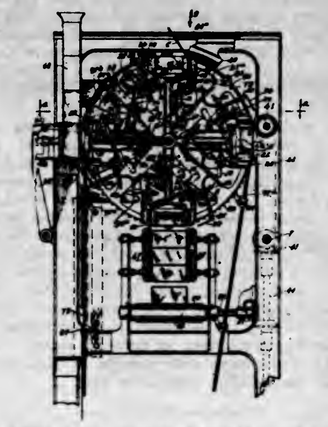
1,352,218. SAFETY DEVICE FOR MOVING-PICTURE MACHINES. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1916, Serial No. 102,070. Renewed Dec. 29, 1919. Serial No. 348,045. 6 Claims. (Cl. 88—17.)



1. In a moving picture machine a gate or wall having a projection aperture to the rear of the path of the film and a plurality of safety shutters mounted on said gate or wall and coöperating with said aperture, means controlled by the driving mechanism of the machine for operating one such shutter, and means controlled by the film itself for operating the other shutter, said last named means comprising a member arranged adjacent the path of film to be engaged and shifted by a departure of the film from its normal path and positive mechanical connections between said part and said shutter.

1,352,219. VIBRATOR. HENRY PRELL, Cleveland, Ohio. Filed May 20, 1918. Serial No. 235,468. 8 Claims. (Cl. 175—338.)

1. A vibrator for use in the preparation of foundry molds, comprising a hollow casing adapted for attachment to the part to be vibrated and provided with an integral central core and an annular cavity surrounding the same, a coil in said cavity, a bolt adjustably threaded into said core and provided with a head forming a stationary abutment, and an armature slidable on said bolt and vibrating between said casing and bolt head.



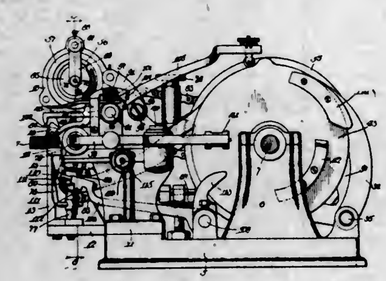
1,352,220. AUTOMOBILE-BUMPER. FRANK R. PROCUNIER, Chicago, Ill., assignor of one-fourth to Jesse C. Stryker, one-fourth to Louis N. Turner, and one-fourth to Louis H. Nissen, Chicago, Ill. Filed Feb. 5, 1920. Serial No. 356,537. 7 Claims. (Cl. 293—55.)

6. In combination with a vehicle having a pair of longitudinal channel frames each of which is provided with a laterally extending boss at its forward end, a bumper arranged forwardly of the frames and adapted to be carried thereby, an means for mounting the bumper upon the frames comprising a pair of brackets, one for each frame, each of which is provided at its rear with a part that underlies the frame, and at its front with another part that rests upon the boss, means for holding each bracket to its associated frame to receive constant support therefrom, a head formed at the forward end of each bracket, there being also a cylindrical bearing therein, and duplex bumpers carried by the brackets, one bumper having its ends secured to the heads of the two brackets and the other bumper being rotatably journaled within the bearings of the two brackets and means carried by said rotatable bumper adapted for projection between the forward wheels of the vehicle to prevent the same from being steered, substantially as described.

1,352,221. MACHINE FOR SEALED WRAPPED PACKAGES. JAMES D. REIFSNYDER, Philadelphia, Pa., assignor to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 6, 1916. Serial No. 118,668. 17 Claims. (Cl. 93—7.)

1. A machine for adherently affixing adhesively coated wrapper blanks of the notched or cornered type to the exterior walls of a package in the manufacture of sealed wrapped packages, comprising in combination means for advancing a package to bring a wall thereof into contact with a selected adhesively coated section of a positioned wrapper blank to adherently affix said section of the blank to said wall the direction of advance being at substantial right angles to the plane of the positioned blanks means for thereafter adherently affixing adjacent adhesively coated side covering sections of the blank to two side walls of the package devices for adherently affixing other adhesively coated portions of the blank to opposite ends of the package and means for thereafter adherently affixing adhesively coated end label portions of the blank to the opposite end walls of the package to cover said walls.

2. A machine for affixing adhesively coated wrapper blanks of the notched type to the exterior walls of a package, in the formation of sealed wrapped packages, comprising a traveling carrier, a plurality of packages, holding devices movable with said carrier, means for successively advancing adhesively coated wrapper blanks and positioning them in coöperative relation with said packages holding devices, means for successively feeding packages to be wrapped in a direction substantially transverse to the plane of the positioned blank to locate a side wall of each package in direct contact with a selected adhesively coated portion of a positioned wrapper blank and thence into said holding devices, means for advancing the carrier, means for adherently affixing portions of the blank in position contacting with the remaining side walls of the package, and means for adherently affixing adhesively coated marginal portions of the blank across each of the four edges of the end walls of the packages.

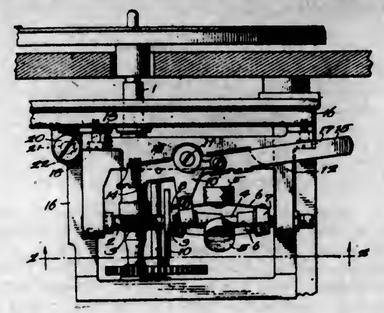


3. A machine for affixing adhesively coated wrappper blanks of the notched type, providing a plurality of marginal laps, to the exterior walls of a package in the formation of sealed wrapped packages comprising a traveling carrier, a plurality of package holding devices movable with said carrier, means for successively advancing adhesively coated wrapper blanks and positioning them in coöperative relation with said package holding devices, means for successively feeding packages to be wrapped in a direction substantially transverse to the plane of the positioned blank to locate a side wall of each package in direct contact with a selected adhesively coated portion of a positioned wrapper blank and thence into said holding devices, means for advancing the carrier, means for wrapping the body portion of the blank about the package and completely covering the side walls with the longitudinal blank edges in adhesively connected superposed position, and means for adherently affixing to the end walls of the package adhesively coated marginal laps adjacent each edge of each end wall.

4. A machine for affixing adhesively coated wrapper blanks of the notched type, providing a plurality of marginal laps, to the exterior walls of a package in the formation of sealed wrapped packages, comprising a traveling carrier, a plurality of package holding devices movable with said carrier, means for successively advancing adhesively coated wrapper blanks and positioning them in coöperative relation with said package holding devices, means for successively feeding packages to be wrapped in a direction substantially transverse to the plane of

the positioned blank to locate a side wall of each package in direct contact with a selected adhesively coated portion of a positioned wrappper blank and thence into said holding devices, means for advancing the carrier, means for wrapping the body portion of the blank about the package and completely covering the side walls with the longitudinal blank edges in adhesively connected superposed position, means for positioning against each end wall an end covering wrapper section, and means for folding marginal laps against the package walls in position to provide continuous adhesive connection between the edges of said end portions and the body portion of the wrapper.

5. A machine for affixing adhesively coated wrapper blanks to the exterior walls of a package in the manufacture of sealed wrapped packages, comprising in combination a traveling carrier, a plurality of platens mounted upon and movable with said carrier, a set of wrapper blank folding and affixing devices associated with each platen, a package support or rest arranged adjacent the path of movement of the platens, means cooperating with but independent of the carrier for successively positioning the adhesively coated wrapper blanks in coöperative relation with said package support or rest and one of said platens, means for imparting a step by step advancing movement to the carrier, and means for temporarily locking the wrapper blank advancing means against movement to effect an accurate register of a selected wall of the blank with relation to each associated platen and the package support or rest.

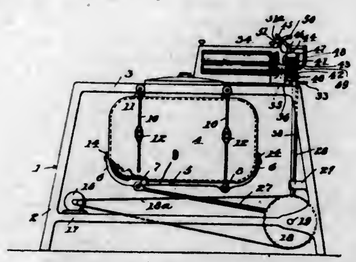


1,352,222. LEATHER-STITCHING MACHINE. RAYMOND H. RUDOLPH, Elgin, Ill., assignor of one-half to Charles Friedman, Chicago, Ill. Filed May 22, 1919. Serial No. 298,969. 13 Claims. (Cl. 112—38.)

1. In a lock stitch sewing machine, the combination of a work support, a reciprocatory awl operating from the under side of the work, a longitudinally tensioned shaft for supporting the awl, a notched needle operating from the upper side of the work, a cam operated lever engaging one end of the shaft to bodily move the shaft and awl to feed the work and to position the awl opening therein in line with the needle, a rotary shuttle disposed above the plane of the needle and rotating about an axis parallel with the direction of feed of the work, and means cooperating with the needle to engage the loop of thread carried thereby and position the same for entrance by the shuttle.

1,352,223. SPEED-GOVERNOR. HENRY G. SAAL, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,553. 5 Claims. (Cl. 188—187.)

1. Speed governing mechanism including a motor operated worm wheel; a frame for supporting the worm wheel; a bracket pivotally connected with said frame at a point remote from the axis of said worm wheel and affording an axis of swinging movement which is substantially parallel with the axis of said wheel; a governor mounted upon said bracket inclusive of a worm shaft in mesh with the worm wheel, a rotatable brake member upon the shaft, and a second brake member complemental to the rotatable brake member; and a lever carrying the

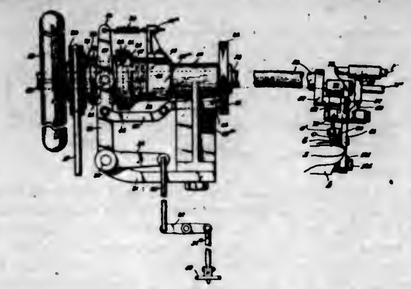


second aforesaid brake member and itself also pivotally mounted upon said bracket.

1,352,224. TURNTABLE FOR PHONOGRAPHS. HENRY G. SAAL, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,887. 1 Claim. (Cl. 274—39.)

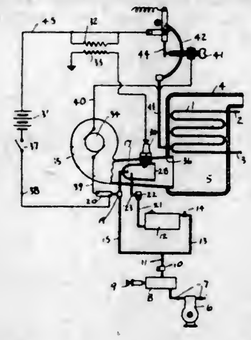
A disk record supporting turn table having a depending rim and provided with sheet material covering the top surface of the turn table and the outer surface of the turn table rim and extended to engage the inner surface of the turn table rim; and a clamping ring of such diameter as to have tight clamping engagement with the sheet material to force it into firm engagement with the inner surface of the turn table rim.

1,352,225. WASHING-MACHINE. WILLIAM H. SARGENT, St. Louis, Mo., assignor to Wayne Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 14, 1919. Serial No. 289,988. 2 Claims. (Cl. 259—75.)



1. In a washing machine, the combination of a frame having elevated side bars, a tube, a cradle on which said tube rests, links suspended from said elevated side bars and attached at their lower ends to said cradle enabling said cradle to swing to and fro in a substantially vertical plane, turnbuckles in said links for adjusting the length thereof, and means attached to said cradle for swinging the same.

1,352,226. STOPPING AND STARTING MECHANISM. AUGUST R. SCHOENKY, Somerville, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Mar. 22, 1919. Serial No. 284,451. 7 Claims. (Cl. 112—219.)



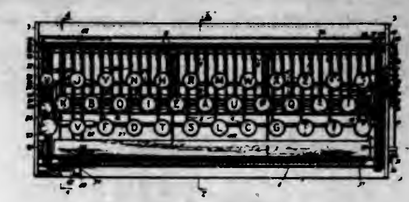
1. In a machine for stitching shoe uppers to sole lips, chain stitching mechanism comprising a curved hooked

needle operating so that the needle stands in the work at the completion of each stitch, a frictional stopping means controlled to cause stoppage with the needle in the

work, and a slip connection associated with said stopping means such as to permit reversal sufficient to extract the needle.

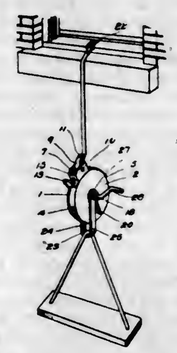
1,352,227. COMBUSTION SYSTEM. LEWIS L. SCOTT, St. Louis, Mo., assignor to Standard Engineering Company, St. Louis, Mo., a Corporation. Filed Mar. 6, 1918. Serial No. 220,856. 10 Claims. (Cl. 158—29.)

1. A hydrocarbon burner comprising a plurality of liquid fuel spraying and mixture forming atomizers, an ignition device coöperating directly with one of said atomizers, and means for forcing additional atmospheric air into the mixtures from all of said atomizers after the ignition of the mixture in one of said atomizers by said ignition device.



1,352,228. BRUSH. STUART SPEIRS, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,218. 4 Claims. (Cl. 15—35.)

1. The combination with a brush having a wooden back, of an abrasive block yieldingly carried thereby.

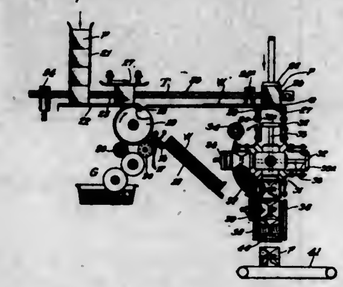


1,352,229. TYPEWRITING-MACHINE. EDWARDS B. STUART, Chicago, Ill. Filed Dec. 13, 1918. Serial No. 266,569. 7 Claims. (Cl. 197—1.)

1. A typewriting machine, comprising a stationary platen, a carriage arranged to travel over said platen from side to side thereof, a type-carrier supported in said carriage, said type-carrier being shiftable in said carriage in a direction transverse to the direction of travel of said carriage, and a plurality of type keys each arranged to

differentially shift the type-carrier in said carriage and impart a step-by-step motion to said carriage.

1,352,230. PORTABLE FIRE-ESCAPE. PIETRO P. VESCOVI, Ottawa, Kans. Filed May 9, 1919. Serial No. 295,842. 8 Claims. (Cl. 227—22.)



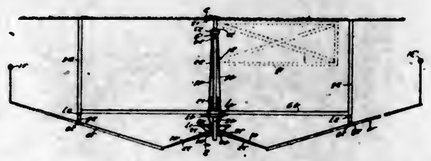
1. A fire escape comprising a casing having a braking face therein and provided with an opening, a flange about the opening, a flexible connection coiled within the casing, the periphery of which is adapted to bear against the braking face, a drum upon which the flexible connection is wound, trunnions on the drum projecting through alining, elongated slots in the casing, a braking face rigid with the flange surrounding the opening, a pivoted braking member adjacent to the braking face on the flange and having a curved, portion engaging the flexible connection, and a yoke carried by the trunnions.

1,352,231. PADDING. WILLIAM H. WEHRENBERG, La Crosse, Wis. Filed Aug. 8, 1918. Serial No. 248,888. 4 Claims. (Cl. 139—9.)

1. An article of the character described consisting of a pair of superposed layers embodying transversely extending strips of batting, weave cords for retaining the strips of each layer in close relation with other and providing square portions, and longitudinally extending reinforcing strands engaged through the alined square portions and transversely of the strips.

1,352,232. METHOD OF PRODUCING SEALED WRAPPED PACKAGES. WILLIAM A. WEIGHTMAN and CHARLES H. NITSCH, Philadelphia, Pa., assignors to Stokes & Smith Company, Summerdale, Pa., a Corporation of Pennsylvania. Filed June 29, 1917. Serial No. 177,832. 18 Claims. (Cl. 93—7.)

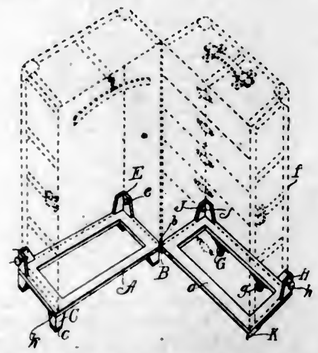
1. The method of covering a packet with an adhesively coated wrapper blank having a body portion formed of integrally connected sections substantially corresponding to the several longitudinal faces of the packet and also having marginal extensions adapted to cover the lateral faces of the packet, which consists in assembling the blank and packet with a longitudinal face of the packet in contact with an adhesively coated corresponding section of the blank adjacent one end of the blank and during continuous travel of both blank and packet, and thereafter applying the remaining sections of the blank successively to the longitudinal faces of the packet and the marginal laps successively to the lateral faces of the packet.



2. In the art of adherently applying a wrapper blank to an article, the method of assembling a thin and flexible blank adapted to cover a plurality of faces of the articles, which consists in continuously moving the article along a predetermined path, continuously supporting said article during its movement in said path, and inserting said blank between the article and its support during travel with a face of the article in contact with an adhesively coated portion of the blank and with said blank extending in the direction of article travel beyond said face of the article along said support.

3. In the art of applying a cover blank to an article, the method of applying a wrapper blank to a plurality of longitudinal faces of the article which includes supporting the article during its continuous travel along a fixed path on a plurality of supports, positioning the cover blank on one of said supports, applying adhesive to said blank while on said support, and bringing said blank into engagement with said article while both blank and article are supported by said support.

4. In the art of producing sealed wrapped packages, the method of assembling the packet and cover blank during travel thereof, which consists in positioning the cover blank on a support and adhesively coating a surface thereof, and while so supported, bringing a face of the packet into registration contact with the complemental portion of the adhesive surface of the blank to produce the assembly, whereby the major portion of the blank is free from adhesive connection with the packet in the direction of packet travel, and thereafter applying the unattached portions of the blank adhesively to the remaining faces of the packet.

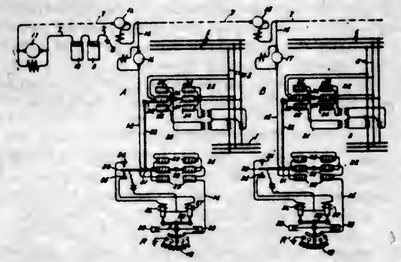


5. In the art of producing sealed wrapped packages, the method of assembling the packet and cover blank, which consists in supporting the cover blank during adhesive-application and moving the support to advance the cover blank with its adhesive surface uppermost, and advancing the packet into contact with the advancing blank and with the face of the packet in registration with the complemental portion of the adhesive surface of the blank to produce the assembly during the advancing movements, and with the blank support serving to support both blank and packet during assembly.

1,352,233. GATE. WILLIAM EUGIN WHITE, Manor, Tex. Filed Mar. 28, 1917. Serial No. 157,977. 1 Claim. (Cl. 39—35.)

In a gate, the combination with a gate frame, of a rotatable hinge stile pivoted vertically in the frame and carrying a cross arm at its upper end, a gate carried by said hinge stile, a lever vertically mounted at one side of the gate frame, a latch carried by the gate frame for engagement with the gate, and a cable connected with the latch and passing to the lever and from the said lever to the cross arm, the said cable having a sliding engagement with the lever whereby in the opening of the gate the latch is caused first to disengage the gate and the gate thereafter swung to open position.

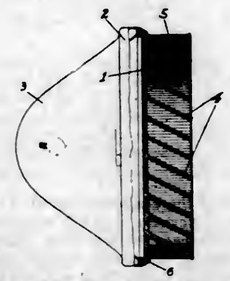
1,352,234. WARDROBE-TRUNK OPENER AND CARRIER. WILMOT W. WHITTEN, Washington, D. C., assignor of one-half to Edwin Guthrie, Washington, D. C. Filed Oct. 28, 1919. Serial No. 333,926. 4 Claims. (Cl. 280—37.)



3. The combination with a wardrobe trunk, of detachable frames for supporting the trunk on end, one part of the trunk resting on one frame and the other part on the other frame, said frames having portions pivotally connected whereby said frames may be closed together or opened horizontally correspondingly moving the parts of the trunk, one of the frames having casters, and one frame having feet adapted to engage the floor frictionally.

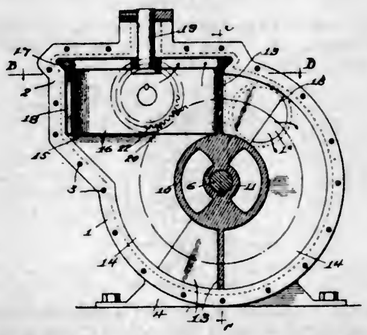
1,352,235. TOTALIZING POWER SYSTEM. LEONARD WILSON, Salt Lake City, Utah, assignor to General Electric Company, a Corporation of New York. Filed Apr. 20, 1918. Serial No. 229,732. 6 Claims. (Cl. 171—34.)

1. A system for totalizing the power supplied at a plurality of stations, comprising a circuit having parallel portions, associated with the respective stations, and a main portion, individual sources of current connected to said parallel portions and means associated with the respective stations and controlled by the power supplied thereat for varying the magnitude of the current in said parallel portions so that it bears a definite relation to the magnitude of the power being supplied at the respective stations associated therewith.



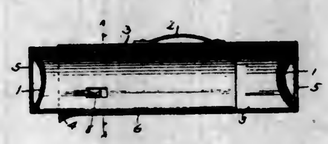
3. A system for totalizing the power supplied at a plurality of stations, comprising a circuit having parallel

portions, associated with the respective stations, and a main portion, means for energizing said circuit, and means, controlled by the power supplied at the respective stations



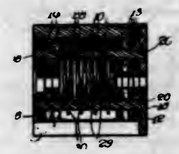
and by the current in said parallel portions associated therewith, for varying the current in said parallel portions in a definite relation to the power supplied at the respective stations.

1,352,236. NON-GLARE LENS FOR HEADLIGHTS. JOHN O. YARDLEY, Stockton, Calif. Filed Aug. 5, 1919. Serial No. 315,467. 2 Claims. (Cl. 240—48.4.)



1. In combination with a lens for headlights which comprises a clear glass disk and transverse and parallel plates formed therewith and projecting outwardly therefrom at a downward slant, an endless sheet metal ring positioned about the plates to shield the same, the ring being removably beaded onto the periphery of the disk, the rim of the headlight engaging the beaded portion of the ring to hold the same and the disk in place.

1,352,237. WATER-MOTOR PUMP. MORIEL V. ANDREWS and STEPHEN W. HOLMAN, Marmarth, N. D. Filed Jan. 29, 1920. Serial No. 354,054. 2 Claims. (Cl. 103—44.)

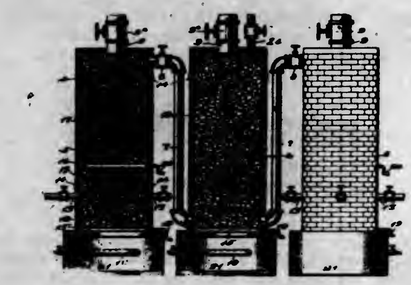


1. In a water motor pump of the character described, a pair of spiral lifting vanes, a cylindrical open end gate revoluble between the vanes on an axis plane perpendicular to the axis plane of the vanes and permitting the vanes to pass through the wall of the gate while the water is passing through the ends of the gate, and means for revolving the vanes and the gate in unison.

1,352,238. AUTOMOBILE-TIRE-CHAIN HOLDER. ERNEST LEMUEL ARTHUR, Pembroke, Va. Filed May 17, 1919. Serial No. 297,815. 1 Claim. (Cl. 220—8.)

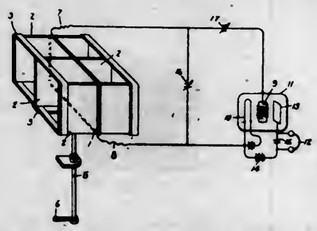
In an article of the character described, a pair of cylindrical metallic shells having an open end and fitting one within the other, the other end of the shells being closed by a concaved shell member, the outer shell having a hand strap extending lengthwise thereof and a lip protruding from the open end, the inner shell having a plurality of slots adjacent to its closed end, a plurality of plate springs secured to the inner face of the inner shell and having their free ends working through the slots for engaging the inner face of the outer shell, and a flat bar extending centrally across the closed ends flush with the periphery of the shells so as to form seats and hand grasps for the shells.

1,352,239. LOCK. EDWARD P. BAIRD, Evanston, Ill., assignor to Chicago Cabinet Lock Company, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1919. Serial No. 296,288. 9 Claims. (Cl. 70—46.)



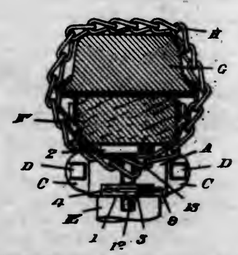
1. In a cylinder lock, the combination of a casing, a rotatable carrier comprising a series of disks within the casing and journaled in the casing and side-bars secured together, and key-operable plate-tumblers transversely slidable in the carrier and into interlocking relation with the casing, the carrier comprising also a disk provided with a stop lug for engaging the casing to limit the rotation of the carrier.

1,352,240. OIL-CLOTH-CUTTING MACHINE. FREDERICK M. BALDWIN, Los Angeles, Calif. Filed Aug. 25, 1919. Serial No. 320,044. 19 Claims. (Cl. 164—73.)



1. A machine for cutting oil cloth and the like comprising a table having a top, means on the top for retaining a roll of cloth thereon, a cutter arranged to travel across the table, means for holding the free end of said roll, and clamping fingers at the cutting line for holding the cloth to the table during the cutting operation.

1,352,241. METHOD OF GENERATING GAS. HOSTON BATCHELOR, Boston, Mass. Filed Feb. 8, 1917, Serial No. 147,483. Renewed Jan. 13, 1920. Serial No. 351,253. 1 Claim. (Cl. 48—214.)

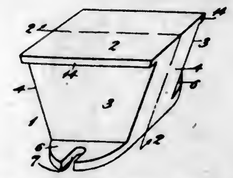


The herein described process of generating gas which consists of alternately heating two separate masses of refractory and porous material, spraying upon such masses a homogeneous mixture of hydro-carbon and H_2O, and conducting the generated gas through a third mass of refractory material which constitutes a common path for the gases from both the first named masses.

1,352,242. WIRELESS RECEIVING APPARATUS. ERNST J. BRAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 13, 1917. Serial No. 148,400. 3 Claims. (Cl. 250—11.)

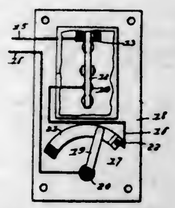
1. The method of directive receiving of wireless signals by means of a receiving coil which consists in utilizing said coil as a receiving antenna, rotating the coil in a horizontal plane until the response in receiving apparatus connected thereto is a maximum for the desired signals and at the same time absorbing the energy of undesirable impulses of all frequencies in such a way that they will produce substantially no effect in the receiving coil.

1,352,243. FASTENING DEVICE. ASHLEY L. BISHOP, Bristol, Conn., assignor to The Steel Products Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 27, 1918. Serial No. 268,521. 8 Claims. (Cl. 24—73.)



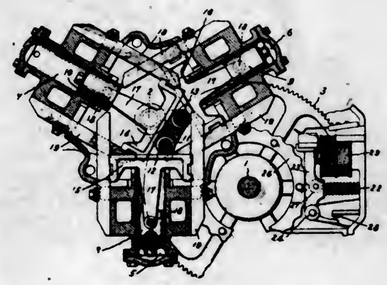
7. Two relatively fixed parts, one of said parts being perforated and the other part being adapted to receive the end portion of the element hereinafter referred to, one of said parts being slotted, in combination with an element adapted to have movement in the perforated part, having some portion at all times located in the perforation thereof and having an end portion normally received by the other part, said element having an annular groove, a catch pivotally mounted in the slotted part and normally extending through a portion thereof into the groove of said element, means for locking said catch in normal position and means for limiting its outward movement.

1,352,244. PROCESS OF DAMPENING LEATHER. FREDERICK J. BLATZ, Wilmington, Del., assignor to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1917. Serial No. 148,677. 1 Claim. (Cl. 91—70.)



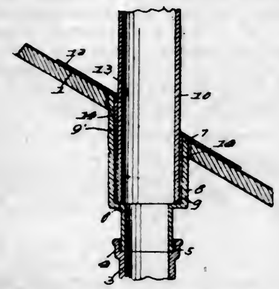
The process of treating leather to effect dampening thereof, which consists in subjecting the leather, while in a flat condition, to water in the form of fine spray in the presence of heat, whereby the body of the leather may be softened by the combined action of heat and moisture.

1,352,245. CONCRETE ANCHOR OR INSERT. CHARLES J. BRANCH, Philadelphia, Pa. Filed May 27, 1916. Serial No. 100,178. 2 Claims. (Cl. 72—105.)



1. In a device of the character stated, a wedge-shaped anchor or insert, comprising a closed body portion, having a closed top member provided with parallel vertical rectilinear side walls, oppositely located rectilinear end walls converging downwardly from said top so as to form an angular nut chamber between said walls, whose internal area increases upwardly and is greatest at its top, oppositely located top anchoring flanges forming a continuation of said top and overhanging said closed vertical walls, slotted bottom anchoring flanges projecting laterally from the bottom of said vertical flanges, an open mouth in the bottom of said body of greater length than width, the longest dimension of said mouth extending at a right angle to said vertical side walls, and a standard nut inserted endwise therein, said nut when turned into a horizontal position being supported upon said inner converging walls at a point above said mouth.

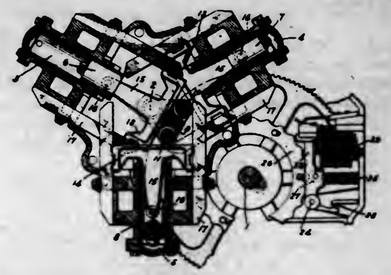
1,352,246. ELECTRIC SWITCH. LAWRENCE E. CARLSON, Huntington, Ind. Filed Nov. 20, 1919. Serial No. 339,485. 1 Claim. (Cl. 219—48.)



A switch mechanism for lighting systems embodying a base plate, a circuit closer, provided with terminals and a switch arm for connecting the same and means operable from the front of the base plate for actuating the switch arm, an arcuate resistance bar mounted on the base plate and terminally connected with one of said contacts, a blade pivotally mounted at one end of the base plate and having its remaining end bearing upon the resistance bar for movement thereof, and a knob exposed at the front of the base plate and connected to the pivot of the blade, whereby angular movement may be imparted to the latter for the purpose specified.

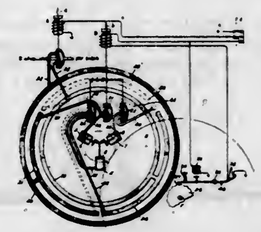
1,352,247. CONTROLLER FOR ELECTRIC MOTORS. FRANK E. CASE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 21, 1918. Serial No. 255,142. 6 Claims. (Cl. 200—17.)

1. In a circuit controller the combination with a controlling member, of means for operating the same comprising a plurality of pistons, means for applying fluid pressure to said pistons successively and connections between the pistons and the controlling member whereby a complete stroke of each piston advances the controlling member a step and returns another piston to operative position.



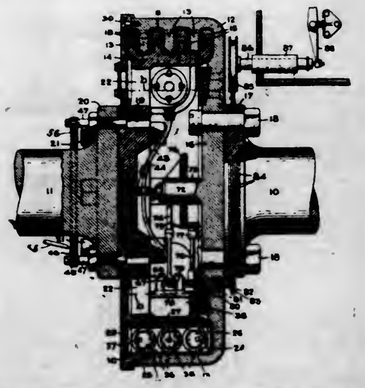
1,352,248. ROOF CONNECTION FOR VENT-PIPES. ENOS E. COAR, South Bend, Ind. Filed Dec. 13, 1917. Serial No. 206,995. 3 Claims. (Cl. 285—31.)

1. A vent pipe fitting for roof connection adapted for concealment below a pitched roof and having an enlarged upper portion in which is received that section of the vent stack projecting above the roof, the said enlarged portion having an inclined upper edge and comprising a plurality of readily separable terminal sections removable to effect a change in the inclination of said upper edge to conform to the pitch of the roof in connection with which the fitting is employed.



1,352,249. CONTROLLER FOR ELECTRIC MOTORS. ARTHUR T. CROCKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 28, 1918. Serial No. 259,902. 10 Claims. (Cl. 200—17.)

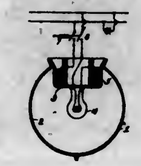
6. A circuit controller comprising a controlling member, a crank shaft and a crank thereon for driving the same provided with two crank pins in triangular relation with the shaft, and a plurality of fluid actuated reciprocating pistons driving said crank by engaging one of said crank



pins and rotating the crank until the other crank pin is similarly engaged.

1,352,250. CONTROLLER FOR ELECTRIC MOTORS. CLARENCE T. CROCKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 6, 1918. Serial No. 261,332. 22 Claims. (Cl. 121—38.)

1. A circuit controller comprising a controlling member, three fluid actuated reciprocating pistons disposed at angles of 120 degrees from each other for operating the same and two electromagnetically operated valves controlling the admission of fluid under pressure to said pistons to control the direction of rotation of said member and positively stop the same.

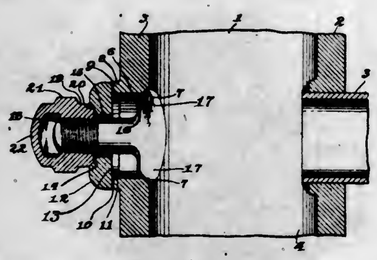


1,352,251. FLEXIBLE COUPLING. EDGAR D. DICKINSON and JAMES WILKINSON, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 9, 1919. Serial No. 295,921. 12 Claims. (Cl. 64—96.)

1. In combination, concentric driving and driven members, transverse rows of interleaving axially alined teeth

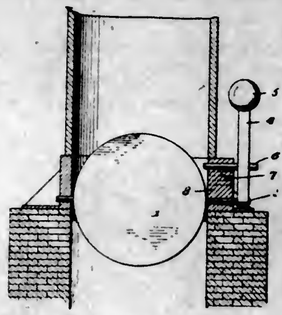
carried thereby, spring shoes which extend throughout the length of the rows of teeth, and springs engaging said spring shoes.

1,352,252. LIGHTING MEANS. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed May 10, 1917. Serial No. 167,725. 1 Claim. (Cl. 240—1.)



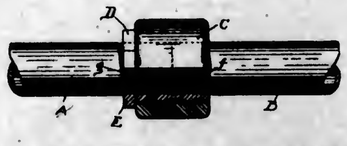
Illuminating means comprising a globe containing a coating of phosphorescent material, a source of light within the globe, and means for providing a magnetic field in the zone of said coating.

1,352,253. ATTACHMENT FOR DIESTOCKS. BRUNO E. EICHENDORFF, San Francisco, Calif. Filed Mar. 22, 1919. Serial No. 284,475. 8 Claims. (Cl. 10—151.)



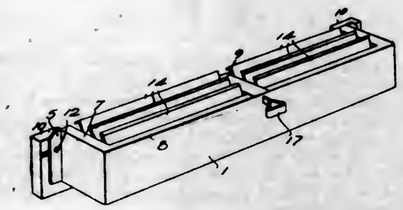
1. The combination with a die stock of a slotted disk; a slide mounted within the disk and arranged to form a squared aperture with the slot in the disk; and means for moving the slide to engage the shank of a tool.

1,352,254. CLOSURE FOR BOILER-HEADERS. VICTOR LEE EMMASON, Philadelphia, Pa. Original application filed May 8, 1919, Serial No. 295,541. Divided and this application filed Nov. 3, 1919. Serial No. 335,562. 9 Claims. (Cl. 220—25.)



1. In a liquid vaporizer, a manifold comprising front and rear walls, the front walls having an externally flanged hand hole with oppositely disposed recesses inclined to the plane of said flange on the internal rim, a cap, a T-head bolt seated in said recesses and passing through said cap and having an adjustable engagement with said recesses and a nut on said bolt.

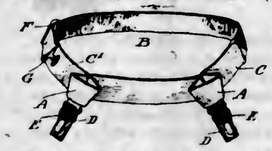
1,352,255. SAFETY-DAMPER FOR OIL-STILLS AND THE LIKE. VICTOR LEE EMMASON, Philadelphia, Pa. Original application filed May 6, 1920, Serial No. 379,356. Divided and this application filed May 11, 1920. Serial No. 380,614. 5 Claims. (Cl. 126—287.5.)



1. In combination with a stack, a damper therein, an operating rod for said damper and a heat destructible element situated in the path of movement of said operating rod and adapted to normally hold said damper in position.

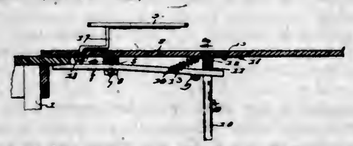
1,352,256. COUPLING FOR METAL PIPES. FREDERIC WM. ERICKSON, East Greenwich, R. I. Filed Apr. 22, 1920. Serial No. 375,661. 3 Claims. (Cl. 285—128.)

1. A coupling to unite the ends of metal conduits comprising a bushing consisting of a plurality of complementary externally threaded members of uniform internal diameter from end to end and internally threaded, the externally threaded portions being also of uniform diameter, and an internally threaded sleeve to engage the external threads of the bushing members and confine said members in engagement with the conduits.



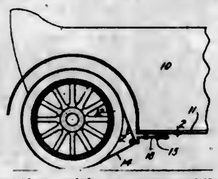
1,352,257. VENTILATOR. CARL EVANS, Battle Creek, Mich. Filed Mar. 22, 1917, Serial No. 156,703. Renewed Oct. 18, 1919. Serial No. 331,754. 2 Claims. (Cl. 98—31.)

1. A ventilator, including a housing having an open front wall and flanges formed on the ends and bottoms thereof, anchoring means adjustably mounted on said end flanges, a partition arranged intermediate the ends of the housing, a plurality of longitudinally disposed slats rotatably mounted in the housing ends and said partition, cranks engaged with the adjacent ends of said slats, and an adjustable bar movable in the partition and loosely engaged with said crank for causing movement of the slats.



2. A ventilator including a housing having an open front wall, anchoring means on the ends thereof, a plurality of slats rotatably mounted in the top of said casing, cranks engaged with the adjacent ends of the slats, and a bar disposed transversely of the intermediate portion of the casing and formed with a series of recesses loosely engaged over said crank portions and having its free end extending through one side wall of the casing.

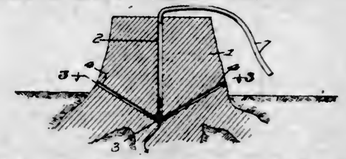
1,352,258. METHOD OF MAKING GARTERS. ROBERT GORTON, Brookline, Mass.; Charles W. Noyes administrator of said Robert Gorton, deceased. Filed Oct. 7, 1919. Serial No. 329,073. 2 Claims. (Cl. 241—6.)



1. The method of forming a garter, which consists in folding the opposite end portions of strip material upon the middle portion thereof, joining the folded portions at each end by a transverse line of stitches, extending the free portion of the strip at each end to form a part of the leg-band, and then flattening the loop at each end and securing it to the free end and to the middle portion of the strip.

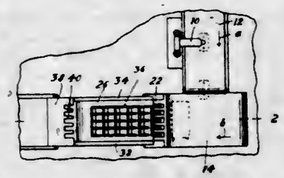
1,352,259. IRONING-BOARD. INEZ GRAVES, Seattle, Wash. Filed May 2, 1919. Serial No. 294,349. 1 Claim. (Cl. 68—10.)

A household article of the kind described comprising a board, a pair of clamping plates mounted on the under face of the board so that their one extremity may in conjunction with the board effect a clamping operation upon the edge of a shelf or a table, a leg, formed with a cross bar which is hingedly attached to the board on the under face thereof and which lies between the other extremities of the plates and the board, the leg limited to a substantially perpendicular position with reference to the board but foldable down thereagainst, the cross bar bearing against the plates, a spring having one end connected with the plates, and a wire strand passing between the cross bar and the board and having one end secured to the spring and the other end to the board in the manner and for the purpose herein specified.



1,352,260. NON-SKID DEVICE FOR MOTOR-VEHICLES. GEORGE GUNTHER, Seattle, Wash. Filed June 12, 1918, Serial No. 239,656. Renewed Feb. 3, 1920. Serial No. 355,959. 5 Claims. (Cl. 305—3.)

1. In combination with an automobile and a driving wheel thereof, an endless belt passing peripherally around the wheel being of greater length than the wheel circumference, a shaft mounted upon the automobile in the central vertical plane of the wheel capable of being longitudinally movable and rotatable or fixed from rotation, and a vertically and horizontally adjustable yoke carrying an idler puller on an axis transverse to the shaft, said pulley being inside said belt



5. In a device of the character described, a bracket carrying member, a bracket comprising two separate parts individually adjustable on said member and one of the parts removable from said member, and a pulley shaft carried by and between said bracket parts.

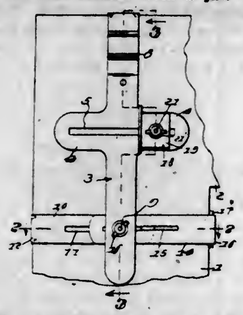
1,352,261. PROCESS OF BURNING TREE-STUMPS. HAROLD L. HANSON, Butte, Mont., and MARION B. SAWYER, Edmonds, Wash. Filed Nov. 9, 1918. Serial No. 261,843. 2 Claims. (Cl. 110—21.)

1. The process for burning tree stumps, which consists in providing a vertical air passage substantially in the center of the stump, then providing a plurality of flue passages communicating with the air passage and opening on the sides of the stump, then starting a fire in the air passage, and finally forcing a draft of air into the air passage and out through the flues.

1,352,262. CONVEYING AND ELEVATING APPARATUS. HENRY O'B. HARDING, Minneapolis, Minn. Filed Dec. 21, 1918. Serial No. 267,791. 7 Claims. (Cl. 193—8.)

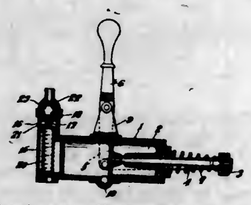
1. A conveying and elevating apparatus comprising means for carrying filled sacks underneath a device for closing the upper ends thereof, means for receiving the closed sacks and carrying them in a direction at an angle to the direction in which sacks are carried by said first-mentioned means, and means for elevating the closed sacks as they are delivered thereto by said second-mentioned means.

1,352,263. CONVEYER. HENRY O'B. HARDING, Minneapolis, Minn., assignor to Washburn Crosby Company, Minneapolis, Minn., a Corporation. Filed Dec. 26, 1918. Serial No. 268,373. 3 Claims. (Cl. 193—4.)



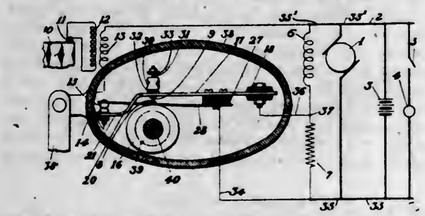
1. A conveyer comprising wheeled standards, a pair of longitudinally extending bars secured to said standards, a table secured to said bars, inclined bracing strips secured at their upper ends to said bars, the lower ends of some of said strips being secured to said standards and the lower ends of the rest of the strips extending into a line beneath the median line of said table, an angle bar secured to said last mentioned strip-ends, an endless belt extending longitudinally around said table with its upper stretch in contact therewith, and means for driving said belt.

1,352,264. SHADE-ROLLER SUPPORT. JOHN HERNACKI, Alexandria, La. Filed Jan. 7, 1919. Serial No. 270,045. 1 Claim. (Cl. 156—24.)



A device of the kind described, comprising a body member designed for vertical positioning on a window frame, a shade roller bracket adjustable on said body member, the

said body member being formed with a jaw terminal designed to over hang the upper edge of the window frame, a transverse member formed with the jaw terminal designed to engage the inner edge of the vertical stile of the window frame, the said transverse member being formed with a plurality of interconnecting holes, a second transverse element formed with a jaw terminal for



engagement with the outer edge of the vertical stile of the frame, the last said transverse member being formed with a longitudinal slot, a bolt engaged with the body member and passing through any one of the interconnecting holes and through the said slot, and a wing nut attached to the bolt and serving to secure the transverse members and the body portion together.

1,352,265. AIR-EXHAUSTER FOR STEAM-RADIATORS. MARTIN E. HERSHEY, Arlington, N. J. Filed May 15, 1918. Serial No. 234,628. 4 Claims. (Cl. 230—24.)

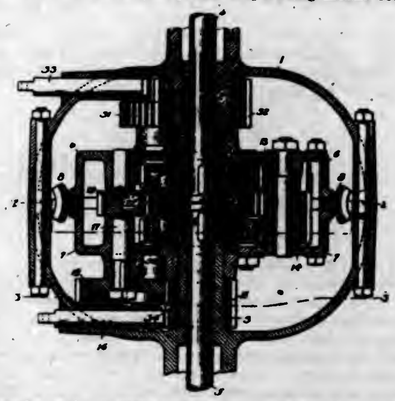
1. A pump having a cylinder adapted to be in open communication with a radiator or the like, a piston within said cylinder, means for operating the piston, a valve connected with the cylinder, and a thin corrugated metallic tube carrying said valve and adapted to expand upon a rise of temperature within said cylinder to move said valve to its seat.

1,352,266. ELECTRICAL SYSTEM FOR MOTOR-VEHICLES AND THE LIKE. MORRIS HIRSCH, New York, N. Y., assignor to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Apr. 30, 1919. Serial No. 293,719. 12 Claims. (Cl. 290—41.)

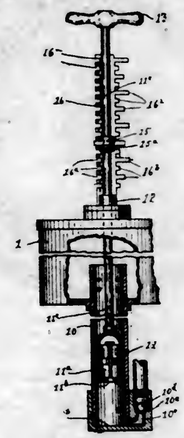
2. In electrical systems for motor vehicles in combination, a generator, a vibratory regulator contact therefor, ignition apparatus connected to said generator, said apparatus including breaker contacts, and a single cam or the like for operating both said regulator and said breaker contacts.

1,352,267. FIREARM. LINDLEY D. HUBBELL, Hartford, Conn. Filed Apr. 7, 1920. Serial No. 371,899. 4 Claims. (Cl. 42—3.)

1. In a firearm of the character described, a frame, a breech-slide mounted for reciprocation thereon, a magazine including a follower, a single means for locking the hammer in cocked position and locking the slide in retracted position and interengaging means between said follower and locking means whereby the latter is actuated by said follower.



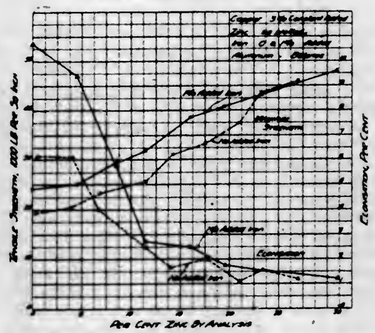
1,352,268. COLLAR-FASTENER. FRANK HYDE, Sioux Falls, S. D. Filed Feb. 19, 1920. Serial No. 359,779. 1 Claim. (Cl. 267—71.)



In a collar fastener, a pair of substantially similar members each having a shank with a pin point on the outer end of the shank, the shanks being of substantially rectangular cross section and having their inner ends turned at right angles and formed with eyes which conformably and slidably receive the shank of the opposite member, and a single coil spring to the rear of one shank and engaged over the other shank and between the eyes, each shank being offset adjacent its pin point to form a stop engaging the eye of the opposite shank to restrict contractile movement of the shanks, the front shank being offset rearwardly and the rear shank being offset forwardly to bring the shanks into alinement.

1,352,269. DIFFERENTIAL-GEAR MECHANISM. MAURITZ C. INDAHL, Philadelphia, Pa. Filed Mar. 8, 1916, Serial No. 82,929. Renewed Oct. 16, 1916. Serial No. 126,035. 37 Claims. (Cl. 74—34.)

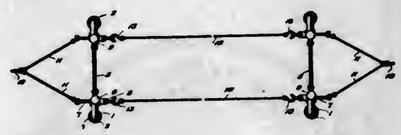
1. The combination with a pair of driven members and means for connecting said members, said means permitting acceleration in speed of one of said members accompanied by a proportionately diminished speed of the other driven member, of positive operating means for limiting the ratio of differentiation in speed of said members to a predetermined maximum ratio.



1,352,270. GAGING MEANS. DANIEL H. JEFFERSON, Los Angeles, Calif., assignor to Frank E. Andres, Alhambra, Calif. Filed Sept. 18, 1919. Serial No. 324,287. 4 Claims. (Cl. 221—103.)

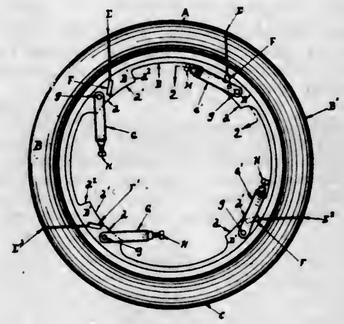
4. Gaging means comprising a movable member, adjustable stop means on said member, and an indicating member adapted to receive and position said stop means in a plurality of positions of adjustment; there being means whereby said movable member is limited in its travel by said stop means.

1,352,271. ALLOY. ZAY JEFFRIES and WILLIAM A. GIBSON, Cleveland, Ohio, assignors to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 30, 1919. Serial No. 314,261. 6 Claims. (Cl. 75—1.)



1. An alloy containing aluminum, copper, zinc and iron, the copper content being from 2% to 5%, the zinc content being from 4% to 25%, the iron content being from 0.6% to 1.8%, and the aluminum making up the remainder.

1,352,272. ALLOY. ZAY JEFFRIES and WILLIAM A. GIBSON, Cleveland, Ohio, assignors to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 30, 1919. Serial No. 314,262. 4 Claims. (Cl. 75—1.)

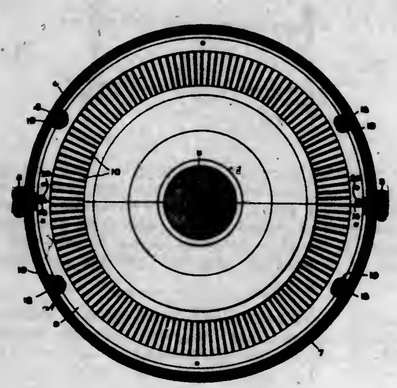


1. An alloy containing aluminum from 4% to 25% zinc, from 2% to 5% of copper, from .5% to 1.5% iron and an appreciable amount of magnesium.

1,352,273. CLOTHESLINE. RALPH D. JOHNSON, Fairbury, Ill. Filed Dec. 1, 1919. Serial No. 341,633. 1 Claim. (Cl. 68—3.)

A device of the class described comprising two pairs of posts, each post having its lower part provided with a spiked end, a pair of cross pieces for holding the posts of each pair in spaced relation, said cross pieces being clamped to the post, eye bolts carried by said post and a pair of clothes lines connected with the eye bolts.

1,352,274. COLLAPSIBLE TIRE-CORE. FRANK L. JOHNSON, Akron, Ohio. Filed Jan. 31, 1920. Serial No. 355,349. 2 Claims. (Cl. 18—45.)



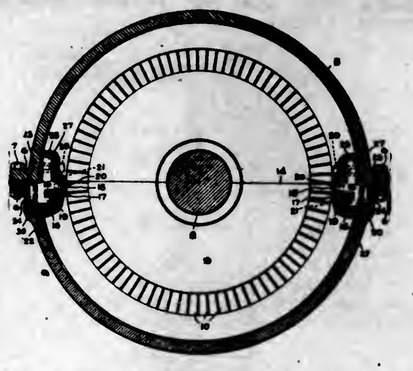
1. In a collapsible tire-core, the combination of a plurality of segments, keys sunk into the adjoining ends of said segments, clevises pivoted on said sections and extending across the adjoining ends of said segments, and set-screws in said clevises adapted to engage the next adjacent segment and clamp the adjoining ends together, substantially as set forth.

1,352,275. WEATHER-STRIP. CHARLES J. JONES, Cheyenne, Wyo. Filed July 29, 1919. Serial No. 313,979. 3 Claims. (Cl. 20—69.)

1. As a new article of manufacture, a weather strip comprising two members, one of said members adapted to be secured to a window frame and the other of said members to a window sash, one of said members having relatively flat longitudinal edges, and a transversely bowed intermediate portion, whereby a spring pressure is had of one strip against the other when in position between the sash and the frame.

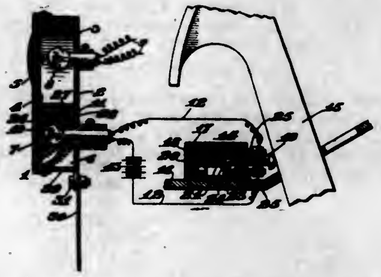
1,352,276. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,639. 18 Claims. (Cl. 253—78.)

1. In an elastic-fluid turbine, a supporting wall, a diaphragm, and means which yieldingly supports the diaphragm in the wall so that it is free to expand and contract radially relatively to the wall.



1,352,277. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 9, 1919. Serial No. 270,418. 29 Claims. (Cl. 253—78.)

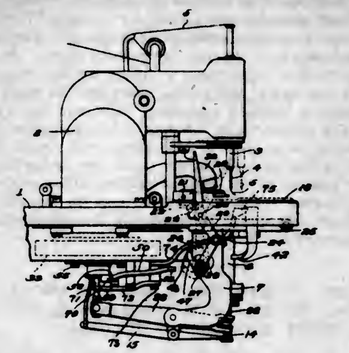
1. In an elastic fluid turbine, the combination of a casing, a nozzle diaphragm which divides the casing into stages, said diaphragm being mounted in spaced relation to the inner wall of said casing, and a ring which connects the diaphragm to the casing and forms a yielding connection for holding the diaphragm in spaced relation thereto whereby it may expand and contract relatively to and independently of the casing.



1,352,278. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 3, 1920. Serial No. 362,913. 10 Claims. (Cl. 253—78.)

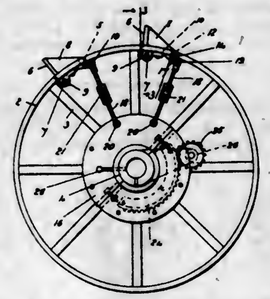
1. In an elastic-fluid turbine, the combination of a supporting wall provided with shoulders adjacent its horizontal axis, a diaphragm of less diameter than the inner diameter of said wall, means connected to said diaphragm and resting on said shoulders for supporting the weight

of said diaphragm, and yielding means which engages said first named means for centering said diaphragm.



1,352,279. TAIL-LIGHT SIGNAL. JESSE E. KEPPEL, St. Louis, Mo., assignor to International Aerial Navigation Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 30, 1916, Serial No. 122,959. Renewed Apr. 21, 1920. Serial No. 375,650. 3 Claims. (Cl. 40—132.)

1. In a signal apparatus, the combination of a case, a translucent signal member carried thereby, an electric light for illuminating said translucent member continuously to give a continuous signal, a second translucent member below the first named translucent member for giving a special signal and normally inactive, a hood adjacent said second translucent member disposed below said electric light and back of the forward wall of said case so as to leave a space between said hood and said forward wall, the upper and rear side of said hood being a reflector for reflecting the rays from said light down through said space, said case having a window at the under side thereof, through which said reflected rays may pass, and a sign plate carried by said case below said window and receiving the reflected rays passing through said window.

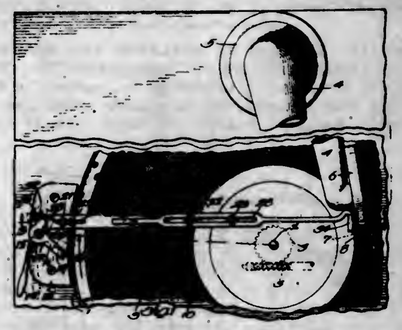


1,352,280. SEWING-MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Dec. 12, 1918. Serial No. 266,426. 20 Claims. (Cl. 112—252.)

1. In a sewing machine, the combination with work-holding means and stitch-forming mechanism including upper thread mechanism and under thread mechanism arranged so that when the machine comes to rest a loop of the upper thread is retained by the under thread mechanism, of a movable device adapted by its movement to cut the side of the loop of upper thread that leads to the work and at the same time to draw out a length of under thread from the supply without cutting said thread,

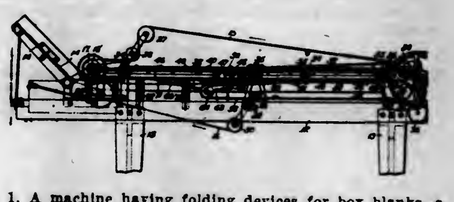
and means to actuate said device after the stitch-forming mechanism comes to rest.

1,352,281. TRACTION-WHEEL. FRANCIS M. KOETZ, Woodstock, Ill. Filed Oct. 25, 1919. Serial No. 333,193. 2 Claims. (Cl. 301—46.)



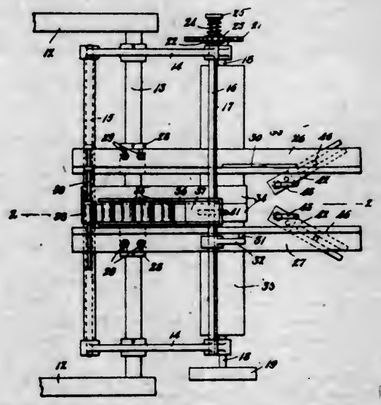
2. The combination, with a traction wheel having a rim provided with rectangular holes and having stops on its underside at the corners at one end of the holes, of bearings secured to the underside of the rim at the other end of the holes, cleats formed of rectangular plates arranged at a right angle to each other and provided with stiffening ribs, said cleats being provided with pivots at their apex portions which engage with the said bearings, the longitudinal plates of the cleats being provided with notches at their corners to permit them to be turned inwardly past the stops, the plates of the said cleats being adapted to engage alternately with the said holes and substantially close them, and the radial plates being adapted to engage with the said stops and means for moving the cleats pivotally and locking them to the wheel rim.

1,352,282. PHONOGRAPH. WINCENT S. KUCKI, Chicago, Ill. Filed Nov. 14, 1918. Serial No. 262,485. 1 Claim. (Cl. 74—46.)



A phonograph having a circular, record supporting, turn table; a swinging brake member having a face initially engageable with the periphery of the turn table upon one side of the line joining the centers of movement of the brake member and the turn table whereby the turn table completes the braking movement of said brake member; a tone arm structure; a bar mounted upon one side of the turn table and overlying the turn table and of adjustable length to define the location of the inner end of the bar which is engageable by the sound box end of the tone arm structure, said bar being mounted to be moved longitudinally of itself by the sound box end of the tone arm

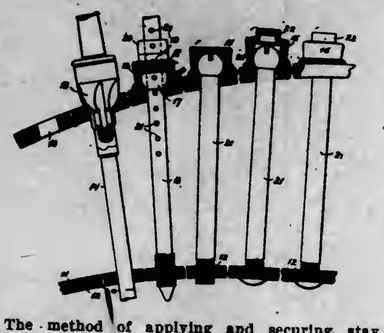
structure at the conclusion of the record reproducing movement of the tone arm structure; and an abutment



moving with the brake member and engageable by an outer end portion of said bar.

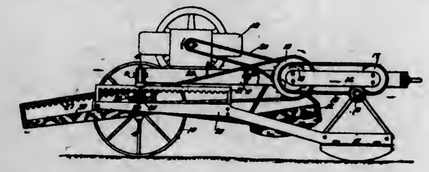
1,352,283. MACHINE FOR MAKING DOUBLE-WALL BOXES. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 18, 1916. Serial No. 137,535. 18 Claims. (Cl. 93—52.)

1. A machine having folding devices for box blanks, a pair of coacting carrier belts for causing the blanks to travel while being folded, and a table for a pile of blanks, said table being in position to cause one of the belts to comb the blanks singly from the table.



1,352,284. BLANK-FEEDER. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1917. Serial No. 161,432. 9 Claims. (Cl. 271—41.)

2. In a blank feeding mechanism having a hopper for a pile of blanks and a friction feeder for removing the



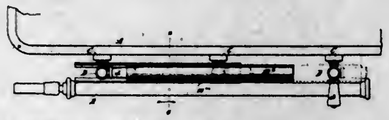
blanks singly therefrom a wheel opposite the front edges of the blanks, and means having a constant tendency to rotate the wheel in a direction to urge said edge portions toward the feeder.

1,352,285. METHOD OF APPLYING AND SECURING STAYBOLT-SLEEVES TO BOILER-SHEETS. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Aug. 21, 1919. Serial No. 318,923. 5 Claims. (Cl. 29—148.)

1. The method of applying and securing stay bolt sleeves to the outer sheet of a boiler consisting in properly placing the sleeve on and clamping it to said outer sheet by means engaging the sleeve and passing through the bolt holes in both sheets, and welding the sleeve while so held.

1,352,286. TRACTOR. EDWARD E. LARSON, Thompson, Iowa. Filed Mar. 9, 1918, Serial No. 221,490. Renewed Apr. 30, 1920. Serial No. 378,015. 7 Claims. (Cl. 180—8.)

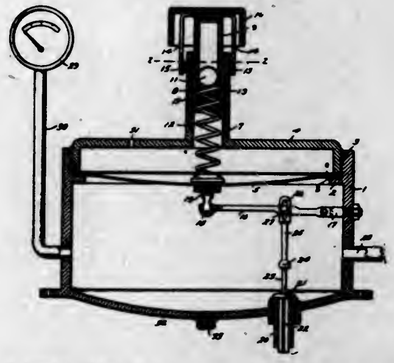
1. A tractor comprising a frame, rolling means supporting one end of the frame, a pair of endless tracks associated with the other end of the frame, a carriage on each of the tracks, means for moving the carriages and the tracks relative to one another, a shoe associated with each of the carriages, and means associated with the shoe for accelerating the movement of the carriage when the shoe is moved from the inoperative into the operative position.



2. A tractor comprising a frame, rolling means supporting one end of the frame, supports for the other end of the frame, tracks for said supports, means for moving the tracks and supports relative to one another whereby the frame is moved on the supports, and means for moving the supports on the tracks at a greater speed than the frame moves, whereby a support can be moved quicker from the inoperative to the operative position than from the operative to the inoperative position.

3. A tractor comprising a frame, rolling means supporting one end of the frame, supports for the other end of the frame, a roller bearing interposed between the supports and the frame, endless tracks for said rolling means of the supports, means for moving said frame and supports relative to one another, and means associated with said moving means for increasing the relative speeds of said frame and supports when said supports and frame are moved in the same direction.

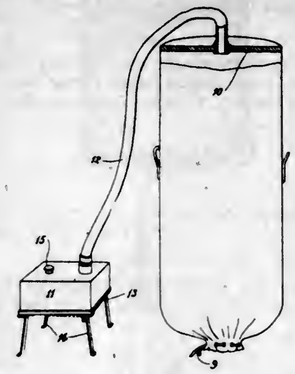
4. A tractor comprising a frame, rolling means supporting one end of the frame, supports for the other end of the frame, means for moving said supports and frame relative to one another in the same and opposite directions, and means for increasing the speed of said supports when said supports are moving in the same direction as the frame when compared with the speed of the supports when moving in a direction opposite to that of the frame.



5. A tractor comprising a frame, rolling means supporting one end of the frame, shoes for the other end of the frame, a carriage associated with each shoe, an endless track on the frame for each of the carriages, an endless chain mounted to revolve about each track and connected to the carriage on the track, means for imparting rotary motion to the endless chains, differentials interposed between the endless chains and the motion-imparting means, and means for revolving the differential housings operable by the shoes.

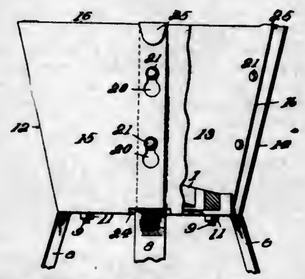
1,352,287. GUARD FOR GAS-STOVE COCKS. JOHN LAYDON, Brooklyn, N. Y. Filed Sept. 9, 1919. Serial No. 322,660. 5 Claims. (Cl. 126—42.)

1. A guard for gas stove cocks including telescoping tubular sections having alined longitudinal slots at the under side, and being open-ended to permit the guard to be passed over the gas cocks by an endwise movement of the guard.



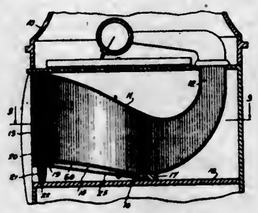
1,352,288. PRESSURE-REGULATOR. LOUIS LE BRAS, New York, N. Y. Filed Nov. 18, 1919. Serial No. 338,996. 2 Claims. (Cl. 137—53.)

1. A device of the character stated, comprising a casing, a diaphragm in the casing, a valve opened by the movement of the diaphragm when the latter moves in one direction, an internally screw threaded hollow post on the casing, a spring in the post bearing against the diaphragm, a ball on the end of the spring, a screw threaded plug in said hollow post engaging the ball, said post having longitudinal grooves in its outer face, a cap secured on said plug and spring arms secured between said cap and plug and engaging in said grooves.



1,352,289. DISINFECTING OF, AND DESTRUCTION OF VERMIN IN CLOTHES, BEDDING, AND THE LIKE. PERCY SAMUEL LELEAN, Westminster, London, England. Filed Jan. 29, 1920. Serial No. 354,845. 2 Claims. (Cl. 167—3.)

1. Disinfecting apparatus comprising a sack adapted to contain the articles to be treated, said sack having a contractible end portion through which the articles may be introduced, the other end portion of the sack having a relatively stiff or rigid member closing the same, a boiler, and means passing through the rigid member for conducting steam from the boiler into the sack, said rigid member being at the top during the disinfecting operation,

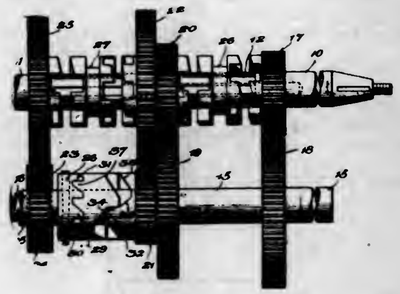


the contractible end providing an outlet for the air in the sack to escape whereby the steam passes through the sack from the top downwardly, the sack itself being collapsible whereby most of the surplus air may be squeezed out of the same prior to the introduction of the steam.

1,352,290. TENT-STOVE. JOSEPH E. LEONARD, Cedar Rapids, Iowa. Filed Feb. 25, 1919. Serial No. 279,131. 9 Claims. (Cl. 126—59.)

1. A stove of the character described, comprising a grate, legs supporting the grate and extending beyond the periphery thereof, and a fire pot loosely resting upon the legs and surrounding the grate and held against lateral movement by the grate.

1,352,291. ARTICULATOR FOR PHONOGRAPHS. FRANK BENAJAH LONG, Sacramento, Calif. Filed Sept. 29, 1919. Serial No. 327,307. 8 Claims. (Cl. 181—27.)

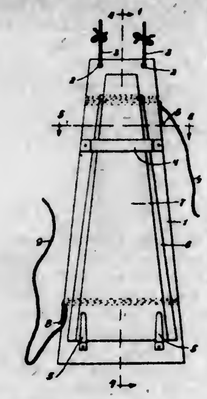


1. In a sound recording or sound reproducing machine a sound chamber provided with a sound board, and means for exerting an edgewise pressure on the said sound board to form a crown thereon.

1,352,292. METHOD OF MAKING FLOW-NOZZLES. HENRY C. LORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 8, 1919. Serial No. 316,238. 3 Claims. (Cl. 29—148.)

1. The method of manufacturing a flow nozzle having a curved up-stream section and a straight down-stream section with a flange between said sections, which comprises taking a length of tubing having an external shoulder at a point which is to form the dividing line between the curved section and the straight section, placing a disk over the tube into engagement with said shoulder to form a flange, and expanding an end of the tube to form a curved tube section and hold said disk in position.

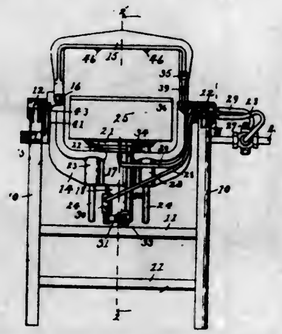
1,352,293. GEARING. WESLEY S. LOVELL, Elmira, N. Y., assignor of one-half to Robert R. Rockwell, Elmira, N. Y. Filed Apr. 22, 1919. Serial No. 291,879. 7 Claims. (Cl. 74—59.)



1. In selective, variable speed gearing, the combination with a driving shaft and a driven shaft, of means for connecting said shafts to drive the driven shaft at any one of a plurality of different speeds relatively to the speed of the driving shaft, said means including a low speed clutch which transmits power at lowest speed only, said clutch being disengaged when the shafts are connected for higher speeds and being adapted to automatically connect the shafts for low speed transmission when the higher speed connections are disconnected.

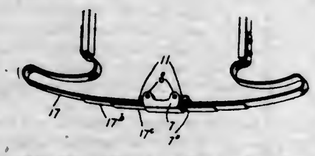
1,352,294. NECKTIE-PRESSING DEVICE. BOYD L. MCKNIGHT, Washington, D. C., assignor of one-half to Joseph E. Uebele, Washington, D. C. Filed Sept. 26, 1919. Serial No. 326,510. 2 Claims. (Cl. 100—57.)

1. A necktie press comprising two flat layers of rigid material loosely and permanently connected together at one end so that one may be swung from over the other, fastening devices carried by and exterior of the layers adjacent to opposite ends thereof and binding cords, one complementary to each fastening device and connected at one end thereto and adapted to be wound about the layers and detachably fastened at its opposite end to the fastening device.



2. A necktie press comprising two flat layers of rigid material permanently connected together adjacent to one end of the device and so that one layer may be swung from over the other; one of the said layers being provided

on its outer side and adjacent to one end with a keeper loop designed to retain one end of a pad or pads and

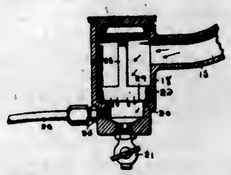


being also, provided adjacent to its opposite end with clamping means to detachably hold the other end of the pad or pads.

1,352,295. MOLDING-MACHINE. HENRY O. MAGNUSON, Chicago, Ill. Filed May 27, 1918. Serial No. 236,732. 8 Claims. (Cl. 22—32.)

1. In a molding machine, the combination of a supporting frame, a mold-clamping and inverting frame having trunnions on its opposite sides journaled in said supporting frame, said mold-clamping and inverting frame comprising upper and lower frame members hinged together at one end on a horizontal axis lying transverse to the axis of said trunnions and separably connected to each other at their other ends, a table supported on said lower frame member and itself adapted to support a mold-box, and means for elevating said table within said mold-clamping and inverting frame whereby to clamp the mold-box against said upper frame member.

1,352,296. CLAMPING DEVICE. MICHAEL J. MAGUTH, Carlstadt, N. J. Filed Nov. 25, 1916. Serial No. 133,299. 7 Claims. (Cl. 293—55.)

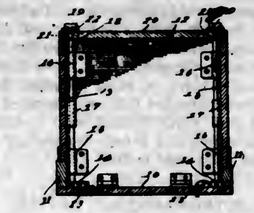


1. In combination with a spring buffer for motor vehicles formed of a plurality of sections, certain of said sections having their ends spaced apart and overlapped by other of said sections, a clamping device embodying a pair of cam levers for locking all of said sections in frictional engagement, each of said cam levers exerting pressure on the adjacent section at two points to maintain the spaced ends in alinement.

1,352,297. PICKER-STICK FOR LOOMS. HOMER F. MARSHALL, North Adams, Mass. Filed Nov. 1, 1919. Serial No. 334,942. 1 Claim. (Cl. 139—48.)

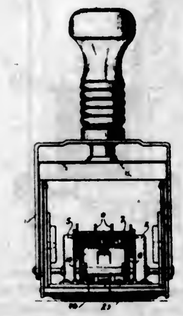
As a new and useful article of manufacture, a metallic picker stick holder for looms comprising a lower tubular portion and an upper socket or pocket portion of rectangular form in cross-section to receive and surround and reinforce the lower portion of a wooden picker stick section, and a rocker bearing having a cylindrical terminal portion disposed in and brazed to the lower end of the tubular portion of the holder.

1,352,298. LUBRICANT DISTRIBUTER AND FILTER FOR INTERNAL-COMBUSTION ENGINES. JOHN W. MEARS, Forest Hills, N. Y. Filed Jan. 13, 1919. Serial No. 270,899. 3 Claims. (Cl. 184—11.)



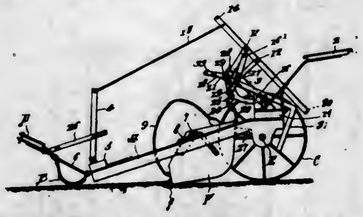
2. A lubricator attachment for engines having rotating oil carrying parts inclosed in a casing, comprising a receptacle containing a removable foraminous filtering element offering relatively low resistance to fluid flow, and said receptacle including a mouth having a face plate shaped to conform to the configuration of the casing, said mouth protruding from the plate through the casing and receiving oil delivered thereto centrifugally at a tangent to the rotating parts.

1,352,299. FOLDING CRATE. EMIL MERTZ, Tygh Valley, Oreg. Filed Feb. 3, 1920. Serial No. 356,012. 3 Claims. (Cl. 217—15.)



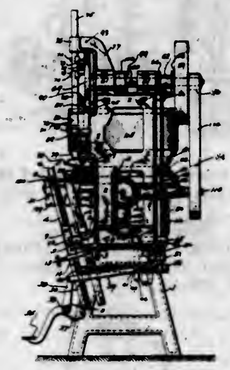
1. A folding crate comprising a bottom, sides and ends hinged upon the bottom, loops carried by the ends of the sides and ends and adapted to be brought into registration, corner bolts passing through the registering loops and threaded into the bottom, a top engaged upon the heads

of the bolts and prevented thereby from longitudinal or lateral displacements, and means carried by the top and



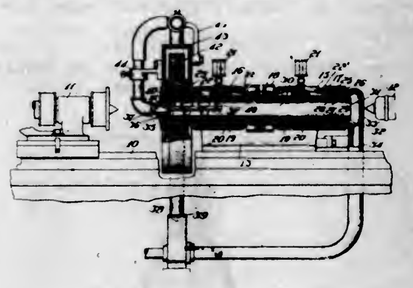
engaging said bolts for holding said top against movement away from the bottom.

1,352,300. DATING-STAMP LOCK. AUGUSTUS MILLER, East Orange, N. J. Filed Apr. 23, 1919. Serial No. 292,015. 1 Claim. (Cl. 101—111.)



1. A locking means for use on a dating stamp which has a printing mechanism mounted on a swingable base, comprising a bracket fixed upon the available space of the base, a dog pivoted on the bracket, a spring disposed between the bracket and the dog for exerting pressure against said dog to confine it in engagement with the printing mechanism.

1,352,301. EARTH-SCRAPER. ARTHUR R. MISKIN, Idaho Falls, Idaho. Filed Nov. 11, 1918. Serial No. 262,006. 9 Claims. (Cl. 214—73.)

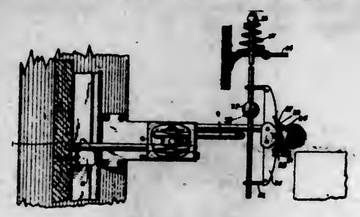


1. In an earth scraper the combination of a frame supported at its rear by wheels, adjustable means resting on the ground for supporting the front of the frame so that such portion may be held at various distances from the surface of the ground accordingly as said means are adjusted, a scoop pivotally supported in the frame between its front and rear portions, means for holding the scoop against rotation and means connected with the said holding means and also with the said adjustable supporting means for simultaneously operating these to release the scoop to permit it to turn over after discharging and at the same time to cause the frame to be adjusted relative to the ground and to bodily move the scoop to allow it to turn over.

1,352,302. HEEL-BUILDING MACHINE. JOHN H. MITCHELL, WILLIAM WOLFE, and DENNIS PARKS, St. Louis, Mo. Filed Sept. 14, 1918. Serial No. 254,137. 18 Claims. (Cl. 12—50.)

1. In a heel building machine, in combination with means for compressing and nailing a heel-blank, a movable holder for receiving a series of said heel-blanks in superimposed relation, and on which said heel-blanks are in turn built up, and means for moving said holder with a built-up heel-blank thereon beneath said compressing and nailing means.

1,352,303. SHAFT-COOLING MEANS FOR GRINDING-MACHINES AND THE LIKE. RAYMOND C. MITCHELL, Springfield, Ohio, assignor to The Webster & Perks Tool Company, Springfield, Ohio, a Corporation of Ohio. Filed June 15, 1918. Serial No. 240,186. 4 Claims. (Cl. 64—28.)

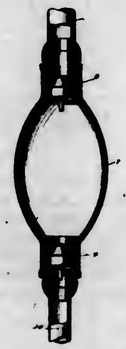


1. A combination of close fitting shaft bearing and a shaft therein having a hollow center open at one end, liquid supply means leading into the opposite end of the shaft, liquid receptive means associated with the open end of the shaft, liquid impelling means connected with the supply and receptive means, and means for causing the fluid introduced into the shaft to whirl therein.

1,352,304. DOOR-LOCK. ERNST E. L. MONTELIUS, New York, N. Y. Filed May 6, 1919. Serial No. 295,178. 5 Claims. (Cl. 187—61.)

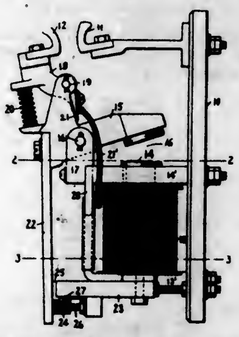
1. A lock in combination with a door, a keeper secured to the inner face of such door, a latch arm engaging the keeper, a fork connected to such latch and extending in an opposite direction therefrom, such latch and fork being pivotally mounted at their point of connection, and means

for engaging the fork for depressing the same, whereby to elevate the latch, said means including a cord,



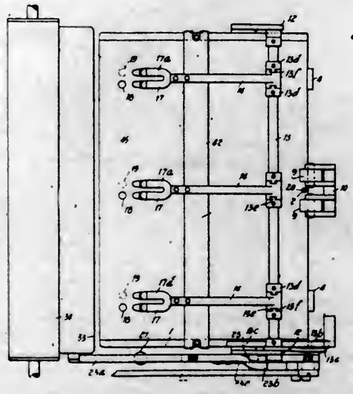
formed with an enlarged portion, adapted to engage the fork upon a pull being exerted upon the cord.

1,352,305. VEHICLE-TIRE. DAVID H. MOORE, Port Clinton, Ohio. Filed Feb. 4, 1920. Serial No. 356,326. 5 Claims. (Cl. 152—8.)



2. A tire of the class described, comprising a casing formed of a pair of coacting sections substantially semicircular in cross section, a tubular lining member formed of two sections and located within the casing, means for securing the edges of the sections of the tubular member and the casing sections together at the inner circumference of the tire, an annular plate located within the tubular member in the outer circumference of the tire and having a portion projecting between the edges of the sections of the tubular lining member and casing, strips carried by said plate having their ends looped over the tubular member and casing, a tread plate and means for securing the tread plate, the edges of the tubular lining member and the casing, the strips and annular plate together.

1,352,306. SYRINGE. ROBERT L. MOTT, St. Louis, Mo. Filed Feb. 4, 1919. Serial No. 274,964. 1 Claim. (Cl. 128—231.)



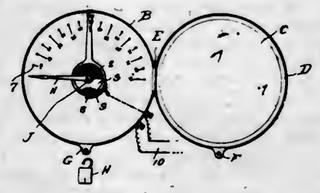
In a device of the character described, a pumping mechanism comprising a body formed at one end with a reduced extension and having a bore extending therethrough and through the extension, the bore being enlarged to form a valve seat, a nipple engaged upon said extension and adapted for connection with a flexible tube, a spider within said bore, a valve adapted to close said seat and having a stem slidable through said spider, a second body having an extension thereon and provided with a bore extending therethrough and through the extension, a nipple secured upon said extension and adapted for connection with a flexible tube, the inner end of said bore being enlarged to define a chamber, a spider at the juncture of the bore with the chamber, a valve movable within the chamber and having a stem slidable through said spider, and a sleeve threaded into said chamber and having its end toward said valve formed with a valve seat engageable by the latter, and a bulb connecting and having its ends engaged upon said bodies.

1,352,307. ELECTROMAGNETIC DEVICE. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 15, 1911. Serial No. 608,652. 6 Claims. (Cl. 200—94.)

1. A controlling device for electric circuits comprising a pivoted switch member having an armature portion on each side of the pivot, an electromagnet acting on one of said armature portions to close the switch and on the other armature portion to hold it open, and a magnetic shunt to said holding portion which approaches saturation when the exciting current of the magnet is above a predetermined value and causes the holding force to predominate until the current is decreased to the predetermined value.

1,352,308. PAPER-FEED MECHANISM FOR PRINTING-TELEGRAPHS, &c. DONALD MURRAY, London, England, assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1915. Serial No. 46,780. 13 Claims. (Cl. 271—43.)

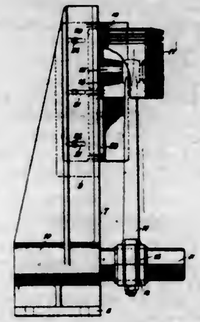
1. Paper feed mechanism such as described comprising paper supply means adapted to hold a pile of sheets at a suitable height, positive holding means for such sheets



engaging the same and preventing lateral displacement thereof except by the tearing away of such sheets from such holding means, one or more feed fingers adapted to feed sheets singly or in predetermined number from the top of such pile, said feed fingers adapted to engage such sheets positively and to tear them away successively from the positive holding means, and means for operating said feed fingers.

1,352,309. GAME OR TOY. LAURA M. MYERS, Chicago, Ill. Filed Jan. 20, 1919. Serial No. 272,010. 5 Claims. (Cl. 46—59.)

1. A toy comprising a short resilient base member, with a cover of felt over the top thereof and extending beyond the sides a sufficient distance so that the device will tend to stand in upright position, said base having an upwardly projecting vane of light material.

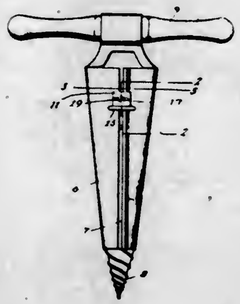


1,352,310. AUTOMATIC SPEED-REGULATOR. CARL S. OLSON, Troy, Idaho. Filed July 21, 1919. Serial No. 312,119. 4 Claims. (Cl. 175—355.)

1. In combination with a speedometer, a disk connected to the shaft of the speedometer consisting of an insulating segment and a metallic segment, and an arm making contact with and adjustable on the disk.

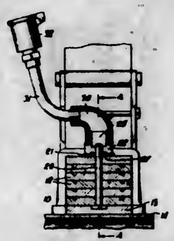
1,352,311. TOOL FOR ALINING AND FITTING MACHINE PARTS. JOHN PEYER, New York, N. Y. Filed Nov. 29, 1918. Serial No. 264,670. 5 Claims. (Cl. 33—180.)

1. An apparatus as characterized comprising a member having a straight exposed surface; a supporting shaft; means for rigidly holding said shaft in relation to said member and in perpendicular relation to said surface, and a steady rest for a piston supported on said shaft, said



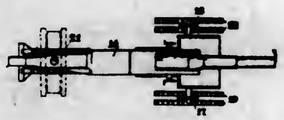
rest having view openings formed therein for permitting the passage of light past said surface.

1,352,312. CONVEYER. WILSON PINES, Rogers, Mich. Filed Oct. 13, 1919. Serial No. 330,194. 7 Claims. (Cl. 193—7.)



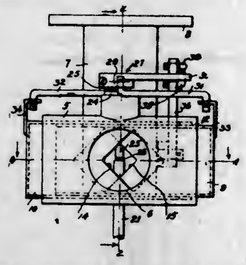
2. A conveyer comprising a series of pans each including a main portion having side flanges and a hingedly connected apron having side flanges, the side flanges of the apron being pivotally connected with the flanges of the main portion of the pan.

1,352,313. AUGER. RAYMOND PREW, Detroit, Mich. Filed Feb. 2, 1920. Serial No. 355,876. 2 Claims. (Cl. 145—128.)



1. In combination with a hollow cone shaped auger which is slitted longitudinally to provide an outer cutting jaw and an inner inactive jaw, and said cutting jaw having a longitudinal groove on its outer face, of a gage block having a pocket to receive the cutting edge of the cutting jaw and a bead to be received in the groove of the cutting jaw, removable and adjustable means carried by the block for contacting with the inner face of the cutting jaw for retaining the same in the pocket and for locking the block adjustable to the jaw.

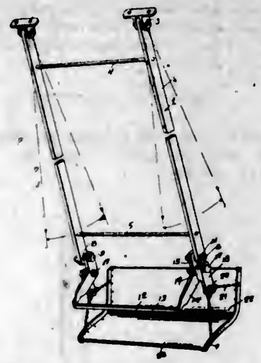
1,352,314. LUBRICATING MEANS FOR LEAF-SPRINGS. HOLDEN RIGBY, Paterson, N. J. Filed Dec. 16, 1919. Serial No. 345,434. 1 Claim. (Cl. 267—50.)



A lubricating means for leaf springs, comprising a bolt extending through the spring leaves, a nut screwing on the said bolt and having an oil receiving chamber provided in the bottom with apertures for delivering the oil to the leaves, a cap screwing on the said nut, and an oil cup connected with the said cap.

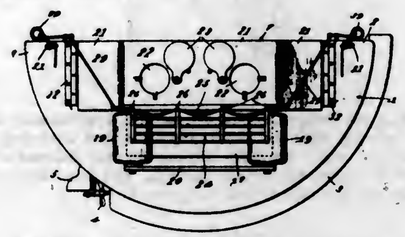
1,352,315. COMPOUND CRAWLER. EMILE RIMAILHO, Paris, France, assignor to Compagnie Des Forges et Acieries De La Marine et D'Homecourt, Paris, France. Filed Aug. 8, 1918. Serial No. 249,006. 11 Claims. (Cl. 89—40.)

1. A compound crawler with steerable progression, and comprising a central carrier plate, two elementary and independent crawlers spaced apart in parallel relation, said elementary crawlers pivotally carried on opposite sides of said carrier plate and on a common pivot, and means for driving each crawler independently of the other.



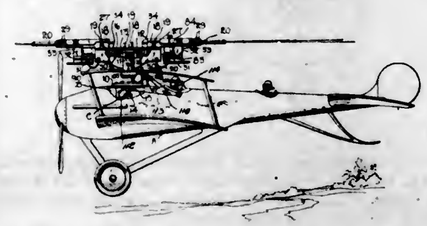
1,352,316. CARBURETER. HARLEY G. ROBINSON and LEWIS K. STINSON, Los Angeles, Calif. Filed Mar. 4, 1918. Serial No. 220,127. 1 Claim. (Cl. 261—49.)

A carbureter comprising an open ended cylindrical mixing chamber having oppositely disposed air inlet and mixture outlet openings in its wall, a pair of cylindrical members each having a pair of oppositely disposed openings therein reciprocatingly mounted in said mixing chamber, the outer ends of said members being closed, a fuel valve mounted in said mixing chamber, and a single means to reciprocate said cylindrical members and to regulate the amount of fuel delivered by said valve.



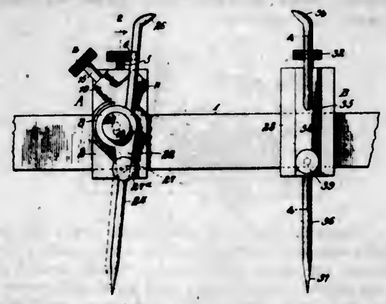
1,352,317. SWING. FREDERICK SCHWABS, Berne, Ind. Filed Apr. 10, 1919. Serial No. 288,955. 2 Claims. (Cl. 155—65.)

1. In a single seated swing, swinging suspension members, a propelling device including arms pivotally connected with the said suspension members, the arms extending downwardly and forwardly from the said suspension members, a handle bar connecting the arms, links



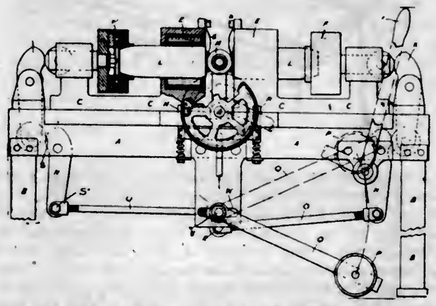
pivotally connected with the arms at points below the pivotal connections between the arms and the suspension members, and a seat supported from the said links.

1,352,318. LIFEBOAT. LEOPOLD SESTY, Bridgeport, Conn. Filed Nov. 11, 1919. Serial No. 337,291. 7 Claims. (Cl. 9—3.)



1. A life boat of the class described comprising a hull and side deck portions projecting outwardly beyond the sides of the hull, the decks of said portions forming continuations of the main deck.

1,352,319. MOTOR-OPERATED GUN. DAVID J. SMITH, Jr., Washington, D. C. Filed Nov. 9, 1918. Serial No. 261,877. 7 Claims. (Cl. 89—40.)



1. The combination with a motor driven vehicle including a motor having a shaft, of a tubular column supported upon the vehicle and having an annular gear wheel concentric to the axis of the column, a rotatable shaft passing through the column and operatively geared to the motor shaft, a platform carried by the rotatable shaft, guns mounted upon the platform, gear wheels, one for each gun, carried by the platform and operatively engaging the annular gear wheel on the column, and means operated by said gear wheels for firing the several guns.

1,352,320. TRAMMEL-POINT. HERBERT V. SOUDERS, Wilmington, Calif. Filed May 10, 1919. Serial No. 296,168. 9 Claims. (Cl. 33—160.)

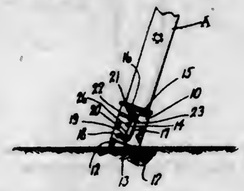
1. A trammel structure comprising two heads each having on one face a clamp for engaging a trammel bar and on the opposite face means for holding a clamping trammel point thereto, one of the heads having the holding means for the trammel point rotatable about an axis perpendicular to the face of the head, and also including means for clamping the rotatable part in adjusted positions.

1,352,321. MACHINE FOR ROLLING IN THE BASE-PLATES OF HIGH-EXPLOSIVE SHELLS AND SUCH LIKE. FRANCIS CHARLES SOUTHARD and HENRY GEORGE SOUTHARD, Southampton, England. Filed Aug. 15, 1918. Serial No. 249,965. 7 Claims. (Cl. 29—1.21.)

1. In a machine for rolling in base plates for explosive shells, a base portion, a rolling tool mounted on said base portion, means to move said rolling tool transversely of said base, means to limit such transverse movement, shell holders pivotally secured to said base and adapted to be swung outward relative to said base, adjustable means for positioning said shell holders on said base, means to retain said shell holders in position on said base, means to release said shell holders from operative position on said base and automatically operable means for moving said shell holders to operating position relative to said rolling tool.

1,352,322. METALLIC ALLOY AND METHOD OF MAKING SAME. THERON D. STAY, Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 6, 1917. Serial No. 152,791. 12 Claims. (Cl. 75—1.)

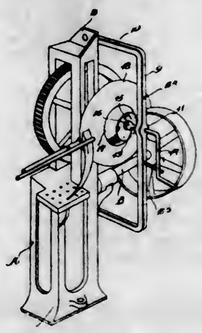
1. An aluminum alloy composed of aluminum in a predominating amount, copper in appreciable amounts and titanium.



2. An aluminum alloy composed of aluminum in a predominating amount, copper in appreciable amounts and titanium up to 0.10%.

3. An aluminum alloy containing aluminum, copper and titanium in approximately the following proportion by weight: aluminum 88% to 90%, copper 12% to 10%, and titanium 0.10% approximately.

4. An alloy of aluminum, copper and titanium, in which the aluminum largely predominates, which is characterized by low crystallization shrinkage, and, in the solid state, by relatively great hardness and a fine-grained structure having good bearing qualities.



5. The method of forming an alloy containing a metal of relatively high melting point and a metal of relatively low melting point which consists in first forming an alloy whose constituents include the said high melting point metal and a metal having a melting point between those of the other two metals, and then combining with the last named alloy said low melting point metal.

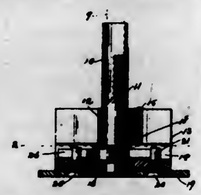
1,352,323. SAFETY DEVICE FOR LADDERS. JOHAN STEPHAN, Clifton, N. J. Filed May 17, 1920. Serial No. 381,986. 3 Claims. (Cl. 228—61.)

1. A safety attachment for ladders comprising a body engaged upon the lower end of each side of a ladder, spring-pressed arms pivoted upon the sides of the body and having prongs adapted to engage the surface upon which the ladder stands, and means for holding said arms in elevated position with said prongs out of engagement with said surface.

1,352,324. DISK-SHARPENING MACHINE. CHARLES M. STRAIN, Crawfordsville, Iowa. Filed Jan. 15, 1920. Serial No. 351,709. 5 Claims. (Cl. 76—85.)

5. The combination with a disk sharpening machine, having a hollow driven shaft, of a face plate carried by said shaft, a yoke fixedly supporting and bridging the face plate, a follower coöperating with the face plate, means engaged in the bracket to advance the follower, a removable calk carried by the face plate, said face plate being of substantially bowl shape and stop means carried by the yoke and coöperating with said first named means.

1,352,325. FRUIT-PEELER. WARD SULLIVAN, Sidney, Ohio. Filed Feb. 12, 1917, Serial No. 148,035. Renewed Feb. 2, 1920. Serial No. 355,585. 4 Claims. (Cl. 146—14.)



1. A fruit peeling implement, comprising a tubular handle, a plurality of laterally disposed cutting elements of varying lengths arranged on one end of the handle, and

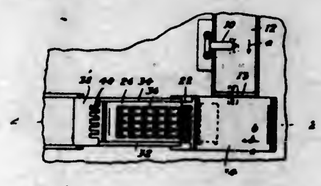
a looped wire finger extending longitudinally of the handle and having the end portions thereof secured to certain

of the cutting elements and portions of the sides thereof secured to the sides of the tubular handle.

1,352,326. MOTOR-DRIVEN HAIR-CLIPPER. DAVID N. SWATZELL, Birmingham, Ala., assignor of one-fourth to B. P. Cox, one-fourth to R. C. Adcock, and one-fourth to W. A. Swatzell, Birmingham, Ala. Filed July 17, 1919. Serial No. 311,580. 5 Claims. (Cl. 30—1.)

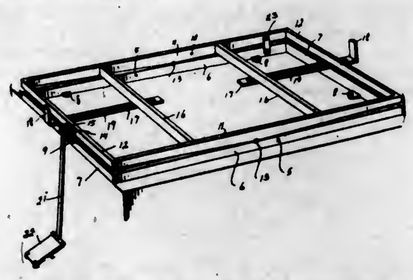
1. In a barber's hair clipper, a frame, a fixed blade attached thereto by screws having rounded projections above the frame, a reciprocatory slide guided by said screws, a crank shaft adapted to reciprocate said slide, a movable blade reciprocable with said slide, and a flexible driving shaft for said crank shaft.

1,352,327. DIRECTION-INDICATOR FOR VEHICLES. FRANK H. SWEENEY, San Francisco, Calif. Filed May 10, 1920. Serial No. 380,408. 8 Claims. (Cl. 116—50.)



1. A device of the character described comprising a pair of rods having means for attachment to a vehicle, means connecting said rods to hold the same taut, direction indicators connected to and slidably mounted on said rods, manually control means connected to said direction indicators, and means for guiding said direction indicators in a horizontal plane.

1,352,328. NICKEL-PLATING. EDMUND N. TODD, Milburn, and WILLIS R. KING, Newark, N. J., assignors to The Hanson & Van Winkle Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 28, 1914, Serial No. 879,312. Renewed Feb. 12, 1920. Serial No. 358,127. 8 Claims. (Cl. 204—14.)



1. An electroplating mixture comprising sulfate of nickel and ammonium and an admixture of gum tragacanth.

1,352,329. CONVEYING AND TIPPING APPARATUS. EDWARD D. TSCHACHE, Minneapolis, Minn., assignor to Washburn Crosby Company, Minneapolis, Minn., a Corporation. Filed Dec. 21, 1918. Serial No. 267,776. 5 Claims. (Cl. 193—8.)

1. A conveying apparatus comprising means for carrying filled sacks in upright position underneath a device for closing the upper ends thereof, means located adjacent the delivery end of said first-mentioned means for causing the closed sacks to tip and means for receiving the tipped sacks and carrying them in recumbent position at an angle to the direction in which sacks are carried by said first-mentioned means.

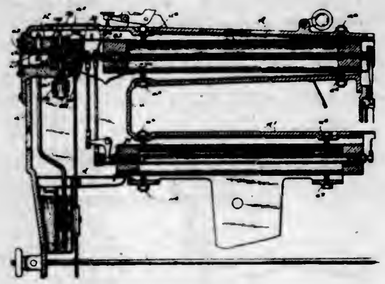
1,352,330. FIXING-BATH AND DEVELOPING-TRAY SUPPORT AND ROCKER. SIDNEY J. TYLER, Afton, Okla. Filed Sept. 18, 1919. Serial No. 324,340. 1 Claim. (Cl. 259—75.)

A device of the character described comprising a stationary supporting frame, a rocking frame coinciding with the stationary frame, the intermediate lower portion of each side of the rocking frame being enlarged, said enlarged portion being pivoted to the supporting frame, and arms slidably mounted on the lower surface of each end portion of the rocking frame, said arms being adjustable toward and away from each other beyond the ends of the rocking frame.

1,352,331. PROCESS OF ELECTROPLATING NON-CONDUCTING SUBSTANCES WITH COPPER. UMIKICHI UNNO, Tokyo, Japan. Filed Nov. 21, 1917. Serial No. 203,179. 2 Claims. (Cl. 204—8.)

1. The method of electrolytically depositing metal upon an article made of a non-conducting substance which consists in impregnating the article with a mixture of beeswax, paraffin wax and white wax, preparing a coating mixture by mixing together relatively large proportions of graphite and sulfuric ether, and relatively small proportions of mercury and gold chlorid, drying and powdering the mixture, and coating the impregnated article therewith, then immersing the article so coated in a bath of electrolyte and electrolytically depositing a metal on said article while so immersed.

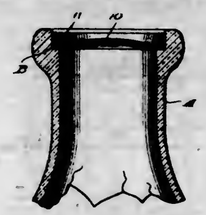
1,352,332. UMBRELLA AND PARASOL. ISAAC H. WEINBERG and CHARLES F. BISBING, New York, N. Y. Filed Mar. 5, 1920. Serial No. 363,606. 2 Claims. (Cl. 135—44.)



2. The combination with an umbrella or parasol having a handle thereon, of a ring movable longitudinally of the handle and adapted to be supported on the handle or

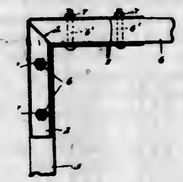
around the ribs of the umbrella or parasol, a flexible device, and a ring fixedly secured to the handle and to which said flexible device is connected, said flexible device being also connected to the first-mentioned ring and of a

sufficient length between the rings whereby an arm receiving loop is provided in either position of the ring, said handle tapering in form and adapted to support the ring thereon by a frictional engagement therewith.



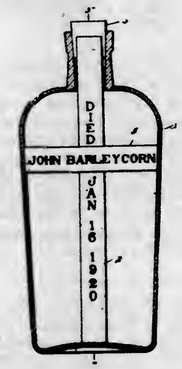
1,352,333. STOP-MOTION. JOHN PETER WEIS, Nyack, N. Y., assignor of one-half, by mesne assignments, to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Original application filed Oct. 16, 1914, Serial No. 867,005. Divided and this application filed Apr. 29, 1916, Serial No. 94,355. Renewed Dec. 24, 1919. Serial No. 347,191. 19 Claims. (Cl. 74—46.)

18. The combination with a drive-shaft; of a stop-motion constructed and operable for engaging and disengaging said drive-shaft; the stop-motion comprising liquid-cushion-forming means; means for supplying the liquid-cushion-forming means with cushion-forming liquid; and means for actuating the stop-motion.



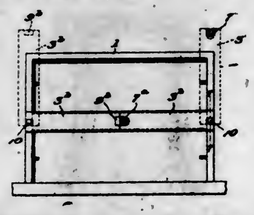
1,352,334. MILK-BOTTLE CAP. EMERICK WESTER, Easton, Pa. Filed Apr. 30, 1920. Serial No. 377,868. 1 Claim. (Cl. 215—14.)

A closure cap adapted for disposition within the mouth of a milk bottle, the mouth having an annular groove, comprising a disk of flexible metal concavo-convex in cross section and formed with an annular flange extending upwardly, the cap being normally disposed with its convex side uppermost with said flange inclining outwardly and frictionally engaging the wall of the groove, and the cap being capable of being pressed downwardly whereby to reverse convexity thereof to cause the flange



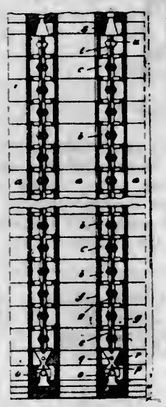
to be inclined inwardly whereby to withdraw it from engagement with the wall of the groove.

1,352,335. FASTENING-BRACKET FOR THE MITERED ENDS OF TIMBERS OR THE LIKE. EMIL WIRTH, Waukomis, Okla. Filed Feb. 17, 1919. Serial No. 277,570. 2 Claims. (Cl. 20—92.)



1. A corner bracket for connecting the mitered ends of timbers or the like, comprising right angularly arranged pairs of spaced arms which receive therebetween the timbers and to which the said timbers are secured, and an angle connecting portion for the arms against which the mitered ends of the timbers contact.

1,352,336. ADVERTISING DEVICE. HARRY M. YINGST, Harrisburg, Pa. Filed Mar. 15, 1920. Serial No. 365,977. 1 Claim. (Cl. 40—4.)

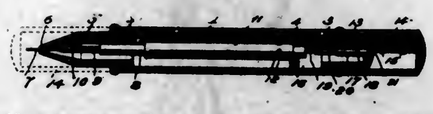


In combination with a transparent hollow body, including a neck that is normally closed by a cork; of a cross-shaped member arranged in the body and having indicia imprinted thereon which is readable through the body, the longitudinal element of the cross-shaped member having one of its ends contacting with the bottom of the body and its other end received in the neck and contacted by the cork in the neck, the transverse member of the cross having its ends contacting with the sides of the body for holding the cross against lateral movement in the body.

1,352,337. PLAYER-PIANO. JOHN W. ZIMMERMAN, Baltimore, Md. Filed Apr. 7, 1919. Serial No. 288,119. 4 Claims. (Cl. 84—151.)

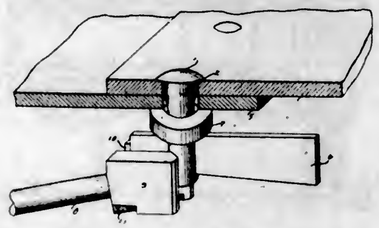
1. In combination with the spool box and the tracker bar of a player piano, shutter sections pivotally mounted to rest in alinement over the tracker bar and to swing in a plane parallel to that of the tracker bar, and means subjecting the said sections to yielding pressure to yieldingly maintain the same against the spool box.

1,352,338. FURNACE. JACOBUS GERARDUS AARTS, Dongen, near Breda, Netherlands. Filed Aug. 11, 1916. Serial No. 114,485. 2 Claims. (Cl. 202—9.)



2. A furnace of the class specified having vertical chambers, the wall of each chamber being composed of bricks consisting of highly refractory material and provided with a large number of narrow heating flues and a large number of baffles arranged transversely therein to the direction of the current of the heating gases to increase the resistance of the flues to such current and produce a better intermixture of the heating gas with the air for combustion, the flues of the several bricks being in communication and forming continuous flues from the bottom to the top of the furnace.

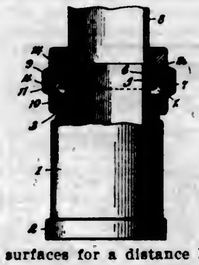
1,352,339. CHAIN TIGHTENER AND LOCK. GEORGE ANDEREGG, Sheridan, Wyo., assignor of one-half to Roy C. Tarrant, Sheridan, Wyo. Filed Mar. 31, 1919. Serial No. 286,461. 4 Claims. (Cl. 24—69.)



2. The combination with a link of a chain, said link comprising a loop with a pair of spaced eyes at one end of said loop, and spaced and hooked ends engaging said loop, of a substantially J-shaped lever composed of a long and short arm, the short arm being provided with a transverse opening, means connecting the eyes and the short arm of the lever for pivotally connecting said lever to said link, said lever working between the spaced hooked ends of the link, and a locking bar or element pivotally connected to the long arm of said lever at a point nearer one end of the bar than the other, said locking bar element having a length greater than the loop of the link, so that when the device is in locked position said locking bar element extends beyond the said loop.

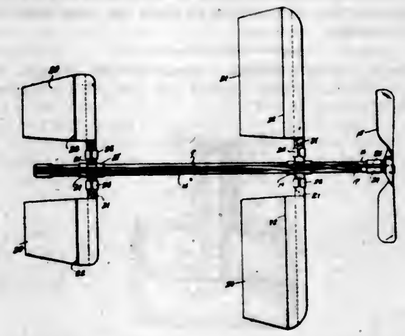
1,352,340. WRITING IMPLEMENT. CASPER J. APP, Lynchburg, Va. Filed Apr. 14, 1919. Serial No. 289,886. 16 Claims. (Cl. 120—44.)

12. A writing implement comprising a tubular reservoir body member with a rearward extension thereof, a division wall between the body member and rearward extension forming a supplemental reservoir, a nozzle for the front end of the reservoir, a plug for the rear end of the supplemental reservoir, a tubular member mounted in and extending through the division wall and at the forward end entering the nozzle and there carrying a writing point projecting from the front of the nozzle, said tube adjacent to the writing point having a passage therethrough opening into the main reservoir and also having a passage near its rear end opening into said supplemental reservoir, and another tube carried by the rear end of the plug and communicating through said rear plug end with the atmosphere and through its side passage with the supplemental reservoir, said last-named tube having a prolongation toward the rear end of the first-named tube but stopping short thereof and there provided with an agitatable extremity in position to rupture a film or bubble formed at the rear open end of the first-named tube.



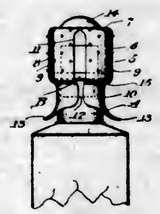
1,352,341. BUTTING-TOOL. ROBERT WILLIAM AYLING, West New York, N. J. Filed Oct. 15, 1919. Serial No. 330,879. 4 Claims. (Cl. 29—84.)

1. A butting tool comprising a head formed with a bolt receiving face, a wedge guide, and a handle extending from said head.



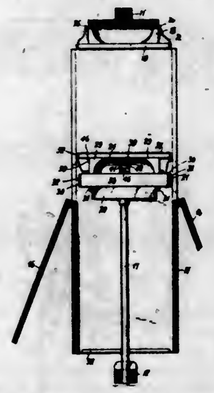
1,352,342. UNION-FERRULE. ALBERT W. BACHMANN, Laporte, Ind. Filed Mar. 27, 1919. Serial No. 285,435. 4 Claims. (Cl. 285—86.)

1. A joint for connecting hard and soft metal pipes together, including a nipple extension of the hard metal pipe for entering one end of the soft metal pipe, said nipple extension having relatively thin walls elongated in the direction of the length of the pipe and having an acute exterior curved taper, and a nut for application to the hard metal pipe in embracing relation to the nipple and the soft metal pipe applied thereto, the said nut having a correspondingly elongated interior convexly rounded surface for location opposite and shaped to receive the convexly rounded longitudinally elongated outer surface of the nipple, whereby the soft metal pipe is grasped between



the two convex surfaces for a distance lengthwise of the nipple and nut.

1,352,343. TOY AEROPLANE. ALFRED ZANTZINGER BAKER, Newark, N. J. Filed Feb. 17, 1920. Serial No. 359,436. 11 Claims. (Cl. 244—14.)



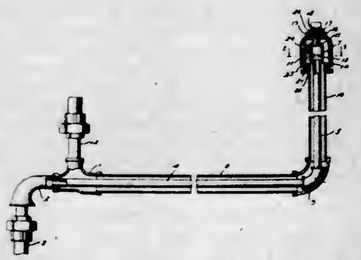
1. A toy aeroplane comprising a body portion or fuselage made from a single piece in the form of a bar having a slot cut in each end thereof, wing fittings mounted on the bar, wings attached to the fittings, and a propeller head and tail bracket fitted on each end of the bar by engaging the slots, said propeller head and tail bracket characterized by having socket clasps which surround and clamp the bar.

1,352,344. POISON-BOTTLE INDICATOR. ARTHUR G. BAXTER, Wabana, Belle Isle, Newfoundland. Filed Dec. 8, 1917. Serial No. 206,269. 1 Claim. (Cl. 215—113.)

A poison indicator for bottles comprising a hollow cylindrical body having its upper end closed and its lower end open for receiving the neck and cork of a bottle, said body being provided in opposite sides with longitudinal incisions thereby forming a pair of yieldable transversely curved attaching members, the intermediate portions of said attaching members being offset for forming retaining shoulders and neck engaging portions, the free lower portions of said transversely curved attaching members being curved outwardly for forming combined guides and finger engaging portions.

1,352,345. BLOCK OR FOLLOWER FOR BALING-PRESSES. IRVINE N. BECKER, Kaufman, Tex. Filed Nov. 19, 1918. Serial No. 263,178. 9 Claims. (Cl. 100—19.)

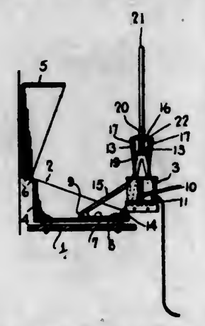
2. A block or follower for baling presses, said block having pockets to receive within its periphery the edge portions of a wrapping sheet disposed thereon having means for lifting an edge portion of the wrapping sheet disposed thereon.



8. The combination with a block or follower for baling presses, of a rock shaft journaled therein, a lever for operating said rock shaft, and a plurality of longitudinally movable rods operated by said rock shaft and having heads disposed adjacent one edge of said block.

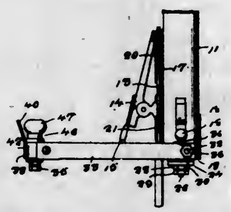
1,352,346. BRUSH-HANGER AND PAD-REMOVER. MATTHEW P. BENSON, Troy, and MILTON M. WIENER, New York, N. Y. Filed Feb. 2, 1920. Serial No. 355,710. 3 Claims. (Cl. 15—29.)

1. The combination in a hair brush with a back having an undercut flange and a flexible pad seated beneath said flange, of a hand operated ejector carried by the brush for the removal of the pad by pressure against the inner surface thereof.



1,352,347. OIL-BURNER. WILLIAM B. BOOKER, Freeport, Tex. Filed Nov. 25, 1919. Serial No. 340,523. 1 Claim. (Cl. 158—75.)

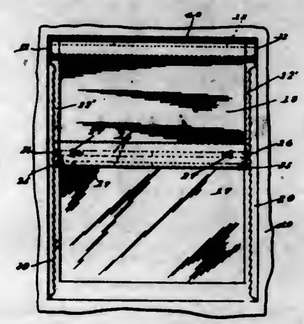
An oil burner, comprising a steam line, an oil pipe located inside of the steam line, a burner head on the steam line, a spray head on the oil pipe in the burner head, said spray head having a threaded opening in its end, a threaded plug in said opening having a tapering outer end,



said burner head having a screw threaded opening in its end, a screw threaded plug in said last-mentioned opening having a conical socket in its inner end receiving the first-mentioned plug and centering the spray head in the burner head.

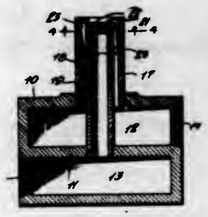
1,352,348. AIR-PUMP. SHIRLEY H. BOSSART, Birmingham, Ala. Filed Nov. 13, 1918. Serial No. 262,326. 1 Claim. (Cl. 230—27.)

A device of the class described comprising a casing, a pump hingedly secured thereto and comprising a pair of cylinders, pistons therein, rods connected with the pistons, an upright connected with the pump, a T-shaped mmber pivoted to said upright, links connecting two arms of the T-member with the piston rods and the other arm having a socket therein and a handle for engaging said socket.



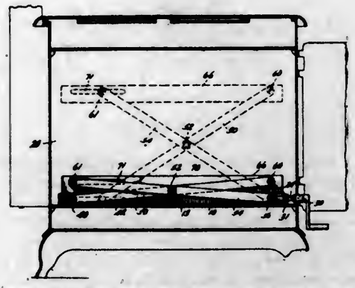
1,352,349. ILLUMINATING ATTACHMENT FOR MUSIC-HOLDERS. FRANK A. BUA, Lodi, N. J. Filed Dec. 2, 1919. Serial No. 342,019. 1 Claim. (Cl. 240—4.)

An illuminating means for sheet music holders, including a battery, a support including front and back members, and a bottom connecting said members receiving the battery, and said support being in contact with one of the electrodes of the battery, a flange on one end of the bottom, an arm pivoted thereto and designed by contact with said bottom to be limited in its swinging movement in two directions, said arm having a flange one one side thereof, a guide housed therein and connected to the second electrode of the battery, an angle member pivotally secured to the outer end of the arm and having a socket receiving a lamp bulb to the terminal of which the said wire is connected, guide means carried by the latter member for the wire, an integrally formed reflector having a bulb on said member, and the front plate of the support having integral spring fingers for engaging with the music holder.



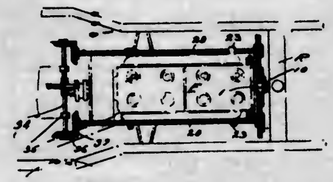
1,352,350. WINDOW-SHADE. THOMAS J. BURNS, Syracuse, N. Y. Filed June 21, 1919. Serial No. 305,759. 3 Claims. (Cl. 156—14.)

3. The combination with a spring actuated window shade having side hems and a transverse hem, of a longitudinally slotted guide secured to each side of the window casing, vertical rods positioned within said guides for insertion within the side hems, a frame comprising spaced transversely disposed rods and end connecting rods located within the transverse hems, eyes located at



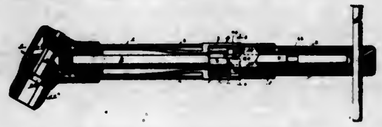
each end of the frame for engagement around the vertical rods and means extending over the side hems of the shade and around the vertical rods to space the hems from the tubular guides.

1,352,351. GAS-BURNER. JAMES BYERS, Chicago, Ill. Filed Oct. 21, 1919. Serial No. 332,157. 2 Claims. (Cl. 158—99.)



1. A device of the character described comprising a body provided with air and gas chambers having inlet openings, a tubular member connected with said body and communicating with the air chamber therein, a pipe extending concentrically through said tubular member and communicating with the gas chamber, and a tip on the end of said pipe having its outer end closed, said closed end being provided with a plurality of gas discharge holes and the outer periphery of said tip being provided with a plurality of spirally arranged ribs defining spiral passages through which the air passes, the air being thereby given a circular motion.

1,352,352. OVEN-GRILL. GEORGE BARKER CASWELL, Fort Terry, N. Y. Filed Mar. 29, 1920. Serial No. 369,739. 3 Claims. (Cl. 126—337.)

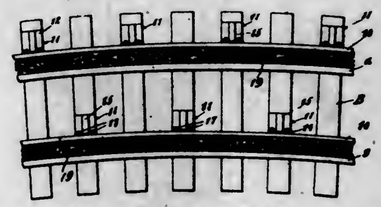


1. An oven grill adapted to fit into the oven of a cooking stove, comprising a grated base adapted to be supported in the lower portion of the oven, an open frame mounted to slide transversely on the said base and provided at its forward end with a nut, a transverse screw rod mounted to turn on the said base and screwing in the said nut to move the open frame forward or backward, a grated platform and lazy tong connections pivoted on the base and connecting the said frame with the said platform.

1,352,353. ENGINE-STARTER. MICHAEL CHATTLE, Wauna, Oreg. Filed Apr. 16, 1919. Serial No. 290,484. 4 Claims. (Cl. 123—185.)

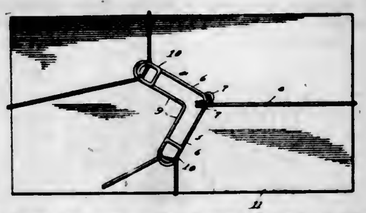
1. In an automobile engine starter, the combination with a notched disk fast on the engine shaft, a gear wheel loosely mounted on said shaft, a pawl pivoted in the gear wheel and with its tip engaging said disk, and means for disengaging the tip from the disk when the engine backfires; of shafts extending alongside the engine, gears loosely mounted on their front ends and meshing with said main gear, pawl and ratchet mechanism for connecting the shafts with their respective driving gears, a rock shaft across the rear end of the side shafts and geared thereto, and a lever for oscillating the rock shaft, for the purpose set forth.

1,352,354. RATCHET AND CLUTCH MECHANISM. IRA CHURCH, Reed City, Mich., assignor of one-half to Lottie Sanford, Reed City, Mich. Filed Dec. 17, 1919. Serial No. 345,589. 7 Claims. (Cl. 81—60.)



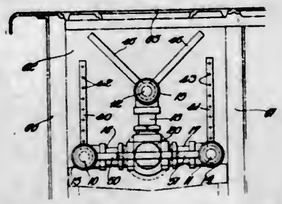
1. In mechanism of the character described; a first rotatable element having teeth; a pawl adapted to engage the teeth to hold said element against rotation in one direction only; a second element having a longitudinal movement and a rotary movement, and having a portion adapted to engage and move by the second element's longitudinal movement the pawl from operative engagement with the teeth, and having also a clutch member adapted to be moved by the longitudinal movement of the second element into clutching engagement with the teeth; a body member whereby said parts are carried.

1,352,355. COLLAPSIBLE TUBE. EDGAR LEROY CLEVELAND, Othello, Wash. Filed Nov. 18, 1919. Serial No. 338,895. 3 Claims. (Cl. 221—60.)



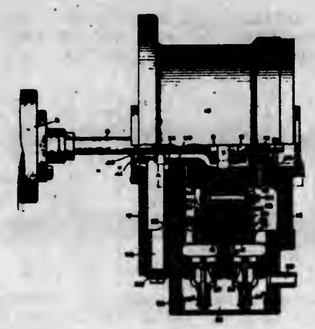
1. A collapsible and non-resilient tube adapted to be distorted in discharging the contents thereof, and flexible spring members secured upon the wall of the tube and adapted to produce a retracting effect on the contents within the tube when the pressure of distortion has been relieved.

1,352,356. GUARD-RAIL STRUCTURE. WALTER M. CREITZ, Bethlehem, Pa. Filed June 14, 1920. Serial No. 388,902. 2 Claims. (Cl. 238—17.)



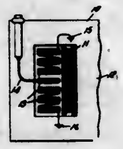
1. In combination with the rails of a trackway, guard rails secured upon the ties of the trackway at corresponding sides of the track rails and at the same distance apart as the distance between the rails and projecting above the rails, and the spaces between the rails and said guard rails being filled with crushed stone, both the rails and also the guard rails extending above the crushed stone.

1,352,357. PACKAGE-TIE. JOHN C. CULLIGAN, Bombay, N. Y. Filed Mar. 1, 1919. Serial No. 279,999. 1 Claim. (Cl. 24—18.)



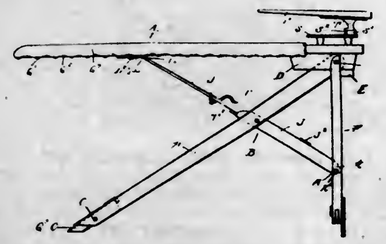
A package tie constructed from a strand of wire and comprising a right angular body portion, comprising parallel inner and outer arms, said arms at their outer ends being rounded upon themselves and provided with connected extensions that overlie the said arms and provide jaws, the outer arms providing the terminals of the wire strand and having their confronting face bent to provide interengaging eyes, and one of said eyes designed to receive a knotted tying cord therethrough.

1,352,358. GAS-BURNER FOR HEATERS. RUFUS DEPEW, Brooklyn, N. Y. Filed Feb. 12, 1920. Serial No. 358,253. 3 Claims. (Cl. 158—99.)



1. A gas burner for heaters, comprising side tubes and a top tube, the tubes being closed at one end and connected at the other end with a fixture common to the tubes, a gas and air mixer connected with the said fixture to supply the latter and the tubes with a mixture of gas and air, upright perforate pipes rising from the said side tubes, perforate bottom pipes extending from the side tubes toward each other, and perforate pipes diverging sidewise upwardly and outwardly from the said top tube.

1,352,359. DASH-POT. JOHN H. DORAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,661. 7 Claims. (Cl. 74—69.)



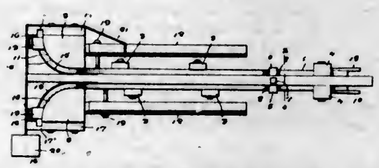
1. In an apparatus of the character described, the combination of a rotating shaft, a collar thereon, a dash-pot comprising a cylinder member and a piston member, one of said members being formed in two parts which engage said collar on opposite sides, and means for yieldingly holding said parts in engagement with said collar.

1,352,360. STATIONARY INDUCTION APPARATUS. WILLIAM O. DWYER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 27, 1920. Serial No. 361,702. 4 Claims. (Cl. 175—356.)

1. An electrical winding arranged to be supplied with current at substantially its middle point and to conduct the same in multiple paths diverging from said middle point advancing in the same direction about the winding axis, and provided with means located at said middle point for electrostatically imposing throughout said paths a desired potential distribution.

1,352,361. IRONING-BOARD. JOHN H. D. EVERETT, Boulder, Colo. Filed Apr. 13, 1917. Serial No. 161,891. 5 Claims. (Cl. 68—10.)

1. In an ironing table, the combination with a board, of a three-point supporting frame therefor comprising a standard adapted to engage the floor at spaced points, a diagonally projecting supporting leg, an adjustable abutment secured to said board, and a locking bar having a resilient portion adapting it to be sprung into position between said standard and said adjustable abutment for fastening said standard and leg in fixed position.



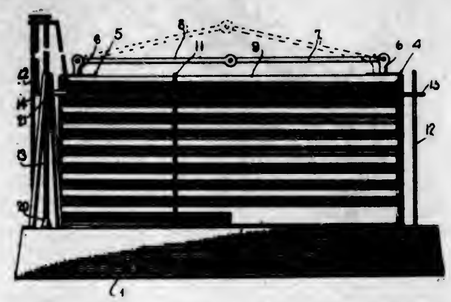
2. In an ironing table, the combination with a board, of an abutment member rigidly secured thereto, a supporting frame for said board having a standard pivotally secured to the board and rockable to a position against said abutment, an adjustable abutment also secured to said board, and a locking bar having a resilient portion adapting it to be sprung into locking position between said standard and adjustable abutment so as to press said standard against said abutment when the table is in position of use.

3. In an ironing table, the combination with a board, of a supporting standard pivoted to one end of said board, a supporting leg pivoted to the same end of said board and occupying a diagonal position in use and a resilient locking bar pivoted intermediately upon said leg, an abutment for one end of said locking bar upon the lower portion of said standard and an abutment for the other end of said locking bar, longitudinally adjustable upon said board to stress said locking bar and secure rigidity.

4. In an ironing table, the combination with a board, of an abutment carried by the board, a substantially vertical standard engaging said board adjacent one end of the same, a coacting supporting leg extending diagonally from one end of the board beneath the latter and a member pivoted upon said diagonal leg having a substantially rigid portion at one side thereof for engagement with said standard and having a resilient portion at the other side of the leg engageable with the abutment and adapted to be stressed by such engagement to establish a rigid relation between the board and frame.

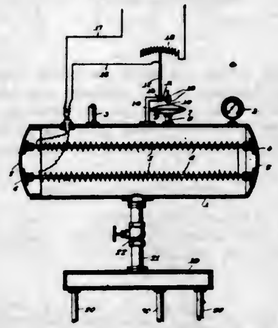
5. An ironing table including a board equipped with an abutment on its under face and a supporting structure consisting of a supporting standard and a supporting leg secured to said board at a point remote from the abutment and an inherently resilient locking bar pivotally mounted intermediate its ends on said supporting leg, one end thereof being engageable with the supporting standard and the opposite end being flexed beneath said abutment for rigidly supporting said ironing board.

1,352,362. FORMING-CLAMP FOR TWO-PIECE SNOW-SHOES. WILLIAM W. FELTER, Arkansas City, Kans. Filed Dec. 19, 1919. Serial No. 345,966. 3 Claims. (Cl. 144—267.)



1. A device of the class described comprising a base having a slot therein, a block on each face of the base having a recess therein for receiving the heel ends of a pair of snow shoe strips, a former block on each face of the base for holding the strips in position, a pair of heel engaging blocks adjustably mounted in the slot and having their ends engaging both pairs of the strips and means for bending the toe ends of each pair of strips upwardly and holding them in this position.

1,352,363. SHEET-MUSIC MOVING AND TIME-KEEPING APPARATUS. JAMES FLYNN, Soo Junction, Mich. Filed Sept. 13, 1919. Serial No. 323,518. 6 Claims. (Cl. 84—48.)



4. In an apparatus to move an endless music sheet on which music is inscribed in a spiral manner lengthwise of the sheet, the combination of means to move the sheet

rectilinearly, a line indicator movable to a corresponding degree throughout its length in a direction at right angles to the line of movement of the sheet, and disposed at all times in approximate parallelism with the lines on the sheet, and means to so move the line indicator at the same time that the sheet is moved.

6. Apparatus for the purpose described, comprising means to move a music-bearing sheet rectilinearly, a line indicator, a screw shaft, cones adjacent to the opposite ends thereof, a nut movable on and by the shaft and carrying the line indicator and controlled by the said cones, and a spring for quickly moving the said nut in one direction after the same is engaged by one of the cones from the screw shaft.

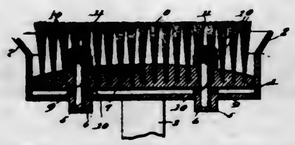
1,352,364. TEMPERATURE-REGULATOR. JOSEPH GRAZIANO, Newburgh, N. Y. Filed Oct. 15, 1918. Serial No. 258,184. 3 Claims. (Cl. 219—38.)

1. The combination with a compressed air reservoir, of means for automatically regulating the pressure of the air therein, said means embodying an electric resistance element in said reservoir, a rheostat in circuit with said element, and a pressure-operated controller for said rheostat in open communication with said reservoir and directly influenced by the pressure of the air therein.

1,352,365. [WITHDRAWN.]

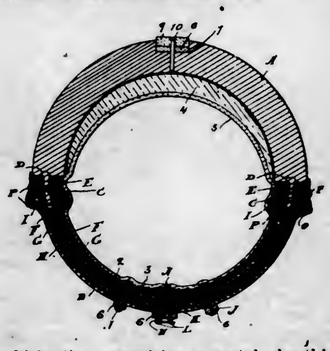
1,352,366. [WITHDRAWN.]

1,352,367. ALLOY. JOHN G. HOMAN, Steubenville, Ohio, assignor, by mesne assignments, to William H. Keller, Norton, Va. Filed Jan. 3, 1920. Serial No. 349,288. 4 Claims. (Cl. 75—1.)



1. An alloy of iron and silicon having an electrical resistance superior to iron and of punchable quality, consisting of iron, silicon 1% to 6% and manganese .20% to 1%, the relation of the silicon and manganese being such, as one of them is increased or diminished, the other is also more or less increased or diminished.

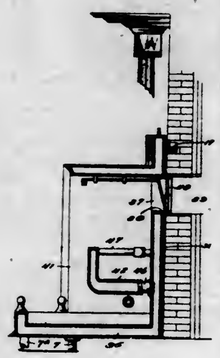
1,352,368. ADVERTISING DEVICE. MELVIN HOSSEY, Crisfield, Md. Filed July 3, 1919. Serial No. 308,541. 4 Claims. (Cl. 40—28.)



1. A device of the class described comprising a pair of figures representing a man and a woman, supporting means upon which the figures are pivotally mounted in such a manner that the figures will assume a position caused by gravity with their lips in contact, means engaging one of the figures for intermittently moving the figure away from the other figure and means for imparting a limited movement to the last mentioned figure by the movement of the first mentioned figure.

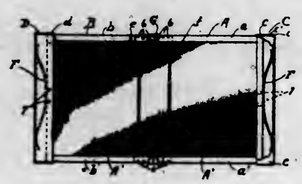
1,352,369. BRUSH. HOMER HUNT, Springfield, Mass. Filed Apr. 11, 1919. Serial No. 289,196. 1 Claim. (Cl. 15—13.)

A brush for cleaning ceilings comprising a rectangular receptacle having the upper portions of its side walls flaring outwardly, bolts connected with the bottom of the receptacle, a brush having holes in its back for receiving said bolts, washers on said bolts for spacing the brush from the bottom of the receptacle, nuts engaging the bolts for removably holding the brush in the receptacle, and a handle extending downwardly from the bottom of the receptacle.



1,352,370. VEHICLE-TIRE. CHARLES ROBERT IRVINE, Petrolia, Ontario, Canada. Filed Jan. 7, 1920. Serial No. 349,895. 4 Claims. (Cl. 152—33.)

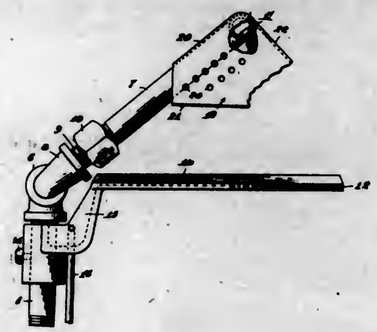
1. A vehicle tire comprising a metal sheathing composing the tread and designed to partly inclose the inner



tube; a separable reinforced flexible closure member designed to complete the incasing of said tube; a tongue carried by each of the sides of said metal sheathing and extending circumferentially thereof; wires positioned adjacent said tongue, and designed to couple said separable closure member to said metal sheathing, and plates overlapping said metal sheathing at each side of the tire and suitably secured in position to said tongues.

1,352,371. HEATING SYSTEM. DAVID T. KENNEY, North Plainfield, N. J. Filed May 7, 1915. Serial No. 26,568. 6 Claims. (Cl. 126—132.)

1. In a circulating water heating system, a heating element for the water comprising a hollow fire supporting hearth forming the floor of an open fire-place.

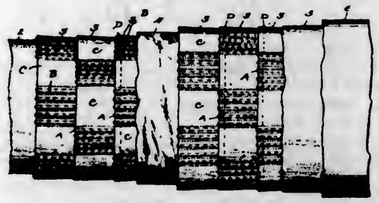


1,352,372. EXTENSION WINDOW-SCREEN. JOHN H. KESSLER, Binghamton, N. Y. Filed Jan. 20, 1919. Serial No. 271,951. 4 Claims. (Cl. 156—38.)

1. In a window screen the combination of two sliding screen frames having on their upper edges series of recesses adapted to be placed in alinement with each other, and a clamp placed over said frames and having a downwardly projecting member adapted to enter the alined recesses.

1,352,373. OIL-BURNER. LOUIS M. KOHNER, Los Angeles, Calif. Filed May 21, 1919. Serial No. 298,769. 9 Claims. (Cl. 158—66.)

3. A hydrocarbon burner comprising a vertical feed pipe, an arched generating tube communicating with the feed pipe from the opposite sides thereof and inclined relative to the horizontal, said generating tube being formed with a downwardly opening discharge orifice, a sleeve adjustable vertically on said feed pipe, a baffle plate carried by said sleeve and extending beneath the

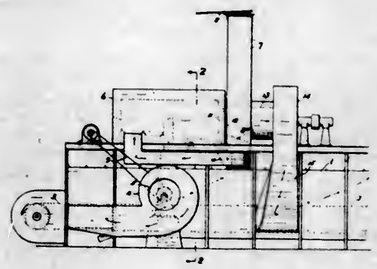


discharge orifice, and a generating cup formed at the juncture of the sleeve and baffle plate.

1,352,374. SNAP-FASTENER. THOMAS F. MORRIS, Waterford, N. Y. Filed Apr. 17, 1920. Serial No. 374,704. 7 Claims. (Cl. 24—208.)

1. A snap fastener member including a part to pass through an opening in the material and also including disks adapted to be clamped on the material beyond said opening, and spurs projecting from one of said disks to be deflected toward the opening in the clamping of the disks.

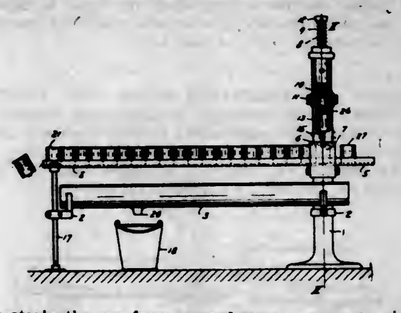
1,352,375. AUTOMOBILE-TIRE. ANNIE L. MEEKS, Gadsden, Ala. Filed Feb. 17, 1920. Serial No. 359,440. 6 Claims. (Cl. 152—18.)



6. In a tire structure comprising a plain fabric layer, a plurality of reinforcement layers each comprising a plurality of fabric sections arranged transversely of the tire and so that each overlaps the one next adjacent and is secured thereto, each of said fabric sections being provided with a plurality of spaced groups of cords, the cord groups of one section being arranged in staggered relation to those of the next adjacent and overlapped section so as to seat in spaces between the cord groups of the latter and an intermediate layer of an armor material, such as rawhide, all superposed on said first fabric section, a fabric section superposed upon said reinforcement layers and a tread surrounding the whole substantially as specified.

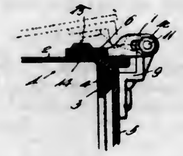
1,352,376. CHUCK FOR RIBBON-WINDING MACHINES. EDGAR A. OPPENHEIMER, Chicago, Ill. Filed May 14, 1919. Serial No. 297,034. 6 Claims. (Cl. 279—71.)

1. In a chuck device, a bearing, a rotatable shaft mounted in said bearing, a head on one end of said shaft, consisting of two relatively movable sections, jaws carried by said head for gripping the flange of a ribbon spool, means for moving said jaws to gripping and releasing positions by proper relative shifting of said head sections, means for drawing one of said head sections laterally against the other to frictionally lock them against relative movement when said jaws are in gripping position, and means for rotating the aforesaid shaft.



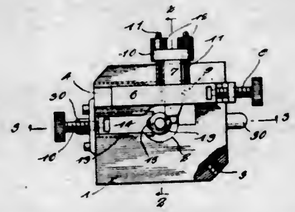
1,352,377. BRIQUET-DRIER. ROBERT S. PLUMMER, Philadelphia, Pa., assignor to American Briquet Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 11, 1919. Serial No. 323,172. 3 Claims. (Cl. 34—12.)

2. A briquet drier comprising in combination, a drying tunnel, a traveling conveyer extending through the tunnel and dividing it into upper and lower compartments and adapted to carry a bed of briquets, an offtake from the upper compartment at one end of the tunnel, a fan at the other end of the tunnel for forcing air into the lower compartment, a series of fans at stages intermediate of the length of the tunnel and having their inlets connected to the upper compartment and their outlets connected to the lower compartment, and means for heating the air prior to its introduction into the first of the fans of the series, substantially as described.



1,352,378. CAN-PUNCH. JOHN POSTMA, Loleta, Calif. Filed Dec. 27, 1919. Serial No. 347,818. 2 Claims. (Cl. 164—96.)

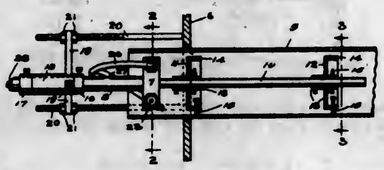
1. A can punching machine comprising a punch adapted to penetrate the top of the can and continue through the can and its contents and to punch a hole also in the bottom of said can in combination with a base member and traveling means thereon adapted to move cans successively under and away from said punch and a member adapted



to restrain the can from upward movement as the punch is withdrawn from the can, and means for operating said punch.

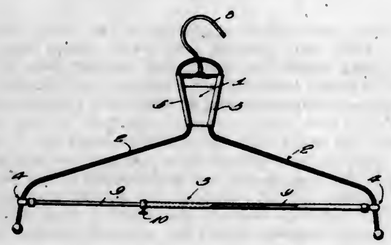
1,352,379. HINGE FOR DOORS OF BURIAL-VAULTS. HARRY POUNDER, Galion, Ohio. Filed Apr. 28, 1920. Serial No. 376,100. 1 Claim. (Cl. 16—11.)

A hinge for mounting closures on burial vaults comprising a hinge plate provided with spaced slotted lugs, the slots being disposed in parallelism with the body of the plate, a second hinge plate including a right angular offset portion, on the free end of which is a knuckle, and a relatively fixed pivot member extending through said slotted lugs and knuckle, said member being in the form of a bolt which is adapted to be moved to various positions in the slots in the lugs and clamped by the nut in any position desired, whereby the closure may be adjusted to different positions and tightly contact packings of different thickness which are arranged between itself and the front of the vault.



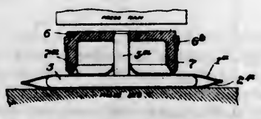
1,352,380. PORTABLE METAL-TURNING LATHE. GEORGE W. PAISBERRY, St. George, Utah, assignor of one-sixth to Brigham Carpenter and one-sixth to Robert Fawcett, St. George, Utah. Filed Dec. 11, 1919. Serial No. 344,013. 2 Claims. (Cl. 82—4.)

1. In a metal turning lathe a head having therethrough a work-receiving opening, a cutter carried by said head adjacent said opening, spacers extending rigidly from said head around the opening thereof, an annular internally channeled bearing carried rigidly by said spacers in spaced relation to said head, a substantially flat feed nut rotatably mounted in the channel of said bearing in alinement with said opening, a set screw carried by said bearing for holding said feed nut against turning when



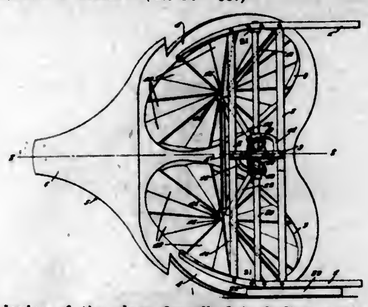
required, a sleeve threaded through said nut, a shoulder on said sleeve to abut said nut and hold the sleeve and nut against relative turning when the latter is released for rotation within said bearing, and means for centering and clamping the work in said sleeve.

1,352,381. OXYACETYLENE-TORCH FOR CUTTING TUBES. JOY S. REYNOLDS, Seattle, Wash, assignor, by direct and mesne assignments, to Reynolds Torch Manufacturing Company, Seattle, Wash. Filed Nov. 18, 1918, Serial No. 263,084. Renewed Jan. 24, 1920. Serial No. 353,801. 2 Claims. (Cl. 266—23.)



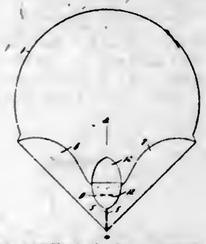
2. The method of cutting the end off of a boiler tube which consists of inserting a cutting torch within said tube, splitting the tube longitudinally in more than one place from the end inwardly to the point where it is to be cut off and then rotating the torch to cut off the end of said tube.

1,352,382. GARMENT-HANGER. DAVID R. RIDDICK, Rawlins, Wyo., assignor of one-half to Alexander L. Mackintosh, Denver, Colo. Filed Nov. 4, 1918. Serial No. 261,034. 2 Claim. (Cl. 211—13.)



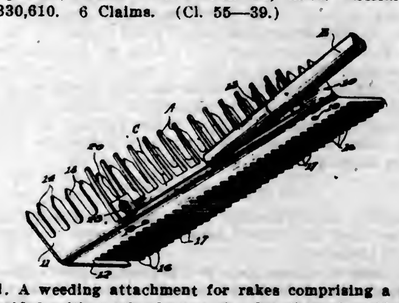
1. In a garment hanger, a support provided with a suspending device, a horizontal, longitudinally extensible and retractible spreader below said support and provided with guides at its ends, and a pair of self-straightening spring arms diverging downwardly from said support, the lower ends of said spring arms being sprung downwardly and inserted under tension through said guides without destroying their self-straightening qualities, whereby a constant outward stress is exerted on said lower ends of the arms to yieldably hold them against sliding through said guides.

1,352,383. MECHANISM FOR MANUFACTURING RUBBER BATHING-CAPS. RALPH EARL RILEY, Akron, Ohio, assignor to The Miller Rubber Company, a Corporation of Ohio. Filed Sept. 11, 1919. Serial No. 323,096. 3 Claims. (Cl. 154—42.)



1. Means for use in forming rubber bathing caps comprising a flat platen having a vertical stem, and a substantially cylindrical die having a guideway to receive said stem and a blunt cutting edge.

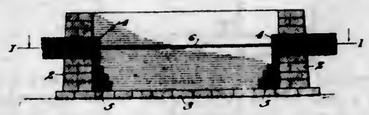
1,352,384. VACUUM SNOW-SWEEP. ARTHUR B. RISHEL, Goddard, Kans. Filed Mar. 8, 1919. Serial No. 281,377. 1 Claim. (Cl. 37—68.)



A device of the class described including a plow having side wings provided with openings; fans journaled in the openings; and means for rotating the fans to cause a draft outwardly through the openings, the plow having a central rib between the side wings and being provided with flanges on the rear ends of the wings, the flanges and the wings serving to direct laterally the air proceeding from the openings, thereby to produce a diminution of pressure at the sides of the plow in advance of the openings.

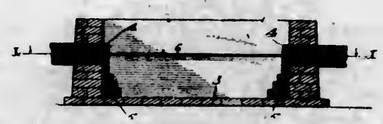
1,352,385. FAN. FREDERICK F. ROTHENHOEFER, Covington, Ky., assignor to The Monarch Lithographic Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 24, 1918. Serial No. 241,537. 2 Claims. (Cl. 230—33.)

1. A one-piece cardboard fan comprising a blank of suitable outline, having a straight edge as a base, oppositely disposed diagonal scored lines extending from said base edge at points central of the blank, dividing the blank into a body portion and two oppositely disposed flaps, the flaps folded upon the body portion on the scored lines, and a tongue cut from the center of said body portion and bent upon and secured to said flaps to provide a thumb receiving opening through the body portion.



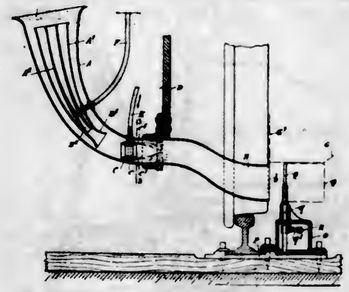
1,352,386. RAKE ATTACHMENT. OTTO RUNDBERG, Spokane, Wash. Filed Oct. 14, 1919. Serial No. 330,610. 6 Claims. (Cl. 55—39.)

1. A weeding attachment for rakes comprising a plate provided with teeth along each edge thereof, said plate bent intermediate its ends to provide obliquely disposed



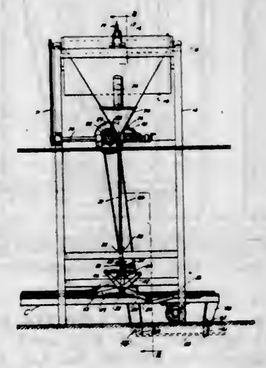
portions, and means for attaching said plate to an ordinary rake whereby one of the tooth portions will extend at an acute angle to the handle of the rake.

1,352,387. METHOD OF CONVERTING REFRACTORY OXID. LEWIS E. SAUNDERS, Niagara Falls, N. Y., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1919. Serial No. 290,223. 6 Claims. (Cl. 204—64.)



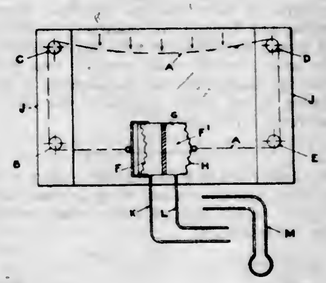
1. The operation is electrically far more efficient, its power requirement being only about ⅓ that of an ordinary arc fusion of the same oxid.

1,352,388. METHOD OF SHRINKING MAGNESIA. LEWIS E. SAUNDERS, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 28, 1917, Serial No. 183,367. Renewed Feb. 17, 1920. Serial No. 359,316. 2 Claims. (Cl. 204—64.)



1. The electrical method of shrinking magnesia, which consists in locally heating a charge of magnesia under conditions to establish a current path therethrough, and progressively shrinking further portions of said charge by means of an electric current traversing the conductive portions thereof.

1,352,389. APPARATUS FOR REPEATING AUTOMATICALLY ON A RAILWAY-LOCOMOTIVE, TRACK SIGNALS PROVIDED FOR THE PROTECTION OF MOVING TRAINS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Joint-Stock Company of France. Filed Feb. 28, 1920. Serial No. 362,121. 13 Claims. (Cl. 246—192.)

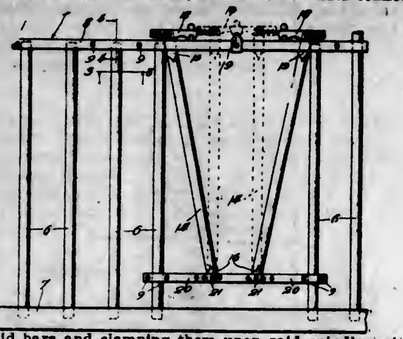


3. In a railway signal, a nozzle mounted on a car to form an air-duct, means for normally maintaining a depression of the air pressure in the nozzle, signal-indicating means communicating with the nozzle to be actuated by a fluctuation of the depression therein, and a screen mounted adjacent to the track to register with the mouth of a passing nozzle to cause a fluctuation of the depression in the nozzle.

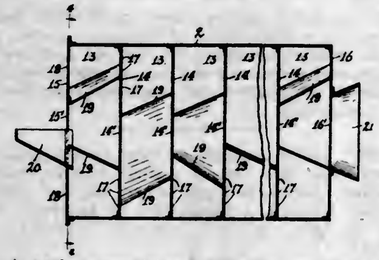
1,352,390. PLASTER-BOARD AND METHOD OF MAKING SAME. JOHN SCHUMACHER, Los Angeles, Calif. Filed Dec. 22, 1919. Serial No. 346,534. 6 Claims. (Cl. 154—2.)

3. The method of making plaster board which consists in advancing a single sheet of covering material, folding said sheet intermediate the ends to form parallel covers, flowing plastic material between said covers while the latter is being folded, and compressing said board to form parallel faces.

1,352,391. ANEMOMETER. SYDNEY GEORGE STARLING, Forest Gate, and ARTHUR JOSEPH HUGHES, London, England, assignors to Henry Hughes and Son, Limited, London, England, a Corporation of England. Filed Apr. 10, 1919. Serial No. 289,066. 5 Claims. (Cl. 73—2.)



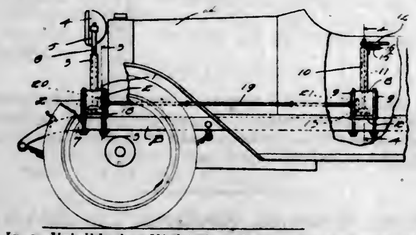
1. An anemometer comprising a flexible lineal connector supported under tension and arranged to yield to transversely directed air currents, and means for indicating variations in the tension of said connector.



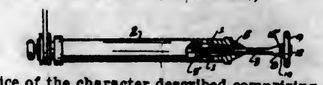
1,352,392. INCLOSURE, PEN, FENCE, AND THE LIKE. CHARLES M. STEVENSON, Chicago, Ill., assignor to Stevenson Mfg. Co., Barton, Wis., a Corporation of Wisconsin. Filed Sept. 29, 1919. Serial No. 327,178. 4 Claims. (Cl. 256—21.)

1. In a structure of the class described, a rail comprising two companion, webbed bars arranged with their channels facing each other and with their upper marginal edges abutting against each other, there being opposing

semi-circular holes in the lower sides of said bars, spindles extending through said holes, and bolts and nuts connecting said bars and clamping them upon said spindles with the abutting upper edges clamped together throughout.

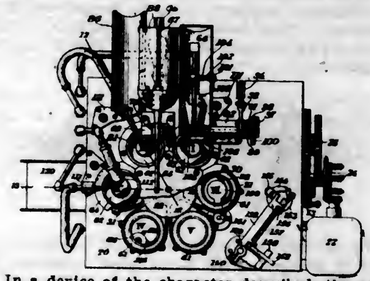


1,352,393. FRUIT AND VEGETABLE WASHER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barn-Grover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 3, 1920. Serial No. 370,935. 6 Claims. Cl. 146—14.)



4. A washer comprising a rotatable, circumferentially-imperforate tank; means secured within and rotating with the tank for advancing the material therethrough and elevating and dropping it repeatedly during its progress, said means consisting of annular, perforate, spaced partitions, and a spiral vane between said partitions; and means for supplying and maintaining a stream of water flowing in the lower portion of the tank through the perforations of the partitions.

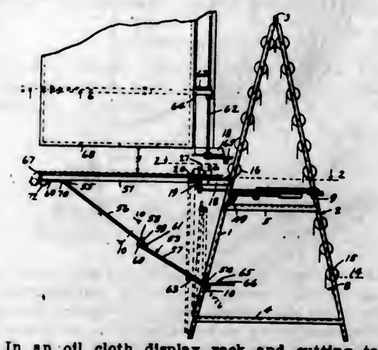
1,352,394. DIRIGIBLE HEADLIGHT. MAT A. TUCKER, Moore, Okla., assignor of one-third to Chas. L. Tucker, Moore, Okla. Filed May 19, 1919. Serial No. 298,042. 1 Claim. (Cl. 240—61.)



In a dirigible headlight, housings secured to the frame of an automobile, a base plate located beneath each housing, a tubular extension mounted on each housing and extending vertically upward, a shaft journaled in each housing and having a pointed lower end seated in a recess in the base plate aforesaid, one of said shafts being formed to receive and support a lamp, an operating handle secured to the other shaft, a horizontal shaft connecting said housings and journaled in their walls, a beveled gear wheel secured on each end of said horizontal shaft within the housing, and a beveled gear wheel on each vertical shaft and meshing with the gear wheel on the adjacent end of the horizontal shaft.

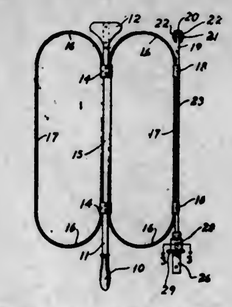
1,352,395. DENTAL MANDREL FOR HOLDING STONES AND SANDPAPER DISKS. WALTER S. WRIGHT, Lompoc, Calif. Filed Apr. 29, 1920. Serial No. 377,614. 1 Claim. (Cl. 32—13.)

A device of the character described comprising a mandrel having a split end; a clamping rod for an instrument extending through said mandrel and clamped therein at said split end.



1,352,396. MACHINE FOR FINISHING BLOWN-GLASS ARTICLES. JAMES BAILEY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Aug. 19, 1919. Serial No. 318,569. 12 Claims. (Cl. 49—2.)

2. In a device of the character described, the combination of a bulb tray, and automatic resilient means to rock the tray, a member having a stripping notch above the tray, and a latch moved by an insertion of the blow-iron in the stripping action to lock the tray against rocking.

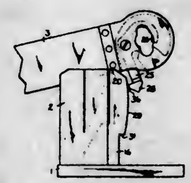


12. In a device of the character described, the combination of a transfer mechanism adapted to lift a bulb out of a chuck, of a resiliently supported pad adapted to raise said bulb into gripping engagement with said transfer mechanism.

1,352,397. OIL-CLOTH DISPLAY-RACK AND CUTTING-TABLE. FREDERICK M. BALDWIN, Bishop, Calif. Filed May 31, 1918. Serial No. 237,613. 3 Claims. (Cl. 211—18.)

1. In an oil cloth display rack and cutting table, a table leaf; slide-ways below the leaf; arms in the slide-ways; and roller supports carried by the arms and adapted to extend beyond the edge of the leaf.

1,352,398. NEWSPAPER-HOLDER. JAN BARTUSEL, Youngstown, Ohio. Filed Oct. 15, 1919. Serial No. 330,780. 2 Claims. (Cl. 129—36.)

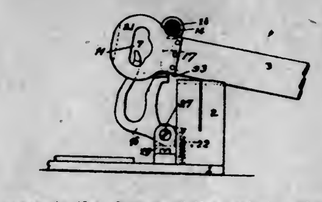


1. A paper holder comprising a stem, a handle extending therefrom, a plate element formed on the end of said handle, clips secured on said stem, a pair of open wire frames hingedly engaged in said clips, a rod engaged with the outer end of one of said frames, a second rod pivoted with the first named rod, a head adapted to engage the two rods when in close relation, and a slide movable over said head whereby said rods are held in said head.

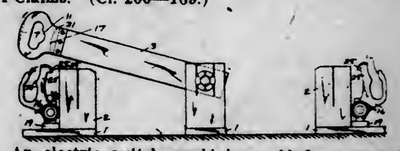
1,352,399. METHOD OF TREATING ZINC-BEARING ORES. FRANK K. CAMERON and JOHN A. CULLEN, Salt Lake City, Utah, and REED W. HYDE, New York, N. Y., assignors to American Smelting & Refining Company, Salt Lake City, Utah, a Corporation of New Jersey. Filed July 17, 1917. Serial No. 181,169. 1 Claim. (Cl. 23—13.)

The method of treating zinc-bearing ores, which consists in converting the zinc component of the ore into sulfate, adding thereto an alkali-metal chlorid in proportion at least sufficient to transform the zinc sulfate into chlorid and to form therewith a crystallizable double halid salt, and crystallizing the said double halid from the solution.

1,352,400. ELECTRIC SWITCH. PHILIP H. CHASE, East Orange, N. J. Filed Feb. 28, 1916. Serial No. 80,923. 20 Claims. (Cl. 200—169.)



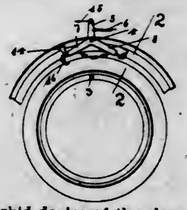
1. An electric switch combining a blade apertured to



receive an operating implement, a contact-block, contact clips mounted thereon to coöperate with said blade, and means adjacent the contact clips for preventing removal of the implement during a predetermined range of the movement of the blade.

1,352,401. ELECTRIC SWITCH. PHILIP H. CHASE, East Orange, N. J. Filed June 1, 1916. Serial No. 101,109. 16 Claims. (Cl. 200—169.)

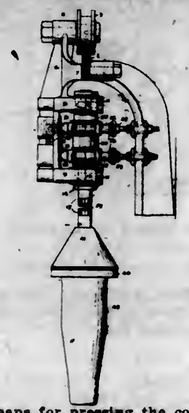
1. An electric switch combining a blade having a bracket substantially in the plane of the blade, said bracket being apertured to receive a hook, contact clips coöperating with said blade, a lock for holding the switch closed, means whereby the operation of the hook in the aperture in blade-opening direction releases the lock to permit the opening of the switch, and means whereby the lock normally prevents the closing of the switch unless the hook is in the aperture.



1,352,402. ELECTRIC SWITCH. PHILIP H. CHASE, East Orange, N. J. Filed Mar. 1, 1916. Serial No. 81,415. 14 Claims. (Cl. 200—169.)

1. An electric switch combining a blade apertured to receive a hook provided with a nose, a contact-block, contact clips mounted thereon to coöperate with said blade, and a lock comprising a latch mounted on the contact-block, said latch comprising means for preventing removal of the hook during a predetermined range of the movement of the blade.

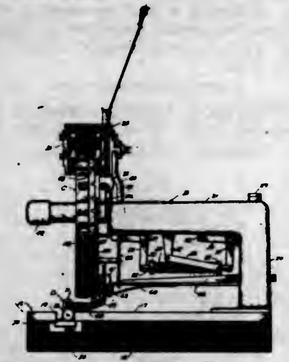
1,352,403. ANTISKID DEVICE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Jan. 30, 1917. Serial No. 145,521. 9 Claims. (Cl. 152—14.)



3. In an anti-skid device of the class described, in combination with the fender of a vehicle and the wheel of such vehicle, a receptacle disposed at the underside of the fender along the curves of the wheel, a chain removably disposed in the receptacle, engaging means on the wheel, double levers disposed near the receptacle and near the wheel removably engaged with both ends of the chain, and operating means for engaging the chain with the engaging means on the wheel.

1,352,404. METHOD AND APPARATUS FOR DRYING PULP HOLLOW WARE. JOHN J. ELDRIDGE and GUY A. DUNN, Oakland, Calif. Filed June 12, 1916, Serial No. 103,150. Renewed July 28, 1920. Serial No. 399,636. 7 Claims. (Cl. 92—54.)

1. The process of drying a series of bodies which consists in bodily moving each body in a path parallel with, and adjacent to, electrical conductors and causing electricity to pass from one to the other of said conductors and closely adjacent to each moving body to heat the same.

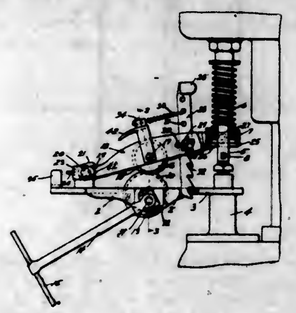


7. In a device of the character described, two conductors extending along side each other, a standard for supporting said conductors, a trolley rail supported by said standard, a trolley wheel movable on said trolley rail, a hanger supported from said wheel, a tube having bearings in said hanger, a hollow core suspended from said tube,

high resistance wire within the core, conductors connected to the ends of said wire and extending through said tube, rotatable contact carriers on said tube, contacts carried

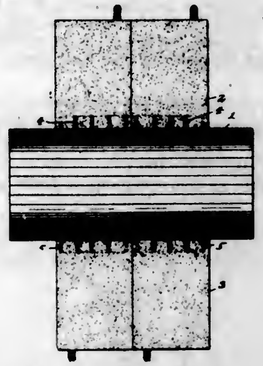
thereby, and means for pressing the contacts against the first-named conductors, the other ends of the last-named conductors being connected to said carriers.

1,352,405. WRITING-MACHINE. HJALMAR ELMBLAD, Chicago, Ill. Filed July 28, 1919. Serial No. 313,678. 7 Claims. (Cl. 197—47.)



1. In a printing machine, the combination of a base; a movable carriage for paper thereon; a rotatable type wheel movable so as to be depressed and engage said paper for printing, said type wheel having spacing notches on the rim thereof corresponding to just spacing; spacing means comprising a horizontally pivoted arm having a finger to engage with said notches, means tending to swing said arm, means to permit movement of said arm upon depression of said wheel and to return said arm upon elevation of said wheel, and a clutch for moving said carriage in one direction connected to said arm.

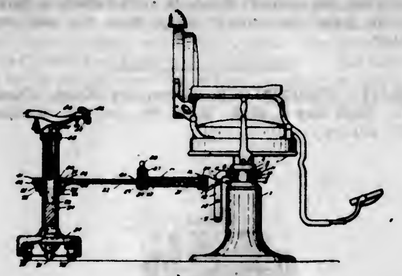
1,352,406. SAFETY-STIRRUP. WILLIAM RICHARD GRIMM, Los Angeles, Calif. Filed Oct. 16, 1917. Serial No. 196,938. 2 Claims. (Cl. 54—49.)



1. A safety stirrup comprising a hanger member, a tread member pivotally connected with the hanger member and a hood member pivotally connected with the hanger member in position to lie at times in cooperative relation to the tread of the tread member.

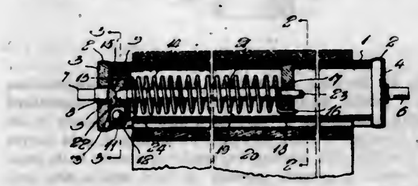
1,352,407. VALVE-SPRING LIFTER. GUSTAVIUS GUINAND, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,169. 8 Claims. (Cl. 29—86.3.)

1. A valve spring lifting device comprising a base member having a tongue to straddle or rest upon a supporting part, a lifting lever connected at one end to the base member and having at the other end above the tongue a yoke to take around a valve stem below the spring, a spring latch mounted on one of the parts to engage the other and support it against the load of the spring, and a manually operable cam mounted upon the base member for jacking up the lever.



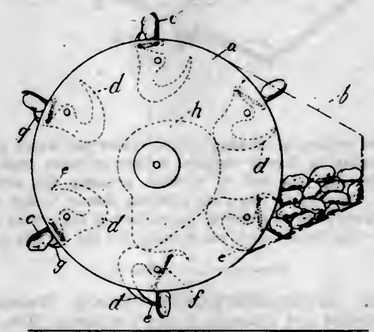
1,352,408. COMMUTATOR-BRUSH. WILLIAM C. HOOD, Chicago, Ill. Filed Oct. 28, 1918. Serial No. 259,889. 2 Claims. (Cl. 171—325.)

2. A commutator brush having on its contacting surface a plurality of diagonally extending spaced apart parallel open-ended notches, one end of one notch lying in substantially the same transverse plane as the opposite end of the adjacent notch.



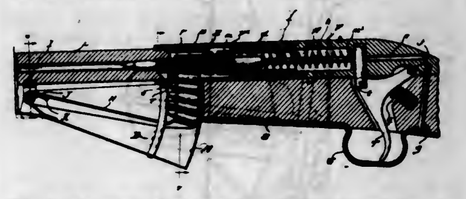
1,352,409. TRAVELING STOOL ATTACHMENT FOR BARBERS' CHAIRS. EDWARD W. HOEFENER, Los Angeles, Calif. Filed July 17, 1919. Serial No. 311,611. 3 Claims. (Cl. 155—81.)

2. In a traveling stool attachment for a chair having a central supporting post, a swivel construction mounted upon the supporting post of the chair, a hitching bar comprising a tubular member connected with the swivel construction and a bar adapted to telescope with the tubular member, a spring latch mounted on the outer end of the tubular member adapted to bear resiliently upon the telescoping member, and a stool fixed swivelly to the outer end of the bar having a seat and casters for the stool



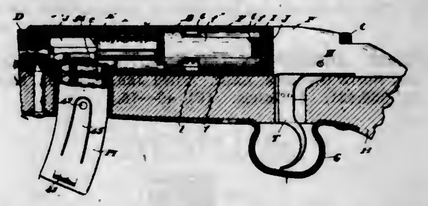
whereby the stool may be rotated about the chair or rolled toward or away from the chair by a bracing pressure of the feet upon the floor.

1,352,410. SHADE-ROLLER. DOCK GLEN HORTON, Birmingham, Ala. Filed Aug. 28, 1919. Serial No. 320,351. 5 Claims. (Cl. 156—36.)



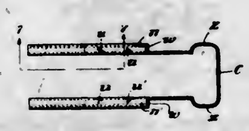
5. A shade roller comprising two end members, one of said members carrying a cylindrical pintle and the other having an opening, a single sheet of metal bent into tubular form with its ends secured to the edges of said end members, the edges of said metal sheet being overlapped and stamped inwardly to provide an internal rib and to form anchoring means for the upper end of the shade, a non-rotating pintle passing loosely through the aforesaid opening, a spring in said shell connected at one end to said non-rotating pintle, a disk in said shell attached to the other end of the spring and having a peripheral notch receiving said rib, and means for holding the roller in adjusted position.

1,352,411. MACHINE FOR PLANTING POTATOES AND OTHER SEED. JOHN HUTTON, Gibliston, Colinsburgh, Scotland. Filed June 22, 1920. Serial No. 390,957. 7 Claims. (Cl. 221—127.)



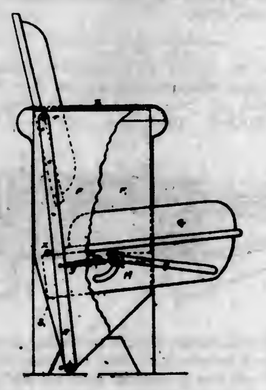
1. In a machine for planting seed such as potatoes and of the kind in which the seed is carried in a hopper mounted upon wheels, the combination of a rotatable drum, elements pivotally mounted on the drum, each element being provided at opposite ends with fingers adapted at different predetermined times to extend beyond the periphery of the drum, springs controlling the elements, carriers projecting from the periphery of the drum, and a non-rotating cam adapted to move the elements against the action of the springs, and to rock said elements on their pivots and project the respective fingers beyond the periphery of the drum.

1,352,412. GUN. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,201. 10 Claims. (Cl. 42—3.)



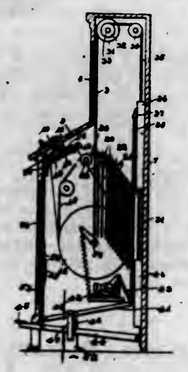
10. A gun comprising a receiver having a circular bolt chamber, a bolt arranged in said chamber to reciprocate into and out of breech closing position and at the forward end of its reciprocation to rotate into and out of locked position, the bolt and receiver being concentric and being separated throughout a part of their length by an annular space, bolt and receiver abutments disposed in said space, the receiver abutments lying in the rear of the bolt abutments when the bolt is in locked position, and a combined tension and torsion spring arranged to reciprocate the closure forwardly by its tension and bring the bolt abutments into advance of the receiver abutments by its torsion.

1,352,413. GUN. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,202. 12 Claims. (Cl. 42—3.)



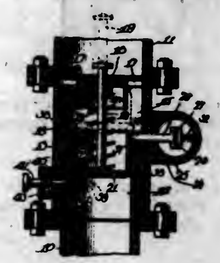
1. A gun comprising a frame and a breech bolt reciprocatably mounted in the frame, the frame and bolt having forwardly and rearwardly extending fingers respectively adapted to interfit and guide the bolt in its reciprocatory movement.

1,352,414. BREECH LUBRICATION. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Original applications filed Mar. 14, 1919, Serial No. 282,642, and May 15, 1919, Serial No. 297,283. Divided and this application filed Aug. 18, 1919. Serial No. 318,203. 21 Claims. (Cl. 42—1.)



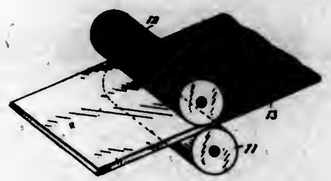
1. A gun comprising a receiver having a bolt chamber, a bolt movable in said chamber, and a device having a lubricant-carrying body removably disposed in said chamber in position to contact with the bolt when retracted.

1,352,415. AUDITORIUM, ASSEMBLY-ROOM, OR THEATER CHAIR OR BENCH. JOHN PAUL SATTERLEE, Klamath Falls, Oreg. Filed Apr. 24, 1919. Serial No. 292,521. 1 Claim. (Cl. 155—115.)



In a chair of the class described, a pair of supporting standards, side panels, links pivotally connected at their lower ends to the side panels and at their upper ends to the supporting standards; a back, a seat, said seat being pivotally connected to said side panels, side members carried by said seat and having angularly disposed slots therein, one of said slots being arcuate for vertical movement of the seat about its pivot; a bolt connecting the side standards and passing through said slots so that engagement between the bolt and slots will allow the seat to move rearwardly or upwardly, and a retractile spring connected to the links and to said bolt to cause the seat to resume a normal position when moved therefrom.

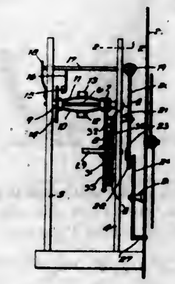
1,352,416. DIRECTORY-MACHINE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Jan. 9, 1920. Serial No. 350,421. 6 Claims. (Cl. 40—78.)



1. In a directory device of the class described, resilient means provided between the outwardly projecting foot pedal and a member of the inner mechanism so as to allow a slow following of such member of the inner mechanism when the foot pedal is operated quickly, and locking means operatively disposed in relation to the same foot pedal and the same inner member so as to lock the foot pedal when the resilient means is overstrained by moving the foot pedal too quickly away from the said inner member.

1,352,417. ENGINE-LOCK. GOTTHARDT KOCH, Chicago, Ill. Filed May 3, 1919. Serial No. 294,420. 9 Claims. (Cl. 251—6.)

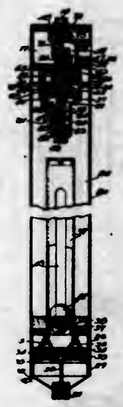
1. In an internal combustion engine, the combination with an intake manifold fitting, of a device associated therewith and spring pressed to a position wherein it obstructs passage of fluid through the manifold, said device being mounted for suction induced movement to a position wherein it permits passage of fluid, and a key controlled lock-operated bolt mounted for actuation into the path of movement of said device to prevent, at will, the movement of the device from its obstructing position.



1,352,418. METHOD OF MAKING STORAGE-BATTERY JARS. HARRY L. BOYER, Trenton, N. J., assignor to Jos. Stokes Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 6, 1917. Serial No. 184,560. 4 Claims. (Cl. 18—56.)

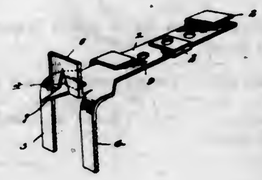
4. The method of making a hard rubber jar which comprises applying plastic uncured rubber in sheet form to the sides and one end of a core, pressing the rubber against the core by applying pressing means to the rubber with air pockets between the surface of the rubber and the pressing means, and vulcanizing the jar on the core.

1,352,419. SPEED-REGULATING DEVICE. WALTER J. HERSCHEDE and CHARLES COHAN, Cincinnati, Ohio, assignors to The Herschede Hall Clock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 2, 1917. Serial No. 178,086. 1 Claim. (Cl. 74—45.)



A speed regulating device comprising a chime mechanism, a shaft rotatively mounted adjacent to the chime mechanism, a pinion mounted on the shaft and connected with the chime mechanism, adapted to rotate the shaft during operation of the mechanism, a device mounted on the shaft and responsive to the centrifugal force of rotation thereof, a second shaft reciprocally mounted adjacent to said shaft, a friction cushion mounted on the second shaft and adapted to be engaged by the centrifugal device during operation thereof, a spring engaging one end of the second mentioned shaft and adapted to retain

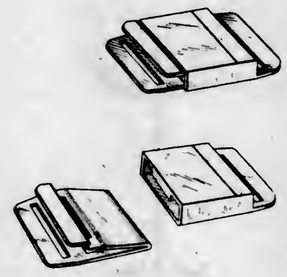
the second mentioned shaft in a position such that the cushion permits of maximum speed of rotation of the centrifugal device, an inclined plate adapted to engage the opposite end of the second mentioned shaft and to be moved to different positions to reciprocate the second mentioned shaft against the tension of the spring, and means accessible from the front of the clock adapted to move the inclined plate to its different positions.



REISSUES.

14,946. PUMP AND PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Original No. 1,253,558, dated Jan. 15, 1918, Serial No. 51,524, filed Sept. 20, 1915. Application for reissue filed Dec. 1, 1919. Serial No. 341,805. 79 Claims. (Cl. 103—8.)

1. In a pump, a water chamber, an auxiliary chamber having inlet and outlet valves said auxiliary chamber being connected with said water chamber, an exhaust port for said water chamber, a compressed air port for said water chamber, valves for said ports, pressure means for operating said valves, one side of said pressure means being exposed to the pressure in said auxiliary chamber to close the exhaust port and open the compressed air port, and the other side being exposed to the pressure in said water chamber to open the exhaust port and close the compressed air port, and a valve for controlling the connections between said chambers.

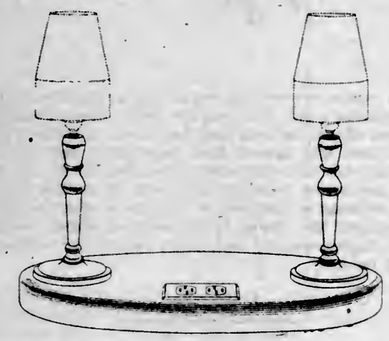


14,947. TAPE ATTACHMENT. MARCUS H. BALLOU, Pittsburgh, Pa. Original No. 1,303,756, dated May 13, 1919, Serial No. 211,612, filed Jan. 12, 1918. Application for reissue filed Nov. 19, 1919. Serial No. 339,252. 4 Claims. (Cl. 33—137.)

1. A tape attachment having a body and means for the connection of a tape ring and also having cleats extending from one edge of the body and spaced from a common side thereof and also spaced from each other and a cleat reaching from the other edge of the body at a point between and spaced from the inner ends of the first-named cleats, whereby a tape may be introduced edgewise laterally between the cleats to be retained against causal lateral displacement by said cleats coöperating with said side of the body.

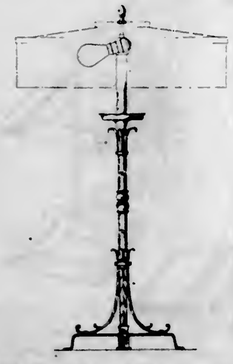
DESIGNS.

56,246. BUCKLE. LOUIS ALTERSON, Averne, N. Y. Filed June 29, 1920. Serial No. 392,893. Term of patent 14 years.



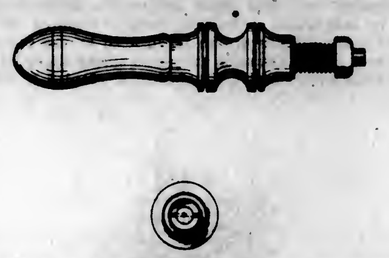
The ornamental design for a buckle as shown.

56,247. RUBBER ERASER-HEAD FOR LEAD-PENCILS. EBERHARD FABER, New York, N. Y. Filed Apr. 29, 1920. Serial No. 377,719. Term of patent 14 years.



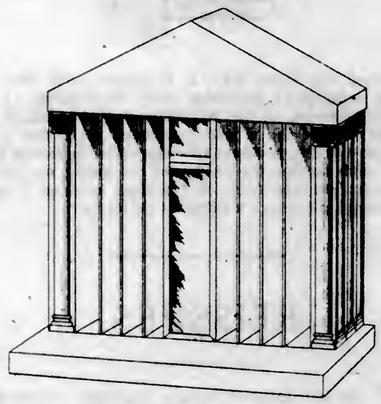
The ornamental design for a rubber eraser head for lead pencils as shown.

56,248. COMBINED CANDELABRUM AND ELECTRIC TERMINAL. CLINTON B. FERGUSON, Newtonville, Mass. Filed Nov. 7, 1919. Serial No. 336,479. Term of patent 14 years.



The ornamental design for a combined candelabrum and electric terminal, substantially as shown and described.

56,249. ELECTRIC FLOOR-LAMP. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,331. Term of patent 3½ years.



The ornamental design for an electric floor lamp, as shown.

56,250. SHARPENER FOR KNIVES. MARTIN T. GRAF, Buffalo, N. Y. Filed May 1, 1920. Serial No. 378,201. Term of patent 14 years.

The ornamental design for a sharpener for knives, as shown.

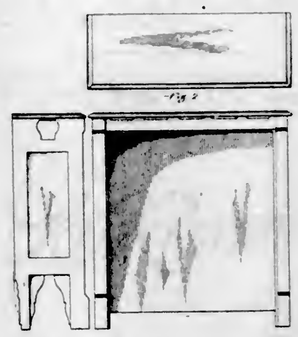
56,251. CASING FOR A VENDING-MACHINE. FRANK R. GREENE, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 351,055. Term of patent 14 years.

The ornamental design for a casing for a vending machine as shown.

56,252. JAR. COULTER D. HUYLER, Greenwich, Conn., assignor to Huyler's Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1920. Serial No. 349,060. Term of patent 14 years.

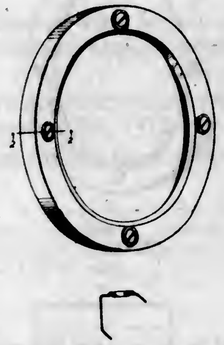
The ornamental design for a jar, substantially as shown.

56,253. ARM FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,673. Term of patent 7 years.



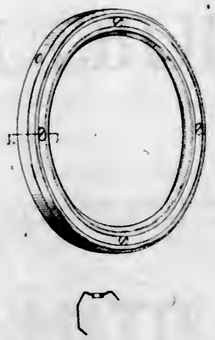
The ornamental design for an arm for lighting fixtures, as shown.

56,254. TOILET-PAPER HOLDER. WILLIAM L. LEE, Helena, Mont. Filed Apr. 26, 1920. Serial No. 376,875. Term of patent 7 years.



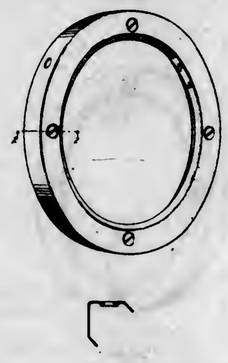
The ornamental design for a toilet paper holder, as shown.

56,255. RADIATOR-INCLOSURE. DAVID C. MOORE, Cleveland, Ohio. Filed Apr. 15, 1920. Serial No. 374,240. Term of patent 14 years.



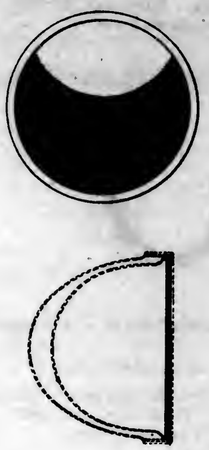
The ornamental design for a radiator inclosure, as shown.

56,256. RIM FOR A VEHICLE-LAMP OR SIMILAR ARTICLE. CHARLES D. RYDER, Covington, Ky., assignor to The Corcoran-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 21, 1919. Serial No. 298,804. Term of patent 14 years.



The ornamental design for a rim for a vehicle lamp or similar article, as shown.

56,257. RIM FOR A VEHICLE-LAMP OR SIMILAR ARTICLE. CHARLES D. RYDER, Covington, Ky., assignor to The Corcoran-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 21, 1919. Serial No. 298,805. Term of patent 14 years.



The ornamental design for a rim for a vehicle lamp or similar article, as shown.

56,258. RIM FOR A VEHICLE-LAMP OR SIMILAR ARTICLE. CHARLES D. RYDER, Covington, Ky., assignor to The Corcoran-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 21, 1919. Serial No. 298,806. Term of patent 14 years.

The ornamental design for a rim for a vehicle lamp or similar article, as shown.

56,259. AUTOMOBILE-LENS. ARTHUR SENGER, Milwaukee, Wis. Filed Apr. 26, 1920. Serial No. 376,884. Term of patent 3½ years.

The ornamental design for an automobile lens, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 7, 1920.

[PUBLISHED SEPTEMBER 8, 1920.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 103,510. (CLASS 37. PAPER AND STATIONERY.) PARAGON BINDER CORPORATION, New York, N. Y., and Newark, N. J. Filed May 3, 1917.

PARAGON

Particular description of goods.—Binders for Loose Sheets of Paper and the Like.
Claims use since Apr. 2, 1917.

Ser. No. 108,460. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SUMELLOR COMPANY, Worcester, Mass. Filed Jan. 14, 1918.

SUMELLOR

Particular description of goods.—An Ointment for the Treatment of Eczema and other Skin Diseases.
Claims use since Dec. 15, 1917.

Ser. No. 113,453. (CLASS 39. CLOTHING.) LINEHAM-CONOVER COMPANY, Worcester, Mass. Filed Sept. 27, 1918.

La Regente

Consists of the French word "Regente" prefixed by the French article "La," both printed in script letters, as represented in the accompanying drawing.
Particular description of goods.—Corsets, Corset-Waists, and Brassières.
Claims use since 1909.

Ser. No. 113,929. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DOUGLAS COMPANY, Cedar Rapids, Iowa. Filed Oct. 29, 1918.

Particular description of goods.—Corn-Oil.
Claims use since Jan. 15, 1918.

Ser. No. 116,774. (CLASS 15. OILS AND GREASES.) THE HULBERT OIL & GREASE CO., Philadelphia, Pa. Filed Mar. 21, 1919. Under ten-year proviso.

HULBURT

Particular description of goods.—Lubricating Oils and Greases.
Claims use since about 1861.

Ser. No. 117,469. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MATO MFG. CO., New York, N. Y. Filed Apr. 14, 1919.

MATO

Particular description of goods.—Washing-Powders.
Claims use since Jan. 1, 1919.

Ser. No. 118,621. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOCIÉTÉ ANONYME DES PRODUITS DU LION NOIR, Montrouge, near Paris, France. Filed May 17, 1919.

LE LION BLANC

Particular description of goods.—Bleaching Compounds, and Powder.
Claims use since March, 1916.

Ser. No. 118,630. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ULTRAMARINE COMPANY, Jersey City, N. J., and New York, N. Y. Filed May 17, 1919.

The background being indicated in blue. No claim is made to the exclusive use of the words "Laundry Blue" or "Manufactured by" or "New York" except in so far as they may form part of the particular collocation.
Particular description of goods.—Bluing.
Claims use since January, 1906.

Ser. No. 118,932. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) THE PIERSON COMPANY, Rockford, Ill. Filed May 26, 1919.

DIAP-A-WASH

Particular description of goods.—A Combined Wringer and Washboard in the Form of a Unitary Article.
Claims use since May, 1917.

Ser. No. 119,074. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) KRASBERG ENGINEERING AND MANUFACTURING CORPORATION, Chicago, Ill. Filed May 31, 1919.

KRASCO

Particular description of goods.—Phonograph-Motors, (Mechanical.)
Claims use since Nov. 1, 1915.

Ser. No. 119,374. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ST. LOUIS BRASS MANUFACTURING COMPANY, St. Louis, Mo. Filed June 9, 1919.

E-LITE

Particular description of goods.—Fixtures for Electric Lights.
Claims use since May 20, 1919.

Ser. No. 120,530. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE GEM HAMMOCK & FLY NET COMPANY, Milwaukee, Wis. Filed July 14, 1919.

Particular description of goods.—Polish for Furniture, Automobiles, Floors, Woodwork, &c.
Claims use since May 28, 1917.

Ser. No. 122,242. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) RONALD E. BOOTH, Seattle, Wash. Filed Sept. 3, 1919.

GOOSEY CAR

Applicant hereby disclaims the exclusive right to the use of the word "Car" apart from the mark shown in the drawing.
Particular description of goods.—Toy Velocipedes.
Claims use since Nov. 15, 1917.

Ser. No. 123,773. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CREOLE PRALINE CO. INC., New Orleans, La. Filed Oct. 14, 1919.

No claim is made to the words "Creole Praline" apart from the mark shown in the drawing.
Particular description of goods.—Candy.
Claims use since Sept. 10, 1919.

Ser. No. 124,355. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) PERCY PIERCE, Philadelphia, Pa. Filed Oct. 30, 1919.

ARROW PLANE

Particular description of goods.—Toy Aeroplanes.
Claims use since May 24, 1912.

Ser. No. 124,693. (CLASS 39. CLOTHING.) SLONIM BROTHERS, Duluth, Minn. Filed Nov. 8, 1919.

HEAD OF LAKES

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Sixth Circuit.

CONCRETE APPLIANCES CO. *et al. v.* MEINKEN *et al.*

Decided January 6, 1920; on petition for rehearing March 2, 1920.

[262 Fed. Rep., 958.]

1. PATENTS—VALIDITY AFFECTED BY PRIOR APPLICATION FOR ANOTHER PATENT.
   A patent applied for after filing of application for but before issue of another patent in the same art should, as to anticipation and the presence of invention, be judged upon the basis of which the earlier application is a part, though it was not a part of the prior art in the sense in which that phrase is used with reference only to publication.
2. SAME—PATENT FOR DISTRIBUTING WET CONCRETE INVALID FOR WANT OF INVENTION.
   The Smith patent, No. 948,746, for an apparatus for distributing wet concrete, as limited by the prior Callahan patent, No. 948,719, *Held* not to show invention.
3. SAME—COMBINATION DEVICE FOR DISTRIBUTING WET CONCRETE VALID AND NOT ANTICIPATED.
   The Callahan patent, No. 948,719, for an apparatus for distributing wet concrete, consisting of an elevating-tower and devices for spreading same over structure, though a combination, *Held* to show invention and not to have been anticipated.
4. SAME—ANALOGOUS USE.
   Apparatus for elevating and distributing wet concrete *Held* not a mere double use of earlier apparatus for loading coal.
5. SAME—NEW RESULT.
   The elevation and gravity distribution of wet concrete to and around the successive floors of a building being constructed and all in a semi-automatic way is a new result in a patentable sense.
6. SAME—PATENTABILITY—TEST OF INVENTION—"NEW RESULT."
   "The test of the presence of invention in a new assembly of old elements is sometimes said to be whether a new result is accomplished. This is often not a helpful rule, because its application involves definition of the phrase 'new result,' and this opens the original difficulty. Within a narrow definition, every new combination of old elements gets a new result; but this is not the sense in which the phrase is rightly used as indicative of invention."
7. SAME—APPARATUS FOR DOING A UNITARY WORK INVOLVING SUCCESSIVE STEPS UNDER MANUAL CONTROL.
   Apparatus for elevating and distributing wet concrete to the floors of buildings under construction, which is in a fair sense a unitary work, does not become an aggregation merely because it involves successive steps under manual control.

On petition for rehearing.

8. SAME—CONSTRUCTION—"ADJUSTABLE"—REMOVAL OF BOLTS AND FASTENING IN NEW POSITION.
   The Callahan patent, No. 948,719, for an apparatus for elevating and distributing wet concrete to the floors of buildings under construction, claim 5, the phrase "said boom being adjustably connected with the tower and adapted to be arranged at various points in the height thereof" construed in accordance with the apparent intention of the draftsman to refer to the vertical change of the boom on the tower, which was effected by taking out bolts and bolting it again to a new position, although such is not adjustability in the most precise definition.

APPEAL from the District Court of the United States for the Western Division of the Southern District of Ohio; Howard C. Hollister, judge.

Suit by the Concrete Appliances Company and another against Dietrich Meinken and others. From a decree for defendants, plaintiffs appeal. Reversed and remanded, with directions.

STATEMENT OF THE CASE.

Suit upon patents numbered 948,719, issued July 8, 1910, to L. Callahan, and 948,746, issued February 8, 1910, to A. L. Smith. This case involves the tower apparatus now in common use for elevating and distributing wet ("mush") concrete upon the successive floors of high buildings, constructed in whole or in part from that material. The apparatus, as now used, involves two steps: first, elevating the material to a reservoir or hopper-bin temporarily fixed at the desired elevation in the tower; and, second, distributing it from that elevation, by gravity, through a conduit revolving at the point of connection with the hopper-bin and having at least one swiveled elbow-joint, whereby any desired point upon the selected horizontal plane can be reached for the gravity discharge of the material.

Callahan and Smith each showed, in his drawing, the complete apparatus; but Callahan made no claim to the feature of the double-swiveled discharge-pipe. Callahan's application was filed January 21, 1909; Smith's on February 23d of the same year. The Patent Office notified Callahan that his application seemed to conflict with another, and suggested to him some of the claims which Smith had made. Callahan adopted these claims, whereby an interference was declared. The substance of the issue is shown by count 1, which is given in the margin.[1] Upon this issue, Callahan conceded priority;

[1] In a device for distributing concrete, means for elevating the concrete to a point above the work to be performed; a hopper adapted to receive the concrete so elevated; a primary distributing pipe revolubly mounted beneath the hopper; and a secondary distributing pipe revolubly mounted beneath the mouth of the first named pipe, substantially as described.

judgment was rendered upon the concession; Callahan canceled these additional claims; and both patents issued. Both patents, by assignments, licenses, etc., became the property of the Concrete Appliances Company and Insley, and this suit was brought by them in the court below based upon alleged infringement of both patents. The above-quoted count 1 of the interference became claim 1 of the Smith patent, and is typical of those sued upon.

Claim 5 of the Callahan patent is here quoted [2] and may be accepted as a statement of his invention said to be infringed. Claims 1, 2, and 13 are also declared upon.

Mr. Arthur M. Hood for the appellants.
Mr. F. E. Dennett for the appellees.

Before WARRINGTON, KNAPPEN, and DENISON, Circuit Judges.

DENISON, *Cir. J.*, (after stating the facts as above:)

(1, 2) It goes without saying that the Smith patent can get no advantage merely because it has been owned and commercially exploited along with the Callahan patent. Upon this record, Smith cannot claim to be the inventor of anything shown by Callahan's application, except as the latter is modified by the later concession of priority. The Callahan patent is not a part of the prior art, in the sense in which that phrase is used with reference only to publications, but the Smith patent, both as to anticipation and as to the presence of invention, must be judged upon the basis of which the earlier Callahan application is a part. (*Lemley* v. *Dobson-Evans Co.*, 243 Fed., 391; 156 C. C. A., 171.) It must therefore be assumed, as against Smith, that the advance of his claim 1 consisted merely in taking the concrete elevating and distributing apparatus of Callahan and substituting for Callahan's simple discharging-conduit, revolving only at the point of attachment to the receiving-hopper, the compound discharging-conduit consisting of two or more sections revolubly connected with each other.[3] We are not convinced that this advance involved any invention. Such a double-swiveled conduit was a well-known expedient for the gravity conveying of any material which is was desired to discharge at selected points in a lower horizontal plane. It is obvious—at least when it is pointed out to us—that, with an inclined conduit revolving at its upper end, the lower end could be made to reach any desired point on the lower plane, either by changing the angle of inclination and modifying the length of the conduit, as by telescoping a section, or by adding a supplementary conduit revolubly connected with the lower end of the primary one. Neither form had been in use for concrete (before Callahan), but both forms were old for other purposes. The double-swiveled form had been most highly developed in grain-elevators, for distributing the grain from the elevated receiving-bin to the several openings on the floor below, which indicated spouts leading to still lower storage-bins.

If the matter were to be considered in the broadest sense, there might be such distinctions between elevating and distributing grain and elevating and distributing concrete that transferring a device from one art to the other and making the necessary adaptation would involve invention. That need not be decided; but here Smith begins at the point where the elevation of the concrete is finished. He has then merely the question of gravity distribution. He finds that concrete has been distributed and grain has been distributed by a single unitary chute, swinging and turning at its upper end, and that grain has also been distributed by the double-swiveled chute, thereby increasing the ability to select exactly the desired point for discharge. In the words which were used in *Crown Co.* v. *Sterling Co.*, (217 Fed., 381; 133 C. C. A., 297,) Callahan had already "bridged over whatever gap there was" between the art of concrete-building and the art of gravity distribution, and the "door of opportunity was open" to all who wished to use in the former art an expedient well known in the latter. It seems to us quite clear that there is no invention in adding to the device of Callahan the well-known additional swiveled joint in the discharge-conduit. It follows that those claims of the Smith patent sued upon are invalid, and the decree of the court below, which dismissed the bill as to this patent, must so far be affirmed.

(3) At the time these patentees appeared on the field concrete had already come into extensive use as a building material in connection with metallic reinforcements, and it had been found that it was suitable for buildings of all shapes and of many stories in height. When mixed of the proper consistency, it was called "mush" concrete, and to handle this material and deliver it efficiently at the place of use in a large building operation was a considerable problem. Various methods had been employed, but the one most approved consisted in raising it by elevator to the floor or level where it was to be used and there dumping it into wheelbarrows, by which it was conveyed to the various desired points of use upon that level. It occurred to Callahan that he could construct a tower, or skeleton elevator-shaft, which should originally extend, or which, by successive additions, should be made to extend, well above the highest story of the proposed building; that he could attach to this tower, and make vertically adjustable thereon, a receiving bin or hopper carrying a downwardly-inclined and revolubly-connected discharge-chute, which could be swung about to reach various points on the next lower level to that where the receiving-bin was fixed; that this receiving-bin and its discharging apparatus could be temporarily fixed, as the building advanced, at positions on the tower suitably elevated above each successive story; that the mush concrete could be elevated inside the tower to these various fixed positions and there dumped into the receiving-bin; and that, in this way the mush concrete could be delivered in an approximately automatic way throughout the successive floors or levels of a building, no matter how high. Upon this record, this general thought was wholly novel. It has proved to be of great commercial value. It is common knowledge that, mostly within the period since the patent issued, reinforced concrete has largely superseded all other materials in the erection of large structures, and the record shows that eighty or ninety per cent. of all the important construction work of this class in the country employs this Callahan method, and that all of the larger manufacturers of machinery and apparatus for this general purpose have taken licenses under the patent. It is not too much to say that the invention has played a large part in revolutionizing the building industry, and that it is not common for a patent in litigation to find itself supported by such a large measure of commercial merit and public acquiescence.

It is not contended that the patent is anticipated, in the strict sense of that term, but the defendant's position, approved by the court below, is that Callahan only put together old and familiar elements, and that his advance did not involve invention over what had gone before. To determine this question, we must know, first, the character of the relations between what was old and this new arrangement, and, second, whether his claims are properly characterized by reference to his real advance. To elevate material to a fixed and invariable height, and to distribute it therefrom by gravity, through a swinging, revolving chute, to different discharge-spots upon a lower level, was common. As we have said, in considering the Smith patent, this was familiar in the class of grain-elevators. The typical so-called grain-elevator, or storage-house, was a permanent structure, and grain was carried by various types of elevating apparatus to the permanent top floor or level. From the bottom of the bin there situated depended a swinging chute, which could be moved about so as to discharge, upon the floor below, into any storage-bin opening from that level. These grain-elevators, like others of similar type shown by the record, entirely lack the only substantial novelty claimed for Callahan. They did not have a temporary receiving bin or hopper with a connected discharge-chute vertically adjustable in an elevator-tower, adapted to distribute the material upon successive levels. If invention lies in this thought and its practical application, the grain-elevators are not important.

Next we are cited to several examples of unloading apparatus for vessels, of which the English patent to Baillie, No. 10,380 of 1888, is as relevant as any. In this device, which was for transferring coal from a barge to the ship alongside, there was a receiving bin or hopper located in an elevated framework or staging on the barge, and from which a depending chute carried the material away by gravity to the proper bunker in the ship. The coal contents of the barge were raised to this point by an endless chain of buckets over an inclined mast or support pivoted to the vertical frame at its upper end. Evidently, as the contents of the hold of the vessel became lowered, this mast must be extended farther down, or farther to one side, and this could be done either by an extension of the lower end or by lowering the upper pivoted point. The patent shows both methods of adjustment. The bin and pivot could be lowered upon this supporting-stage a short distance—not more than the height of the bin. The point of final delivery was not changed. Such vertical adjustability as there was in the bin was incidental to raising and lowering the whole "tower" to accommodate it to the point where elevation began. We do not find here any substantial disclosure of the real novelty of Callahan's invention, as above stated.

This leaves for consideration only the patent to Theiss *et al.*, No. 866,166, of September 17, 1907. It is not to be doubted that this is suggestive of the idea and the apparatus of Callahan; whether it is more than a mere suggestion is the question. Theiss's apparatus, like Baillie's, was intended for unloading coal from a barge and loading it into the hold of a ship. It consisted essentially of a tower-shaped structure permanently erected upon the deck of a barge or scow. It was intended to reach a distance substantially higher than the coal-receiving hatchways of the particular ship which might be selected to be served; there was never occasion to make it any higher. This tower carried an elevator car or skip which was loaded with coal when it was at the bottom of the tower, and then was elevated as far as necessary to be dumped into a receiving-bin, which bin was capable of vertical adjustment on the tower. This receiving-bin in turn dumped into a chute, which, at its lower end, discharged through the hatchway of the vessel to be loaded. This chute was not revolubly connected with the bin or tower. It could not be moved laterally. It was carried, by the tower, in ways or guides which gave the chute its inclination and permitted it to slide therein longitudinally. There was a permitted adjustment of the guide by which the angle of inclination could be changed, but this was done by releasing and readjusting and refastening the guideways, and could not be done as a part of the operation of the device while in use.

The adjustment and fixing of the chute, in order to discharge into a desired hatchway, was a complicated matter. First, the carrying scow must be so positioned and fastened with reference to the ship that the tower was exactly opposite the hatchway. Second, the receiving-bin and the chute must be adjusted vertically in the tower at such a position that the chute, in its carrying-guides, would

[2] Claim 5. An apparatus for the purpose described, comprising a tower, a conduit extending laterally therefrom, a suitably supported horizontally movable boom carrying the conduit, said boom being adjustably connected with the tower and adapted to be arranged at various points in the height thereof, means for raising plastic material to the point desired in the height of the conduit [tower], and means for receiving plastic material from the raising means and conducting the same to the conduit; the said receiving and conducting means being adjustable in the direction of the height of the tower.

[3] We speak thus of Callahan's form, because of the necessary effect of the filing dates, the concession, and the form of the issued claims.

be pointed at the hatchway. Third, the chute must be slid downward and outward, in the direction at which it was pointed, until its lower end entered the hatchway. If, then, it was next desired to reach another hatchway on the same transverse line, the vertical adjustment of the bin and the chute-carrier, and the aiming of the chute at the new hatchway and its longitudinal extension into contact therewith, must be repeated. If it were desired to reach hatchways farther forward or aft, the scow and its entire apparatus must be released and floated alongside the ship to its new position. In the broadest sense, this patent shows a plan of elevating material to an adjustable vertical height, and from there distributing it by gravity to selected positions upon a lower level; but it shows this idea in a very rudimentary form. It would be practically useless, for the purposes now involved.

In details of construction and of claim reading, there is ample differentiation. Claim 5 of Callahan, above quoted, will not read on Theiss. A comparison of the Theiss apparatus with this claim shows (*a*) that the Theiss apparatus is not "for the purpose described," in any restricted sense of that phrase; (*b*) that Theiss has a relatively short supporting-framework rather than a relatively high and distinctive tower; (*c*) that, while Theiss has "a conduit," it does not "extend laterally therefrom," excepting in the most general sense; (*d*) that Theiss has no "suitably supported horizontally movable boom carrying the conduit," nor anything which approximates such a boom: (*e*) that, since he has no boom at all, of course he has no boom "adjustably connected with the tower and adapted to be arranged at the various points of the height thereof;" but it must be said that Theiss's conduit itself has this vertically-adjustable connection with the tower. (*f*) The remaining elements of the claim are literally met well enough by Theiss, save for the distinction as to their use with plastic material.

(4) The question presented by Theiss seems not to be one merely of double use, because the structural differences are too great; but, if the physical resemblance were much closer, the defense of double use would be far from satisfactory. (See *Ansonia Co.* v. *Electrical Co.*, 144 U. S., 11, 18; 12 Sup. Ct., 601; 36 L. Ed., 327; *Potts* v. *Creager*, 155 U. S., 597, 606–608; 15 Sup. Ct., 194; 39 L. Ed., 275; *Hobbs* v. *Beach*, 180 U. S., 383, 390; 21 Sup. Ct., 409; 45 L. Ed., 586; *Gold* v. *Newton*, C. C. A., 2, 254 Fed., 824, 827; 166 C. C. A., 270.) Certainly, the art of loading coal into a ship for fuel is not the same art as that of distributing wet concrete to a building structure; nor is the analogy very close. It is not at all certain, even if probable, that an experienced building engineer, considering methods of handling wet concrete for a skyscraper, would call to mind a coal-handling apparatus on a harbor-scow. On the other hand, it impresses us as a bold and original thought that this material could be handled in this way. Distributing mush concrete through gravity-chutes by one apparatus throughout the whole course of building obviously involved difficulties; it had never been handled by gravity-chutes at all, excepting under simple conditions where these difficulties did not exist, and then, perhaps, had been done only on paper. On one side was the danger that it would adhere to the chutes and set and choke up the pipes, at least at the valves and gates; on the other side, the risk that the elements would disintegrate, and the water and the cement and the broken stone fall in separate strata.

Callahan's conception, that this material could be thus treated so as to deliver it from the ground all about the successive several floors of a high building and with practically no manual labor, except that involved in the story by story adjustment of the apparatus, involved, we think, inventive thought of a high order, when accompanied as it was by the devising of suitable apparatus to carry out the thought, which apparatus substantially differed from anything which had ever been constructed for any purpose, although every element was old. It is true, in a sense, that the Callahan device is produced upon the basis of Theiss's structure by substituting for the longitudinally sliding and extensible delivery-chute of Theiss, the revolubly-mounted chute of the grain-elevators; but this is not the whole truth. Callahan built up his tower to a height never thought of by Theiss, and which Theiss could not have accomplished without capsizing his barge; and Callahan supplied a chute-supporting boom attached to the receiving-hopper and vertically adjustable with it, a feature which the grain-elevators did not have and could not have used. He thereby laid the basis for adapting the structure to use fairly distinct from that of either a coal-elevator or a grain elevator.

As upon every such question, there is no authoritative decision which compels one or the other conclusion. The doubtful inference is rather one of fact; but we select and refer to a few instances where invention has been found—by the Supreme Court or by this court—and the facts of which may well be thought to present no stronger inferences in its favor than do those of the instant case: *Loom Co.* v. *Higgins*, (105 U. S., 581, 590; 26 L. Ed., 1177;) *Hobbs* v. *Beach*, (180 U. S., 383, 393; 21 Sup. Ct., 409; 45 L. Ed., 586;) *Expanded Metal Co.* v. *Bradford*, (214 U. S., 366, 381; 29 Sup. Ct., 652; 53 L. Ed., 1034;) *National Co.* v. *Aiken*, (163 Fed., 254, 259; 91 C. C. A., 114;) *Warren* v. *Owosso*, (166 Fed., 309; 92 C. C. A., 227;) *Morgan Co.* v. *Alliance Co.*, (176 Fed., 100, 109; 100 C. C. A., 30;) *Ferro-Concrete Co.* v. *Concrete Co.*, (206 Fed., 666; 124 C. C. A., 466;) *International Co.* v. *Sievert*, (213 Fed., 225; 129 C. C. A., 569.)

(5) The test of the presence of invention in a new assembly of old elements is sometimes said to be whether a new result is accomplished. This is often not a helpful rule, because its application invoves definition of the phrase "new result," and this opens the original difficulty. Within a narrow defi-

nition, every new combination of old elements gets a new result; but this is not the sense in which the phrase is rightly used as indicative of invention. The recent opinion of this court in *Huebner Co.* v. *Matthews Co.*, (253 Fed., 435; 165 C. C. A., 177) illustrates this situation. The ultimate practical result at which the patentee and his predecessors aimed was to carry packages by gravity upon a runway from one place to another. The patentee was the first to accomplish this with such a degree of efficiency as to make the device commercially popular; but the same result, except in efficiency degree, had several times been reached before, and by apparatus so similar as to be superficially indistinguishable. The patentee had simply added the well-known and common mechanical refinements and expedients already used by others, even in the same art—*e. g.*, he used roller-bearings, instead of ordinary journal-boxes—and we declined to regard this as a new result. We have no intention to depart from that line of our recent decisions[1] of which this one is typical; such refinements are not inventions. On the other hand, we recall no instance of combinations of old elements which has been held to produce "a new result" in a patentable sense and which better deserves that commendation than does Callahan's. The quasi-automatic elevation and distribution of wet concrete under the varying conditions of progressive building and by a single apparatus was an entire novelty. No one had tried to do it; apparently, no one had thought of it; it was useful in a very high degree; and when we find a new result in this complete and extreme sense accomplished by a confessedly new combination—though of known means—we think both the purpose of the patent law and the rightful application of the decisions thereunder require that it should be awarded the merit of invention.

(6) We have stated our conclusion that the device of the patent is not an aggregation in the sense that it represents such a mere assembling of old elements as might have been made by the exercise of only ordinary skill. It is at least equally clear that the device is not an aggregation in the more technical sense of the word, but is rather a true combination. It is true that the use of the apparatus involves successive steps, and is at each of its stages under direct or indirect manual control; but in a fair sense the entire operation of elevating and distributing the concrete is a unitary thing. From the time it starts on its journey from the ground to the time it is deposited in the forms, its progress might well be automatic. There is clear distinction between this performance and that of the associated washing and wringing machines, discussed by the Supreme Court in *Grinnell Co.* v. *Johnson Co.*, (247 U. S., 426; 38 Sup. Ct., 547; 62 L. Ed., 1196) In the latter case, both the judgment and the hand of the operator were involved, in submitting to the second operation the material which had finished the first; the juxtaposition of the two machines was a mere matter of convenience. In the present case, the operator can, at the most, only interfere to prevent the otherwise normal completion or second part of what is intended to be the unitary work; and even then his interference will only temporarily stay the normal action. We collected and commented on the decisions of the Supreme Court and other courts on this subject in *Gas Co.* v. *United Co.*, (228 Fed., 684; 143 C. C. A., 206.) Callahan's patent should not be condemned as an aggregaton.

We do not overlook the fact that some, and perhaps a considerable portion, of the practical and commercial success has been due to the use of the feature covered by the Smith patent; but this does not detract from the patentable and inventive merit of Callahan's idea. An oscillating or swinging chute, even without Smith's secondary swivel, would make the primary distribution of the concrete throughout the floor or level, leaving the secondary and more accurate distribution to be accomplished by further means. We have held that the particular means adopted by Smith did not involve invention, and we can hardly say that much of the credit due to public use should be taken away from Callahan, because he had not himself adopted an improvement and refinement which, however important to commercial success, was within the grasp of the men ordinarily skilled in the art.

We have considered claim 5. Claims 1, 2, and 13, also in suit, use more general terms and are superficially somewhat broader; but we think, in connection with the specification, they necessarily intend that the means for receiving the concrete from the raising means and taking it to the conduit are vertically adjustable in the tower. This may fairly be implied from the requirement that the material is to be raised to a "suitable point" in the tower. It is then seen that all these claims involve what we have thought Callahan's meritorious invention, resting upon the successive story-by-story operation of the device. With this interpretation, they are not very different from claim 5, but should be treated as other expressions of the same thought in terms nominally of somewhat broader equivalency. These claims, also, should be considered valid.

The infringement is not denied.

The decree below, as entered, must be set aside, and the record remanded for a new decree, modified in accordance with this opinion.

ON PETITION FOR REHEARING.

(7) The application for rehearing brings to our attention a matter not mentioned in the opinion. We selected claim 5 as the one most suitable for study, because it expressly incorporated those features in which we thought patentable novelty was to be found. One of these features was the horizontally-movable boom carrying the conduit, and—

being adjustably connected with the tower and adapted to be arranged at various positions in the height thereof.

We assumed that this referred to a vertical adjustment of the boom in the tower. The assumption

[1] *Berger Co.* v. *Trussed Co.*, (257 Fed., 741; —— C. C. A., ——;) *Edwards* v. *Dayton Co.*, (257 Fed., 980; —— C. C. A., ——;) *Van Dorn Co.* v. *Mathis Co.*, (260 Fed., 400; —— C. C. A., ——.)

is now challenged, because it is said that the adjustable connection between the boom and the tower was that mechanism which provided for a horizontal adjustment of the upper end of the boom on a horizontal track (which defendant has not used), and that the provision for vertical change of the boom in the tower is not adjustability, but rather refers to a disassembling of the parts in one location and reassembling them in another. It is true that the specification refers to a horizontal adjustability, but we do not think that it is this capacity to which claim 5 refers—at any rate, this inference is not clear enough to justify limiting the claim to a comparatively unimportant detail. Such an inference is contradicted, both by the fact that this horizontal adjustability of the boom on the tower is made the special characteristic of a group of claims not in suit, and by the fact that the thought is stated in the claim in immediate connection with the reference to "various points in the height" of the tower, and after one reference has been made to the horizontal motion of the boom and the reference to that function apparently finished, while the draftsman turned to the thought of vertical change. It is true, also, that in the form of the invention shown in the drawings, and specifically described, the vertical change was to be made by taking out bolts, removing the horizontal platform, raising it, and bolting it again to a new position, and that this is not adjustability in the most precise definition. However, it is well within the sense in which the word is very often used, and we must define it as the patentee intended. For these reasons we adhere to the interpretation of the claim in this respect which the opinion assumed.

It is also true enough that Callahan specifically contemplated building his tower up section by section, as the building progressed; but this was a matter of preference. His drawing shows the completed tower, permitting operation anywhere along its height, and observation of his plan of erection does not change our conception of the real disclosure.

In other respects, further review of the case leaves our stated conclusions unchanged, and the application for rehearing will be disallowed.

Disclaimers.

1,125,498.—*Thomas I. Duffy*, Chicago, Ill. DEMOUNTABLE WHEEL. Patent dated January 19, 1915. Disclaimer filed August 20, 1920, by the assignee, by mesne assignments, *Wire Wheel Corporation of America.*

Enters a disclaimer—

"To that part of the specification which reads as follows:

"When driving over rough and uneven roadways, it is thought that other forces are set up, due to road resistances, varying applications of motor power to the wheels and side tipping, produced by swaying or the weight of the vehicle, which supplements or replaces the first mentioned force to automatically tighten the locking ring. For instance, assuming that the hand of the screw-thread to tighten the ring is in the direction of forward rotation of the wheel, forward rotation of the outer hub member relatively to the inner hub member, when the ring is loosened, acts at the limits of the side tipping of the wheel with a forward clutch action to tighten the locking ring, while reverse relative rotation of the hub members is ineffective to further back off the ring, because acting against a direction of screw-thread which is ineffective to maintain clutching engagement between the ring and outer hub member. Again, with the same arrangement of the locking ring and hub members a like tightening effect is produced with a screw-thread which runs in a direction opposite to the direction of rotation of the wheel, inasmuch as the ring is free from engagement with the outer hub member during the interval between the limits of side tipping of the outer wheel part, so that said ring tends to lag relatively to the positively driven wheel, with the result that the screw-threaded inner hub part is screwed into the lagging ring. Any tendency to loosen the ring due to clutch action between it and the outer hub member and relative rotation of the hub members is counteracted because the direction of the screw-thread is ineffective to maintain such clutching action. The tendency to tighten the ring, however, due to these factors is effective because running with the screw-thread and supplements the lagging action of the ring to tighten the same. It will thus be seen that the contact of the locking ring with the inner and outer hub members coöperate with forces generated by the eccentric relation of the hub members and the side tipping of the outer hub member on the inner hub member, due to varying road resistance to wheel travel and to varying application of power to the wheels, and also conditions which cause side tipping of the vehicle, to automatically tighten the locking ring, regardless of the hand of the screw thread on the ring and the hub member to which it is screw-threaded."

1,287,331.—*John W. Jepson*, Buffalo, N. Y. ELECTRICAL SYSTEM OF DISTRIBUTION. Patent dated December 10, 1918. Disclaimer filed August 20, 1920, by the assignee, *Gould Coupler Company.*

"Hereby disclaims from each and every claim of said Letters Patent any electrical system of distribution except as the combination recited in the claim is so constructed, designed, and arranged as to effect the result specified in the patent, to wit: the avoidance of sparking at the commutator brushes when the variable speed generator is operating at its higher speeds."

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 20, 1920.

Pyro Paint Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of George F. Johnston, of Fort Dodge, Iowa, for registration of a trade-mark and trade-mark registered May 16, 1899, No. 32,902, to Pyro Paint Company, of 37–39 Commercial Place, Norfolk, Va., and a notice of such declaration sent by registered mail to said Pyro Paint Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Pyro Paint Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULTSON,
First Assistant Commissioner.

Correction of Drawings.

RULE 72. • • • • •

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Substitute drawings will not be admitted in any case unless required by the Office.

Adverse Decisions in Interference.

PATENT NO. 1,298,861.

On August 6, 1920, a decision was rendered that William A. Babbott was not the first inventor of the subject-matter covered by claims 1 and 3 of his Patent No. 1,298,861, subject, "Latches for automobile-doors," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,302,492.

On August 2, 1920, a decision was rendered that Albert L. Arenberg was not the first inventor of the subject-matter covered by claim 1 of his Patent No. 1,302,492, subject, "Lighting unit," and no appeal having been taken within the time allowed such decision has become final.

Drawings.

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE.

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin-lines of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

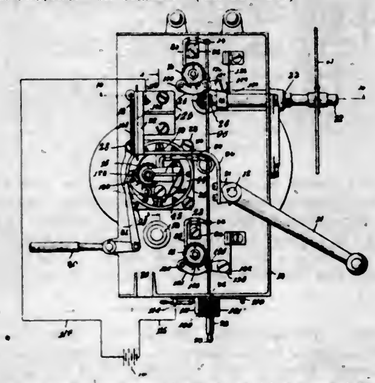
It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed, and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention. If the application has received a serial number, that should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state, if such be the case, that the new drawings are to be substituted for those previously filed.

Amendment Under Rule 78.

The entry of an amendment under Rule 78 takes much more time than would its entry during the regular prosecution of the case, since the docket clerk must get the file from the Issue and Gazette Division, send it to the Examiner for report, submit it to the Commissioner, notify the applicant of the Commissioner's action, and if the petition is granted return the file to the Examiner for entry of the amendment.

Attorneys are therefore requested to take all possible steps to obviate the necessity of the presentation of such an amendment.

APPLICATIONS UNDER EXAMINATION



Condition at Close of Business September 4, 1920.

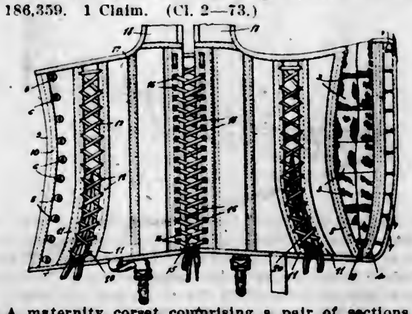
PATENTS

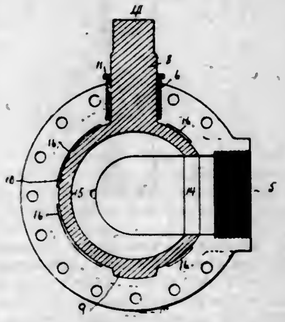
GRANTED SEPTEMBER 14, 1920.

1,352,420. PICTURE-PROJECTING MACHINE. WILLIAM C. ALBERS, New York, N. Y., assignor to Albert F. Pierce, Brooklyn, N. Y. Filed Aug. 10, 1917. Serial No. 185,456. 42 Claims. (Cl. 88—17.)



1. A motion picture projecting machine comprising, with a motion picture film having insert portions, means for feeding said film, insert stop mechanism for stopping the film at a desired point for a desired period of time, and means for moving said mechanism, said mechanism comprising sprocket-means for engaging the film and clutch means for engaging the sprocket means.

1,352,421. PROCESS OF PRESERVING MANUFACTURED OR LEAF TOBACCO. VICENTE CATALÁ ALSINA AND GENARO FERNANDEZ, Buenos, Aires, Argentina. Filed June 26, 1916. Serial No. 105,924. 1 Claim. (Cl. 131—55.)

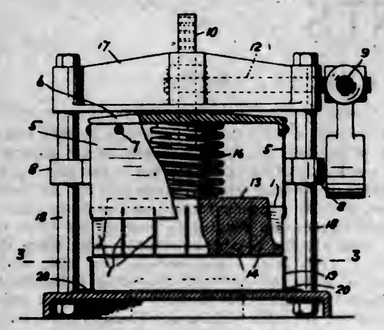


A process of preventing injury to tobacco products, by the tobacco moth and other similar insects, which comprises subjecting the tobacco products to the odors emanating from a mixture comprising a mixture of vanilla beans and tonka beans, said mixture being placed in proximity with the said tobacco products, but being protected from actual contact therewith, and allowing the tobacco products to absorb said odors.

1,352,422. MATERNITY-CORSET. CAROLINE E. ANDERSON, Park City, Utah. Filed Aug. 15, 1917. Serial No. 186,359. 1 Claim. (Cl. 2—73.)

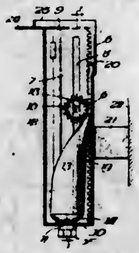
A maternity corset comprising a pair of sections and one section being of a greater length than the other section to form a front portion, one side portion and a portion of the back of the corset, the second section forming one side portion and a portion of the back, means adjustably connecting the sections together at their rear edges, a reinforcing fly formed on the front edge of the second section and adapted to underlie the front edge of the first section, means detachably connecting the sections at their front edges, each section being divided in a pair of parts and elastically connected, lacing strings adjustably connecting the parts of said sections, said front portion of the first section being constructed from relatively broad overlapping elastic strips that gradually increase in length from the lowermost strip, said strips having their upper edges arranged in rear of the lower edges of the adjacent strip.

1,352,423. CASING-HEAD. PAUL ARBON, Tulsa, Okla. Filed Apr. 21, 1919. Serial No. 291,578. 3 Claims. (Cl. 251—101.)



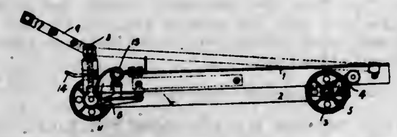
1. A casing head for gas and oil wells having in combination a shell consisting of sections adapted to be detachably secured together, each section having a nozzle and a semicircular projection forming one half of a third nozzle and each section having one half of bearings for trunnions, said bearings being arranged with their axes at right angles to the axes of the respective nozzles, and a rotatable valve having a diametrical passage therethrough and a passage or opening extending at right angles from the diametrical passage and having trunnions with their axes at right angles to the axes of said passages or openings, one of the trunnions extending outside of the shell.

1,352,424. DIVIDER FOR DOUGH OR THE LIKE. WILLIAM B. ABRAMS and ROBERT I. GAY, Philadelphia, Pa. Filed Nov. 20, 1919. Serial No. 339,490. 2 Claims. (Cl. 107—26.)



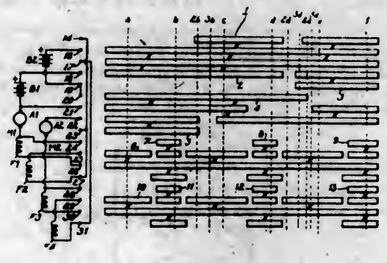
1. In a divider for dough and the like the combination of a head, housing sections demountably attached to the head and to each other and provided with openings, a grillage of straight blades notched together and provided with extensions demountably arranged in said openings and held by the walls thereof immovable in respect to the head, and a stripper base arranged in the housing and

having yielding connection with the head and provided with rectangular fingers integral with the base and ar-



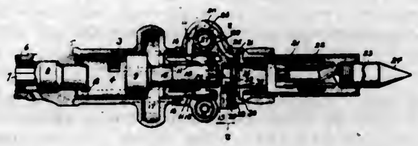
ranged in the interstices of the grillage, substantially as described.

1,352,425. DISPENSING DEVICE. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1919. Serial No. 288,929. 3 Claims. (Cl. 221—60.)



1. In a dispensing device of the character described, the combination of a holder for a loaded tube, said holder having vertically slotted side walls and an aperture support to receive the nozzle of the tube, a roller within said holder having its spindle extending through the slots of said side walls, a knob on said spindle, and rack and pinion mechanism for causing said roller to travel over and squeeze the tube as it rotates.

1,352,426. ELEVATING-TRUCK. JOSEPH ALEXANDER BUTTERWORTH, Loughborough, England, assignor to Herbert Morris, Limited. Filed Sept. 27, 1919. Serial No. 326,990. 2 Claims. (Cl. 254—8.)

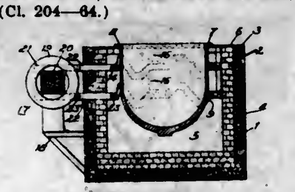


1. An elevating truck comprising a wheeled under frame, a top frame, rockers connecting said frames, a lug pivoted to one of said rockers, and an elevating handle fitted to said lug, said handle movable from horizontal position transverse to the truck to vertical position, and from said vertical position to a position longitudinally of the truck whereby to tilt said rockers, and from said position longitudinally of the truck to a horizontal position transverse to said truck.

1,352,427. SYSTEM OF CONTROL. ANDREW H. CANDEE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1917. Serial No. 146,456. 6 Claims. (Cl. 172—291.)

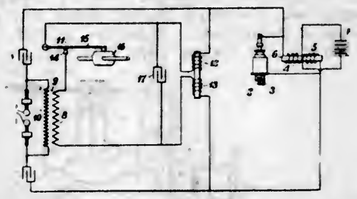
1. In a system of control, the combination with a plurality of sources of energy and a plurality of motors, of means for operating the motors in series relation and the batteries in parallel relation, for connecting the batteries in series with one motor, and for operating the batteries in series and the motors in parallel-circuit relation.

1,352,428. ROCK-DRILL. HARRY M. CHASE, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo, a Corporation of Delaware. Filed June 3, 1919. Serial No. 301,450. 23 Claims. (Cl. 121—9.)



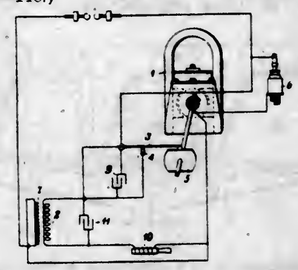
1. In drilling apparatus of the character described, the combination with a drilling motor, of fluid actuated feeding means therefor, means for supplying motive fluid under pressure to the motor and feeding means, and means for increasing the pressure of the fluid in the feeding means above that of the fluid supply.

1,352,429. SHORE-PROTECTOR. ST. JOHN CLARKE, Bogota, N. J. Filed Jan. 14, 1918. Serial No. 211,766. 7 Claims. (Cl. 61—37.)



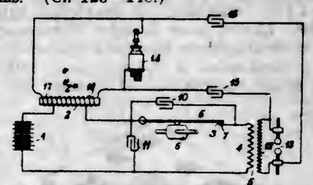
1. A shore protecting structure adapted to be laid on sloping shores comprising a slab formed on its under face with sets of intersecting partition ribs constituting open bottom cellular compartments and supporting the slab a considerable distance above the surface of the beach on which it is laid, said slab being formed with filler openings through which each compartment may be filled.

1,352,430. INDUCTION SOLDER-POT HEATER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,660. 10 Claims. (Cl. 204—64.)



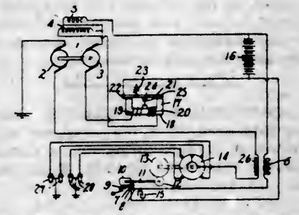
4. In an electrically-heated apparatus, the combination with a container and supporting means therefor, of a transformer having primary and secondary windings, a grid resistor connected to the secondary winding of said transformer, said resistor being wound first in one direction around said container and then wound in the reverse direction a substantially equal number of turns, and means on said resistor for supporting it on said supporting means.

1,352,431. IGNITION SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1910. Serial No. 583,857. 6 Claims. (Cl. 123—148.)



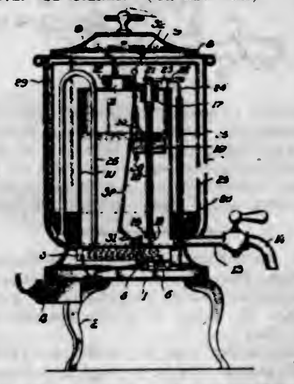
1. An ignition system comprising a source of current, a primary circuit connected to the source and including an interrupter, a secondary circuit inductively related to the primary circuit, a spark device having permanently separated terminal members in shunt to the secondary circuit, and a spark plug connected between the terminals of both the source and the secondary circuit.

1,352,432. ELECTRICAL IGNITION SYSTEM. FRANK CONRAD, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1910, Serial No. 541,787. Renewed Jan. 8, 1912. Serial No. 670,131. 25 Claims. (Cl. 123—148.)



1. An ignition system comprising a source of current, a primary circuit connected to the source, a secondary circuit that is inductively related to the primary circuit and includes a permanently open gap in series therewith, and a spark plug having its terminals connected both to the source directly and to the secondary circuit.

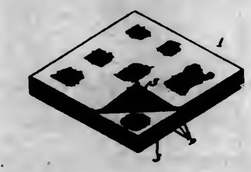
1,352,433. ELECTRICAL IGNITION SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1910, Serial No. 583,858. Renewed Apr. 4, 1917. Serial No. 159,844. 24 Claims. (Cl. 123—148.)



14. An ignition system comprising a source of current, a spark plug, means receiving current from said source for producing an oscillatory discharge to initially establish a spark at the spark plug, and energy storing means that receives energy from said source and supplies it to the spark plug following the initially established spark.

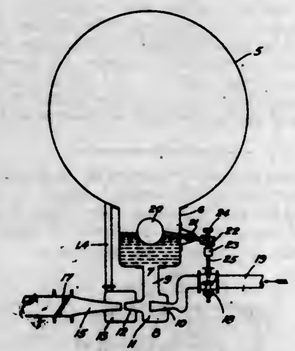
1,352,434. IGNITION SYSTEM. FRANK CONRAD, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1913, Serial No. 771,894. Renewed Jan. 20, 1920. Serial No. 352,910. 12 Claims. (Cl. 123—148.)

1. In an ignition system, the combination with a source of current at a relatively high voltage, of a circuit connected to said source and having a gap normally impassable to said current, of means for causing said current to flow across said gap, said means comprising a source of current at a relatively low voltage and an induction coil having its secondary winding in said circuit.



1,352,435. BEVERAGE-PREPARING MACHINE. EDWARD C. DENNERT, Detroit, Mich., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1919. Serial No. 329,272. 12 Claims. (Cl. 219—44.)

9. A beverage preparing machine comprising a base, an outer receptacle on said base, an inner receptacle in



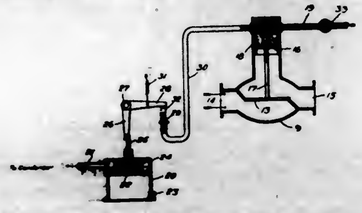
said outer receptacle having an outlet thereto, a siphonic tube between said receptacles adapted to transfer liquid back and forth between said receptacles, and a heating means in said base for the inner receptacle.

1,352,436. METHOD OF FORMING COMPOSITE BODIES. DANIEL ADAM DICKEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1918. Serial No. 268,950. 7 Claims. (Cl. 154—2.)

2. The method of forming bodies of superimposed layers of fibrous material and a phenolic condensation product as a binder which comprises superimposing layers of sheet material impregnated with the binder between protective layers of untreated material, subjecting the plate thus assembled to heat and pressure sufficient to partially compact it and soften the binder without materially curing it, dividing the plate into sections, removing the protective coatings from the sections, superimposing certain of the sections and subjecting the body thus assembled to heat and pressure sufficient to fully compact it and transform its binder into its hard and substantially insoluble and infusible state.

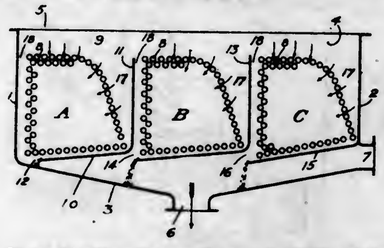
1,352,437. CONDENSING APPARATUS. RAYMOND N. EHRHART, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed June 28, 1917. Serial No. 177,557. 3 Claims. (Cl. 162—3.)

3. Condenser apparatus comprising a condenser, a hot well communicating therewith, an ejector, including steam and discharge pipes, arranged exteriorly of the hot well and communicating therewith, a valve for the steam pipe, float means within the hot well adapted to open and close the valve, and a check valve in the discharge pipe.



1,352,438. CONDENSER. RAYMOND N. EHRHART, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 29, 1917. Serial No. 194,005. 13 Claims. (Cl. 60—94.)

1. In combination with the casing of a turbine having an exhaust passage and an exhaust port formed therein, means for delivering cooling liquid into the exhaust passage toward the central portion of the casing for condensing motive fluid discharged from the working passages of the turbine, and a trough receiving the said liquid disposed between the cooling liquid delivering



means and the axis of the turbine for constantly preventing the cooling liquid from entering the working passages of the turbine and for directing the liquid through the exhaust port.

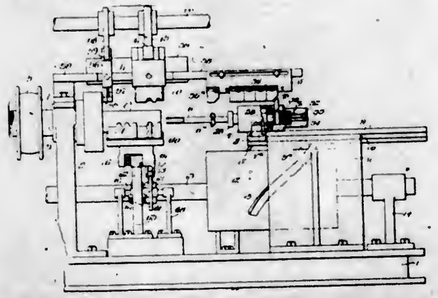
1,352,439. VALVE-UNLOADING MECHANISM. RAYMOND N. EHRHART, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Nov. 6, 1917. Serial No. 200,627. 13 Claims. (Cl. 137—53.)

1. In a fluid operated power developing system, a pressure actuated relief valve for the system adapted to be opened by pressure in the system when the pressure in the vicinity of the said valve exceeds a determined amount, and means controlled by the pressure in a remote part of the system for causing the valve to open at a pressure less than the determined pressure.

1,352,440. MARINE CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa. Filed Aug. 21, 1918. Serial No. 250,905. 16 Claims. (Cl. 257—43.)

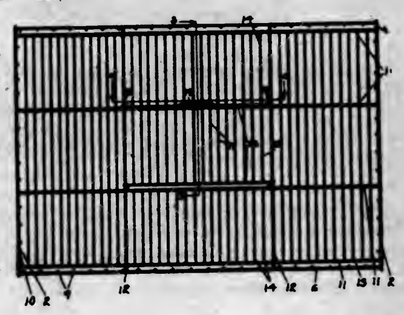
1. In combination in a condenser, a relatively shallow shell, a nest of tubes located within the shell and divided into separate groups, each having substantially converging paths of steam flow and angular partitions located within the shell and forming side and bottom walls of separate condensing chambers for each group provided with a separate condensate discharge.

1,352,441. RAILWAY-TRACK SCALE. ALONSO W. EPRIGHT and WILLIAM H. GRINDALL, Altoona, Pa. Filed June 10, 1918. Serial No. 239,173. 11 Claims. (Cl. 265—71.)



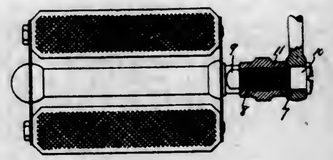
1. In a railway track scale the combination with the scale platform and its supporting levers, of means for preventing horizontal displacement of the platform comprising a horizontal metal plate parallel in length to the scale platform, and having one end fixed and having its opposite end rigidly connected to the scale platform approximately midway between the longitudinal ends of the latter.

1,352,442. MEANS AND METHOD OF TREATING STRINGED INSTRUMENTS TO IMPROVE QUALITY OF TONE. SILVIO FLORESCO, Berne, Switzerland. Filed Mar. 10, 1919. Serial No. 281,723. 8 Claims. (Cl. 84—44.)



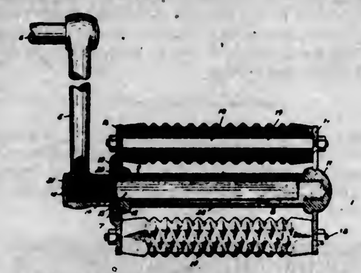
1. A method of improving the tone of instruments played with a bow, consisting in temporarily applying to the belly of the instrument before attachment thereto a local pressure, exercised at the place occupied by the bridge or adjacent thereto, which pressure considerably exceeds the normal pressure exercised by the usual strings of said instrument.

1,352,443. MACHINE FOR TURNING PLASTIC MATERIAL. EDWARD A. FRIES, Boston, Mass., assignor to Randall & Fries, Boston, Mass., a Copartnership consisting of Lillian L. Randall and Edward A Fries. Filed May 7, 1917. Serial No. 166,941. 21 Claims. (Cl. 144—46.)



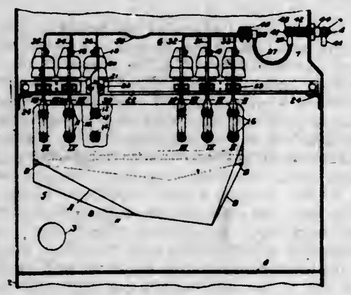
1. A turning machine of the character described, comprising a rotary hollow shaft adapted to support and rotate a bar of plastic material to be operated upon, a carrier for bore forming and end-forming tools movable axially of the hollow spindle, a bore forming tool and an end-forming tool both rotatable on said carrier, and means controlled by the forward movement of said carrier to hold the end-forming tool against rotation during its operation and to permit the same to rotate with the work at the end of its operating stroke.

1,352,444. POULTRY-CRATE. GEORGE J. GENEBACH, Battle Creek, Mich., assignor to United Steel and Wire Co., Battle Creek, Mich., a Corporation of Michigan. Filed July 3, 1920. Serial No. 393,926. 7 Claims. (Cl. 220—19.)



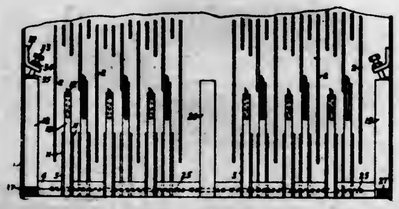
4. A poultry crate comprising end members each having top, bottom and upright bars formed as a continuous member, side top bars disposed in the angles of the end top and upright bars, top longitudinal bars disposed on the top end bars, a pair of spaced cross bars disposed below said top longitudinal bars with their ends resting upon the top side bars, top slats disposed on the under sides of said top longitudinal bars, the slats being omitted between the inner longitudinal bars and said cross top bars providing a door opening, a door comprising a pair of longitudinal bars and slats welded on the under sides thereof, said longitudinal bars having eyes on their ends slidably engaging said top cross bars, the outer longitudinal door bars being engaged with the cross bars at the outer side of one of the intermediate top bars and the inner longitudinal door bars being engaged with the cross bars on the inner side of such longitudinal top bar so that the door is supported for sliding movement, and a downwardly projecting keeper mounted on the top slats so that the end bar of the longitudinal door bars may be sprung over the same to hold the door in its closed position.

1,352,445. REPAIR OF BICYCLE-PEDALS. JOSEPH GLANZ, Hartford, Conn. Filed Nov. 23, 1918. Serial No. 263,834. 5 Claims. (Cl. 208—70.)



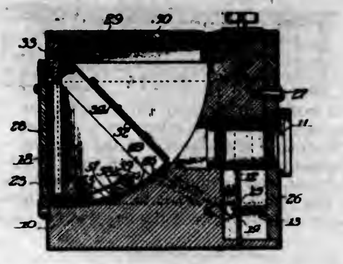
1. In combination with a bicycle crank arm having an opening, and a pedal structure embodying a pedal shaft having a threaded end extending beyond the pedal structure, a bushing separate from and terminating short of the pedal structure and having a threaded opening to receive the threaded pedal end, and means for securing said bushing to the crank arm.

1,352,446. CRANK-PEDAL. JOSEPH GLANS, Hartford, Conn. Filed Sept. 30, 1919. Serial No. 327,470. 9 Claims. (Cl. 208—70.)



1. A pedal structure comprising a pedal supporting spindle, a bearing rotatable on said spindle, a pedal frame supported on said bearing, and means independent of the pedal frame detachably engaging said spindle to secure it in place and loosely engaging said pedal frame to rotatably retain it on the spindle.

1,352,447. CONTROL APPARATUS. ARTHUR J. HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1916. Serial No. 138,004. 20 Claims. (Cl. 219—57.)

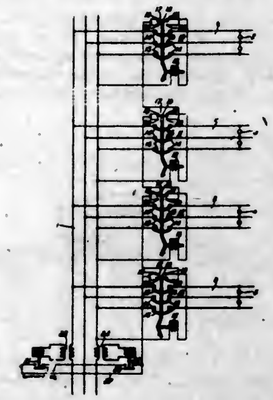


1. A polyphase liquid rheostat embodying sets of electrodes of different lengths for the several phases, the electrodes being arranged in an irregular rotation of phases in such manner that substantially equal active areas corresponding to the several phases are immersed at all liquid levels.

1,352,448. CONTROL APPARATUS. ARTHUR J. HALL and CHARLES C. WHITTAKER, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1916. Serial No. 136,033. 28 Claims. (Cl. 219—57.)

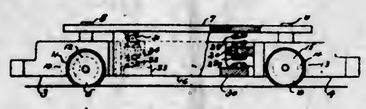
1. In a liquid rheostat, the combination with a tank and a plurality of electrodes contained therein, of a plurality of barrier members of non-conducting material extending upwardly from the tank bottom to a predetermined height above the lower edges of said electrodes.

1,352,449. REFLEX CAMERA. VARIAN M. HARRIS, Chicago, Ill., assignor, by mesne assignments, to Popular Reflex Camera Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1918. Serial No. 255,260. 14 Claims. (Cl. 95—42.)



1. In a photographic camera adapted to hold a sensitized element in position for exposure, the combination with a lens structure, a focusing screen, means adapted when interposed between said lens structure and said sensitized element to reflect the image upon the focusing screen, shutter mechanism adapted for periodic interposition between said lens structure and said sensitized element, and means for causing a conjoint actuation of said reflecting means and said shutter mechanism, said last aforesaid means including a shutter retarder.

1,352,450. LIFT-BRIDGE. ADELBERT A. HENDERSON, Wilkinsburg, Pa. Filed Nov. 21, 1918. Serial No. 263,504. 7 Claims. (Cl. 14—42.)



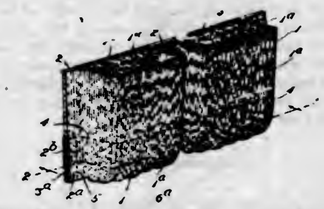
1. In a bridge structure, a vertically movable span, an adjacent tilting span, positively operating means for simultaneously effecting a vertical movement of the adjacent ends of said spans, and means for permitting a lateral movement of the opposite end of said tilting span.

1,352,451. CIRCUIT-INTERRUPTING SYSTEM. STEPHEN Q. HAYES, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1917. Serial No. 168,663. 6 Claims. (Cl. 175—294.)

I. The combination with a main circuit, a plurality of feeder circuits and interrupters for connecting the feeder circuits to the main circuit, of a relay responsive to the load in the main circuit for controlling the tripping of the interrupters, and auxiliary switches actuated by the interrupters for successively connecting the tripping devices in series with the contact members of the relay.

1,352,452. STORAGE-BATTERY LOCOMOTIVE. GEORGE H. F. HOLT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 5, 1917. Serial No. 159,965. 9 Claims. (Cl. 105—50.)

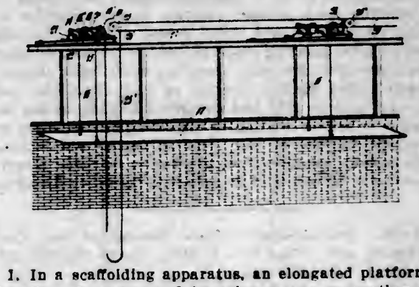
1. In a low-height locomotive, the combination of a low-height end section, a two-wheel truck supporting the same, another low-height section pivotally connected to said end section, a two-wheel truck connected to said other section, propelling means for the trucks, and means tending to maintain said trucks and sections in alinement.



2. In a low-height locomotive, the combination of a low-height end section, a two-wheel truck supporting the same, another low-height section having means thereon for carrying storage-batteries or the like, a two-wheel truck connected to said other section, a propelling means mounted on each of said trucks, and yieldable means tending to maintain said trucks and sections in alinement.

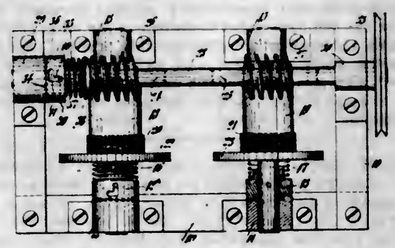
3. In a low-height locomotive, the combination of a low-height end section, a two-wheel truck supporting the same, another low-height section having means thereon for carrying storage-batteries or the like, a two-wheel truck connected to said other section, a propelling means mounted on each of said trucks, and resilient means acting laterally and vertically and tending to maintain said trucks in longitudinal and horizontal alinement.

4. In a low-height locomotive, the combination of a low-height end section, a truck for supporting the same, another low-height section having means thereon for carrying storage-batteries and the like, means whereby said carrying means is pivotally connected to said end section, a truck connected to said other section, and propelling means for said locomotive.



5. In a low-height locomotive, the combination of a low-height end section, a truck for supporting the same, another low-height section having means thereon for carrying storage batteries and the like, said carrying means having an end projecting over and supported on said end section, means for pivotally connecting said carrying means to said end section, a truck connected to said other section and propelling means carried by said trucks.

1,352,453. WOVEN CARRIER. VICTOR H. JENNINGS, Worcester, Mass., assignor, by mesne assignments, to Frank R. Batchelder, Worcester, Mass. Filed Aug. 8, 1918. Serial No. 248,873. 4 Claims. (Cl. 224—23.)

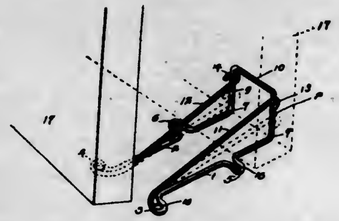


1. A carrier comprising a series of pockets woven to shape and having the body-web section intermediate two successive pockets woven with a passageway connecting the interior spaces of such pockets, and inserted linings having lateral continuations which are entered into the said passageway between the pockets.

1,352,454. SAFETY-SCAFFOLD. FRANK B. JOHNSTON, New York, N. Y., assignor to American Safety Device Company, a Corporation of New York. Filed June 30, 1916. Serial No. 106,782. 4 Claims. (Cl. 254—184.)

1. In a scaffolding apparatus, an elongated platform, a plurality of raising and lowering means supporting said platform suspended at a plurality of points, means operatively connecting all of said raising and lowering means, whereby operation of one of said last named means, simultaneously and equally operates all of said last named means, and means operable from one point for effecting said simultaneous and equal operation to cause equal movement of said platform at all points in a substantially level position.

1,352,455. SCAFFOLD-SUPPORTING MACHINE. FRANK B. JOHNSTON, New York, N. Y., assignor to American Safety Device Company, a Corporation of New York. Filed June 30, 1916. Serial No. 106,783. 2 Claims. (Cl. 254—184.)



1. In a scaffold supporting machine, a frame, winding means supported thereby, locking means adapted to prevent rotation of said winding means in one direction, means for making said locking means inoperative to permit rotation of said winding means in either direction, suspension means adapted to be wound and unwound from said winding means, gear means in fixed relation with said winding means, an operating shaft supported on said frame and geared to said gear means, means operating to turn said shaft in either direction for raising or lowering the scaffold, the engagement of said gear means of said winding means, and said shaft, adapted through the locking of said winding means against rotation in one direction to prevent rotation of said shaft in one direction, locking means on said operating shaft adapted to prevent rotation in the other direction, said operating shaft being thereby normally locked against rotation in both directions, and means for making said last-mentioned locking means inoperative to permit rotation in the direction unopposed by said locking means of said winding means, said locking means of said winding means adapted to be made inoperative to permit rotation in the other direction.

2. In a scaffold supporting machine, a frame, a winding drum supported thereby, locking means adapted to prevent rotation of said winding drum in one direction, means for making said locking means inoperative to permit rotation of said winding drum in either direction, suspension means adapted to be wound and unwound from said winding drum, a worm gear in fixed relation with

said winding means, an operating shaft supported by said frame and provided with a worm geared to said worm gear, and operating to turn said shaft in either direction for raising or lowering the scaffold, the engagement of said worm and worm gear adapted through the locking of said winding drum against rotation in one direction to prevent rotation of said shaft in one direction, locking means on said operating shaft adapted to prevent rotation in the other direction, said operating shaft being thereby normally locked against rotation in both directions, and means for making said last-mentioned locking means inoperative to permit rotation in the direction unopposed by said locking means of said winding drum, said locking means of said winding drum adapted to be made inoperative to permit rotation of said shaft in the other direction.

1,352,456. DOOR-STOP. JOHN MELUS GUYNN, East Newport, Ark. Filed Feb. 9, 1920. Serial No. 357,136. 2 Claims. (Cl. 292—17.)

1. A door-stop formed of a single piece of wire and embodying horizontal substantially parallel members with eyes at one end and vertical portions at the other end and resilient independently bodily-movable inclined members extending from said eyes and having their free ends formed with portions to freely engage said vertical members and guide the inclined members in their vertical movements.

1,352,457. MOLD. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Apr. 4, 1919, Serial No. 287,580. Divided and this application filed Sept. 3, 1919. Serial No. 321,496. 5 Claims. (Cl. 18—5.)

4. A mold comprising a body portion having a chamber, a removable member closing one end of the chamber and provided with an opening, a rod adapted to seat in the opening, a removable spacing member having an opening to receive the rod, a pressure member corresponding to the spacing member but of less length, and a second pressure member adapted to fill the space in the mold chamber between the spacing member or the first pressure member and the inner surface of the wall of the mold.

1,352,458. SWIFT FOR REELING-MACHINES. WILLIAM C. KEYWORTH, Paterson, N. J. Filed Feb. 25, 1919. Serial No. 279,077. 6 Claims. (Cl. 242—113.)

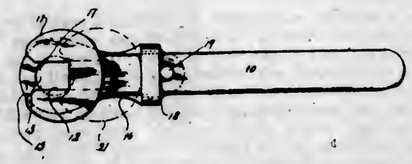
1. In combination, with the radial socket of the center part of a swift, said socket having longitudinal slots terminating at their outer ends short of the outer end of the socket and thus forming a stop, a skein supporting member radially movable in said socket and including a gib slidable in said slots and a skein receiving part disconnectively attached to the gib and projecting radially from the socket, and a spring confined in the socket and holding the gib bearing against said stop, the gib being re-

movable laterally through one of the slots but being normally interlocked with the spring and thereby held against such removal.

1,352,459. ANNEALING-FURNACE. FREDERIC S. KOCHENDORFER, Chicago, and BRUNO E. BALDUF, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1918. Serial No. 253,386. 7 Claims. (Cl. 266—4.)

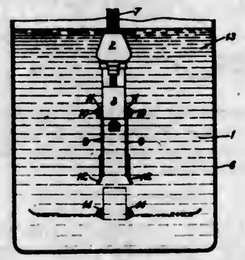
1. In an annealing furnace, a tube through which the material to be annealed is passed, a water seal into which one end of said tube opens, the other end of said tube opening into the air, means for sealing the greater portion of the tubular area from the outside air, means for raising the material to an annealing temperature in one portion of the sealed area, and means for cooling said material below the temperature of oxidization in another portion of said sealed area.

1,352,460. PISTON. FRANK KONYVKA, Cleveland, Ohio. Filed Apr. 12, 1919. Serial No. 289,632. 2 Claims. (Cl. 74—108.)



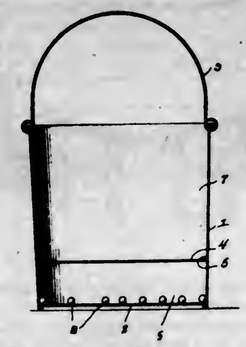
1. A hollow piston having a central socket adapted to receive a ball at the end of a connecting rod, and a retaining nut secured in the end of the piston, said piston having spaced supporting ribs between the socket and the

wall of the piston and holes from said spaces into the socket, and the nut having openings connecting said



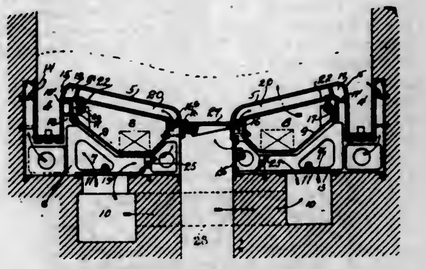
spaces and the space in the crank case, whereby oil may be splashed through the openings into said spaces.

1,352,461. WRENCH. JOHN E. LENHOLT, Guilford, Conn., assignor of one-half to Charles R. Tainter, Guilford, Conn. Filed Oct. 22, 1919. Serial No. 332,484. 4 Claims. (Cl. 81—53.)



4. A wrench having a head provided with a recess for engagement with a bolt head or nut; a plate connected with said wrench with an opening therein for constant engagement with said bolt or nut; and means for preventing the disengagement of said plate from said wrench.

1,352,462. CIRCUIT-INTERRUPTER. WALTER O. LUM, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1916. Serial No. 100,371. 11 Claims. (Cl. 74—69.)



3. The combination with a movable member for actuation in a fluid, of means, on said member only, opposing the movement thereof by gradually increasing amounts in one direction and by gradually decreasing amounts in another direction.

1,352,463. TOY BUCKET. EDWARD MARSH, Washington, D. C. Filed Aug. 16, 1919. Serial No. 317,987. 1 Claim. (Cl. 46—46.)

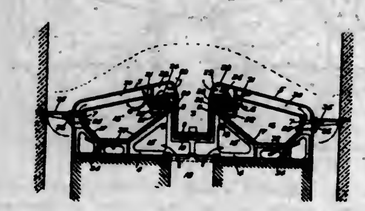
A toy bucket comprising a tapering body portion, a false bottom forced into the body and secured at a predetermined spaced point from the bottom of the body, and balls arranged in the space under the false bottom.

1,352,464. MULTIPLE-RETORT UNDERFEED STOKER. CHARLES F. MILLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1916. Serial No. 120,977. 6 Claims. (Cl. 110—44.)

1. In an underfeed stoker two horizontal retorts, a dump grate located between the retorts, a separate set of grate bars located between each retort and the dump grate, air supply means for each retort and coöperating set of grate bars, each means including a damper to control the flow of air both to the retort and the grate bars and a second damper to control the air flow to the grate bars, one of said means having a passage-way adapted to afford communication to the space beneath the dump grate, and a damper for the passage-way.

3. In an underfeed stoker, a retort, a dump grate mechanism extending substantially parallel to the retort, a set of parallel grate bars extending transversely of the retort and between the retort and said mechanism, an air box on which the fuel discharge ends of the grate bars are mounted, and single piece pedestals extending transversely of the retort and on which said retort, said air box and said grate bars are mounted.

1,352,465. MULTIPLE-FEED HORIZONTAL UNDERFEED STOKER. CHARLES F. MILLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1916. Serial No. 120,978. 18 Claims. (Cl. 110—44.)

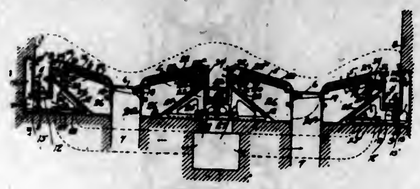


1. In an underfeed stoker, grate bars, a horizontal retort, pedestals on which the retort is detachably mounted, a rocking bar supported by the pedestals for reciprocating

some of said grate bars, and means supported by the pedestals for supporting the grate bars independently of the rocking bar and the retort to permit removal of the retort without disturbing the grate bars.

8. An underfeed stoker, comprising at least two horizontal retorts extending from the front to the rear of the stoker, a dump grate located between the retorts, a separate set of grate bars between each retort and the dump grate, pedestals on which each retort is mounted, supporting and spacing members secured to the pedestals on which the grate bars of each set are mounted, partition plates mounted on the grate-bar-supporting members, and forming an air chamber, and a fuel sifting receiving chamber below each set of grate bars, and means for delivering air under pressure to each chamber.

1,352,466. UNDERFEED STOKER AND DRAFT-CONTROLLING MECHANISM THEREOF. CHARLES F. MILLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1916. Serial No. 120,979. 15 Claims. (Cl. 110—44.)

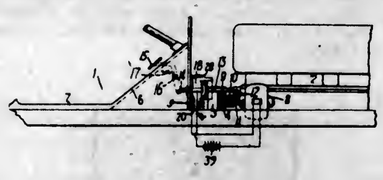


3. An underfeed stoker comprising a fuel feeding retort, grate bars receiving fuel therefrom, an air chamber beneath the bars adapted to discharge air between the bars into the fuel thereon, each of the said bars being provided with a pair of independent air passages, one of which discharges air into the said air chamber and two air boxes for supporting the grate bars, one of which is adapted to deliver air to one passage of each bar and the other of which is adapted to deliver air to the other passage of the bar.

6. A grate bar having twyer openings formed in one end thereof, a passage formed therein and communicating with the opening and having an inlet port communicating therewith, a second passage formed in the grate bar, a delivery port located in the lower face of the bar, and intermediate its ends, and communicating with the second passage, and an inlet port located in the opposite end of the bar from the twyer openings and communicating with the second passage.

14. An underfeed stoker comprising a pedestal construction having supporting elements for two groups of grate bars and an intermediate retort, a removable retort carried by said retort supporting elements, and a group of removable grate bars supported by said grate bar supporting elements at each side of the retort.

1,352,467. MULTIPLE-SECTION HORIZONTAL UNDERFEED STOKER. CHARLES F. MILLER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1916. Serial No. 120,980. 12 Claims. (Cl. 110—47.)

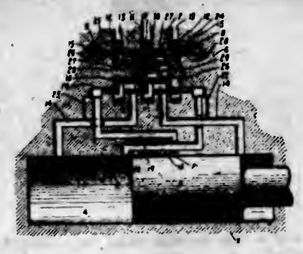


1. A multiple-section underfeed stoker comprising two lateral retorts each extending from the front to the rear of the stoker, and each located adjacent to a side wall of the furnace, a central retort located between the lateral retorts, a dump grate between each lateral retort and the central retort, a set of grate bars between each retort and the adjacent dump grate, and means for delivering air under pressure to each grate bar of each set.

3. A grate bar for use in a retort stoker with one end adjacent a retort, having a passage formed therein and extending from an inlet port adjacent the retort end thereof along the lower face to the other end thereof and back along the upper face to the retort end and also having twyer openings and a delivery port formed in the retort end of the bar and communicating with the passage, the said delivery port being adapted to discharge into the space beneath the bar.

4. A multiple retort stoker, comprising a central retort and two side retorts, an ash discharge mechanism between each side retort and the central retort, a set of grate bars between each retort and each adjacent ash discharge mechanism, a central retort support, comprising similar and interchangeable pedestal members secured together, and lateral retort supports comprising pedestal members similar to the pedestal members first named and interchangeable therewith, and laterial retort supporting members secured thereto.

1,352,468. STARTING SYSTEM FOR AUTOMOBILES. CHESTER B. MILLS, East McKeesport, and CHARLES E. WILSON, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 29, 1913. Serial No. 781,763. 11 Claims. (Cl. 290—38.)

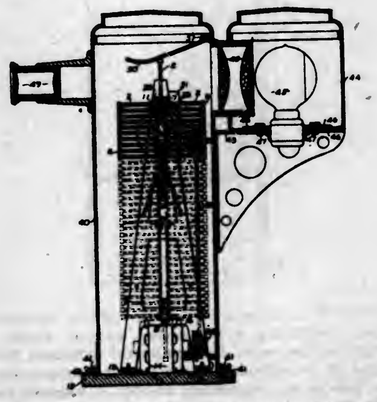


11. The method of starting an engine, comprising accelerating a motor, decelerating the same, engaging the same with the engine, accelerating the motor, and disengaging the motor from the engine.

1,352,469. VALVE. GUSTAVE M. NELL, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Nov. 12, 1919. Serial No. 337,559. 12 Claims. (Cl. 121—28.)

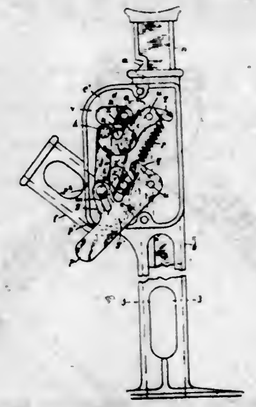
1. The combination with a cylinder member and a movable piston therein, of a valve casing having spaced pressure chambers, a valve in the casing controlling the distribution of motive fluid to and its exhaust from the

cylinder member, said valve having opposite pressure surfaces in the different pressure chambers respectively, means controlled by the piston for admitting fluid under



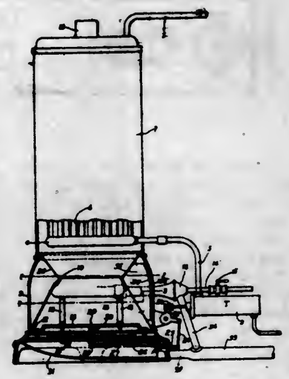
pressure to the chambers and against the pressure surfaces of the valve, and means controlled by the valve for admitting fluid under pressure to the chambers and against said same pressure surfaces of the valve.

1,352,470. RESILIENT RING OR ANNULUS AND METHOD OF MAKING THE SAME. JOHN FULLERTON PALMER, St. Joseph, Mich. Filed Mar. 20, 1918. Serial No. 223,557. 5 Claims. (Cl. 154—2.)



1. An expansible annulus made of thin layers of vulcanized rubber built up around a circular axis, the individual layers having smooth interior and exterior surfaces and being united intimately to form a practically unitary structure.

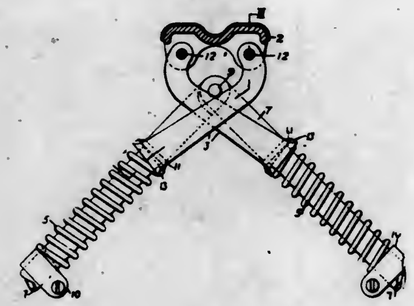
1,352,471. AUTOMATIC PROJECTOR. WILLIAM L. PATTERSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 22, 1917. Serial No. 156,553. 8 Claims. (Cl. 88—28.)



1. A projection apparatus embodying one composite unit comprising a supporting frame, a chain of object carriers movable on the frame, and mechanism on the frame for advancing the carriers one at a time into position for projection, and a second composite unit adapted to be associated with and dissociated from the first unit, said second unit comprising an illuminating system and a projection system adapted respectively when the two units are operatively associated to illuminate the object carrier that is in position to be projected and to project an image of the object.

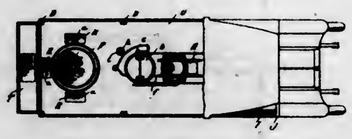
1,352,472. LIFTING-JACK WITH ROTATABLE CAMS. ADOLPH PETELER, Freeport, N. Y. Filed Aug. 22, 1919. Serial No. 319,088. 5 Claims. (Cl. 254—111.)

1. A lifting jack having a lifting-pawl and a holding-pawl with a stud upon one side of each pawl, a rotatable cam pivoted adjacent to each pawl with an eccentric edge adapted, when turned upon its pivot, to draw the pawl out of the rack, and an extension-finger integral with one of the cams for moving the cams and locking them in an operative or inoperative position.



1,352,473. GAS-HEATER. JOSEPH W. PIATT, New York, N. Y. Filed Nov. 30, 1917. Serial No. 204,710. 4 Claims. (Cl. 158—99.)

2. In a gas heater, the combination of a combustion chamber; a burner at the base of said chamber; a secondary air supply to the burner consisting of a chamber the wall of which extends around and diverges downward from the top of the burner adjacent the burner ports and spaced from the wall of the burner to consti-

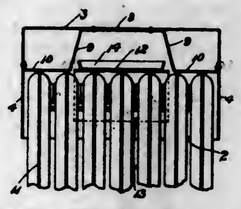


tute an outlet of said chamber adjacent the burner ports; a plate supported at the lower end of the air chamber to have adjustment in a vertical direction with the lateral edges spaced from the walls of the chamber; means to normally urge said plate downward; and means to adjust the plate upward against said latter means, substantially as and for the purpose specified.

1,352,474. TROLLEY. THOMAS S. PUKERUD, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 10, 1916. Serial No. 71,184. 6 Claims. (Cl. 191—55.)

1. The combination with a pantograph frame and a current-collecting member, of a plurality of crossed link members for mounting the current-collecting member upon said frame.

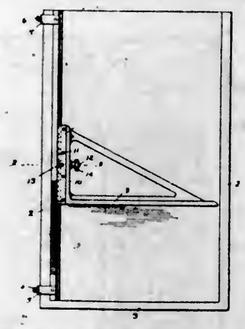
1,352,475. PORTABLE BEVERAGE-DISPENSING APPARATUS. DUBBIN RICHARDSON and CHARLES N. JACOBY, Rochester, N. Y., assignors to Richardson Corporation, Rochester, N. Y., a Corporation of New York. Filed Aug. 28, 1919. Serial No. 320,449. 4 Claims. (Cl. 225—21.)



1. In a beverage dispensing apparatus, the combination with a container, of a discharge faucet on the container, a liquid chamber within the container and having an opening in the bottom, carbonating mechanism, a conducting pipe leading from said opening in the bottom of said chamber through the bottom of the container to the carbonating mechanism, and a conducting pipe leading from the carbonating mechanism through the bottom of the container and through said container to the discharge faucet.

1,352,476. COMBINATION VALVE-GRINDER AND BREAST-DRILL. ISADORE ROSENBERG, Port Chester, N. Y. Filed June 23, 1919. Serial No. 306,129. 12 Claims. (Cl. 29—26.)

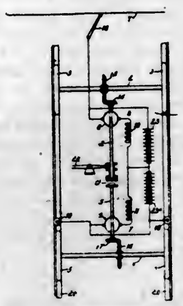
7. A device of the character described comprising a rotary shaft, a pair of oppositely extending spindles, a drill chuck carried by one of said spindles, a valve grinding implement carried by the other of said spindles, intermeshing gears on said shaft and said first named spindle, and a cam on said shaft for oscillating the other of said spindles.



1,352,477. HUMIDIFIER. HART SACKETT, Grand Rapids, Mich. Filed July 16, 1919. Serial No. 311,358. 2 Claims. (Cl. 237—79.)

1. In combination, a hood having spaced front and back sides and vertical ends, an integral connecting top joining the front, back and ends, said front side having an opening therein with metal pressed from the hood over said opening in a downward and outward incline, a bar attached to the upper side of the hood at its middle portion and formed with downwardly bent sections for a distance and then terminating in horisontal sections extending to the ends of the hood, and means connecting the bar to the hood at its ends and at its middle portion, substantially as and for the purposes described.

1,352,478. GALLEY-GAGE. ADOLPH W. SCHILLA, Duluth, Minn. Filed Feb. 10, 1920. Serial No. 357,534. 3 Claims. (Cl. 276—43.)



3. The combination with a galley of the character described, comprising a supporting member having pica graduations thereupon and means for attaching same to the side of the galley, of a slot formed longitudinally the upper face of the supporting member, a gage the base of which slidably contacts the face of said member toward the inside of the galley, a plate rigidly fixed to the upper face of the said base and engageable within the slot in the supporting member whereby the gage is held in slidable engagement with said member, and a screw threaded goose-necked thumb bolt carried by the base of the gage and vertically removably engaged within the slot in the supporting member, substantially as and for the purpose described.

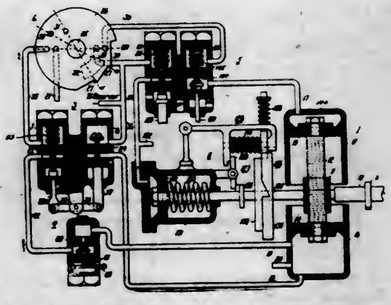
1,352,479. CURTAIN-ROD SUPPORT. ALBERT SCHMIDT, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Nov. 25, 1918. Serial No. 263,982. 5 Claims. (Cl. 296—139.)

1. A door curtain fixture, having in combination, a socket member which can be secured to the door and which has a relatively long recess formed on an arc, and a curtain rod whose lower end is formed on the same arc to turn in and be capable of being held in said recess of the socket member without other fastening means.

1,352,480. CONTROL SYSTEM. THEODORE H. SCHOEPF, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 8, 1916. Serial No. 96,139. 6 Claims. (Cl. 172—291.)

1. In a vehicle having a front and a rear driving axle and a pair of wheels on each axle, the combination with an external source of energy and an auxiliary source of energy disposed on said vehicle, of means for severally and jointly operating said driving axles by said external source of energy and for jointly operating said driving axles by said auxiliary source of energy.

1,352,481. HEATER. JAMES MCCOBB SELDEN, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 12, 1918. Serial No. 216,807. 6 Claims. (Cl. 263—19.)



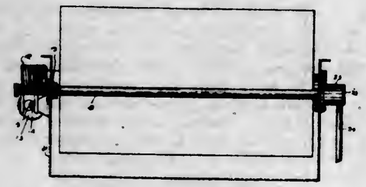
1. In apparatus of the character set forth, the combination with a casing, of means for introducing an oxygen containing gas to the casing, outlet means for conducting the gas from said casing, means forming a tortuous passageway between the inlet and outlet, and means for projecting a flame into the casing to heat the gas passing therethrough between the introducing and outlet means to reduce its oxygen content.

1,352,482. SEED-DRILL. FRANK SHERWIN, Brookings, S. D. Filed Oct. 2, 1919. Serial No. 327,859. 6 Claims. (Cl. 111—54.)

2. In a seed drill, a frame comprising sections connected at their forward portions in a manner to permit of lateral swinging movement of their rear portions toward and from each other, means yieldably acting upon the sections to move their rear portions apart, means whereby the rear portions of the sections may be moved toward each other, a seeding means mounted upon each section, and means for limiting the movement of the rear portions of the sections away from each other.

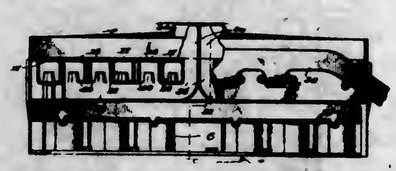
1,352,483. CONTROL APPARATUS. WALTER H. SMITH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 19, 1917. Serial No. 181,523. 20 Claims. (Cl. 172—179.)

1. A control system comprising a multiposition circuit-governing member, fluid-pressure operated means for actuating said member in the one or the other direction,



valve means normally biased to a closed position but operative during actuation of said member to permit the release of fluid pressure from one side of said actuating means, and means dependent upon predetermined conditions for automatically restoring the normal biasing effect in said valve means.

1,352,484. WIRE-TIGHTENING IMPLEMENT. MAX STEINBACH, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,760. 1 Claim. (Cl. 140—149.)

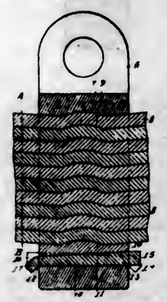


A wire-tightener and twister, comprising a frame having a recess adapted to receive a portion of the object against which the implement bears in the tightening and twisting operation, a bearing member on said frame, a screw-threaded block adjustably fixed to said frame in alinement with said bearing member, a screw-threaded spindle shiftably and rotatably mounted in said bearing member having its threads in engagement with the threads of said block, a head upon said spindle including two stationary gripping jaws, the acting faces of said jaws being arranged at oblique angles to the longitudinal axis of said spindle, pivoted gripping jaws upon said head having cam-shaped faces coöperating with said stationary jaws, said cam-shaped faces being so arranged in relation to their pivots that their grip is increased by the pull on the wire, and guides in front of said jaws through which the wire ends extend.

1,352,485. SHOWER-PIPE FOR PAPER-MAKING MACHINES. ROBERT W. STEVENS, New Haven, Conn. Filed Nov. 10, 1919. Serial No. 336,802. 3 Claims. (Cl. 92—50.)

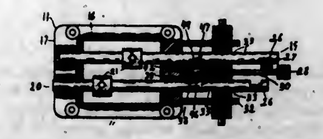
1. In a shower pipe for paper-making machines, mounted for longitudinal movement and formed with a series of perforations combined with a stationary rod having a series of swabs mounted thereon and over which the shower pipe rides.

1,352,486. HYDROCARBON-MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1917. Serial No. 207,560. 8 Claims. (Cl. 123—55.)



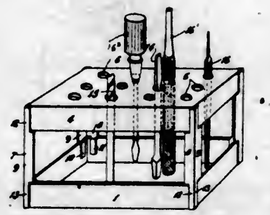
2. A motor cylinder block having the following ports and conduits formed therein: a series of intake and exhaust ports arranged in line, an intake conduit running lengthwise of the block adjacent the valves, branch conduits from said intake conduit to the various intake valves, a branch conduit leading from the top of the block downwardly to the intake conduit, and exhaust conduits leading laterally away from the exhaust ports, the walls of said exhaust conduits projecting into said intake conduit.

1,352,487. HYDROCARBON-MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Oct. 4, 1916, Serial No. 123,716. Divided and this application filed Jan. 16, 1919. Serial No. 271,361. 4 Claims. (Cl. 184—6.)



3. In a hydrocarbon motor, in combination, a casing adapted to receive lubricating oil, a rock shaft therein, said rock shaft being hollow and having an exposed upper opening, means in said casing for splashing the oil against the wall thereof and downwardly extending lug on the wall of said casing over said opening to guide certain of the splashed oil into said hollow rock shaft.

1,352,488. WEDGE-LOCK BUCKLE FOR LEAF-SPRINGS. NORMAN WATERHOUSE, Croydon, New South Wales, Australia. Filed Mar. 12, 1920. Serial No. 365,353. 2 Claims. (Cl. 267—53.)

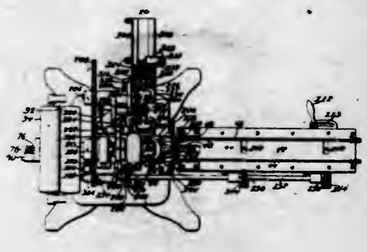


1. In a spring of the character described, in combination, a buckle provided with a curved recess upon one of its inner surfaces, a plurality of leaves having nestable and medial curved portions, a locking plate having a raised locking portion on the upper face for engagement with the undersurface of the curved portion of the adjacent leaf and also provided on its undersurface with oppositely inclined surfaces, and tapered wedges driven from opposite directions between the inclined surfaces of the locking plate and the surface of the buckle opposite to that having the recess for clamping the locking plate against the adjacent leaf, the leaves together and the curved portion of the outermost leaf in the recess in the buckle to prevent longitudinal displacement of the parts.

1,352,489. TRANSMISSION-LOCK. HUGH WHITT, Louisville, Ky. Filed Mar. 15, 1920. Serial No. 365,978. 1 Claim. (Cl. 70—126.)

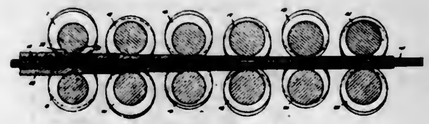
In combination with the transmission gear of an automobile, a pair of longitudinally movable gear shift rods having notches in their confronting faces, a partition between said rods having a slot therein intermediate its ends, a hand lever universally pivoted adjacent said partition and rods and having a portion movable through the slot to selectively engage one of the notches, a lock casing extending between said rods adjacent said partition and having oppositely disposed guide notches receiving said rods, said casing further having a perpendicular bore intersecting one of the guide notches, the rod passing through the intersected guide notch being provided with a notch adapted to register with the bore, a bolt fitting revolubly in the bore and being provided on one side with a notch adapted to register with the guide notch whereby to allow free movement of the rod, the side of the bolt opposite the notch therein being cylindrical to engage the notch in the rod, and a lock having operative connection with the bolt to rotate the same.

1,352,490. COMBINED SHIPPING-CASE AND DISPLAY-RACK. GEORGE H. WILKINS, Greenfield, Mass. Filed Dec. 29, 1919. Serial No. 348,154. 2 Claims. (Cl. 211—14.)



2. A combined shipping and display receptacle adapted to receive articles for shipping as mechanics' tools, and including a cover and base-piece, the cover having a plurality of openings in its upper portion to receive the tools, post-like members for supporting the cover in spaced relation above the base-piece when used as a display receptacle, said members comprising angular shaped pieces having offset tongue members at their ends and formed with shouldered portions to engage the upper and lower edges of the base-piece and cover respectively and portions oppositely located to the tongue members and of a length equal to said tongue engage the inner and outer surfaces of the base-piece and cover respectively and of a length equal to the height of the base-piece and cover.

1,352,491. LOCKING DEVICE FOR STEERING-WHEELS. WILLIAM W. WINCHESTER, Boston, Mass. Filed Feb. 8, 1919. Serial No. 275,858. 1 Claim. (Cl. 70—129.)

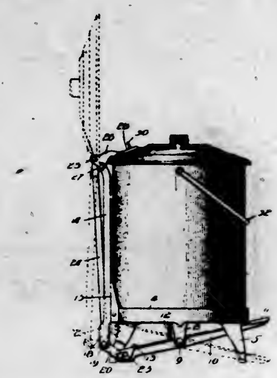


The combination with a steering post and wheel rotatably mounted thereon, of means carried by the wheel for releasably fixing it to the post, said means comprising a socketed bolt slidable to assume either a projected or a retracted position and provided with an extension outside the socket within which it is contained by which it may be manually controlled, a releasable socketed latch movable to assume either a projected or retracted position with relation to the bolt and when in projected position having interlocking engagement with the bolt for holding it in either its projected or retracted position, and a key-controlled lock arranged adjacent said latch, said lock having a turning plug movable by the key to the lock and provided with a member in operative engagement with said latch for moving the same into and out of interlocking engagement with said bolt as the plug is turned by the key of the lock, said lock being otherwise provided with means for holding the plug from turning when the member carried by it has moved the latch into locking engagement with said bolt, whereby the latch may be held by said member in such interlocking engagement and whereby, also, the key may be inserted into and withdrawn from the lock only when the latch is occupying its interlocking engagement with the bolt.

1,352,492. STOCK-CUTTING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 22, 1917. Serial No. 143,738. 41 Claims. (Cl. 164—48.)

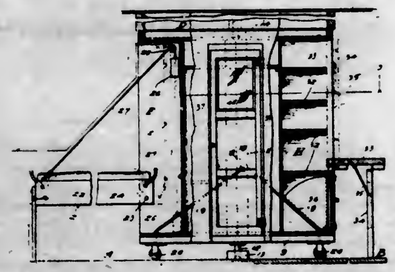
1. A machine having, in combination, means for delivering tapering articles successively in similar positions, and means for stacking the articles so delivered with their thicker and thinner extremities alternating and their analogous faces directed the same way.

1,352,493. ROLLING-MILL. LUDWIG WOLFFGRAM, Erie, Pa. Filed Jan. 23, 1919. Serial No. 272,642. 3 Claims. (Cl. 80—11.)



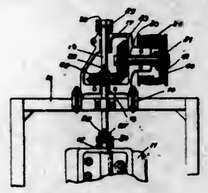
3. A rolling mill comprising a series of pairs of grooved rolls spaced apart and arranged in succession, the rolls of each pair being parallel and alternate pairs of rolls being disposed at acute angles to the intermediate pairs of rolls; the passes of the rolls of successive pairs being in arcs reduced in succession and having triangular extensions reduced in succession, a succeeding pair of rolls having its pass in arcs the same as the preceding set of rolls and with reduced triangular extensions, and a final pair of rolls having a circular pass of the same diameter as the pass of the preceding pair of rolls.

1,352,494. EXPANSION-SHIELD. LOTHAR R. ZIFFERER, Lancaster, Pa. Filed Apr. 2, 1919. Serial No. 286,848. 2 Claims. (Cl. 85—2.4.)



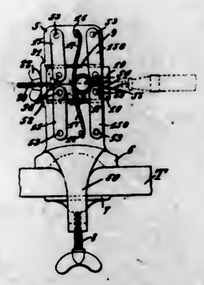
2. An expansion shield of the indirect type having an annular rib adjacent its inner end, a cap fitted over the rib and crimped thereupon, the cap being frangible in nature to afford a temporary abutment for the bolt, substantially as described.

1,352,495. RECEPTACLE. LOTHAR R. ZIFFERER, Lancaster, Pa. Filed Apr. 16, 1918, Serial No. 228,823. Renewed Jan. 26, 1920. Serial No. 354,250. 5 Claims. (Cl. 248—11.5.)



3. A frame providing a mounting for a receptacle and carrying means for raising the receptacle cover including a treadle, and interconnecting elements adapted for simultaneous operation when the treadle is actuated, one of said elements having connection with the receptacle cover and adapted to raise the same when the treadle is actuated, the several elements being normally in such relation as to prevent their transmitting motion except from the direction of the treadle, substantially as described.

1,352,496. REVOLVING HOUSEKEEPING-CABINET. JOEL F. BAYMILLER, Buhl, Idaho. Filed Apr. 19, 1920. Serial No. 375,089. 3 Claims. (Cl. 45—37.)



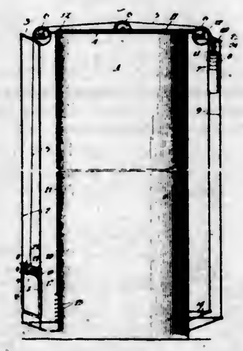
1. A rotatable cabinet comprising a base frame and an upper frame, a central post to which the base frame and upper frame are attached, said post being rotatably mounted, connecting members between the base frame and the upper frame, wheels supporting the outer corners of the frame, said frame being many-sided in cross section and divided by vertical partitions to form a plurality of compartments and opening upon different portions of the cabinet, the central portion of the cabinet defined by the partitions of all but one of the frame constituting a central compartment, this central compartment opening upon one face of the cabinet, a door closing the opening to the central compartment, and members hingedly mounted upon the walls of the other compartments and closing the same and constituting, when closed, the exterior wall of the cabinet.

1,352,497. POWER ATTACHMENT FOR AUTOMOBILES. ALBERT C. BEANBLOSSOM, Des Moines, Iowa. Filed Jan. 21, 1919. Serial No. 272,261. 4 Claims. (Cl. 180—53.)

1. A power attachment for automobiles comprising a gear casing, brackets thereon adapted to fit the frame of an automobile, means for locking said brackets to an automobile frame, a gear casing cover member, bearings formed in said gear casing cover member, a shaft supported in said bearings and designed to be in alinement with the engine shaft, additional bearings in said gear casing cover member, a second shaft mounted in said additional bearings and arranged at right-angles to said first shaft, said first shaft being mounted for sliding movement, a gear non-rotatably mounted on said first shaft and adapted to permit the sliding movement of the first shaft, a gear on the second shaft, means for connecting said first shaft with an engine, said means including a member designed to be mounted on the engine shaft and having an angular hole, said first shaft having an angular end adapted to enter said hole, and a locking device for holding the first shaft against forward movement when it is operatively connected with the engine shaft.

1,352,498. PEN AND FEED PUSHER. BRUCE B. BRADFORD, Hot Springs, Mont. Filed Sept. 3, 1919. Serial No. 321,367. 5 Claims. (Cl. 29—84.)

1. In a device of the class described, a support; a pair of coöperating jaws; and links connecting the jaws with the support for longitudinal and transverse movement.



1,352,499. ELECTRICAL CONNECTOR. VICTOR HENRI BROC, Neuilly-sur-Seine, France. Filed July 7, 1919. Serial No. 309,135. 1 Claim. (Cl. 173—328.)

A metallic body or housing constituting a plug bored

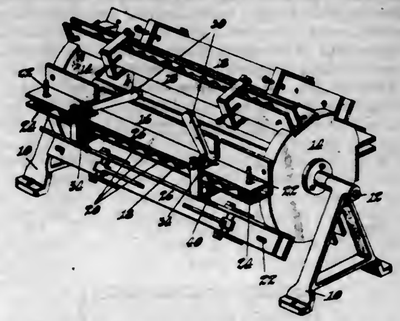
with a side opening for the reception of a spherical head, said body having a hole bored through it, the axis of said hole being at right angles to the axis of said opening and a roughened rod passing through the hole and resiliently locked in said hole, substantially as described and for the purpose specified.

1,352,500. ELEVATOR FOR SILOS. STEPHEN O. BUMGARNER, Given, Ohio. Filed Aug. 26, 1918. Serial No. 251,566. 1 Claim. (Cl. 187—6.)

In a device of the class described, the combination with a silo including a cylindrical body, of an elevator attachment therefor including a beam extending diametrically across and supported by the body adjacent the upper end thereof and having its terminals extended beyond the outer surface of the body, sheaves carried by the projecting terminals of the beam, depending guide rods carried by the projecting terminals of the beam and arranged on opposite sides of the sheaves, a carriage slidably mounted on the guide rods carried by one terminal of the beam, a counter-weight mounted on the guide rods carried by the opposite terminal of the beam, and a suspending cable passing over said sheaves and secured to the counterweight and carriage, as and for the purpose specified.

1,352,501. HEEL-PRESS. CHARLES H. CAREY, Salem, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 2, 1917. Serial No. 140,106. 7 Claims. (Cl. 144—289.)

1. In a heel press, the combination of a rotary carrier, a plurality of heel supporting shelves upon the carrier, a loosely mounted press plate coöperating with each shelf to form a press couple, and means loosely engaging the



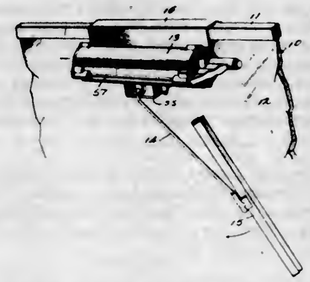


plate for forcing it into intimate engagement with the heels upon the shelf.

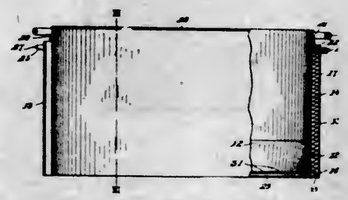
1,352,502. METHOD OF MAKING LUBRICATING-OILS. LEWIS S. EASTLAKE, Chicago, Ill. Filed Dec. 7, 1917. Serial No. 205,948. 8 Claims. (Cl. 87—9.)

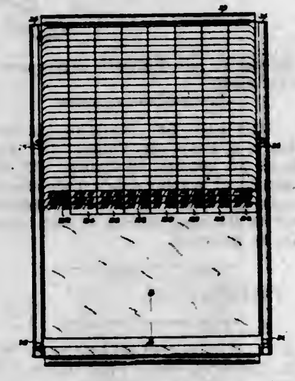
1. The method of making lubricating oils which consists in mixing a lubricating element substantially free of solvents with the spent residue of used lubricating oil, substantially as described.



1,352,503. [WITHDRAWN.]

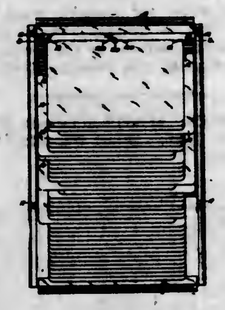
1,352,504. WINDSHIELD-CLEANER. WILLIAM M. FOLBERTH, Cleveland, Ohio. Filed Oct. 4, 1919. Serial No. 328,560. 10 Claims. (Cl. 15—59.)

1. In an apparatus for cleaning wind shields, a reciprocatory cylinder, a cleaning element carried by said cylinder, and means operated by the reciprocation of said cylinder for oscillating said cleaning element.



1,352,505. BOILER. MARTIN FOLKUSH, Milwaukee, Wis. Filed Apr. 10, 1920. Serial No. 372,820. 4 Claims. (Cl. 68—30.)

1. A device of the class described comprising a boiler, an upright casing formed at each end thereof, a pan

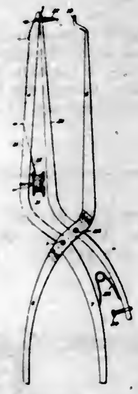


freely positioned within the boiler, a compression spring within each casing having one end thereof secured to the bottom of the casing, a roller bearing journaled adjacent the upper end of the casing and connecting cords between the other ends of the springs and the opposite ends of the pan and passing over said bearings whereby said springs are adapted for, aptomatically elevating the pan to a point adjacent the top of the boiler.

1,352,506. FILING AND INDEXING EQUIPMENT. EDWARD E. FOWLER, Winthrop, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1918. Serial No. 262,761. 13 Claims. (Cl. 129—16.)

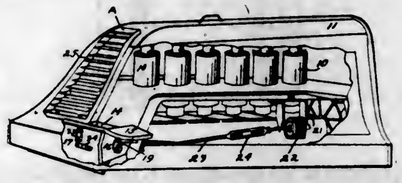
1. In a device of the class described, the combination of a plurality of sheets arranged in overlapping groups, the sheets of each group being each provided with an identification-receiving portion, and all of the identification-receiving portions of the sheets being presented to view at one time, a plurality of sheet-holders, one for each group of sheets, and a mounting for said sheet-holders.

1,352,507. FILING AND INDEXING EQUIPMENT. EDWARD E. FOWLER, Winthrop, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1918. Serial No. 262,762. 17 Claims. (Cl. 129—16.)



1. In a device of the class described, the combination of a sheet, and a sheet-holder comprising a length of wire provided with helically-coiled terminal portions between which said sheet is received.

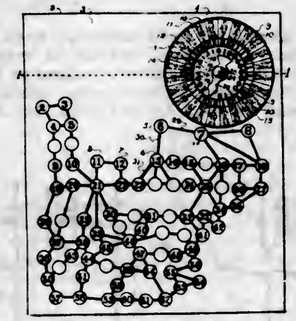
10. In a device of the class described, the combination of a sheet-holder comprising a length of wire provided with a helically-coiled portion, and a sheet supported thereby and provided with a perforation in which said helically-coiled portion is received.



1,352,508. SEWING-PLIERS. JOSEPH FTACEK and STEVE FTACEK, Streator, Ill. Filed May 12, 1919. Serial No. 296,447. 8 Claims. (Cl. 112—169.)

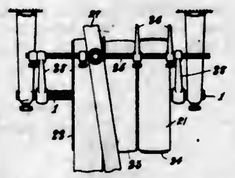
1. Sewing pliers comprising outer needle carrying and work supporting jaws and an intermediate presser foot jaw, yieldable means to normally move the needle carrying and presser foot jaws toward each other, manually operable means to separate the needle carrying and presser foot jaws, and manually operable means to move the

needle carrying and work supporting jaws toward and away from each other.



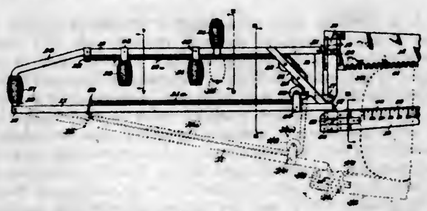
1,352,509. AIR-CONTROL DEVICE FOR ENGINES. LESLIE W. GRISWOLD, Des Moines, Iowa. Filed Jan. 24, 1920. Serial No. 353,845. 6 Claims. (Cl. 123—171.)

6. In a device of the class described, the combination of a hood, having an engine mounted for tilting movement, said hood having in its forward end upper and lower openings, a frame fitted into said upper opening, shutter members mounted in said frame, a shutter device mounted in the lower opening, a common controlling bar for controlling all of the shutter members on the upper opening, adjustable means for connecting the shutter devices in the upper and lower openings, a bracket stand along the interior of said hood on one side thereof supported on said hood, a thermostat supported on said bracket near the rear end of said hood, means for operatively connecting said thermostat with the shutter device in the lower opening, said shutter device and thermostat and bracket being wholly mounted on said hood and movable therewith.



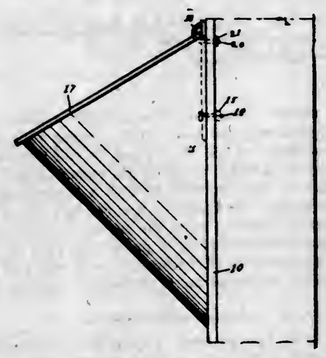
1,352,510. GAME-BOARD. EDWARD TINKHAM GIBSON, Brooklyn, N. Y. Filed Feb. 26, 1920. Serial No. 361,517. 2 Claims. (Cl. 46—63.)

2. A game-board comprising a base having a station-bearing section and a dial-bearing section, a dial-face printed on the upper surface of the last mentioned section, a pivot member projecting upwardly from the center of said dial-face, and a pointer member loosely mounted on said pivot member and adapted to be manually set whirling on a plane parallel with that of the upper surface of said dial-face; the said station bearing section having on its upper surface a plurality of printed station-denoting markings having a distinctive station-number in connection with each, and a plurality of printed lines constituting a system of travel-lines connecting the said sta-



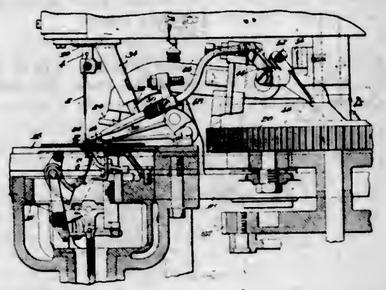
tion-denoting markings one to another, the said dial-face having a concentric ring section subdivided by printed lines into a plurality of segmental sections each of the latter having on it printed numbers corresponding with at least two of the station-numbers on the said station-bearing section of the base of the game-board, and said dial-face also having a concentric ring section subdivided by printed lines into a plurality of segmental sections each of the latter having on it a printed numeral.

1,352,511. BELT-DRIVING. KARL ERIK ALBERT GRANSTEDT, Stockholm, Sweden, assignor to Galco Maskinfabriks Aktiebolag, Stockholm, Sweden, a Corporation. Filed Mar. 1, 1920. Serial No. 362,638. 1 Claim. (Cl. 64—4.)



The combination of a fixed shaft, a single pulley loose on said shaft, a double pulley also loose in said shaft and arranged next the single pulley, a belt shiftable to enter the single pulley on the adjacent part of the double pulley, radial arms secured to said shaft, a slidable rod mounted in said arms and having projections to engage opposite sides of said shiftable belt, and a lever to move said rod and thereby shift said belt.

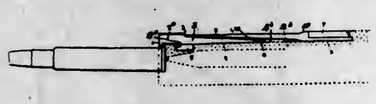
1,352,512. SAW. ROBERT W. GRAVES, Elizabeth, N. J., and SAMUEL MIDDLETON HOLT, Washington, D. C.; said Holt assignor to said Graves. Filed Apr. 25, 1919. Serial No. 292,649. 12 Claims. (Cl. 145—31.)



1. A saw comprising a handle frame of substantially rectangular form comprising two handle bars, pivotal connections between said handle bars at one end of the frame, an arm and a post in longitudinal alinement with each other carried by the separate handle bars at the opposite end of the frame, a presser-bar guide and a saw blade adjustably mounted upon said arm and post projecting in opposite directions from said handle bars, rollers carried by each bar, a coil spring having one end thereof secured to one of said handle bars with the other end of the spring adjustably secured to the other handle bar and passing over said rollers whereby the resilient connection between the portions of the handle is adapted for adjustment at will, and the hand grips carried by one of said handle portions.

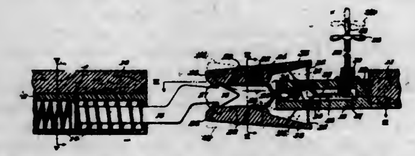
1,352,513. STOCK-FEEDING DEVICE. HERBERT E. HAMILTON and CLAYTON R. HAMILTON, Yale, Iowa. Filed Mar. 16, 1920. Serial No. 366,410. 1 Claim. (Cl. 119—32.)

A stock feeding device comprising a channel-shapped member having its bottom inclined from its lower rearward end upwardly and forwardly, and having its rear edge vertical, a cross member connecting the upper rear walls of said channel-shaped member, having its rear surface flush with the rear edges of said channel-shaped member, means for securing said channel-shaped member to a support, said cross member having a portion projecting upwardly above said channel shaped member, a cover for the upper forward portion of said channel-shaped member, and bolts extended through said cross member having hook portions formed on their forward ends extending through said cover, with their ends adjacent to the forward surface of said cross member.



1,352,514. SEWING-MACHINE. GEORGE S. HILL, Strafford, N. H., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 28, 1916. Serial No. 117,242. 10 Claims. (Cl. 112—252.)

1. A sewing machine having in combination stitch forming mechanism including a reciprocating needle, a support

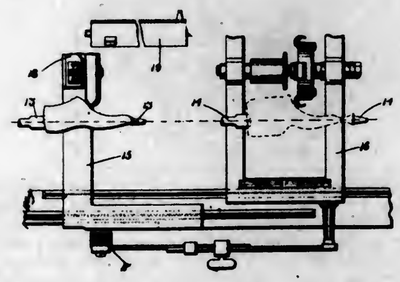


provided with a guideway, thread holding members movable in the guideway toward and away from the needle path, mechanism for simultaneously advancing the members to bring them close to the needle path, and for continuing the advance of one member independently of the other to bring them on opposite sides of the needle path, and for retracting the members to grip the thread and then carry it away from the needle path, and means for severing the thread while the holding members are close to the needle path and prior to their final retraction to holding position.

1,352,515. CARTRIDGE-EXTRACTOR FOR FIREARMS. FREDERICK WILLIAM HULSE, Northfield, near Birmingham, England, assignor of one-half to Armes Automatiques Lewis, Antwerp, Belgium. Filed Mar. 26, 1918. Serial No. 224,764. 2 Claims. (Cl. 42—25.)

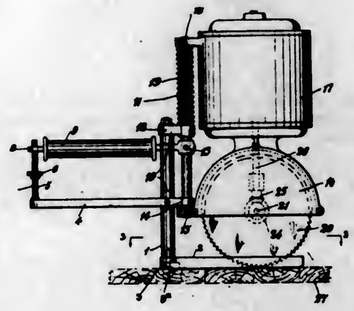
1. In a fire-arm, the combination with a breech block having a peripheral slot into which merges a recess and undercut portions which are formed in the breech block, of an extractor having a locating pin engaging said recess and provided at its forward end with a hook-shaped part adapted to engage the flange of a cartridge, the rear end of said extractor resting upon the bottom of said slot, and a leaf-spring member having a projecting part to engage the under cut portions of the breech block, one end of said spring member engaging an intermediate portion of said extractor.

1,352,516. CAR-COUPLING. FRANK KALATA, Springfield, Ill. Filed Jan. 30, 1919. Serial No. 273,971. 1 Claim. (Cl. 213—35.)



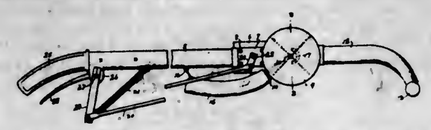
A coupler comprising a tongue, a head having a central bore and forwardly projecting side portions, hooked jaws pivoted to said side portions for engagement with said tongue, a positioning spring for said jaws carried by said head and projecting from the bore thereof, a vertical screw shaft threaded transversely of said head with the inner end extending into the bore, a swivel block at the inner end of the screw shaft, a plurality of roller bearings within the head, and a flexible connection within the bore of the head between the swivel block on the screw shaft and said hooked jaws and passing over said bearings whereby axial movement of said shaft in one direction will release the jaws from the tongue.

1,352,517. GAME APPARATUS. EDWARD M. KING, Elida, Ohio. Filed Feb. 4, 1920. Serial No. 356,155. 4 Claims. (Cl. 46—41.)



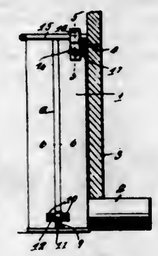
1. In a game apparatus, a game board comprising a circular piece having an outer field and provided with a central pen, and a plurality of radial U-shaped stalls rising upwardly from the piece in the space between the outer annular field and the centrally disposed pen, said space between the outer annular field and the pen being in communication with the field, the open ends of the U-shaped stalls being directly opposite the communications between the outer field and the space between said outer field and the pen.

1,352,518. LAST AND LAST-MAKING. PAUL F. W. C. KRIPPENDORF, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 14, 1916. Serial No. 109,315. 18 Claims. (Cl. 142—15.)



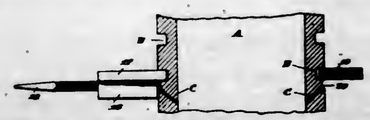
1. A last lathe having work and model rotating means, a rotating cutter and a model wheel, the diameter of said wheel being different from that of said cutter and the axes of rotation of the cutter and wheel being equidistant from those of the work and model, respectively, the machine being thus adapted to cut a last differing from the model by a layer of uniform thickness.

1,352,519. PORTABLE SAW. FREDERICK MAURICE LASERSON, New York, N. Y. Filed Dec. 30, 1918. Serial No. 268,790. 4 Claims. (Cl. 143—43.)



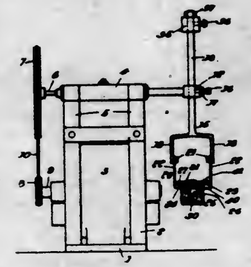
1. A portable saw comprising a standard, a pair of feet pivoted thereto at the base thereof, said feet being adjustable on said pivot in a plane perpendicular to the plane of the said standard, a horizontally disposed transverse bar secured to said standard, and forming a guide to the one side thereof, a second guide secured to the top of said standard, a motor supporting member adapted to move in said guides, a motor secured to said supporting member, a saw mounted in the latter, means for rotating said saw from the said motor, a spring, for maintaining said motor and saw in normally raised position with respect to the said standard and means for bringing the said saw into contact with the work.

1,352,520. VACUUM-CLEANER. FLOYD L. LELAND, Flint, Mich. Filed Sept. 21, 1918. Serial No. 255,129. 5 Claims. (Cl. 15—60.)



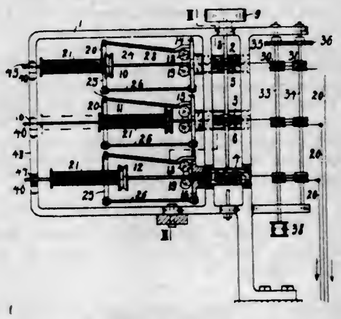
5. In a vacuum cleaner, a pole, a fan housing mounted on one end of the pole, a handle forward upon the opposite end of said pole, a fan rotatably mounted in said housing, a suction nozzle connected to the housing, a dust receiving receptacle, said housing having a discharge nipple opening into the receptacle, a casing mounted upon the pole, a gear train in said casing for rotating the fan, a lever pivotally mounted at one of its ends upon the pole, and extending adjacent said handle to be operated by the hand of the operator engaging said handle, an arm fixed to the lever pivot, means operatively connecting said arm to one element of the gear train, and a spring operative to return the lever to its normal position and impart continuous rotation in one direction to the gear element.

1,352,521. GARBAGE-CAN. ROSA B. LEWELLEN, Hylton, Tex. Filed Oct. 7, 1919. Serial No. 329,013. 2 Claims. (Cl. 220—36.)



1. A garbage can of the class described comprising a body, said body provided with a substantially dove-tailed channel formed in one side thereof, a door operating rod reciprocatably mounted within said channel and being substantially dove-tailed in cross sections, a lid carried by said body, the upper end of said lifting rod adapted to engage said lid for facilitating the raising of said lid to an open position, a treadle carried by said body projecting under said lifting rod for raising said lifting rod as the outer end of said treadle is depressed, and a buffer adapted to be engaged by said door.

1,352,522. GROOVE-CUTTING TOOL. JAMES ALFRED LEWIS, Hartford City, Ind. Filed July 18, 1919. Serial No. 311,776. 1 Claim. (Cl. 82—4.)

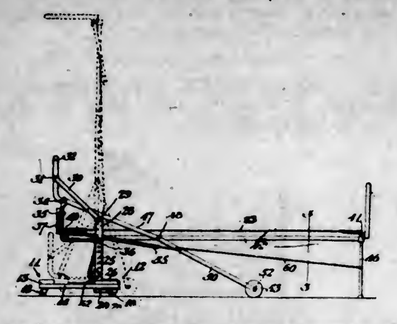


A tool of the character described comprising a body formed in spanner shape and having one end elongated to constitute a lever handle, said body being adapted for engagement within the piston ring receiving groove of a piston, an enlargement formed on one side of said body at its other end and terminating short of the inner wall of the spanner body whereby to be free from engagement with the periphery of a piston upon which the device is engaged, said enlargement being formed with an opening angular in cross section and further formed with a threaded bore leading into the opening, a blade slidable within the angular portion of said bore and adapted to be disposed in engagement with the periphery of a piston, and a screw threaded into the bore and engaging the blade for adjusting the position thereof.

1,352,523. CASTING DEVICE. JOHN F. MCMATH, Oakland, Calif. Filed Jan. 31, 1917. Serial No. 145,723. 7 Claims. (Cl. 22—65.)

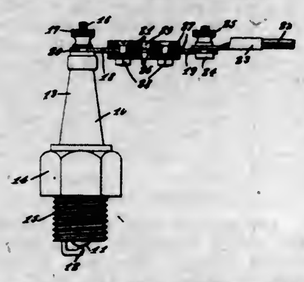
2. A casting device comprising a suitably journaled shaft, a carrying element comprising a rod extending diametrically through said shaft, a fork on one end of said rod comprising two arms, a carrier comprising a pair of members pivoted to said fork arms, a connecting member connecting said pivoted members for carrying a mold, said carrier being adapted to swing on its pivots so as to cause the bottom of the mold impression to extend outwardly radially as the shaft is rotated, and a counterweight on said rod for counterbalancing said carrier and the mold carried thereby.

1,352,524. APPARATUS FOR HARD TWISTING OF FINE AND THICK THREADS. HANS PEDERSEN MITTET, Aalesund, Norway. Filed Nov. 1, 1918. Serial No. 260,752. 9 Claims. (Cl. 118—35.)



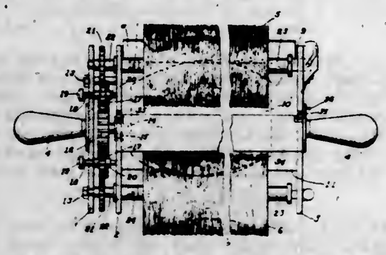
7. In a twisting apparatus, a revoluble twisting spindle, a frame carried by the spindle at one end thereof, guide pulleys carried by the frame adjacent the spindle, a reel spindle within the frame and in alinement with the twisting spindle, and a tubular guide for the thread, said guide being carried by the said frame and extending from the outer end thereof adjacent to the guide pulleys.

1,352,525. FOLDING BED. RESCUE B. PAGE, Los Angeles, Calif. Filed June 30, 1919. Serial No. 308,022. 7 Claims. (Cl. 5—37.)



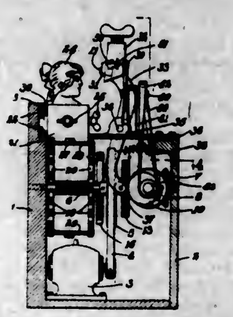
1. A folding bed comprising a primary support, a bed pivotally mounted on the primary support, a secondary supporting member pivotally mounted on the bed in such manner that the secondary supporting member is operated

by movement of the bed to roll on the floor, and elastic means connecting said bed and said secondary member



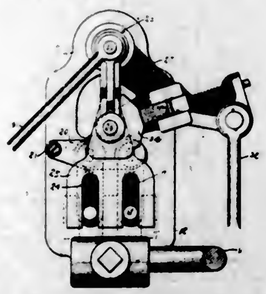
for placing a tension on the secondary member during raising and lowering of the bed to balance the weight of the bed.

1,352,526. SPARK-PLUG INTENSIFIER. RAYMOND S. PATCHEN, Marion, Ind. Filed Oct. 22, 1919. Serial No. 332,435. 2 Claims. (Cl. 175—183.)



1. A spark plug intensifier comprising flat plates of conducting material having spaced apertures therethrough, one of said plates being adapted for connection with a spark plug and the other of said plates being adapted for connection with a conductor leading to said plug, insulating blocks having alined apertures disposed to register with the inner apertures of the plates, connection extended through said apertures for holding said blocks in clamping relation to the plates and securing said plates in spaced relation at their inner ends, said inner ends being tapered, and the block having apertures therethrough at said tapered ends.

1,352,527. BRUSHING-MACHINE. STEVEN RADIMAK, Newark, N. J. Filed Nov. 13, 1919. Serial No. 337,810. 6 Claims. (Cl. 15—61.)

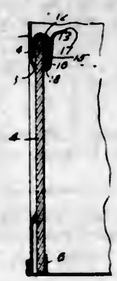


5. In a brushing machine, a series of revoluble brushes, shafts on which said brushes are mounted, means for revolving said brushes independently, means for detachably securing said brushes in said machine, and means for cleaning said brushes during the revolution thereof.

1,352,528. DOLL-EYE-PAINTING MACHINE. STEVEN RADIMAK, New York, N. Y. Filed Mar. 1, 1920. Serial No. 362,238. 3 Claims. (Cl. 101—35.)

1. In a doll painting machine, paint applying means, and means for advancing a doll to said paint applying means, comprising a table, a series of doll carriers resting freely on said table, a pair of endless chains, rods connecting said chains, and lugs on said rods engaging said doll carriers.

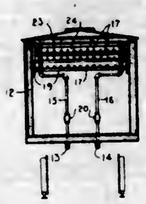
1,352,529. WARP STOP-MOTION. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1920. Serial No. 374,025. 1 Claim. (Cl. 139—54.)



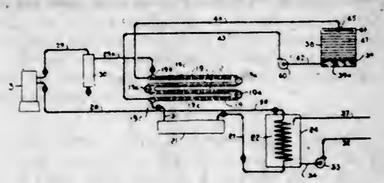
In a warp stop motion, a plurality of drop wires, each with an opening therein having a relatively wide lower portion, and a relatively narrow upper portion, a normally movable indicator bar extending through said openings and effective to engage both sides of said narrow portion of the opening in a fallen drop wire, yielding means to oscillate said indicator bar, and a stationary bar also extending through said opening below said indicator bar and having a width substantially corresponding to the width of the wide lower portion of the opening in said drop wire.

1,352,530. [WITHDRAWN.]

1,352,531. GLASS-RETAINING DEVICE FOR CONTAINERS. JAMES RIZZUTO, New Orleans, La., assignor of one-third to Consumers Biscuit Company, New Orleans, La., a Corporation of Louisiana. Filed May 29, 1920. Serial No. 385,313. 3 Claims. (Cl. 220—82.)



2. The combination with a container having an opening in one of its walls, a bar positioned transversely of the inner surface of the wall having the opening, a glass insert positioned between the bar and the wall having the opening, to cover the opening, an element pivoted on the bar and having a portion overlying one edge of the bar and one edge of the glass insert, a U-shaped clamp carried by the end of the element adapted to straddle the bar and the glass, one arm of the clamp being bent upon itself and the end of the bent portion terminating in a lug to be engaged by the finger for disengaging the clamp, the arm where it is bent having a laterial lug overlying the lower edge of the bar, thereby coöperating with the arch of the clamp to retain the glass insert in position in case the container is inverted.

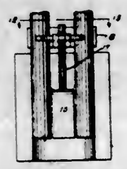


3. The combination with a container having an opening in one of its walls, a bar positioned transversely of the inner surface of the wall which has the opening, a glass insert positioned between the bar and the wall to cover said opening, a strip pivoted on the bar and having a portion overlying one edge of the bar and one edge of the glass insert, a clamp carried by the end of said strip, and being constructed from a single piece of sheet metal bent U form to straddle the bar and the glass, to clamp the glass securely to one face of the bar, one arm of the clamp being bent upon itself and returned upwardly and inwardly and terminating in a lug to be engaged by the finger for disengaging the clamp, the arm where it is bent being formed with a lateral lug overlying the lower edge of the bar, thereby coöperating with the arch of the clamp to return the glass insert in case the container is inverted.

1,352,532. REFRIGERATOR-CAR. HENRY RUSSELL Ross, St. John, New Brunswick, Canada. Filed Dec. 22, 1919. Serial No. 346,759. 3 Claims. (Cl. 62—101.)

1. A refrigerator car constituting a train unit and having two longitudinal mains adjacent to the floor, upright branch pipe lines extending vertically from said mains at one end of the car, one of said mains and its branch constituting a flow conduit, and the other main and its branch a return conduit, a plurality of substantially horizontal sinuous conduits each composed of return bends and connected at one end with one of said branch lines and at its opposite end with the other branch line, and means for supporting said sinuous conduits in different horizontal planes, and spaced from each other, so that a circulation of air is permitted between said conduits and between the members of each conduit, the said mains being provided with flexible coupling members adapted to be coupled to complemental coupling members on corresponding mains carried by other train units.

1,352,533. TRAVELING REFRIGERATING PLANT. HENRY RUSSELL ROSS, St. John, New Brunswick, Canada. Filed Dec. 22, 1919. Serial No. 346,760. 3 Claims. (Cl. 62—117.)

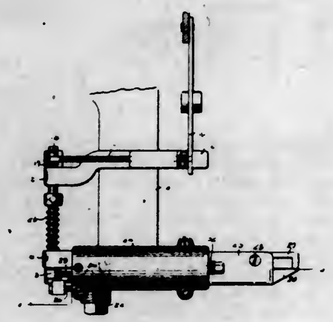


1. A traveling refrigerating plant comprising a housing car, a brine reservoir therein, a brine pump having its intake connected with said reservoir, a flow pipe line communicating with the outlet of the pump and extending therefrom through the rear end of the car, a return pipe line extending through the same end of the car to the reservoir, said flow and return pipe lines being provided with means outside the car for connection with flow and return pipe lines on a refrigerator car, a complete refrigerant-circulating system carried by the housing car and including an evaporating conduit within the brine tank, a compressor, a conduit constituting a condenser element and a receiver, said compressor, condenser element, and receiver being connected in series with the evaporating conduit, whereby a volatile refrigerant may be supplied in liquid form to the evaporating conduit, and conducted in gaseous form therefrom, the said condenser element being provided with a cooling conduit for cooling the refrigerant in its passage from the compressor to the receiver, means for circulating a cooling liquid through said cooling conduit, and means for cooling said liquid while it is circulating.

1,352,534. WELDING-ROD. RICHARD F. RUSSELL, Jersey City, N. J., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed June 24, 1919. Serial No. 306,452. 6 Claims. (Cl. 75—1.)

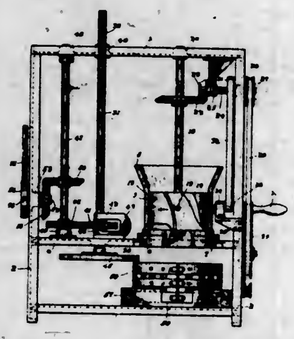
1. A welding rod having iron as its principal component and containing a rare earth metal as a scavenging agent to prevent formation of deleterious oxids and nitrids when the rod is melted to form a weld.

1,352,535. PROCESS FOR MAKING RETURN-BENDS AND RELATED STRUCTURES. GILBERT E. RYDER, Leonia, N. J. Filed May 1, 1919. Serial No. 294,100. 7 Claims. (Cl. 29—157.)



1. The process of making return bends and related structures which comprises slitting the wall of each of two pipes longitudinally from the end for a suitable distance, pressing the portions of the walls adjacent to the side and bottom of each slit out, shaping a connecting piece so its edges correspond in shape to the edges of the bent-out portions, and welding the edges of the bent-out portions of the pipes to those of the connecting piece.

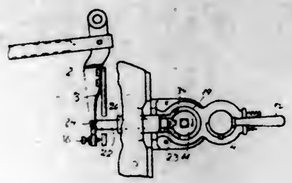
1,352,536. WEFT-DETECTING MECHANISM. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 1, 1919. Serial No. 293,986. 3 Claims. (Cl. 139—85.)



1. In a loom, weft detecting mechanism comprising a stand, a box-like casing slidable on said stand, fixed and movable detectors mounted in the rear end of said casing

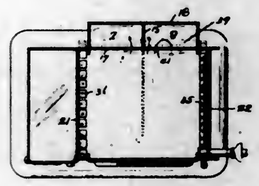
and projecting therefrom, and adjustable stop rod slidable in said casing and engaging the rear side of a lateral projection on said movable detector and the front end of said stand, a yieldingly mounted member connected to indicate weft carrier exhaustion, and a second rod also

slidable in said casing and having its opposite ends abutting said member and said movable detector respectively, said two rods engaging said movable detector at substantially equal distances from the pivot thereof whereby said second rod is normally positioned by said stop rod at its rearward limit of movement.



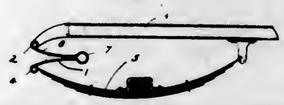
1,352,537. FRUIT-CRUSHER. STEFANO SANTILLI, Canton, Ohio. Filed June 7, 1920. Serial No. 386,955. 5 Claims. (Cl. 146—9.)

1. A device of the character described comprising a cylindrical hopper, a rotatable cylindrical crushing head located in the hopper and provided in its periphery with downwardly and rearwardly disposed grooves, and a crushing plate connected to the lower end of said hopper and engaging the lower end of the crushing head and provided with grooves oppositely disposed to the grooves in the crushing head.



1,352,538. THERMOSTATIC CUT-OFF. AXEL UNO SÄRNMARK, Gottenborg, Sweden. Filed Apr. 3, 1919. Serial No. 287,381. 3 Claims. (Cl. 67—117.)

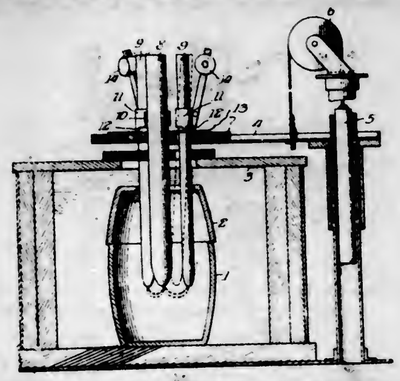
1. In a thermostatic cut off for gas burners, the combination of a main burner, a thermostat, an economizer arranged for giving the thermostat sufficient heat when the main burner is not in use, a pet cock having passages for supplying gas respectively to said main burner and said economizer and adapted to be set to supply gas to one or both of said burners, a second pet cock also having passages for supplying gas respectively to said main



burner and said economizer, and means including said thermostat automatically to effect the closing of said passages.

1,352,539. COMBINED COAL AND GAS STOVE. JOHN H. SATTLER, San Francisco, Calif. Filed Aug. 7, 1919. Serial No. 315,847. 10 Claims. (Cl. 126—36.)

1. In a combined coal and gas stove, a front oven plate, a back oven plate and a bottom oven plate inclosing an oven, a flue for the gases of combustion of the coal fire arranged below the bottom oven plate, said flue and said bottom oven plate being of less width than the oven, whereby passages are formed between the flue and the front and back oven plates, apertured plates in said oven spaced from the front and back oven plates and forming with said plates, continuations of said passages, gas burners in said passages, and means for controlling the flow of air into said passages.



1,352,540. SHOCK-ABSORBER SPRING AND BLANK THEREFOR. NATHAN SCHACHTER, Chicago, Ill. Original application filed Feb. 11, 1918, Serial No. 216,526. Patent No. 1,331,677, dated Feb. 24, 1920. Divided and this application filed Sept. 8, 1919. Serial No. 322,360. 2 Claims. (Cl. 267—46.)

1. A shock absorber spring consisting of an elongated diamond shaped blank folded transversely so as to have an open circular bight portion, and similar, divergently curved tapered arms, and attaching means at the outer end of each arm.

1,352,541. ELECTRIC-ARC FURNACE. FREDERICK VON SCHLEGELL, Evanston, Ill. Filed Jan. 28, 1920. Serial No. 354,700. 10 Claims. (Cl. 204—64.)

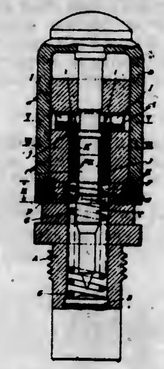
1. In an electric arc heater, a pair of electrodes, and means supporting one of said electrodes in contact with the other and permitting relative movement of said electrodes under the influence of the magnetic field set up by the current flowing through said electrodes whereby the

electrodes are in contact when no current is flowing and whereby an arc is automatically established when current is supplied thereto.

1,352,542. FUSE FOR AVIATION-BOMBS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed June 16, 1919. Serial No. 304,658. 2 Claims. (Cl. 102—2.)

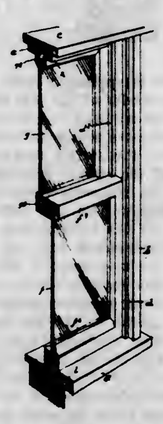
1. A fuse for aviation bombs comprising a tubular body, a detonator secured to the lower part of the tubular body, a retarder in the detonator projecting into the lower end of the tubular body, said retarder having an axial bore and an eccentric recess to contain a retarding firing composition, a cap-carrier mounted in the tubular body above the retarder in spaced relation thereto, said cap-carrier having an axial bore alined with the axial bore of the retarder to form a direct conduit from the cap to the detonator, said cap-carrier also having a branch bore leading from the cap to the space between the cap-carrier and the detonator to form a passage from the cap to the eccentric recess in the retarder containing the retarding firing composition, a ball normally interposed between the alined bores of the retarder and cap-carrier to close the direct conduit therethrough, said ball being displaceable to open said conduit, a striker pellet slidable in the tubular body to impinge on the cap carried by the cap-carrier, a spring normally pressing the striker pellet away from the cap-carrier, a bolt movable in the striker pellet to engage the tubular body to hold the pellet against movement in said body, a spring normally pressing the bolt into position of disengagement with the tubular body, and a screw-propeller having a hub screw-threaded into the upper end of the tubular body and provided with a tail normally engaging the bolt to hold the latter in engagement with the tubular body, said propeller rotating through the falling of the bomb to unscrew its hub and to withdraw the tail from the bolt, the freed bolt responding to the action of its spring to release the striker pellet so that the latter can impinge on the cap when the bomb strikes an obstacle.

1,352,543. PERCUSSION-FUSE FOR PROJECTILES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Original application filed Mar. 31, 1919, Serial No. 286,489. Renewed July 21, 1920, Serial No. 398,031. Divided and this application filed July 21, 1920. Serial No. 397,945. 6 Claims. (Cl. 102—39.)



3. A percussion-fuse comprising a body-part having an axial bore with a cap-carrier at the rear end of said bore, a striker having an impact head and a shank movable in said axial bore, displaceable segments interposed between the fuse body-part and the striker to prevent premature rearward movement of the striker onto the cap-carrier, a counter-ring slidable on the striker-shank and having a limited forward movement in the axial bore, spring-pressed bolts carried by the counter-ring to engage a reduced part of the striker-shank with the counter-ring at the forward limit of its movement in the axial bore and the striker-shank at the rearward limit of its movement as determined by the interposed segments to prevent premature forward movement of the striker, said counter-ring by its inertia during the flight of the discharged projectile moving rearward in the axial bore to release the bolts from the striker-shank, and means operating during the flight of the projectile for moving the striker forward to release the segments to be detached by the centrifugal action imparted by the rotation of the projectile to permit subsequent rearward movement of the striker onto the cap-carrier resulting from impact of the head on the target.

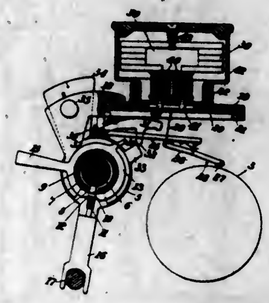
1,352,544. PERCUSSION-FUSE FOR PROJECTILES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919, Serial No. 286,489. Renewed July 21, 1920. Serial No. 398,031. 6 Claims. (Cl. 102—39.)



1. A percussion fuse comprising a body-part having an axial bore with a cap-carrier at the inner end of said bore, a striker movable in the axial bore having a head projecting beyond the body-part operating on impact to drive the striker inward onto the cap-carrier, a spring normally pressing the striker outward, centrifugally actuated bolts slidable in the body-part to engage the striker to hold the latter inward against the outward thrust of the spring, said bolts moving outwardly to release the striker in response to the centrifugal force imparted by the rotation of the discharged projectile, and displaceable segments

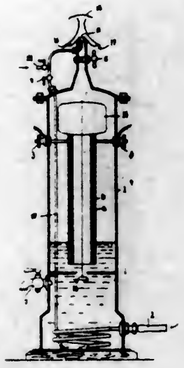
interposed between the body-part and an element of the striker to limit the inward movement of the striker toward the cap-carrier, said segments being freed by the forward movement of the released striker imparted by the spring,

the freed segments responding to the centrifugal force imparted by the rotation of the discharged projectile to move clear of the striker to permit subsequent inward movement of the latter onto the cap-carrier.



1,352,545. WEATHER-STRIP. WILLIAM SCHNEKENBURGER, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 357,075. 2 Claims. (Cl. 20—69.)

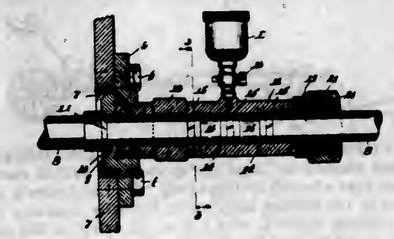
1. In a window, the combination of a window sash provided with a groove, a weather strip adapted to be attached to the window frame, said strip provided with a tongue adapted to be received in the groove in the window sash, said strip bent upwardly to form a yielding flange adapted to abut the side of said sash so as to yield resistingly outwardly therefrom as the sash is seated thereagainst, said flange turned outwardly at its upper extremity to form an outwardly projecting tongue adapted to be received within a groove in a window stop, said stop provided with such groove.



1,352,546. ARRANGEMENT FOR PHONOGRAPHICALLY RECORDING AND REPRODUCING TELEPHONIC MESSAGES. FRANZ SHELAU, Berlin-Wilmersdorf, Germany, assignor of one-half to Alexander M. Newman, Berlin-Wannsee, Germany. Filed Nov. 30, 1915. Serial No. 64,210. 7 Claims. (Cl. 179—6.)

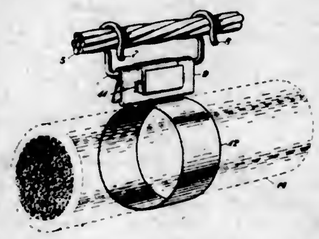
6. In an arrangement for phonographically recording and reproducing telephone messages, a sound box movable into a recording position and into a reproducing position and provided with a diaphragm, recording and reproducing means connected with said diaphragm, electrical diaphragm actuating means adapted to be removably fitted

to said sound box in operative relation to said diaphragm, and means likewise adapted to be fitted to said sound box removably, for receiving the sound waves produced by the diaphragm when reproducing.



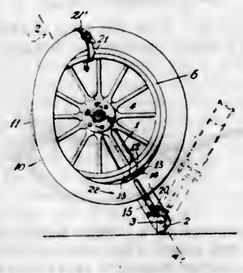
1,352,547. ELECTRICAL HEATING APPARATUS. LOUIS ELIE SEIMBILLE, Paris, France, assignor to Les Successeurs d'Albert Godde, Bedin & Cie., Paris, France. Filed May 23, 1919. Serial No. 299,188. 2 Claims. (Cl. 219—40.)

1. In apparatus of the class described, a boiler, a pair of tubular electrodes in the boiler and spaced from the top and bottom thereof, one of said electrodes being within and spaced from the other, a horizontal partition in the boiler, below the electrodes, and having an opening, means to supply water to the boiler, a valved steam escape for the boiler, a valve to close the opening in the partition, and a float to operate said valve.



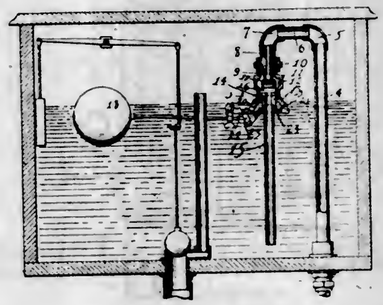
1,352,548. VALVE-STEM STUFFING-BOX. JAMES SHELTON, Knoxville, Tenn. Filed Oct. 16, 1917. Serial No. 196,880. 2 Claims. (Cl. 286—36.)

2. The combination of a collar having an opening therethrough, said collar having a valve seat at one side and a threaded recess at its other side surrounding said opening; a throttle stem and a valve carried thereon, said stem passing through said opening and said valve being adapted to seat on said valve seat; a tubular stuffing box detachably threaded into said recess and projecting outwardly from said collar and through which said stem slidably passes; packing elements disposed on said stem intermediate the ends of said stuffing box; and a packing ele-



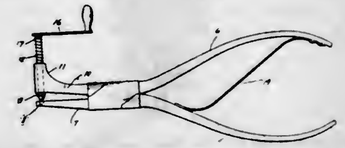
ment surrounding said stem and carried at the outer end of said stuffing box, substantially as described.

1,352,549. CABLE-HANGER. CHARLES G. SINCLAIR, Jr., Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,694. 4 Claims. (Cl. 248—33.)



1. In a cable supporting device adapted to be secured to a messenger or supporting wire, a yoke provided with hooked members for gripping said wire, a saddle member rotatably mounted on said yoke and provided with a slotted portion and an embossed member, and a band fixed at its respective ends to said slotted portion and embossed member.

1,352,550. TIRE-TOOL. CLIFTON E. SINGLETON, Brooklyn, N. Y. Filed Jan. 30, 1919. Serial No. 273,962. 5 Claims. (Cl. 157—6.)

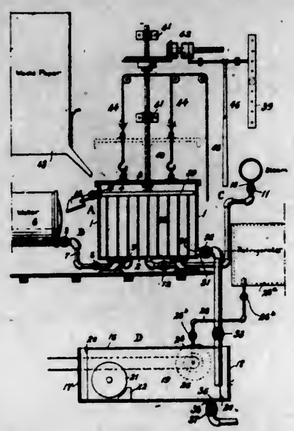


1. A tire tool comprising: an arm adapted to be rotatably supported by the hub of a wheel, a tire stretching member supported on said arm for entry between the tire and rim of the wheel, anti-friction members one for peripheral engagement with the rim, one for engagement with the inside of the tire and one for engagement with the side of the rim all carried by said tire stretching member and a tire guiding member engaging with the side of the tire to move the latter into the plane of the rim.

1,352,551. FLUSH-VALVE FOR WATER-CLOSETS. GEORGE F. SMITH, Buffalo, N. Y. Filed Apr. 20, 1916. Serial No. 92,520. 1 Claim. (Cl. 137—104.)

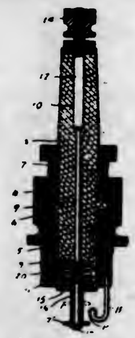
In a tank valve, a valve seat element, a discharge pipe carrying at its upper end a tubular valve member having one end closed and provided with a valve element coöperating with said valve seat element, a flow chamber supported from said valve seat element, the remaining end of said pipe adapted to project below the minimum low fluid level in a tank whereby said pipe is always fluid sealed, and a laterally extending passage at the top of said valve member and of greater length than the diameter of the bore of said valve member and establishing communication between said pipe and said chamber whereby water issuing from said chamber must pass through said passage prior to discharge thereby eliminating all hissing noise of the fluid during operation of the valve.

1,352,552. FINISHING AND BURNISHING PLIERS. LOUIS R. SMITH, Lomita, Calif. Filed Oct. 7, 1919. Serial No. 328,958. 5 Claims. (Cl. 29—90.)



1. A finishing and burnishing pliers comprising a pair of jaws, and a finishing and burnishing element mounted on one of said jaws in the opening therebetween.

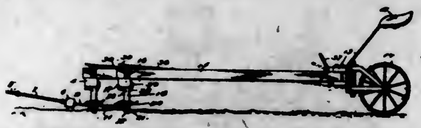
1,352,553. SEPARATING WAXLIKE MATERIAL FROM PAPER-STOCK. WILLIAM HAROLD SMITH, Washington, D. C. Filed Nov. 21, 1916, Serial No. 132,711. Renewed Jan. 23, 1920. Serial No. 353,591. 6 Claims. (Cl. 252.)



1. The herein-described method of treating paper stock coated or charged with a foreign material of the wax and paraffin class, it consisting in subjecting a mass of such paper to the action of water and heat, causing the softening of the paper and the softening or melting of the foreign material, causing the major part of the foreign material to separate from the paper through its difference in specific gravity after it has been softened or melted and separating it from the fluid at the surface thereof, then

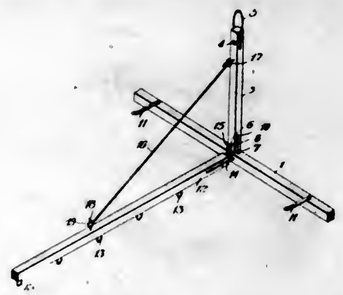
causing the residue of the foreign material to separate from the paper and fluid and form relatively hardened

accumulations, and removing said accumulations bodily from the fluid, substantially as described.



1,352,554. SPARK-PLUG. WARD H. SNYDER, Congress Park, Ill. Filed Nov. 29, 1918. Serial No. 264,597. 6 Claims. (Cl. 123—169.)

1. A spark plug for internal combustion engines comprising a metallic exteriorly threaded plug, a sparking terminal extending therefrom, an insulating core therefor having a cylindrical recess in its lower end, a central current conducting rod mounted within said core and extending below the same, a piston head movably mounted upon said current conducting rod and adapted to coöperate with the walls of said cylindrical recess, a sparking point extended from said movably mounted piston head, and means for returning said movably mounted piston head to the outer portion of said cylindrical recess after the same has been forced therein by the compression developed in the cylinder of the engine.

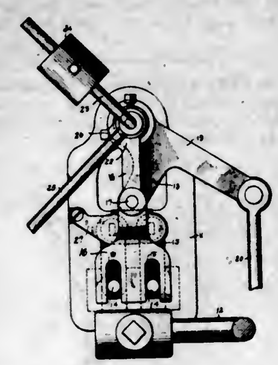


1,352,555. FARM IMPLEMENT. DELL DELBERT SOMMERS, Champion, Alberta, Canada. Filed May 26, 1919. Serial No. 299,910. 11 Claims. (Cl. 97—25.)

1. A farm implement including a plurality of sections arranged in staggered relation and flexibly connected to each other, a draw bar flexibly connected to each of the sections, a bar having a driver's seat mounted thereon, wheels supporting the bar, tongues flexibly connected to the bar and each connected to one of the sections, tillers carried by the sections, and means for operating the tiller, substantially as described.

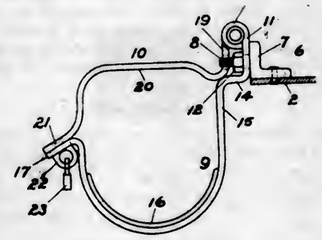
3. A farm implement including a beam, a tiller rotatably mounted beneath the beam and including a pair of spaced parallel bars adapted to alternately travel underneath the surface of the ground, stop means normally retaining the tiller against rotation, and means for tripping the stop means to allow rotation of the tiller for reversing the position of the bars.

1,352,556. GARMENT-HANGER. CLARENCE A. SOULE, Canandaigua, N. Y. Filed July 5, 1919. Serial No. 308,794. 3 Claims. (Cl. 45—37.)



1. In a garment hanger, the combination with a base adapted to rest against a wall, of a rigid upright secured thereto substantially perpendicular to the base and provided with means by which the base and upright may be suspended, a detachable garment supporting arm extending outwardly from the base at substantially right angles to the base and upright and means for bracing said garment supporting arm, said base, upright and garment arm being readily folded into a compact bundle no longer than the longest member, and containing those members arranged in parallelism.

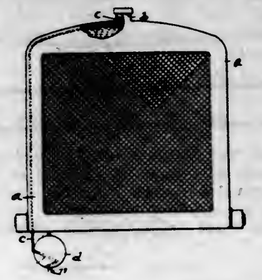
1,352,557. HALTER. JESS STANSBIE, Cambridge, Nebr. Filed Mar. 27, 1920. Serial No. 369,266. 2 Claims. (Cl. 54—24.)



1. A halter comprising a single length of rope, one end portion of said length being extended back upon the length, said end portion forming a chin piece, the adjacent portion of the length forming a nose piece, loops formed in the chin and nose pieces adjacent their junction with each other for connecting said chin and nose pieces to provide a loop and prevent longitudinal movement of said chin and nose pieces with respect to each other, loops formed in the other end portions of the chin and nose pieces to connect the same and prevent longitudinal movement of said chin and nose pieces with respect to each other, when the halter has been adjusted, the other end portion of said length being passed through the loop.

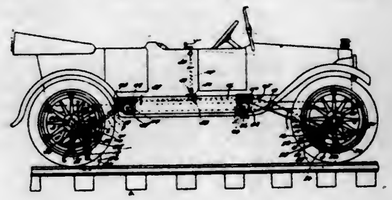
1,352,558. WARP STOP-MOTION. CHARLES M. STONE, Lewiston, Me., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Feb. 19, 1920. Serial No. 359,857. 3 Claims. (Cl. 139—92.)

1. A warp stop motion comprising a frame, a plurality of drop wires, angularly movable indicating bars associated therewith and supported in said frame, an actuator for said bars, a member on which said actuator is pivoted, means to oscillate said member regularly, a stop for said actuator, a weight normally holding said actuator against said stop, and a connection from said actuator through which the loom will be stopped on free movement of said actuator.



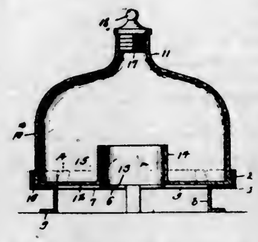
1,352,559. TIRE-HOLDER FOR AUTOMOBILES. LAWRENCE H. TEEL, Salem, Mass. Filed Oct. 13, 1919. Serial No. 330,397. 5 Claims. (Cl. 224—29.)

1. The combination with a tire-supporting rack and fixture secured to said rack having a threaded shank projecting therefrom, of a tire-retaining member arranged upon said shank and extending by the face of a tire mounted upon the rack, a nut on said shank fixing said member, a member hinged to said first-named member and movable to occupy either an operative position or an out-of-the-way turned position and when occupying its operative position coöperating with said first-named member to form a housing enveloping said nut, said members being provided with ends adjacent one another and lockable together when said hinged member is occupying its operative position.



1,352,560. COOLING SYSTEM FOR AUTOMOBILE-ENGINES. HORACE T. THOMAS, Lansing, Mich. Filed July 22, 1918. Serial No. 246,008. 3 Claims. (Cl. 123—174.)

1. The combination with a cooling system having a radiator, of a tank located below said radiator, a condenser within said tank opening to the interior of the same and a delivery pipe leading from the radiator above the normal level of liquid therein and communicating with said condenser, said tank being adapted to contain liquid

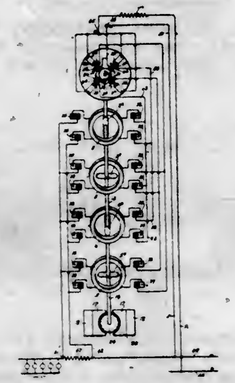


surrounding said condenser and being provided with an escape for steam above the level of the liquid therein.

1,352,561. DISK FLANGE ATTACHMENT TO AUTOS AND TRAILERS. MAT ROY THOMPSON, Chicago, Ill. Filed Jan. 30, 1919. Serial No. 274,003. 5 Claims. (Cl. 104—244.)

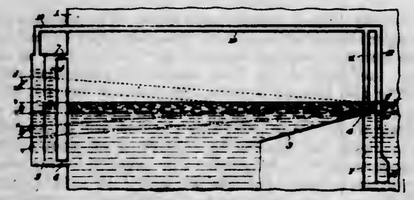
1. In an attachment for automobiles, the combination with the automobile wheels adapted to ride balls of rails, of wheel retaining disks therefor, flexible hangers for the disks, guides for the hangers, and means for raising and lowering the hangers on the guides, whereby the disks may be raised and lowered.

1,352,562. FLYTRAP. JULIA TOKASH, McDowell, W. Va. Filed Nov. 25, 1919. Serial No. 340,634. 1 Claim. (Cl. 43—122.)



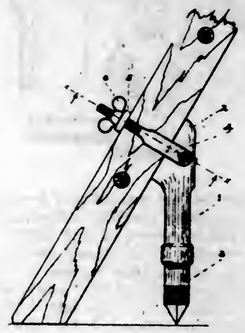
In a fly trap, a supporting annular base provided with an upwardly extending flange, clamping arms formed upon said flange, a central opening and radial slots in said base, the material cut from said slots being bent downwardly and flanged to form legs for said base; a transparent dome like container supported on said base and having an upwardly extending circular wall in communication with the opening in said base, an annular bead formed upon said container, to be engaged by the clamping arms formed upon the flanged wall, said clamping arms being bent inwardly and upwardly to overlie said bead, and to extend a slight distance upon the walls of the container thereby preventing the casual detachment thereof.

1,352,563. COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass. Filed Jan. 22, 1916. Serial No. 73,526. 3 Claims. (Cl. 2—67.)



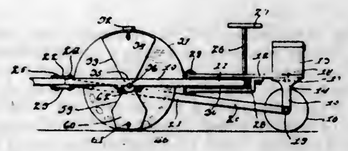
1. A soft turned-down collar of multiply interwoven fabric having a straight fold portion of increased flexibility therein and provided in its inner or neck band portion with one or more indentations having gussets secured thereto and closing the same, substantially as described.

1,352,564. ELECTRIC METER. THOMAS W. VARLEY, New York, N. Y. Filed Dec. 12, 1918. Serial No. 266,436. 3 Claims. (Cl. 171—265.)



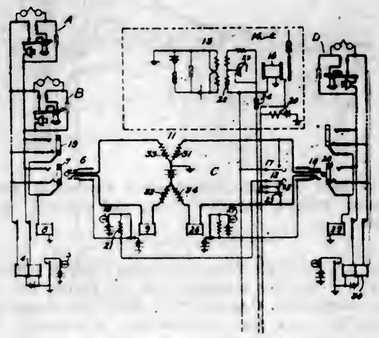
1. In an electric meter of the class described, a rotatable system having a soft iron element fixed thereto, two identical pairs of stationary coils similarly disposed as to the axis of rotation of the aforesaid system and adapted to exert opposite torques upon the iron element, each pair having an E. M. F. coil and a load coil, the load coils being adapted to carry certain currents such that the current flow is proportional to the load and the E. M. F. coils being adapted to carry certain currents such that the current flow is proportional to the E. M. F., the current flow in one pair of coils being the same direction and in the other pair of coils being in opposite directions, and means for simultaneously reversing the E. M. F. coils in synchronism with the rotation of the soft iron element.

1,352,565. METHOD AND MECHANISM FOR MEASURING FLUID DEPTHS. SYLVESTER M. VIELE, Altoona, Pa. Filed Jan. 22, 1918. Serial No. 213,120. 10 Claims. (Cl. 73—54.)



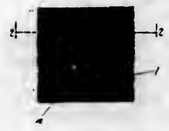
1. In the determination of the depth of liquid above a datum point in a compartment having a gage for showing the level of liquid therein and a differential gage comprising a conduit having connected apertures adapted to be sealed by said liquid, the method which consists in sealing said apertures and providing liquid columns in said gages by liquid in said compartment and providing fluid pressure in said conduit superior to that in said compartment and thereby depressing the liquid level in said differential gage below the liquid level in said gage first named.

1,352,566. SAFETY DEVICE FOR LADDERS. GUSTAV VOLL, Seattle, Wash.; Marie Voll administratrix of said Gustav Voll, deceased. Filed Apr. 2, 1919. Serial No. 286,935. 1 Claim. (Cl. 228—60.)



An auxiliary leg for a ladder, comprising a supporting member interiorly threaded at one end and carrying thereat a reversible foot, the other end carrying a head having an inclined face with slight projections thereon, arms bolted to the head, extending in spaced parallel relation, the free ends thereof threaded and adapted to extend beyond the sides of a ladder leg, a block slidably engaged with said ends, and winged nuts threaded on said ends and coacting with the block, and adapted to clampingly attach said device to a ladder.

1,352,567. WINTER ROAD OR SNOW AND ICE MELTING MACHINE. AXEL WETTERVIK, Iron River, Mich. Filed Jan. 15, 1920. Serial No. 351,663. 2 Claims. (Cl. 37—60.)

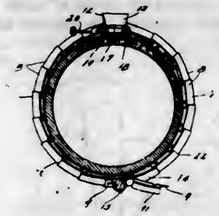


1. In a machine of the class described, the combination with a pair of horizontal frames coupled together at their front and rear ends, of a hood mounted on each of the frames and carried thereby and each having a doorway in its outer side, a door to close each door-way, a fire box having at each of its sides a stub shaft rigidly fixed to the side rails of each frame, a hollow roller encompassing the fire box and rotatably mounted in each of the frames on said stub shafts and each having a doorway in its outer end, a door to close each of said doorways, said fire box having a grate and below the grate an ash receptacle, a door-way in the side of the fire box adjacent to the door-way of the roller, and a door to close said door-way in the fire box.

1,352,568. TELEPHONE SYSTEM. CHARLES WHITE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1918. Serial No. 233,259. 6 Claims. (Cl. 179—35.)

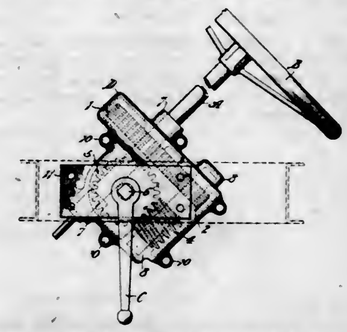
1. A telephone exchange system comprising a telephone line terminating in a plurality of jacks, a cord circuit having a test conductor, a resistance coil, a test relay, and means serving when actuated to connect said resistance in parallel relation with the test conductor to thereby effect the operation of said test relay.

1,352,569. FABRIC AND PROCESS OF MAKING THE SAME. JOSEPH N. WIGGIN, East Orange, N. J., assignor to H. B. Wiggin's Sons Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Dec. 23, 1916. Serial No. 138,529. 18 Claims. (Cl. 41—17.)



1. A fabric having threads of irregular diameter, the face of which has been compressed.

1,352,570. ADJUSTABLE THIRD OR FOURTH POINT SUPPORT FOR BRAKE-BEAMS. CHARLES HAINES WILLIAMS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1919. Serial No. 302,225. 2 Claims. (Cl. 188—213.)



2. The combination of a part of a truck, a track member for supporting a third or fourth point support for brake beams mounted thereon and having yielding relation therewith, and means arranged on said truck part and coöperating with said track member for vertically adjusting the free end of the latter.

1,352,571. APPARATUS FOR FORMING PIPE-JOINTS. DE WITT H. WYATT, Columbus, Ohio, assignor to The Wyatt Engineering Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 23, 1918. Serial No. 267,924. 4 Claims. (Cl. 25—126.)

3. In an apparatus for forming pipe joints, a plurality of sections each in themselves formed of a plurality of separable members flexibly joined together, means for detachably uniting one end of one section between members of another section to approximately present the desired size, means for joining the ends of the previously connected sections together about the meeting ends of a pair of pipes, and additional means whereby the assembled members may be given a final adjustment as to size to properly fit said pipes.

1,352,572. STEERING MECHANISM FOR MOTOR-OPERATED VEHICLES. CLIFFORD H. YOUNG, St. Louis, Mo., assignor to The Auto & Motor Truck Axle Company, a Corporation of Delaware. Filed Feb. 3, 1919. Serial No. 274,755. 1 Claim. (Cl. 74—79.)

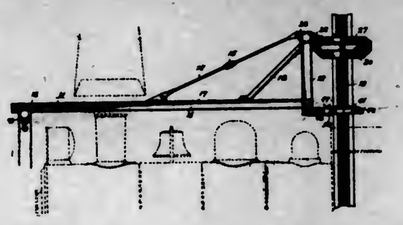
A steering mechanism for motor-operated vehicles, comprising an inclined steering shaft, a split housing on the frame of the vehicle equipped with a bearing for said steering shaft, a horizontally-disposed shaft in said housing arranged at right angles to said steering shaft and provided at its outer end with a rock arm that controls the position of the front wheels of the vehicle, a worm gear on said horizontal shaft, a subshaft journaled in said housing and arranged parallel to said steering shaft, a worm on said subshaft that meshes with the worm gear on said horizontal shaft, a straight faced gear on said steering shaft and a pinion on said subshaft that meshes with said straight faced gear.

1,352,573. SPIKE. EVA LOUISA DULCIE BAGG BALFOUR and JOHN WILLIAM BLACKBURN BALFOUR, London, England. Filed June 25, 1920. Serial No. 391,739. 1 Claim. (Cl. 85—21.)

A spike consisting of a head and a shank, the shank projecting downward from the head and being rectangular in cross-section with parallel front and back faces and parallel side faces immediately below said head, the side faces remaining parallel throughout their entire length, the front face of said shank being inclined slightly

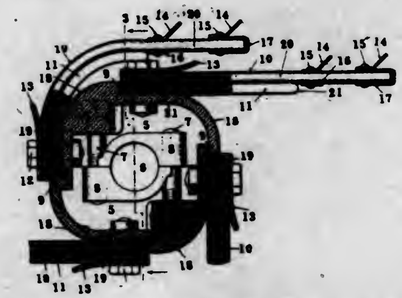
toward the back face thereof from a line spaced beneath the head to a line adjacent the point of the spike, the back and front faces being connected at the point by a sharply inclined surface, the lower part of the rear face lying in the same plane as the upper part thereof, said spike having a continuous series of equal notches formed in the rear face between the upper and lower parts

thereof, said notches each having its upper surface inclined slightly toward the front face of the spike and its lower surface inclined abruptly away from the front face of said spike, the connecting edges between the notches lying in the plane of the upper and lower parts of the back face of the spike, the slightly inclined front face portion being smooth and unbroken throughout whereby to offer no obstruction in driving.



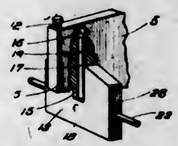
1,352,574. SPRING CONSTRUCTION. GEORGE W. BARNES and DON CARLOS TRAVIS, Kenosha, Wis., assignors to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed May 1, 1916. Serial No. 94,557. 2 Claims. (Cl. 5—29.)

2. In a spring construction the combination with opposed frame members having coil springs interposed therebetween, of a series of cross connecting members extending through the coils of the said springs and each provided with an offset portion, vertically extending portions connecting the offset portion to the main body of the cross connecting link or member and fitting within the adjacent sides of the coil and a second series of cross connecting members each having a plurality of vertically extending shoulder portions fitting within the adjacent sides of the corresponding coils and means intermediate of the vertically extending portions of the first mentioned series of cross connecting members detachably interlocked with means intermediate of the shoulder portions of the second mentioned series of cross connecting members by the tension of the adjoining coils of the spring between which the members are interposed.



1,352,575. CRANE. CHARLES A. BINGAMAN, Reading, Pa. Filed Mar. 20, 1919. Serial No. 283,763. 12 Claims. (Cl. 212—56.)

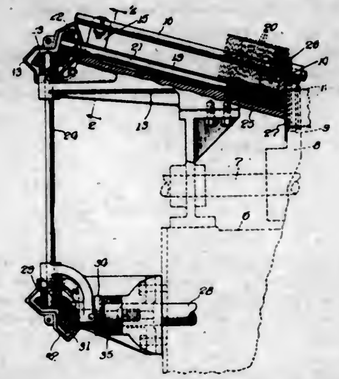
1. In a swinging crane, the combination of a boom, a hoisting device movably sustained by the boom, an anti-friction bearing for pivotally connecting to and supporting the boom from a stationary column so that the boom may revolve around the column, and an anti-friction thrust bearing separate from the supporting bearing



each of said bearings comprising a stationary member extending around, separate from, and secured to, the column.

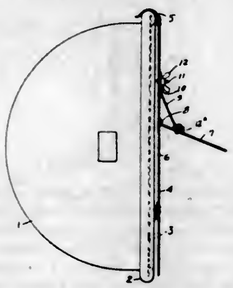
1,352,576. BEATER FOR HOG-SCRAPING MACHINES. FRANK V. BRECHT and HELMUTH W. TOHTS, St. Louis, Mo., assignor to Gus v. Brecht Butchers' Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 9, 1920. Serial No. 372,417. 2 Claims. (Cl. 17—11.)

1. In a device of the class described, a hub, a flexible beater arm of textile material secured to said hub and having longitudinal selvage edges, a protective clip secured to the outer end of said beater arm, and scraper blades secured to the face of said beater.



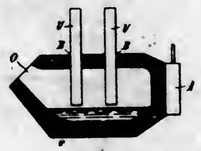
1,352,577. ADJUSTABLE TOY VEHICLE. MAYNOR D. BROCK, Kansas City, Mo. Filed Aug. 16, 1918. Serial No. 250,215. 3 Claims. (Cl. 208—165.)

2. A toy vehicle comprising a beam, axle blocks having cutaway portions to receive the beam, upstanding pins on the axle blocks extending into vertical recesses in the beam, said pins having a plurality of transverse openings, and fastening devices adapted to pass through any of the openings to secure the pins rigid with the beam.



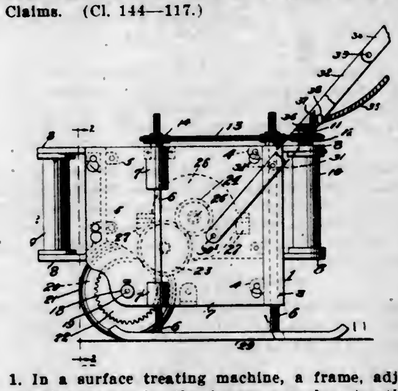
1,352,578. CAN-END-FEEDING MECHANISM. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1919. Serial No. 283,786. 6 Claims. (Cl. 113—114.)

1. In a can end feeding mechanism, the combination of a magazine including a bottom, a worm disposed longitudinally of the magazine parallel with said bottom and having threads spaced to accommodate the edge of one end only between successive threads, means for actuating said worm to separate the ends in the magazine and feed



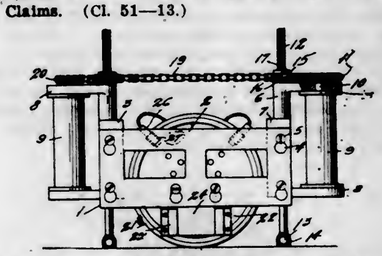
them in separated relation toward the delivery end thereof, and an abutment disposed in the path of said can ends to insure an edgewise delivery of the ends from the magazine when released by said worm.

1,352,579. HEADLIGHT-DEFLECTOR. HOWARD O. CARTER, Detroit, Mich. Filed May 31, 1919. Serial No. 300,907. 2 Claims. (Cl. 240—45.6.)



1. The combination with a head-light, of an apertured shield mounted thereupon at the front thereof, reducing the radiation of light, a vizor hinged upon said shield above the aperture thereof, and inclined to intersect the beam of light discharging through said aperture, an arm loosely secured to said vizor and inclined upwardly toward the shield, and means clamping the upper end of said arm to the shield permitting vertical adjustment of said end.

1,352,580. MANUFACTURE OF STEEL. GEORGES CINILLE, Epierre, France. Filed Aug. 10, 1910, Serial No. 576,561. Renewed Jan. 30, 1919. Serial No. 274,108. 14 Claims. (Cl. 204—64.)

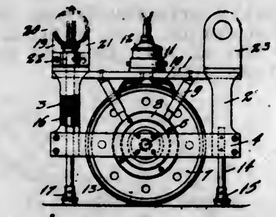


1. A process for producing hard steel which consists in placing crude iron in a Bessemer converter in the presence of basic slags, supplying additional heat thereto to maintain an increased fluidity of the mass, and injecting gas into the mass below its surface in such manner as to intimately mix the metal with the basic slag whereby to completely eliminate the phosphorus, sulfur and other impurities from the mass.

1,352,581. HANDLE ATTACHMENT FOR SURFACE-TREATING MACHINES. ALEX A. CLARKE, Dallas, Tex. Filed June 26, 1919. Serial No. 306,964. 2 Claims. (Cl. 144—117.)

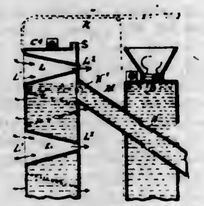
1. In a surface treating machine, a frame, adjustable supporting means for the frame, a surface treating element arranged within and connected with the frame, handles connected with the frame near its opposite ends, means to operate the adjustable supporting means including a shaft connected with one handle to be turned thereby, studs secured to the opposite sides of the frame, a resilient yoke to straddle the frame and having its ends apertured to receive the studs, a handle connected with the yoke, a gear connected with said shaft, a second gear carried by the yoke and engaging the first named gear, a manually operated element connected with the handle near its rear end, and a flexible element connecting the manually operated element and the second named gear.

1,352,582. SURFACE-TREATING DEVICE. ALEX A. CLARKE, Dallas, Tex. Filed Nov. 23, 1918, Serial No. 263,813. Renewed Dec. 22, 1919. Serial No. 346,773. 4 Claims. (Cl. 51—13.)



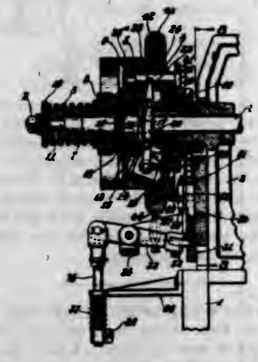
1. In a surface treating device, a supporting frame, said frame having handles whereby it may be manually moved over the work, a motor propelled surface treating member projecting from the frame, supporting elements projecting from the frame on each side of the surface treating member and adjustable in said frame for positioning the surface treating member with relation to the work, and means operated by one of the handles for adjusting the supporting elements.

1,352,583. SURFACE-TREATING MACHINE. ALEX A. CLARKE, Dallas, Tex. Filed Mar. 26, 1918, Serial No. 224,748. Renewed Feb. 6, 1920. Serial No. 356,797. 3 Claims. (Cl. 51—5.)



1. In a surface treating hand device, a supporting frame, handles on the frame whereby it may be traversed

and applied to the work, a fixed horizontal armature mounted on the frame intermediate the ends thereof, a horizontal motor housing electrically energized and mounted to revolve around the armature, an annular surface treating member surrounding the housing, and projecting

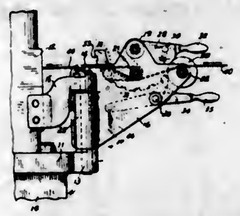


work sustaining elements on the frame on each side of the housing for positioning the surface treating member with relation to the surface of the work, said elements being constructed to effect an advancement or retraction of the surface treating member with relation to the surface of the work.

1,352,584. RADIATOR. EDWARD T. CURRAN, Detroit, Mich. Filed June 22, 1918. Serial No. 241,326. 5 Claims. (Cl. 257—125.)

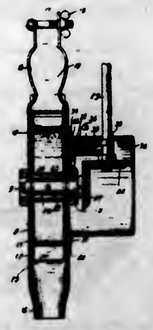
2. In a water cooling apparatus for automobile engines, the combination of a front receptacle having conical air passages therethrough, the smaller ends of said passages being rearwardly arranged, a second receptacle located at the rear of the first-named receptacle with an air passage intervening therebetween, said second receptacle presenting a cooling surface in the line of flow of air passing through said passages, and adapted to permit the passage of air at one side of said cooling surface.

1,352,585. CLUTCH AND BRAKE MECHANISM. STEPHEN A. DOBYNS, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 10, 1917. Serial No. 147,943. 11 Claims. (Cl. 74—46.)



1. In a machine of the class described, a driven shaft including a clutch element, a clutch for said shaft, means for shifting said clutch including a clutch shifting element, a brake for said shaft, means for actuating said brake, operative connections between said brake-actuating means and said shaft adapted to utilize the inertia of said shaft to apply said brake, and controlling means operable on said clutch shifting element adapted to cause said element to engage said brake-actuating means.

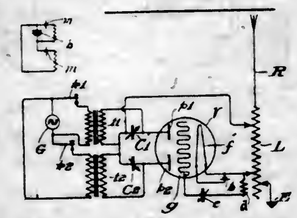
1,352,586. BRAKE FOR RAILWAY-TRAINS. PIERRE FRANÇOIS DUFOUR, Paris, France. Filed Apr. 29, 1919. Serial No. 293,565. 10 Claims. (Cl. 188—148.)



1. A brake installation for railway vehicles, comprising the combination of brakes, actuating means for said brakes, a buffer plunger, a draw-bar and a clutch mechanism controlled by the driver and adapted to operatively connect the said actuating means either with the buffer plunger or the draw-bar, whereby the said actuating means are operated by the buffer plunger when traveling forward and by the draw-bar when traveling backward.

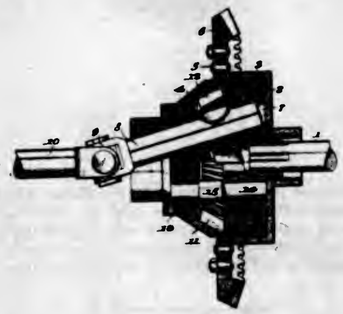
1,352,587. ROLLING-MILL BRIDLE. ERNEST W. DUSTON, Waterbury, Conn., assignor to The Blake & Johnson Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 12, 1919. Serial No. 303,588. 13 Claims. (Cl. 29—17.)

12. The combination with a machine frame provided with a pair of brackets adjacent opposite sides thereof, of a tension device comprising a bridle frame having at one side a lug pivoted to one of said brackets and at the opposite side a second lug adapted to engage the other of said brackets, and a locking pin adapted to pass through said last named lug and bracket to lock said bridle frame in operative position with respect to said machine bracket.



1,352,588. WATER-MOTOR. PAUL EGEDI, Buffalo, N. Y. Filed Oct. 24, 1919. Serial No. 333,032. 3 Claims. (Cl. 253—136.)

1. A water motor comprising a casing, a shaft journaled in said casing projecting therethrough, a rotor

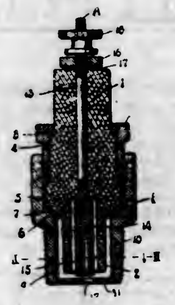


within said casing fixed to said shaft, a bearing block shiftably mounted upon said casing, a driven shaft journaled in said block, and gears fixed to said rotor shaft and driven shaft for transmitting the rotation of said rotor to said driven shaft.

1,352,589. ELECTRICAL TRANSMISSION OF INTELLIGENCE. CORNELIUS D. EHRET, Philadelphia, Pa. Filed Mar. 26, 1919. Serial No. 285,164. 29 Claims. (Cl. 179—15.)

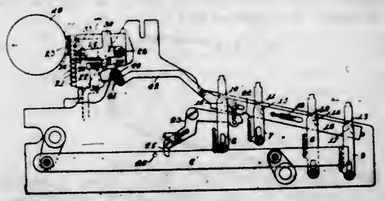
25. The combination with a plurality of oscillators, of means for delivering thereto in predetermined sequence energy of positive and negative currents, respectively, whereby groups of oscillations are produced in like sequence, and independently operable devices controlling said currents in accordance with sound waves.

1,352,590. DIFFERENTIAL MECHANISM. FRANK V. ELBERTZ, Detroit, Mich., assignor to B. F. Everitt Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1919. Serial No. 272,443. 2 Claims. (Cl. 74—99.)



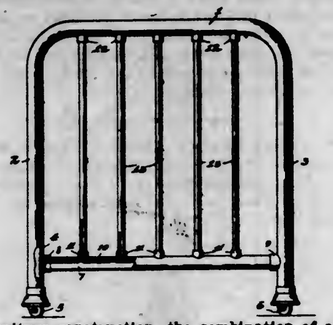
1. In a differential mechanism, a rotatable casing provided with an internal gear, a bushing journaled in the casing having an eccentric bearing recess, a shaft secured in the bushing coaxial with the gear, a shaft alined with the bushing shaft, a wabble shaft journaled in the eccentric recess and connected to the other shaft by a universal joint, and a bevel pinion on the wabble shaft in mesh with the gear.

1,352,591. JEWELRY-CLASP. ABRAHAM L. ELIASOFF and CHARLES BIRNBAUM, New York, N. Y. Filed Mar. 8, 1920. Serial No. 364,084. 2 Claims. (Cl. 24—230.)



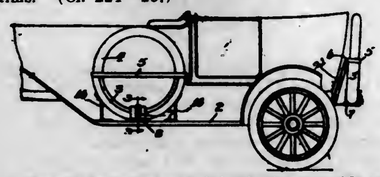
1. An article as characterized comprising a thin box-like body portion having parallel closely spaced top and bottom portions structurally connected by edge flush posts, two of said posts being oppositely disposed in paired relation; an elongated resilient hook-like snap, adapted for extension between said paired posts, the free ends of said snap being provided adjacent the extremities thereof with shoulders for engaging said posts; and a third post intermediate said paired posts in spaced relation thereto, said third post being disposed between the sides of said hook-like snap to guide the same when moved in and out between said top and bottom and for engaging said snap at the bend of the hook thereof when drawn from between said first mentioned posts.

1,352,592. SPARK-PLUG. LOUIS S. FLATAU, St. Louis, Mo., assignor of one-third to Isaac A. Hedges, Webster Grove, Mo., and one-third to Louis A. Benecke, St. Louis, Mo. Filed Oct. 28, 1918. Serial No. 260,046. 6 Claims. (Cl. 123—169.)



1. A spark plug comprising an insulator, an inner electrode extending through said insulator, an outer electrode in which said insulator is secured, the lower portion of said outer electrode being provided with an ignition chamber and an annular web forming an annular bottom wall for said chamber, said inner electrode having a hollow lower end which lies entirely within said ignition chamber at a point above, but adjacent, to the circular wall of the opening in said annular web, so as to provide an annular spark gap between said hollow lower end and said annular bottom wall.

1,352,593. RIBBON-SHIFTING MEANS FOR CALCULATORS. WARREN FUHRMANN, Westfield, N. J., assignor, by mesne assignments, to Wilkinson Brothers and Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1918. Serial No. 264,453. 4 Claims. (Cl. 235—60.)



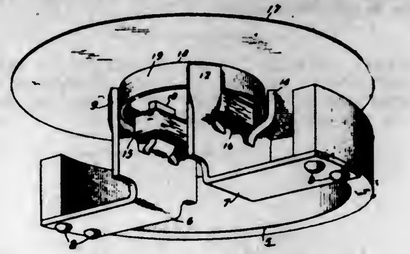
1. In a calculator, the combination with the adding means and printing means, a main operating member, special keys for causing special operations of said means, and signal printing means organized and constructed to cause the printing of signals corresponding to the special keys by the actuation of the key and prior to movement of the main operating member, of a two-color ribbon support, and means connected with the special keys and arranged to be actuated by the special key depressed to cause shifting of the ribbon from normal position to cause the signal characters to print in a color different from that in which the other printing is effected.

1,352,594. FURNITURE CONSTRUCTION. JOHN F. GAIL, Kenosha, Wis., assignor, by mesne assignments, to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Dec. 18, 1915. Serial No. 67,498. 1 Claim. (Cl. 5—4.)

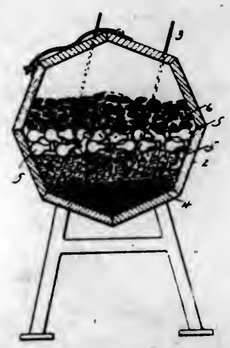
In furniture construction, the combination of a pair of initially separate parts, comprising a tube and an end socket for a spindle having an end wall butted against the wall of the tube, said walls having a common opening therethrough surrounded by a connecting ring consisting of a consolidated composition of the metal of both walls.

1,352,595. TIRE-CARRIER. WALTER R. GREEN, Chicago, Ill. Filed Sept. 10, 1915. Serial No. 50,037. 7 Claims. (Cl. 224—29.)

1. A tire carrier constructed for bottom or side attachment comprising a tire carrying member, a base plate having the tire carrying member resting upon the center portion thereof, and end portions of the base plate bent upwardly and secured to the side of the tire carrying member, said plate being provided at each side of the tire carrying member with a looped portion intermediate of the base portion and the upwardly extending portion so as to provide an enlarged base for bottom mounting and to provide a loop adapted to admit a horizontal bolt therethrough.



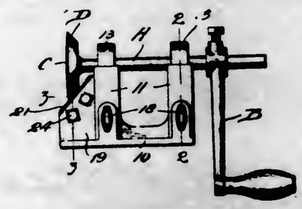
1,352,596. MUD-GUARD BRACE. WALTER R. GREEN, Chicago, Ill. Filed July 21, 1917. Serial No. 181,948. 2 Claims. (Cl. 208—140.)



2. The combination with a transversely concaved mud guard of a brace therefor comprising a pair of arms each having a flat end overlapping and bent to fit the corresponding end of the other arm inside the mud guard and means engaging the overlapping portions of the arms for securing the mud guard to the brace, said arms being provided with attaching means at their other ends.

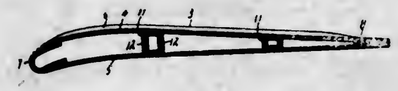
1,352,597. RECEIVER. HENRY C. HARRISON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1918. Serial No. 259,365. 10 Claims. (Cl. 179—119.)

1. A telephone receiver comprising a permanent magnet, a pair of trifurcated polar extensions secured to the ends thereof, a magnetising winding for each of said polar extensions, and a diaphragm in operative relation with the middle trifurcations of said polar extensions, but so disposed with respect to the outer trifurcations of said polar extensions as not to be affected by magnetic flux passing therethrough.



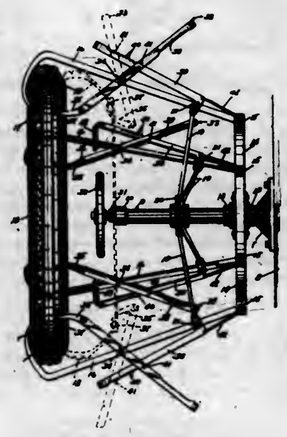
1,352,598. METHOD OF POLISHING AND BUFFING METAL ARTICLES. HUBERT C. HART, Unionville, Conn. Filed Aug. 5, 1919. Serial No. 315,419. 1 Claim. (Cl. 51—278.)

A method of polishing and buffing articles, which comprises placing the articles in a mass of metal balls, together with chamois skin scraps and a polishing powder all in a dry condition and subjecting the mixture to movement against a surface which is softer than that of the balls.



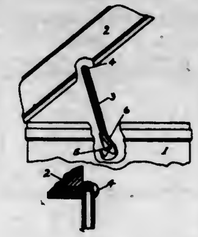
1,352,599. VALVE-FACING TOOL. STEPHEN D. HARTOG, St. Louis, Mo., assignor to S. D. Hartog Manufacturing Company, St. Louis, Mo., a Corporation. Filed May 8, 1919. Serial No. 295,621. 2 Claims. (Cl. 82—1.)

1. In a tool of the class described, a base, spaced housings thereon, bearing members slidingly positioned in the housings, said housings being provided with notches and the bearing members being provided with apertures, which notches and apertures are adapted to coöperate and form



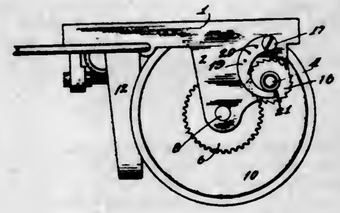
bearings for a valve stem, there being a notch in the side of each bearing member, each of said notches being provided with an inclined face, a set screw penetrating the corresponding wall of each housing and adapted to bear against the inclined face of each notch thereby securing the bearing members in any predetermined position, and a blade on said base adjacent one of said bearings.

1,352,600. AEROPLANE. HENRY L. HASKELL, Ludington, Mich., assignor to Haskelite Manufacturing Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Oct. 23, 1917. Serial No. 198,027. 11 Claims. (Cl. 244—12.)



1. A plane or wing for aeroplanes comprising top and bottom walls each formed of multiple-ply veneer cemented together throughout and conformed to transverse curvature, said walls being disposed to converge rearwardly and outwardly with their rear and outer end edges lapped and cemented together with wedge-shaped fillets between, and front and inner end bars formed of multiple-ply veneer cemented together throughout and conformed to U-cross section and disposed between the front and the inner edges of said walls facing inwardly, the walls being lapped and cemented upon the arms of said bars.

1,352,601. TIRE-CASING HOLDER AND SPREADER. PAUL E. HAWKINSON, Minneapolis, Minn., assignor, by mesne assignments, to Kehawke Mfg. Co., Minneapolis, Minn., a Corporation of Minnesota. Filed May 7, 1919. Serial No. 295,425. 14 Claims. (Cl. 154—9.)



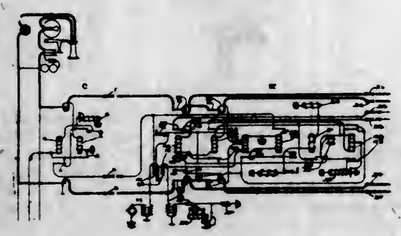
1. An apparatus of the class described comprising a base adapted to be secured to a wall or other vertical surface, a plurality of forwardly projecting arms provided at their extremities with hooks arranged to lie around and engage an edge of a tire casing, being the edge farther away from said base, a second set of hooks adapted to engage that edge of the tire casing nearer said base, means for moving one set of said hooks away from the other set, to spread open the tire casing and means for mounting said arms and hooks on said base for movement around a horizontal axis, and means at said axis arranged when operated to adjust the several hooks toward and away from said axis.

1,352,602. LID-SUPPORT FOR TALKING-MACHINES. JOHN HERZOG, Saginaw, Mich., assignor to Sonora Phonograph Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 15, 1919. Serial No. 271,219. 1 Claim. (Cl. 217—60.)

A lid support for cabinets and the like comprising in combination, a projecting pin on the body of said cabinet, a depending arm pivotally attached to the lid and yieldingly pressed against and slidingly engaging said pin, a flat head on said arm, said head formed with an offset, a spring secured to the head at one side thereof and above said offset, said head formed with a channel in one face thereof, adapted to receive the end of said pin, said channel of irregular shape, one end terminating in the offset and the other end terminating under the spring, the walls of the intermediate part of the channel forming guides for the pin and including a niche to receive said pin when the lid is in its raised position.

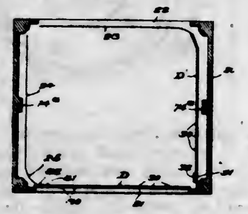
1,352,603. PAWL-AND-RATCHET MECHANISM. CLINTON W. HOWE, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,699. 1 Claim. (Cl. 74—60.)

A reverse rotation check mechanism embracing a ratchet-wheel, a pivoted pawl adapted to engage the toothed periphery thereof, and resilient members rigidly secured on opposite sides of said pawl and inclosing the hook end thereof to frictionally engage the sides of said ratchet-wheel to positively insure a locking engagement of said pawl with the ratchet-wheel when the ratchet-wheel starts to rotate in a reverse direction.



1,352,604. ELECTRIC-SWITCH MECHANISM. HARVEY HUBBELL, Bridgeport, Conn. Filed June 17, 1919. Serial No. 304,879. 9 Claims. (Cl. 200—64.)

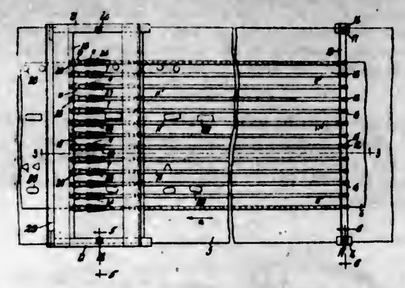
1. A switch mechanism comprising arc shaped inclines, alternate inclines carrying contact plates, a contact member adapted to engage alternate pairs of inclines, a secondary actuator having a loose connection with the



contact member and permitting limited independent movement of said member, an accelerating spring connected to the secondary actuator and to the contact member, and a primary actuator having a step by step connection with the secondary actuator.

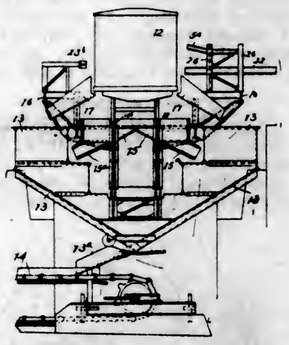
1,352,605. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1918. Serial No. 242,749. 17 Claims. (Cl. 179—18.)

1. In a telephone system, a line, an automatic switch for said line having a plurality of sets of wipers, trunk lines accessible to each set of wipers, means for making any of said trunk lines busy, means for causing said switch to test a pair of said trunk lines simultaneously, and if one of the tested trunk lines is busy for extending a connection from said line over the idle trunk.



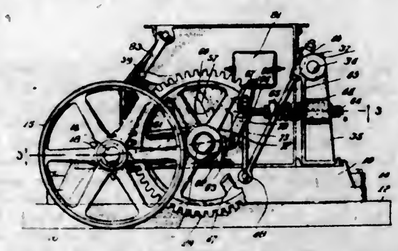
1,352,606. MULTIPLE SLIDING DOOR FOR USE IN AIRPLANE-HANGARS OR OTHER LARGE OPENINGS. HOWARD A. JOHNSON, Norfolk, Va. Filed July 11, 1919. Serial No. 310,000. 9 Claims. (Cl. 20—20.)

5. A flexible sliding door comprising a depressed supporting rail having two sections at an angle to each other and having a curved connecting portion, a movable cable disposed parallel to and along said depressed rail, and friction reducing bearing means for the cable adapted to travel between the cable and the outside of the said curved portion.



1,352,607. MECHANISM FOR GUIDING AND SPACING CANDY. CHARLES H. JONES, Medford, Mass. Filed June 9, 1919. Serial No. 302,729. 14 Claims. (Cl. 193—4.)

3. A device of the character described having, in combination, a conveyer-apron, a plurality of parallel guide members extending longitudinally of said conveyer-apron and flat resilient springs mounted upon said guide members adapted to yieldingly engage opposite sides of arti-



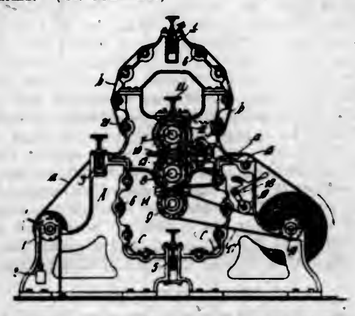
cles passing therebetween whereby said articles may be positioned relatively to each other.

1,352,608. BOX-CAR UNLOADER. ROBERT W. KALTENBACH, Cleveland, Ohio, assignor to The McMyler Interstate Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1918. Serial No. 212,515. 16 Claims. (Cl. 214—46.)

1. A box car unloader comprising a tilting platform adapted to be rocked so as to elevate first one end of a car and then the other, a receiving member for material discharged from cars run onto the platform, a delivery chute carried by the platform and movable relative thereto to and from the side door opening of a car positioned on the platform, and means supported by the platform and adapted to be run into one side of a box car for positively moving material in the car into the chute.

1,352,609. COAL-CRUSHER. MYRON A. KENDALL, Aurora, Ill., assignor to Stephens-Adamson Mfg. Co., Aurora, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 375,019. 11 Claims. (Cl. 83—14.)

1. A crusher comprising, in combination, a coöperating concave and crusher roll, the latter being carried by

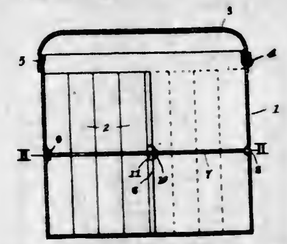


swinging supports, a toggle controlling the swinging of the said supports and a spring resisting the straightening of the toggle.

1,352,610. LOOM FOR WEAVING WIRE CLOTH. ALBERT S. KNAPP, Worcester, Mass., assignor to Wickwire Spencer Steel Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 24, 1919. Serial No. 326,061. 8 Claims. (Cl. 139—39.)

6. In a wire weaving loom, the combination with a warp shed and means for projecting a weft wire through said warp shed, of means for inclosing the advancing end of the weft wire during its passage through the warp shed.

1,352,611. PAPER-FINISHING MACHINE. FRANK C. LADD and FRANKLIN G. NEAL, Springfield, Mass., assignors, by mesne assignments, to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 20, 1914. Serial No. 833,270. 27 Claims. (Cl. 101—23.)

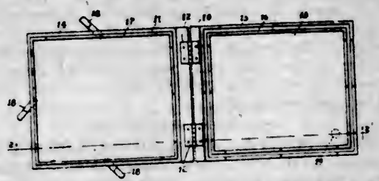


1. A finishing machine for impressing a cloth-surface pattern on paper comprising two rotatable pressure rolls therein, one of which is made of resilient material and the other of comparatively non-resilient material, and both of which are provided with smooth and unbroken peripheral surfaces, a cloth, means to feed the cloth and paper to be finished thereby between the rolls, mechanism to force the rolls one toward the other, all constructed and arranged so that the cloth, paper, and rolls may yield slightly one relatively to the others during the finishing operation.

1,352,612. SPRING STRUCTURE. ALFRED F. LANCE, Chicago, Ill. Filed Oct. 11, 1918. Serial No. 257,808. 1 Claim. (Cl. 267—60.)

A spring support for a box cover comprising a cylindrical housing for containing a helical spring, having an outwardly and downwardly extending hook at its top end to overlie the top edge of the box; a pin extending through the cylinder engaging the lower portion of the spring to hold it in place, and having a part projecting therefrom under the hook to engage the side of the box; and an open helical spring in said housing in contact with the bottom thereof, and held in place by said pin, and extending above the housing for engagement with the cover.

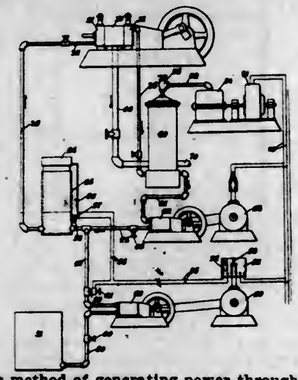
1,352,613. CIGARETTE-BOX. JAMES J. LANGAN, New York, N. Y. Filed Apr. 1, 1920. Serial No. 370,509. 3 Claims. (Cl. 206—41.)



2. In a cigarette box, the combination with a follower fitted to slide in the storage space therein, of tensioned elastic strips extending across the box transversely of the opposite edges of said follower and at the opposite sides of the storage space in the box, and loops at one end of the box at opposite sides of the storage space, each of said elastic strips being overlapped upon itself, one end thereof being fastened to the end of the box opposite to that having the loops, the other end of said strip being fastened to the follower and the intermediate portion of said strip slidably connected with one of said loops on the box, whereby the tension on each strip, when cigarettes are stored between the follower and the end of the box having the loops, will be distributed throughout the length of said strip.

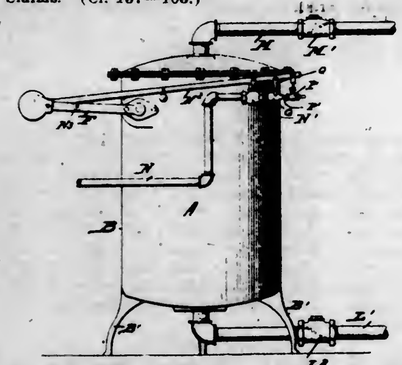
1,352,614. SUCTION MECHANISM FOR DENTAL PLATES. JOHN LEHNER, Pittsburgh, Pa. Filed June 17, 1919. Serial No. 304,783. 2 Claims. (Cl. 32—4.)

1. In combination with a dental plate of hard material having an aperture extending completely through the same and the wall of said aperture being provided with an inwardly extending perimetral slot, a soft rubber suction cup mounted in said aperture with its open top protruding from the surface of the dental plate and provided with a circumferential flange which engages said slot to anchor said cup in said dental plate, said flange being stiffened by the incorporation therein during the process of manufacturing the cup of metallic stiffening material, substantially as described.



1,352,615. CASSETTE. HECTOR P. MACLAGAN, Park Ridge, Ill., assignor to McIntosh Battery and Optical Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1918. Serial No. 255,212. 10 Claims. (Cl. 250—34.)

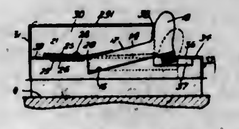
10. In a cassette, the combination of two plates hinged together to lie adjacent each other in substantially parallel planes in closed position, and continuous rectangular frames conformed to nest in one another, a first



one of said frames being secured to one of said plates and another of said frames fitting said first frame being secured to the other of said plates and forming a light proof dry plate receptacle within said frames when the cassette is closed.

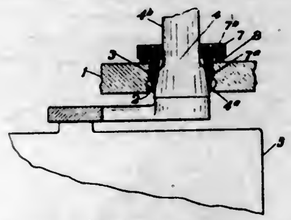
1,352,616. POWER-GENERATING SYSTEM. ALBERT J. MEIER, Glendale, Mo. Filed Mar. 21, 1913. Serial No. 756,033. 70 Claims. (Cl. 60—14.)

1. The method of generating power through the medium of a heat engine having a pressure chamber or cylinder, comprising, maintaining a motive fluid, containing energy in the form of heat, inside of the pressure chamber or cylinder, maintaining the walls of the pressure chamber or cylinder under an external pressure of a heat absorbing fluid to counteract the motive fluid pressure, and utilizing the heat absorbed by the heat absorbing fluid.



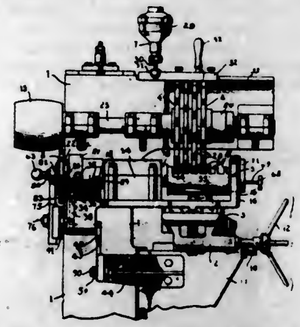
1,352,617. STEAM-TRAP. JOHN MOREHEAD, Detroit, Mich. Filed Oct. 29, 1919. Serial No. 334,335. 6 Claims. (Cl. 137—103.)

1. In a steam trap, a stationary chamber, a movable tank located within the stationary chamber, a rock-shaft journaled in the stationary chamber, a rock-arm secured to the rock-shaft from which the movable tank is suspended, means for conducting water of condensation to the movable tank, means for delivering steam or boiler pressure to the trap, a valve for controlling the delivery of steam to the tank, and means actuated through the movement of said tank whereby steam or boiler pressure may be admitted thereto.



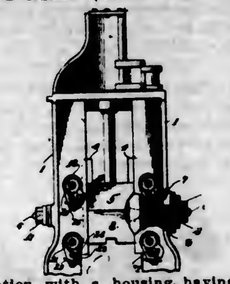
1,352,618. PLAYING ATTACHMENT FOR ZITHERS. FREDERICK M. NICKERSON, Everett, Mass., assignor to The Phonoharp Company, East Boston, Mass., a Corporation of Maine. Filed Mar. 12, 1919. Serial No. 282,154. 8 Claims. (Cl. 84—116.)

1. The combination with a zither, of a playing attachment therefor, comprising a hammer arranged above the strings, a pivot on which said hammer is fulcrumed near its rear end, a leaf spring normally bearing upon the



hammer on both sides of the pivot and holding the hammer head apart from its associated string or strings, substantially as set forth.

1,352,619. TERMINAL STRUCTURE FOR ELECTRIC BATTERIES. PAUL E. NORRIS, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1920. Serial No. 359,533. 5 Claims. (Cl. 204—29.)

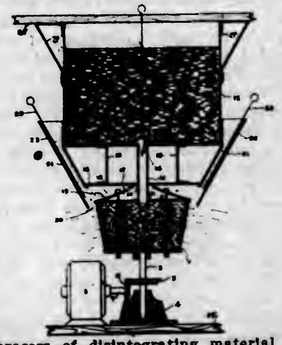


3. In an electric battery, an apertured cell cover, a terminal post passing through the aperture in said cover and comprising a tapered section adjacent said aperture and a cylindrical section above such tapered section, a follower screwed into said aperture and having a body the inner surface of which is tapered to engage with the tapered section of said post, the follower also comprising a head sleeved over the cylindrical portion of the post and overlapping the cell cover, and a gasket located between the cell cover and the head of said follower.

1,352,620. DOVETAILING-MACHINE. OSCAR ONSRUD, Chicago, Ill., assignor to The Marble and Shattuck Chair Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,703. 4 Claims. (Cl. 144—204.)

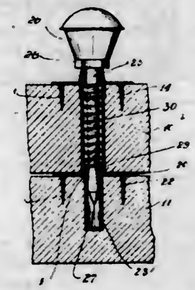
1. In a machine of the character described, automatic chuck tilting means comprising a forked dog pivoted centrally, a resilient compression member pivotally connected to the free end of the shank of said dog and with its opposite end mounted turnably at a point opposite the end of said shank and spaced therefrom, the arms of said dog being formed and adapted to successively engage suitably formed shoulders on the chuck when the latter is moved forward and backward relative to said dog.

1,352,621. ADJUSTABLE GUIDE FOR HAMMERS. STEPHEN PAUL, Lansing, Mich. Filed May 8, 1917, Serial No. 166,132. Renewed May 28, 1920. Serial No. 385,067. 1 Claim. (Cl. 78—87.)



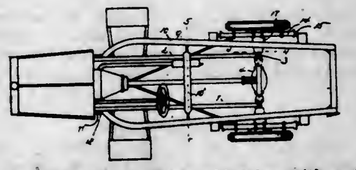
The combination with a housing having frames provided with pockets and rectangular openings, guides in the pockets of the housing frames for a reciprocable member in the housing, tapered members in some of the frame openings and having screw bolts protruding therefrom and adapted for adjusting said guides, and screw bolts carried by said guides and protruding from the other openings and adapted for locking said guides in adjusted positions, of means for adjusting all of said screw bolts, said means comprising washers having rectangular portions to engage in the rectangular openings of said frames, ratchet nuts rotatable in said washers and screwed on said bolts, spring pressed pawls on said washers normally engaging said ratchet nuts, and cam members on said washers adapted to be manually swung into engagement with said pawls to hold said pawls out of engagement with said nuts.

1,352,622. KEY-HOLDER. CHARLES L. PEIRCE, Jr., Pittsburgh, Pa. Filed Mar. 22, 1919. Serial No. 284,319. 3 Claims. (Cl. 59—97.)



3. A key holder comprising two lengths of chain, a detachable connector for joining said lengths together, and dissimilar end stops for the opposite ends of the joined chains.

1,352,623. CENTRIFUGAL MACHINE AND PROCESS OF DISINTEGRATING MATERIAL. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 1, 1917. Serial No. 199,789. 6 Claims. (Cl. 83—91.)

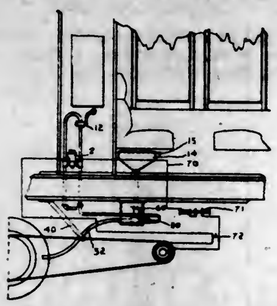


4. The process of disintegrating material which consists in projecting streams of molten material through an unobstructed cooling medium along different horizontal planes, the stream in each plane traveling at a higher velocity than a stream in a lower plane.

1,352,624. SAFETY WINDOW-LOCK. HENRY POLCEK, New York, N. Y. Filed Jan. 7, 1920. Serial No. 349,914. 1 Claim. (Cl. 292—175.)

In a sash fastener, the combination with meeting cross members of an outer and an inner window frame, a housing comprising a tubular receiver, adapted to pass through one of said cross members, having a pair of opposite disposed longitudinal guide-slots terminating into a pair of peripheral stop-recesses open at the extreme end of said tubular receiver, a fastening plate forming an integral part of said receiver, a conical neck extending opposite said receiver from said plate; a socket, having a similar fastening plate, adapted to be attached to said other cross member, a lock-bolt having a large hand knob at one end, adapted for turning and pulling said bolt, a conically shaped point provided at the other end of the bolt normally extending into said socket, a pin passing through said bolt and extending into said slots, a spring bearing against said pin and a seat provided in said neck, said spring causing said bolt to normally protrude with its pointed end into said socket, said bolt being prevented from leaving said socket when its knob is turned and said pin engages said peripheral recesses of said tubular receiver.

1,352,625. AUXILIARY FRAME AND SPRING ATTACHMENT. JOSEPH B. POSPESHIL, Detroit, Mich. Filed Mar. 24, 1919. Serial No. 284,597. 11 Claims. (Cl. 280—106.5.)

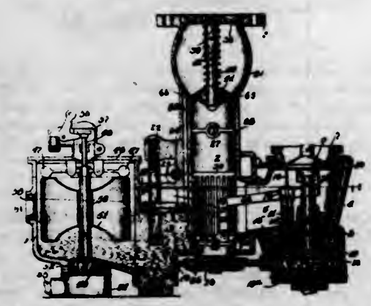


1. In a motor vehicle, the combination with a frame, an axle housing, and ground wheels at the end of said axle housing, of an auxiliary frame mounted upon said first-mentioned frame and axle housing independently of the ground wheels and movable independently of said first-mentioned frame.

1,352,626. SANDING DEVICE. HENRY POWER, Montreal, Quebec, Canada, assignor of one-half to William Halton, Montreal, Canada. Filed Dec. 31, 1919. Serial No. 348,564. 5 Claims. (Cl. 105—101.)

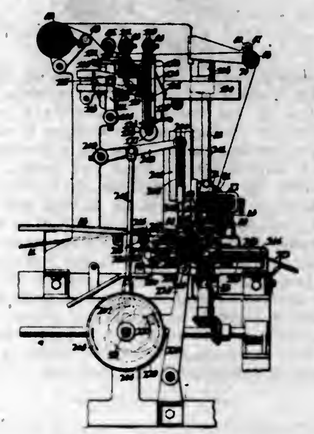
1. In railway passenger car equipment the combination with an axle, a dynamo, a pulley on the axle, a belt looped around the pulley, and an operative connection therebetween and the dynamo, of means for supplying sand to the contacting surfaces of the pulley and belt,

consisting of a receptacle for sand; an ejector, a sand delivering tube connecting the sand receptacle to the ejectof, an air nozzle with its discharge within the ejector,



a sand projecting tube leading from the ejector at a point in alinement with the nozzle to a point in close proximity with the contacting surfaces of the pulley and belt; and means whereby compressed air is supplied to the nozzle.

1,352,627. PUMPING APPARATUS. JAMES P. RATIGAN, Los Angeles, Calif. Filed Jan. 17, 1920. Serial No. 352,209. 6 Claims. (Cl. 74—17.)



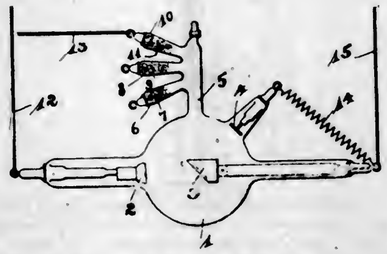
1. In pumping apparatus, a stem, a head at one end of the stem having a semicircular bottom and adapted to rest upon the upper face of a walking-beam, and a connection member at the other end of the stem provided with a grooved fork adapted to engage a cable.

1,352,628. CARBURETER. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Findeisen & Kropf Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1916. Serial No. 120,381. 2 Claims. (Cl. 261—41.)

1. A carbureter comprising a mixing chamber, a throttle valve therein, a fuel supply nozzle adapted to supply fuel into the mixing chamber, an auxiliary mixing chamber above the throttle valve, a spider secured to the auxiliary mixing chamber, a stem secured thereto, an automatic valve adapted to cut off communication between the mixing and auxiliary mixing chambers, a stem secured thereto telescoping with the aforesaid stem, and a spring around said stems exerting a closing pressure on the automatic valve.

1,352,629. MACHINE FOR WRAPPING CONFECTIONS. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor of one-half to Charles Day and John E. Zimmerman, doing business as Day & Zimmerman, Philadelphia, Pa. Filed Dec. 1, 1915. Serial No. 65,006. 16 Claims. (Cl. 93—5.)

1. In a machine of the class described, the combination of a row of envelopment tables with their enveloping mechanisms; means for supplying righted confections in parallel streams at one side of said row of envelopment tables and feeding them one by one at intervals into position upon each of said tables; means for feeding a suitable width of sheet wrapping material, subdividing it lengthwise into strips, and advancing said strips in parallel to the envelopment tables from the side opposite the confection supply; means for subdividing from said strips, transversely, pieces of suitable length for enveloping confections and feeding such pieces upon the envelopment tables, in position to receive the confections, during the intervals between the feed of the latter thereto; and means for bringing the enveloping mechanisms into action during the interval between the feed of successive confections to each table subsequently to the corresponding feed of wrapping material upon the tables.



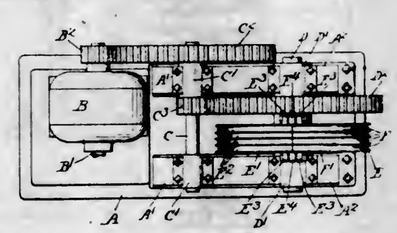
2. In a machine of the class described, the combination of a row of envelopment tables with their enveloping mechanisms; means for feeding to said tables wrapping material, in a width equal to the length of said row, from one side thereof, subdividing the material lengthwise into parallel strips corresponding to the tables as it approaches them, and subdividing from said strips, transversely, pieces of suitable length for enveloping confections and feeding such pieces in succession upon the tables; means for supplying righted confections at the other side of said row of envelopment tables in parallel streams directed to the intervals between the envelopment positions of said tables; means for feeding confections from said streams one by one lengthwise of the row of tables to the enveloping positions of adjacent tables in the row at intervals corresponding to the feeding of successive pieces of wrapping material to the tables; and means for bringing the enveloping mechanisms into action after each feed of confections to the enveloping positions of the tables.

3. In a machine of the class described, the combination of a row of envelopment tables with their enveloping mechanisms; means for feeding a suitable width of tin foil, subdividing it lengthwise into strips, and advancing said strips in parallel to one side of the row of tables; and means for subdividing from said strips, transversely, pieces of suitable length for enveloping confections and feeding such pieces upon said envelopment tables in due relation to the action of their enveloping means.

4. In a machine of the class described, the combination of a row of envelopment tables with their confection-enveloping mechanisms; means for feeding to said tables tin foil, in a width equal to the length of said row, from one side thereof; means for applying adhesive to said tin foil at transverse intervals corresponding to the enveloping positions of the tables and at longitudinal intervals corresponding to the length of material required to envelop a confection; means for pressing stickers against the foil in contact with the adhesive; means for subsequently subdividing the tin foil lengthwise into parallel strips corresponding to the tables as it approaches them and for subdividing from said strips, transversely, pieces of suitable length for enveloping confections with the stickers centered thereon and feeding such pieces in succession upon the tables.

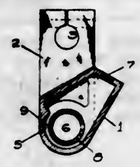
5. In a machine of the class described, the combination of a row of envelopment mechanisms; means for feeding tin foil sidewise to said row of mechanisms in width corresponding to the length of the row; means for placing adhesive upon the surface of said tin foil at points corresponding to the centers of division thereof suitable to afford separate envelopment wrappers for each of the enveloping mechanisms; means for subdividing said tin foil accordingly, both longitudinally and transversely, and feeding the subdivisions to the envelopment mechanisms; means for pressing stickers against tin foil in the region of each application of adhesive to be carried therewith to the envelopment mechanisms.

1,352,630. X-RAY TUBE. THOMAS B. RIDER, Los Angeles, Calif., assignor of one-half to Adolphe Danziger, Los Angeles, Calif. Filed Dec. 30, 1918. Serial No. 268,940. 2 Claims. (Cl. 250—35.)



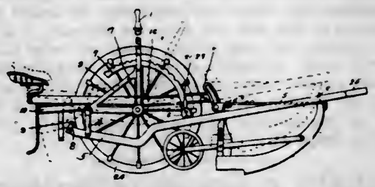
1. In an X-ray tube, a cluster of a suitable number of regulators each regulator containing chemicals of different strength from the chemicals in the others.

1,352,631. RATCHET MECHANISM. CHARLES W. RIPSCH and JAMES C. DAWLEY, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 25, 1919. Serial No. 319,642. 17 Claims. (Cl. 74—16.)



1. In a device of the character described, a toothed wheel, an operating member mounted for movement about the axis of said toothed wheel and having a guideway tangential to said wheel, a pawl slidably mounted in said guideway and having teeth to engage said toothed wheel, said pawl being so arranged that the movement of said operating member in one direction will cause said pawl to be gripped between said guideway and said toothed wheel with a wedging action, and said pawl also being capable of movement about a longitudinal axis to adjust its teeth with relation to the teeth of said toothed wheel.

1,352,632. AUTOMATIC TRACTION-HOIST. CLYDE P. ROSS, Kenilworth, Ill., assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed July 24, 1919. Serial No. 312,979. 9 Claims. (Cl. 187—20.)



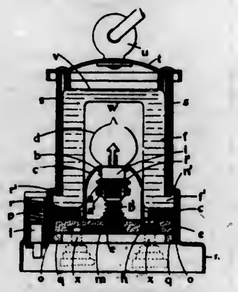
1. In a hoisting drum, a radially thin removable hoisting drum rim comprising a plurality of engaging rim sections and means for separately removing them.

1,352,633. SPRING-SHACKLE. FRANK P. SAWDERS and JAMES G. MURRAY, Pittsburgh, Pa. Filed Dec. 2, 1919. Serial No. 341,951. 2 Claims. (Cl. 267—54.)

1. A spring shackle for the purpose set forth, comprising a bifurcated member the forked portion of which is adapted to receive the end of a spring, the body portion thereof below the fork being hollow to form a lubricating reservoir, and a bearing sleeve extending through the base of said reservoir and adapted to fit over a supporting member, said sleeve being provided thereabout with spaced feed openings, said reservoir surrounding said sleeve and communicating therewith through said openings, the major portion of said reservoir being disposed above said sleeve so that a lubricant therein will have a gravity feed through said openings.

1,352,634. LIFTING DEVICE FOR PLANTERS. EMMANUELL HENRY SNYDER, Davenport, Iowa. Filed Mar. 6, 1916. Serial No. 82,401. 3 Claims. (Cl. 97—86.)

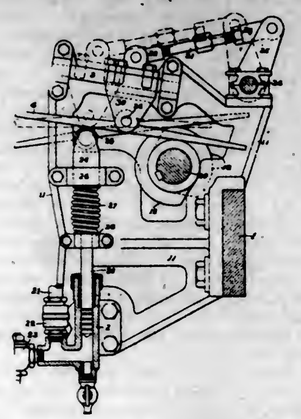
1. In an implement frame, a wheel supported frame, a runner frame pivoted thereto, an axle, a tongue so positioned as to raise the runner frame by its upward movement, having a portion thereof bent downwardly and then



upwardly, said portion being directly beneath said axle, means for raising the rear end of said tongue, a seat to the rear of said axle and pivotally related thereto, the rear end of said tongue being operably related to said seat in such manner as to raise the seat when the rear end of said tongue is raised.

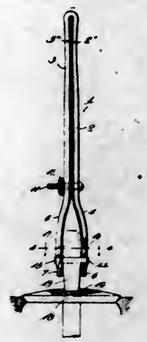
1,352,635. TRACTOR-WHEEL. WILLIAM S. STOTHOFF and CHARLES A. PSILANDER, Easton, Pa., assignors to William Wharton Jr. & Co., Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Sept. 9, 1919. Serial No. 322,702. 3 Claims. (Cl. 305—13.)

1. A wheel of the type recited comprising the combination with floating pads or track-laying units, of a pair of skeleton disks having hub-carrying elements and rim elements integrally united by fluted webs or spokes, bolts connecting the rims and constituting journals, rollers mounted thereon and coöperating with the pads, and eyelet bushings in the rims to accommodate the bolts and constituting thrust provisions for the rollers.



1,352,636. MINER'S ELECTRIC LAMP. THEODORE STRETTON, Cardiff, Wales, and JOHN WILLIAM JONES, Cannock, England, assignors to Haslam & Stretton Limited, Cardiff, Wales. Filed Aug. 11, 1919. Serial No. 316,793. 6 Claims. (Cl. 240—17.5.)

1. An electric lamp comprising in combination an incandescent lamp, a socket within which the plug of the said lamp is fitted, a cap or socket inclosure within which the plug of the said lamp is freely mounted, a spiral spring surrounding the socket and connecting the socket to the upper end of the said cap or socket inclosure, a contact plate beneath the said cap or socket inclosure and the socket, a spring disposed between one of the contacts upon the said contact plate and the end of the lamp plug, and means for connecting the cap or socket inclosure to the other of the contacts upon the contact plate, substantially as described.

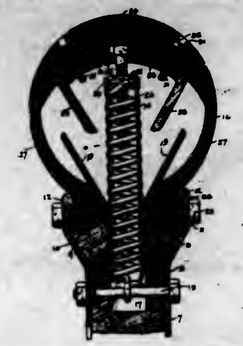


1,352,637. FUEL-FEEDING DEVICE FOR OIL-ENGINES. HENRY W. SUMNER, Seattle, Wash. Filed July 3, 1918. Serial No. 243,213. 20 Claims. (Cl. 123—140.)

1. An oil feeding mechanism comprising a pump, a driving member, a lever interposed between said driving member and the pump and forming the driving connection therebetween, and means for moving the fulcrum of said

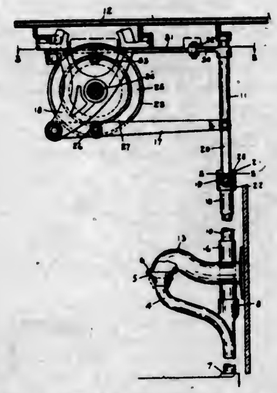
lever in a direction parallel to its position at one extreme to interrupt the driving connection between the pump and the driving member.

1,352,638. VALVE-GRINDING TOOL. EDDIE G. THOMPSON, Devils Lake, N. D. Filed Oct. 2, 1919. Serial No. 327,860. 3 Claims. (Cl. 51—4.)



1. A valve grinding tool comprising a pair of resilient legs having their free ends movable toward and from each other, the free extremities of the legs being shaped to engage in the spanner recesses of a valve, a screw driver blade disposed between said legs, co-acting means between the blade and the legs to prevent rotation of the former and also to permit it to be positioned to extend beyond the extremities of the legs for engagement with a kerf in a valve, or reversed and positioned in the space between the legs in inoperative position, and means to retain the blade in either of said positions.

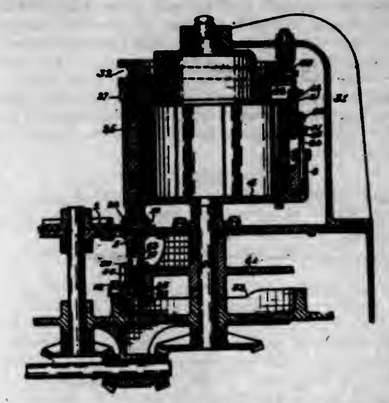
1,352,639. VEHICLE-WHEEL. EMORY A. THOMPSON, Hope, Ark. Filed Apr. 5, 1920. Serial No. 371,298. 7 Claims. (Cl. 152—8.)



7. A vehicle wheel comprising a felly, a rim carried by the felly, outwardly extending flanges formed on the rim, a tire section surrounding the rim, inwardly extending flanges formed on the tire section and disposed inwardly of the flanges on the rim, tension springs uniting the felly

and tire section, and shock absorbing pads arranged intermediate the springs and adapted to be engaged by the tire

section flanges when the tension springs are compressed beyond a certain point.

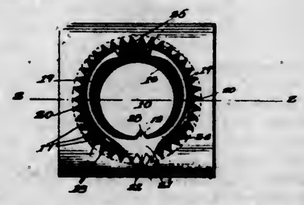


1,352,640. DRAIN-PIPE FOR LIQUID-DISPENSERS. CHARLES A. TRIPP, Wilmington, Del., assignor to Holcomb & Hoke Manufacturing Company, Indianapolis, Ind., a Corporation. Original application filed Oct. 22, 1917, Serial No. 196,854. Divided and this application filed May 5, 1919. Serial No. 294,938. 9 Claims. (Cl. 137—111.)

9. In a liquid dispensing device, the combination with a discharge nozzle, of a drain pipe for said nozzle, a shaft upon which said drain pipe is mounted, cam means for rocking said shaft to swing the drain pipe in one direction so as to bring it into alinement with the end of the discharge nozzle and then swing the drain pipe to move it in the opposite direction, whereby the free end of said nozzle will be out of alinement with said drain pipe, and means to elevate said drain pipe when in said alinement, whereby the free end thereof will enter into the end of the discharge nozzle.

1,352,641. MACHINE FOR APPLYING COMPOUND TO CAN-TOPS. NELSON TROYER, Seattle, Wash., assignor of one-half to Seattle-Astoria Iron Works, Seattle, Wash., a Corporation of Washington. Filed Nov. 20, 1918. Serial No. 263,246. 8 Claims. (Cl. 113—80.)

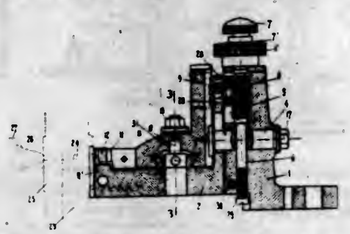
1. A device for applying compound to can tops comprising a revolving head and means for carrying can tops about with said head and for revolving them upon their axes, compound applying pumps having reciprocating plungers, discharge tips adapted to discharge into said caps, and means for operating said pumps comprising a slide mounted in guides carried by the head and having a lateral arm, a rod forming an extension of the pump plunger, tappets carried by said rod and adjustable in position thereon and adapted to be engaged by the arm



of said slide to thereby actuate the pump, a cam follower carried by each slide and a stationary cam track engaged by said cam followers.

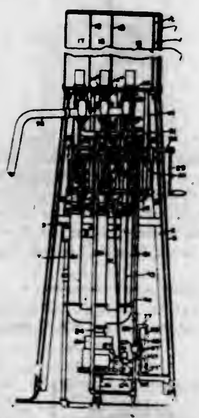
1,352,642. SPACING-CLIP. WILLIAM E. WHITE, Minneapolis, Minn. Filed Dec. 3, 1919. Serial No. 342,068. 4 Claims. (Cl. 72—122.)

1. A spacing clip, comprising a shank having at one end an offset portion forming a recess adapted to receive a reinforcing bar and a hook at its opposite end adapted to engage an adjacent duplicate clip at the junction of its shank and bar-receiving recess, and means at the extremity of the portion constituting the bar-receiving recess for engaging the shank of an adjacent clip, substantially as described.



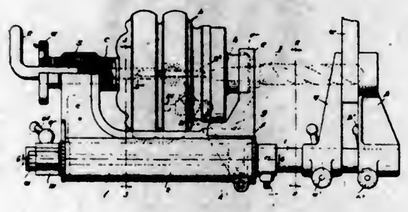
1,352,643. NUT-LOCK. JOHN A. YOUNG, Belair, Md. Filed June 3, 1920. Serial No. 386,241. 4 Claims. (Cl. 151—28.)

1. An improved nut lock comprising in combination with a bolt having a longitudinal groove, a nut having



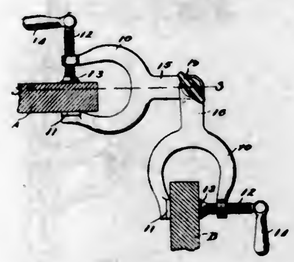
an internally screw threaded opening to admit the bolt and also having an annular chamber on its inner face surrounding the bolt opening and ratchet teeth on the interior of said annular chamber, and a split ring having an inwardly tapering key to enter the groove of the bolt for limited lateral pivoting movement and having one or more teeth at its intermediate portion opposite to said key to engage the teeth of the nut, the end portions of the ring being provided with right angularly extended lugs to permit said ends to be contracted for applying and removing the ring.

1,352,644. TYPE-CASTING MACHINE. ANGELO ALBE, Turin, Italy. Filed Dec. 29, 1919. Serial No. 347,921. 3 Claims. (Cl. 199—80.)



1. In a type casting machine, a part adapted to be mounted on the machine in front of the nozzle for the molten metal, a support arranged on said part to move in a direction parallel with the character face, a member mounted on said support to move in a direction parallel with the character face and perpendicular to the first named direction, means for clamping the type matrix on said member, means for shifting said support and member and means adapted to give a reading of the position of the matrix with regard to stationary parts of the machine.

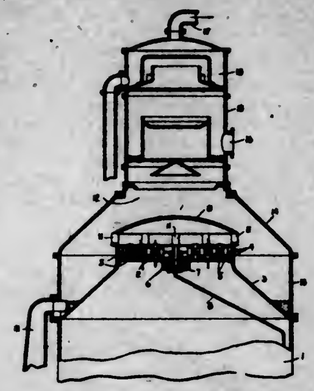
1,352,645. LIQUID-VENDING MACHINE. DAVID W. ANTHONY, Minneapolis, Minn., assignor to Anthony Liquid Vending Machine Co., Minneapolis, Minn., a Corporation of Minnesota. Filed July 11, 1918. Serial No. 244,356. 27 Claims. (Cl. 221—100.)



1. The combination, with a liquid supply tank, of a dispensing tank having a discharge opening, an inlet pipe leading from said supply tank to said dispensing tank, a valve normally closing the passage through said inlet pipe, mechanism for admitting air pressure to said supply tank and simultaneously opening said valve, and an overflow device provided with means mounted to open said supply tank to the exhaust and close said valve when a predetermined quantity of liquid has entered said dispensing tank.

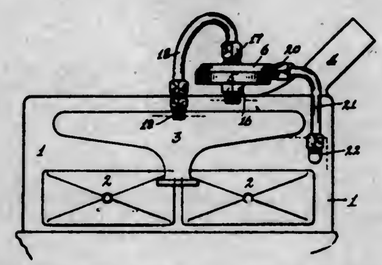
1,352,646. APPARATUS FOR DRILLING, REAMING, AND COUNTERSINKING. OREN F. BALTSLEY, Hagerstown, Md., assignor to The Liberty Tool Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 3, 1919. Serial No. 287,259. 18 Claims. (Cl. 77—82.)

1. A portable apparatus of the character described comprising a motor and a tool driven thereby, a main frame member or bar extending substantially parallel with the axis of the tool and having a feed foot at one end extending substantially at right angles to the frame member, a tool support slidably mounted on the bar, and a cylinder and piston, one connected with the tool support and the other with the frame member with means for supplying pressure fluid for effecting a relative movement between the tool support and frame member and consequently between the feed foot and tool, substantially as described.



1,352,647. DOUBLE CLAMP. GEORGE A. BENTON, Willow Springs, Mo., assignor of one-half to Ottis A. McDill, Willow Springs, Mo. Filed May 21, 1920. Serial No. 383,161. 1 Claim. (Cl. 144—304.)

A sectional clamp, each section including an outer U-shaped frame having a bearing member at one side and an adjustable clamping element through its opposite side opposing the said bearing member, and a shank at the outer end of which the frame is disposed, the inner ends of the two shanks being pivoted in overlapping relation and having relatively engaging ribs and recesses around their pivot, and a clamping wing bolt forming the pivot between the shanks whereby the two sections may be readily adjusted and rigidly held.



1,352,648. RECTIFIER AND CONDENSER. HERMAN E. BEYER, New York, N. Y., and WILLIAM G. HALL, Honolulu, Hawaii, assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 25, 1919. Serial No. 273,200. 2 Claims. (Cl. 127—18.)

1. A combined rectifier and condenser, comprising a vacuum pan, a cone sheet above the same, a rectifier supported by said cone sheet over the vacuum pan, means for draining the rectifier back to the vacuum pan, a crown sheet spaced above the vacuum pan and acting as a baffle to intercept cooling liquid, a casing extending above the rectifier, a condenser supported by said casing above the rectifier, means for draining the said condenser casing, baffles in the condenser forming chambers, means

for admitting circulating cooling liquid to the condenser and means for draining the upper baffle chamber of the condenser.

1,352,649. DEVICE FOR SUPPLYING WATER-MOISTURE TO INTAKES OF INTERNAL-COMBUSTION ENGINES. GEORGE H. BLAKE, Alameda, Calif. Filed Dec. 1, 1919. Serial No. 341,719. 2 Claims. (Cl. 123—25.)

1. A device for supplying moisture to the intake of internal combustion engines comprising a shell consisting of interfitting base and cap members, the base member having an inlet, and the cap member having concentric spaced ribs on its inner surface, the spaces between the ribs intercommunicating and having also an inlet to one end of said inter-rib space and an outlet from the other end thereof; a porous diaphragm confined between the base and cap member and resting on the spaced ribs in the latter member; a connection between the water-system of the engine and the inlet of the base member; a connection between the cylinder intake of the engine and the outlet of the cap member; and a connnection between the valve-tappet chamber of the engine and the inlet of the cap member.

1,352,650. BOTTLE-CLOSURE. CASPER E. BLANCHARD, Chicago, Ill. Filed Dec. 10, 1919. Serial No. 343,779. 4 Claims. (Cl. 215—69.)

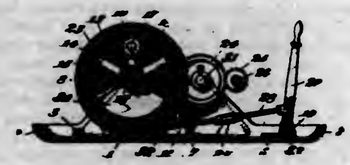
1. The combination with a cylindrical bottle neck of a cylindrical rubber closure cemented to said neck, said closure having interior walls tapering toward the central axis of the closure to form a circular valve seat, said closure having an integral cap, and integral hollow lugs carried by said cap, said lugs having recesses extending above the upper face of the cap.

1,352,651. SHOCK-ABSORBER. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed Nov. 21, 1919. Serial No. 339,585. 7 Claims. (Cl. 267—45.)

2. The combination with a vehicle body spring, and a perch hanger, of a shock absorber construction including shackle plates pivoted at one end to said perch hanger and extending vertically thereabove, a spring supporting shackle pivoted at one end to the upper ends of the shackle plates and at a point vertically over the pivot end of the perch hanger, the opposite end thereof being pivoted to the body spring, and a shock absorbing spring connected to the body spring, said shock absorbing spring having a looped portion for connection with said shackle and a bowed portion for normally holding said shackle plates in vertical position and for resisting movement of the body spring.

1,352,652. CURTAIN-HANGER. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1918. Serial No. 262,633. 5 Claims. (Cl. 156—22.)

1. In a curtain hanger, the combination with end brackets each having a rod-supporting socket formed with a recess in a wall thereof, of a curtain-rod having secured to each end thereof an extension-strip formed with a transversely elastic tongue, and said tongue having a protuberance thereon adapted to snap into said recess when said extension-strip is entered into said socket.



2. In a curtain hanger, the combination with end brackets each having a rod-supporting socket formed with a recess in a wall thereof, of a curtain-rod having secured to each end thereof a thin steel extension-strip that is slitted lengthwise to provide an integral transversely elastic tongue, and said tongue having a protuberance thereon adapted to snap into said recess when said extension-strip is entered into said socket.

3. In a curtain hanger, the combination with end brackets each having a rod-supporting socket formed with a recess in a wall thereof, of a curtain-rod having secured to each end thereof a thin steel extension-strip that is slitted lengthwise to provide an integral transversely elastic tongue having a free outer end, and said tongue having a protuberance thereon adjacent to its free end adapted to snap into said recess when said extension-strip is entered into said socket.

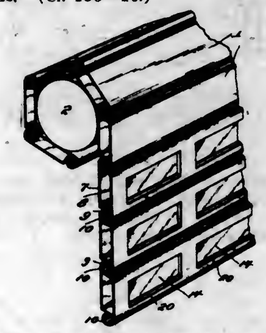
4. In a curtain hanger, the combination with end brackets each having a rod-supporting socket formed with a recess in a wall thereof, of a curtain-rod having secured to each end thereof an extension-strip formed with a transversely elastic tongue, said tongue having a protuberance thereon coöperating with said recess to yieldably lock the curtain-rod in the socket, and said protuberance being steeper on the side thereof remote from the outer end of said extension-strip than on the side thereof nearest the outer end of said extension-strip.

5. In a curtain hanger, the combination with end brackets each having a rod-supporting socket formed with a recess in its front wall, of a curtain-rod having secured to each end thereof a thin steel extension-strip formed with an integral longitudinally extending tongue, said tongue having a protuberance thereon adjacent to its free end coöperating with said recess to yieldably lock the curtain-rod in the socket, and said protuberance being steeper on the side thereof remote from the outer end of said extension-strip than on the side thereof nearest the outer end of said extension-strip.

1,352,653. MINE-HAUL. HERBERT V. BROWN, Cherry Tree borough, Pa. Filed Nov. 12, 1919. Serial No. 337,448. 5 Claims. (Cl. 254—186.)

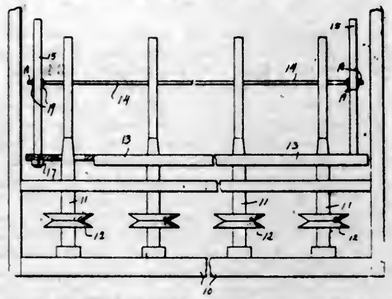
1. A mine haul comprising a winding drum, an internal gear secured thereto, a loose internal gear of different diameter secured to and mounted on the same shaft, an external gear provided with two pinions of different diameters mounted thereon, each adapted to mesh with one of the internal gears aforesaid, brake bands adapted to control each of said internal gears, and means for driving said external gear, whereby the drum can be rotated at normal speed or at any lesser speed as may be desired.

1,352,654. BANJO. NORMAN BROWN, Muenster, Tex. Filed June 8, 1920. Serial No. 387,308. 1 Claim. (Cl. 84—293.)



A musical instrument of the banjo type having a neck or finger board consisting of separable sections and means for detachably connecting the adjoining ends thereof, said means consisting of a pin having a cross sectionally irregular body portion seated in the extremity of one section and provided with a threaded pin for engagement with the socket in the adjacent extremity of the adjoining section.

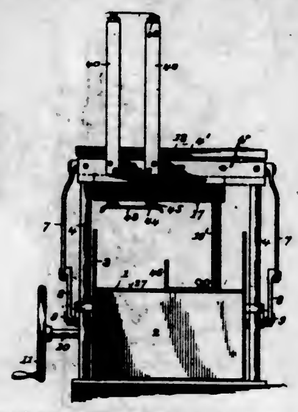
1,352,655. METHOD OF PRODUCING HYDROCYANIC ACID. GUY H. BUCHANAN, Roselle, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Nov. 12, 1919. Serial No. 337,468. 5 Claims. (Cl. 23—1.)



1. The process of producing hydrocyanic acid from a crude cyanid containing substantial quantities of calcium chlorid, lime, and sodium chlorid which consists in preparing a mixture of refrigerated dilute solutions containing a mineral acid and said crude cyanid, there being more than sufficient acid present to react with all the impurities; and passing said mixture in countercurrent against a source of heat whereby the gas dissolved in said solution is driven off; and suitably recovering said evolved gas, substantially as described.

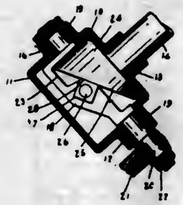
1,352,656. FLEXIBLE CURTAIN. JOHN CAHILL, Norfolk, Va. Filed Nov. 25, 1919. Serial No. 340,557. 14 Claims. (Cl. 156—16.)

14. A slat unit for flexible curtains comprising a wall section having end coils projected in opposite directions, one of said coils being developed from the plane of the wall and the other coil being developed from a right angle extension of the wall.



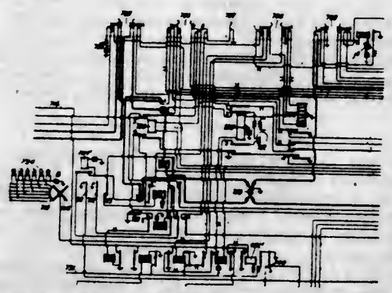
1,352,657. SEPARATOR FOR SPINNING-FRAMES. SAMUEL CARD, East Providence, R. I. Filed Feb. 26, 1920. Serial No. 361,391. 4 Claims. (Cl. 118—11.)

1. In a spinning machine, the combination with a series of spindles and a vertically traversing ring rail through which the spindles pass, of a separator comprising a longitudinally extending rod disposed to one side of the spindles and extending parallel to the ring rail, and supports for the rod mounted upon the ring rail and engaging the opposite ends of the rod.



1,352,658. SLICING-MACHINE. CHARLES A. DIES, Chicago, Ill. Filed Jan. 31, 1920. Serial No. 355,498. 15 Claims. (Cl. 17—24.)

1. In a slicing machine, the combination of a supporting bed, a slicing carriage arranged transversely of said base, means for imparting movement in a vertical plane to said carriage, means for confining said carriage to movement in a vertical line, a slicing blade mounted

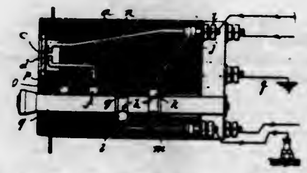


for reciprocation in said carriage, and means for imparting rapid reciprocation to said blade.

1,352,659. STEERING DEVICE. ALFRED E. DRAKE, Indianapolis, Ind., assignor to Drake Manufacturing Company, Indianapolis, Ind., a Corporation. Filed May 28, 1920. Serial No. 385,059. 4 Claims. (Cl. 74—79.)

4. In a mechanism, a rotatable cam having a cam surface obliquely disposed to the axis of rotation, an oscillatably supported stirrup straddling said cam, and a pair of bearing means extending transversely of the stirrup each including a flat surface for engagement with said cam surface, each of said bearing means being swiveled and positioned upon opposite sides of the stirrup.

1,352,660. TELEPHONE-EXCHANGE SYSTEM. ALFRED H. DYSON, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1915. Serial No. 65,804. 104 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a line selector switch, a plurality of lines terminating thereon, a connecting circuit selector switch individual to said line switch, a plurality of groups of connecting circuits terminating thereon and extending to a plurality of operators, means for simultaneously starting said line and connecting circuit switches, and means including said switches for extending a line to an idle connecting circuit in a group leading only to an operator then idle.

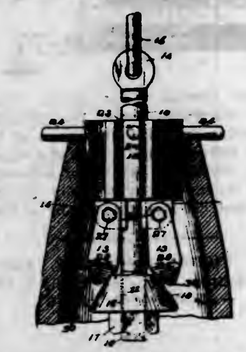
1,352,661. SIGN. SAMUEL GIBBY, Boston, Mass. Filed June 24, 1918. Serial No. 241,461. 2 Claims. (Cl. 40—133.)

1. The combination with a casing and light emitting means in said casing of a stencil plate and a semi-transparent plate coextensive therewith, both plates forming part of a wall of said casing, and an apertured casing wall outside of said plates light-transmitting, differently colored closing means for said apertures, adapted to carry indicating marks, movable covering means intermediate said closing means, and adapted to selectively and concealingly engage with said closing means.

1,352,662. IGNITION-TROUBLE FINDER. LEE B. GREEN, Detroit, Mich., assignor to The Federal Machine Products Co., Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 17, 1919. Serial No. 277,468. 10 Claims. (Cl. 175—183.)

1. An ignition trouble finder for an internal combustion engine, comprising means for indicating trouble in the wires leading from the distributer or back of the same, means for indicating the failure of a circuit through any one of the plugs and capable of separately testing each plug, and means for successively cutting out the plugs to make apparent a missing of any of the cylinders.

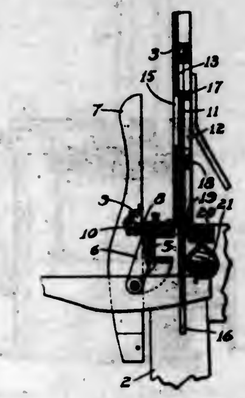
1,352,663. FISHPOLE-SUPPORT. CHARLES A. D. HAFNER, Des Moines, Iowa. Filed July 8, 1919. Serial No. 309,399. 4 Claims. (Cl. 248—37.)



3. In a device of the class described a substantially cylindrical socket of resilient material having a contracted portion adjacent to one end, registering recesses in the last mentioned end, and an elongated opening adjacent to the other end whereby a comparatively narrow resilient band may be formed adjacent to the last described end, spaced outwardly extending ears fixed to the cylinder at either side of one of said recesses, said ears having alined openings therein, and a rod having one end pivoted in said openings whereby said rod may be swung from position with its longitudinal axis parallel with the longitudinal axis of the socket to position within said recesses.

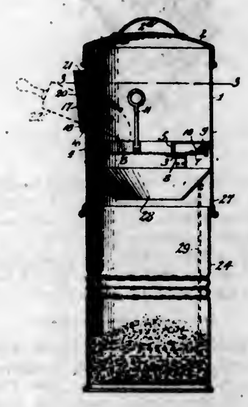
1,352,664. LIQUID-DISPENSING PUMP. WILLIAM T. HATMAKER, Dayton, Ohio, assignor to The Huffman Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Continuation of application filed Feb. 27, 1919, Serial No. 278,491. This application filed Sept. 8, 1919. Serial No. 322,249. 13 Claims. (Cl. 221—108.)

1. In a liquid dispensing apparatus, a cylinder having a discharge opening at one end, a piston mounted in said cylinder, a conduit to connect said discharge opening with said cylinder on the intake side of said piston, and thereby permit the liquid remaining in the cylinder after an incomplete stroke of the piston, to be returned to the intake end of the cylinder, and means to control the passage of liquid through said conduit.



1,352,665. LIFTING-DOG. MAURICE F. HEALY, Watertown, Mass. Filed July 19, 1919. Serial No. 312,088. 9 Claims. (Cl. 294—89.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A lewis, including a lifting rod, a spreader on the lower end of the rod, an elongated sleeve loosely mounted on the rod and slidable longitudinally thereof, means carried by the sleeve for suspending the same in the mouth of a cavity, and arms connected to the lower end of the sleeve and actuated by the spreader to engage the walls of the cavity.

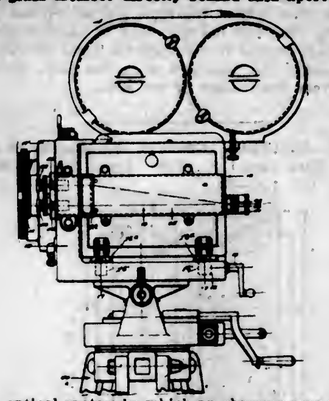


1,352,666. AMUSEMENT APPARATUS. JAMES I. HOLCOMB and JACOB F. HOKE, Jr., Indianapolis, Ind., assignors to Holcomb and Hoke Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Feb. 25, 1919. Serial No. 279,146. 7 Claims. (Cl. 46—61.)

1. In an amusement apparatus the combination with a plurality of vertically disposed pins pivoted adjacent their longitudinal center so that their lower ends when struck by a pin ball will move upwardly when pivoting, and a back board having openings therethrough, of numeral carrying means operable by the lower portion of

said pin when pivoted for bringing the numerals into registration with said openings in the back board.

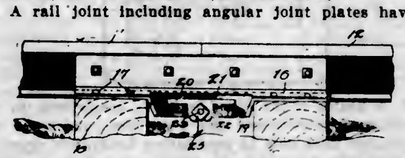
1,352,667. ASH-SIFTER. JOHN A. KESSEL, Buffalo, N. Y. Filed Mar. 6, 1917. Serial No. 152,530. 4 Claims. (Cl. 83—60.)



1. An ash sifter comprising a cylindrical sifting chamber having its axis arranged vertically and provided with internal supports, and a circular sieve adapted to rest on said supports and to oscillate horizontally thereon and having a part of its side flattened to form a space between the sieve and the wall of the sifting chamber.

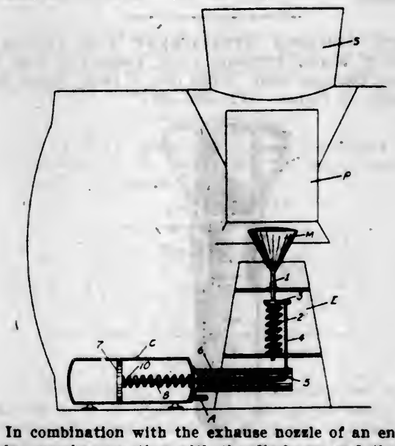
1,352,668. DOUBLE-EXPOSURE MECHANISM FOR MOTION-PICTURE CAMERAS. JOHN E. LEONARD, Los Angeles, Calif, assignor to The National Motion Picture Camera Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 20, 1917. Serial No. 163,497. 8 Claims. (Cl. 88—16.6.)

1. In a motion picture camera; an aperture plate having two openings corresponding to different pictures on a standard strip of film; two lenses; means for adjusting the position of each lens with regard to one of said open-



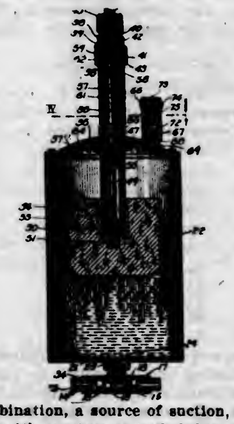
ings; a ground glass member; means for placing said ground glass member directly behind said aperture plate;

and an optical system by which an observer sees the images produced by the two lenses superimposed on each other.



1,352,669. RAIL-JOINT. DOUGALD MCEACHERN, Nelson, British Columbia, Canada. Filed Mar. 14, 1919. Serial No. 282,743. 4 Claims. (Cl. 238—186.)

2. A rail joint including angular joint plates having

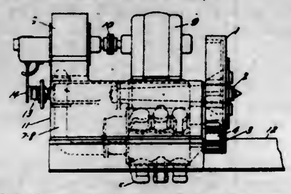


depending side brackets intermediate their ends, provided with slotted openings, a wedge extending horizontally between the joint plate brackets and through said openings, and means acting to continuously urge said wedge inwardly and to take up wear, including a spring engaging a portion of one of the joint plates, and a bolt connected with and extending from the said spring and engaging a portion of the wedge, as described.

1,352,670. DRAFT-REGULATOR. ELBERT MCKIERNAN, Fort Madison, Iowa. Filed Sept. 13, 1919. Serial No. 323,536. 1 Claim. (Cl. 162—7.)

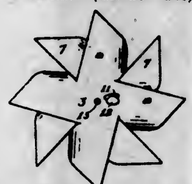
In combination with the exhause nozzle of an engine, a valve member coacting with the discharge end thereof, a rod depending from the valve member and supported for endwise movement within the nozzle, a stop fixed to the rod, a spring engaging the stop to constantly urge the rod and valve member in a direction away from the nozzle, a cylinder positioned to one side of the exhause nozzle, a tubular member extending within the nozzle, a piston mounted for rectilinear movement within the cylinder, a rod coacting with the piston and extending exteriorly of the cylinder and within the tubular member, a guide roller carried by the inserted end portion of the tubular member, and a flexible member secured to the stop carried by the first named rod and passing around the guide roller into the tubular member, said flexible member being also secured to the outer end portion of the piston rod.

1,352,671. APPARATUS FOR SUPPLYING FUEL TO HYDROCARBON-MOTORS. GEORGE B. MAEGLY, Kansas City, Mo., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1915. Serial No. 59,122. 16 Claims. (Cl. 158—36.)



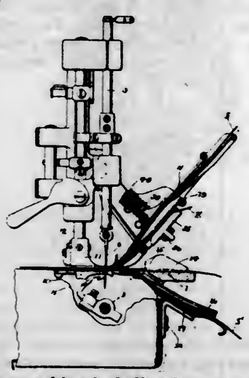
1. In combination, a source of suction, a float tank connected therewith, a storage tank below the level of said float tank, and connected with said float tank, a float in said float tank, a valve operated by said float and controlling the connection of said source of suction, and a second valve also controlling the connection of said source of suction, said second valve closing with said first named valve, but remaining closed until after said first named valve has opened and moved a predetermined amount.

1,352,672. GEE-STRAP. CLARK WILFRED MARTIN, North Union township, Fayette county, Pa., assignor of one-half to Asa L. Martin, North Union township, Fayette county, Pa. Filed Oct. 16, 1918. Serial No. 258,313. 2 Claims. (Cl. 132—25.)



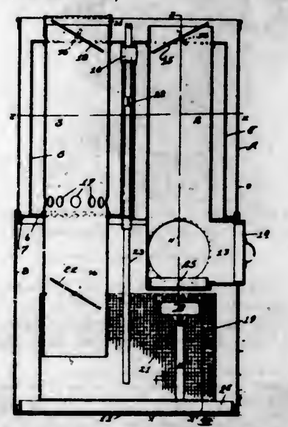
1. A gee strap adapted to serve as the holding strap of a hat comprising two separable sections, the extremities of one section being adjustably secured to the extremities of the second section, the strap when the sections are connected being substantially continuous, the central portion of one of the sections having a longitudinally disposed slit, the portions of said section at opposite sides of the slit providing branches to engage above and below the chin of the wearer.

1,352,673. MACHINE-TOOL CONTROL. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 27, 1919. Serial No. 307,161. 11 Claims. (Cl. 82—2.)



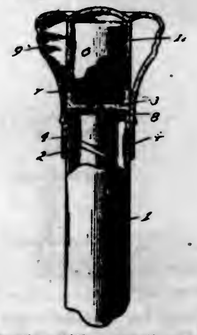
4. A roll lathe control, comprising the combination of a face plate, a prime mover, a hydraulic transmission interposed between the prime mover and face plate and comprising a reversible variable fluid delivery pump, a hydraulic engine, and their complemental fluid connections, and means for controlling the delivery of the pump.

1,352,674. PINWHEEL. CHARLES F. MITCHEL, Rochester, N. Y., assignor to Bastian Bros. Company, Rochester, N. Y., a Corporation. Filed Sept. 24, 1919. Serial No. 326,022. 1 Claim. (Cl. 46—14.)



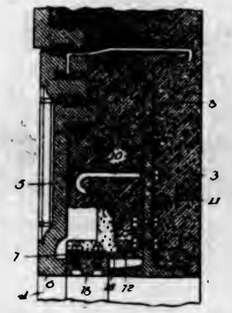
A pin wheel formed of two differently slitted blanks each having blade forming portions rolled to provide blades, the blades of one blank alternating with the blades of the other blank and coöperating with each other to prevent relative turning of the blanks in one direction, one of said blanks having an opening and the other having a tongue extending into said opening to prevent the turning of the blanks in the opposite direction.

1,352,675. SEWING-MACHINE. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 13, 1917. Serial No. 180,371. 6 Claims. (Cl. 112—136.)



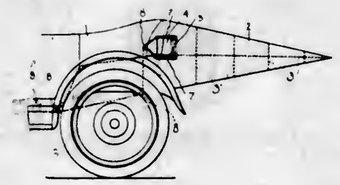
1. A sewing machine including in combination, a work support, an overhanging arm, stitch forming mechanism, means for guiding fabric sections for forming a fabric pocket, means carried by the overhanging arm for guiding an elastic tape into said fabric pocket as it is being formed, a shoe for engaging the tape for placing the same under tension, a plate supporting said shoe, a post mounted on the plate, a spring surrounding the post and normally forcing the shoe against the tape, a lever carried by the overhanging arm and normally out of engagement with said post and means for moving the lever to cause the same to engage the post and move the plate to release the tape from the tension of the shoe.

1,352,676. HEATER. CHARLES A. MOORE, St. Paul, Minn. Filed Sept. 19, 1918. Serial No. 254,869. 4 Claims. (Cl. 126—84.)



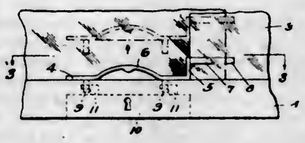
3. A heater of the class set forth, comprising, in combination an outer casing open at its lower and upper ends, a jacketed inlet duct in said casing having its upper end opening into a space to be ventilated and its lower end opening to the outer atmosphere to admit fresh air into the lower end of the duct, said outer casing being formed with a water reservoir surrounding the jacket of the duct so that liquid placed in the reservoir may be heated by the jacket and vaporized, and a heating element associated with the lower end of said duct for heating the air passing upwardly through the duct, said jacket having an outlet through which air entering the lower end of said casing and passing upwardly through the jacket may escape, whereby outside fresh air is warmed and moistened and will pass upwardly above said inlet duct, and vitiated air is admitted into the drum and is expelled to the outer atmosphere.

1,352,677. ERASER ATTACHMENT FOR PENCILS. WADE W. MOORE, Pittsburg, Calif., assignor to Jesse E. Roach, Oakland, Calif. Filed Dec. 1, 1919. Serial No. 342,021. 8 Claims. (Cl. 120—38.)



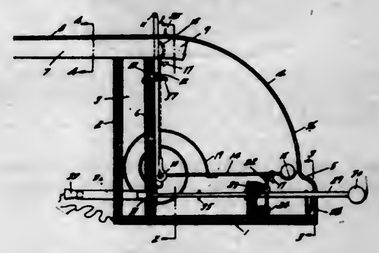
1. The combination with a pencil, comprising a magazine and a shell surrounding the magazine, of a cup mounted upon the end of the magazine and provided with an annular flange to surround the shell of said pencil; an eraser mounted within the cup; means for retaining said eraser within said cup; and an ornamental knob adapted for engagement with the cup to inclose said cup and eraser therein.

1,352,678. BUILDING STRUCTURE. DANIEL J. MURNANE, Chicago Heights, Ill. Filed Jan. 9, 1919. Serial No. 270,253. 11 Claims. (Cl. 72—98.)



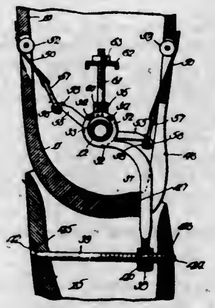
1. The combination with a building-wall formed of a body-portion with metal reinforcement therein and containing an opening and a facing of blocks, or the like, connected with said body-portion and extending adjacent said opening, of means anchored directly to said reinforcement for securing a structure in said opening.

1,352,679. AIR-DEFLECTING DEVICE. CORNELIUS T. MYERS, Detroit, Mich. Filed Nov. 11, 1916. Serial No. 130,715. 3 Claims. (Cl. 280—159.)



1. As a new article of manufacture, a collapsible conical shaped deflector adapted for attachment to the rear end of a vehicle to prevent the formation of eddies of air at the rear end of the vehicle.

1,352,680. SHOW-CASE LOCK. HARRY NAGLER, Brooklyn, N. Y. Filed May 27, 1920. Serial No. 384,704. 6 Claims. (Cl. 70—27.)

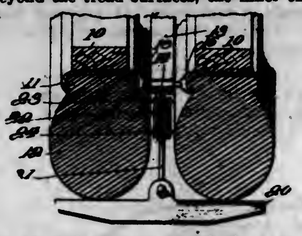


3. The combination with the bottom and oppositely sliding doors of a show case, said doors having one of their ends overlapped when in closed position, a lock mounted in the bottom of the show case, a plate resting upon the bottom of the show case and detachably engaged by said lock, one end of said plate being upturned and abutting the overlapped end of one of said doors to prevent opening of this door, and an arm carried by the upturned end of said plate and extending between the overlapped ends of said doors and provided with means abutting the overlapped end of the other door to prevent opening of this door.

1,352,681. TOY CANNON. WILLIAM L. NICOLS, Tuscumbia, Ala. Filed Aug. 29, 1919. Serial No. 320,737. 6 Claims. (Cl. 46—46.)

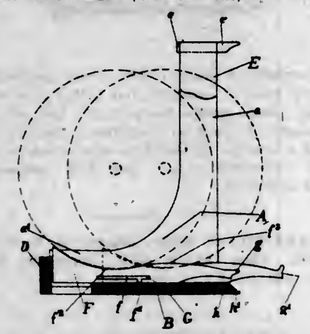
2. As an article of manufacture, a toy comprising in combination a base, a catapult and a pop gun mounted on said base, latch means to hold the catapult set, a common reciprocable element carrying a plunger for the pop gun, and a trip for the latch so related as to produce simultaneous operation of pop gun and catapult, substantially as described.

1,352,682. ARTIFICIAL LEG. JOSEPH R. B. NORFOLK, Chicago, Ill. Filed June 9, 1919. Serial No. 302,658. 7 Claims. (Cl. 3—2.)



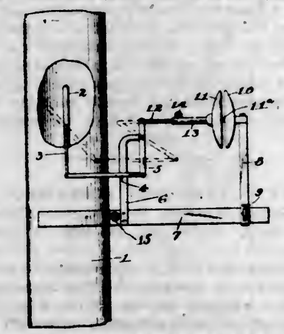
1. The combination of an upper leg member, a lower leg member, a hinge-pin pivotally connecting said members, an equalizing bar pivotally mounted intermediate its ends on said hinge-pin, and a flexible suspender having one of its ends connected to one end of said equalizing bar and its other end connected to the other end of the equalizing bar, the suspender having a length enabling it to pass over the wearer's shoulder and hold the artificial leg in place.

1,352,683. TRACTION-INCREASING DEVICE. JOCELYN-EMILE OLLIVIER, Haute-Savoie, France. Filed Aug. 10, 1917. Serial No. 185,482. 5 Claims. (Cl. 152—2.)



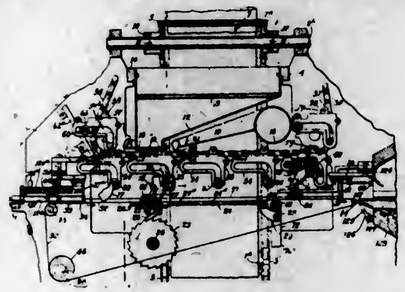
1. The combination with a vehicle wheel having a pair of spaced apart tread surfaces of a ring arranged between the treads and adjacent the rim of the wheel, links pivotally connected with and extending outwardly from said ring, and arms each pivotally connected at an intermediate point in its length to one of the links and each

arm having at its outer end an individual spike that projects beyond the tread surfaces, the inner ends of said



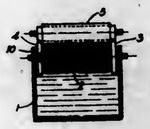
arms being adapted to connect with the supporting ring to limit turning movement of the arm and spike relative to the wheel in one direction.

1,352,684. RECORD-CABINET. OTTO L. OSTENDORF, Rochester, N. Y. Filed Mar. 4, 1920. Serial No. 363,227. 2 Claims. (Cl. 211—16.)



2. A record cabinet comprising a series of partitions and record supporting slides movable between the partitions, each slide having a concave curve toward the rear to receive the edge of a record, and a convex curve continuous with the concave curve toward the front to retain the record on the slide, said slide also having a longitudinal slot and a vertical slot extending from the bottom edge to the longitudinal slot, and a transversely extending rod engaging said longitudinal slot and acting to limit forward movement of the slide, each slide acting to support a record on its upper edge and being independently removable by lifting it away from said rod.

1,352,685. AUTOMATIC TEMPERATURE-REGULATOR. FRANK OSBORN, Wiley, Colo., assignor of one-half to George W. Finnup, Garden City, Kans. Filed Dec. 20, 1919. Serial No. 346,202. 11 Claims. (Cl. 236—95.)



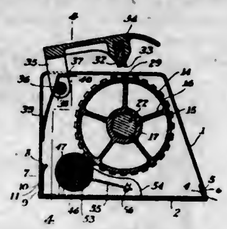
1. A temperature regulator including a heat radiating element, a damper therefor, means for controlling said damper, said means including a plurality of thermostats, one of said thermostats exposed to radiant heat from said element and shielding another thermostat from said radiant heat.

1,352,686. COATING AND STROKING OR DECORATING MACHINE. PANAYIOTIS PANOULIAS, New York, N. Y. Filed Aug. 3, 1911. Serial No. 642,090. 70 Claims. (Cl. 91—3.)

1. A machine for coating and decorating candy cores comprising, in combination, a traveling core support, means thereover for supplying coating material to the cores, and a contacting stroking device also over said support and operative upon the freshly-coated cores while the latter remain upon the support.

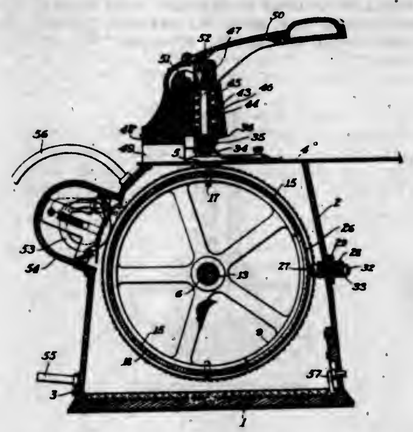
1,352,687. PRODUCING FELT. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed July 31, 1919. Serial No. 314,587. 11 Claims. (Cl. 92—38.)

1. As a new article of manufacture, a sheet of untrimmed felt having lateral extensions thereon.



1,352,688. TOOL. VICTOR H. PETERSON, Waverley, Mass. Filed Feb. 19, 1919. Serial No. 278,007. 4 Claims. (Cl. 29—105.)

1. A rotary cutting tool having a head with grooves extending in the general direction of the axis; blades and keys adapted to fit removably in the grooves, each key being tapered endwise and adapted to press its blade laterally toward a wall of the groove; said keys being also tapered in the radial direction with the smaller dimension outward and the groove wall being inclined to correspond.

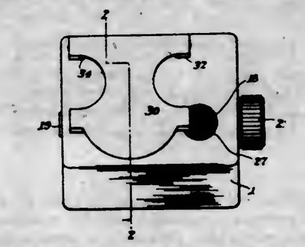


1,352,689. CHECK-PROTECTOR. HENRY J. PLANT, Rochester, N. Y., assignor to Defiance Check Writer Corporation, Rochester, N. Y., a Corporation. Filed Feb. 15, 1917. Serial No. 148,781. 4 Claims. (Cl. 101—20.)

1. In combination with a work support, a rotary printing wheel, a centering wheel turning with the rotary printing wheel, a platen for coöperation with said printing wheel, a platen carrying lever, a rod on which said lever

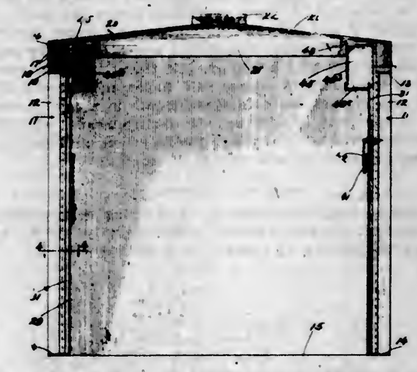
turns, and a pawl mounted to turn on said rod to cooperate with said centering wheel.

1,352,690. PRINTING-MACHINE. HENRY J. PLANT, Rochester, N. Y., assignor to Defiance Check Writer Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 8, 1916, Serial No. 82,810. Renewed Mar. 12, 1920. Serial No. 365,331. 11 Claims. (Cl. 101—19.)



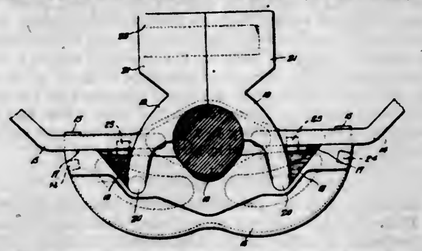
1. In a printing machine, indicating means having consecutive numbers thereon, a printing member having lines of type thereon, each line being adapted to print an amount which bears a definite relation to one of the numbers on the indicating means, and means detachably securing the printing member in proper relation to the indicating means so that other printing members bearing other relations may be associated with said indicating means.

2. In a printing machine, a suitably mounted shaft, indicating means connected to the shaft, a pair of relatively adjustable heads mounted on said shaft, a spring tending to separate said heads, means for holding said heads against separation, means for preventing the relative turning of the heads, a cylindrical printing member detachably interlocked with said heads, and means for defining the position of the printing member on the heads to correspond with the indicating means.



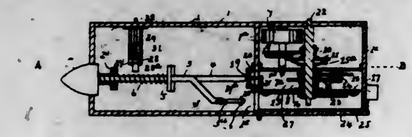
1,352,691. CHECK-PROTECTOR. HENRY J. PLANT, Rochester, N. Y., assignor to Defiance Check Writer Corporation, Rochester, N. Y., a Corporation. Filed Jan. 12, 1917, Serial No. 141,973. Renewed Mar. 12, 1920. Serial No. 365,332. 8 Claims. (Cl. 101—20.)

1. A check protector comprising a casing having a slot in its top wall and two slots in rear of said slot, a printing wheel mounted in the casing and having type thereon adapted to be exposed through the first mentioned slot, a frame arranged on the inside of the casing and having



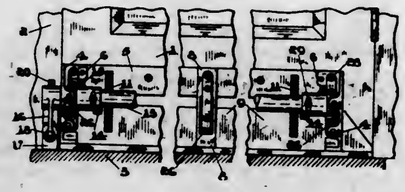
two arms projecting to the exterior of the casing through the two slots, and a lever pivoted to said arms and carrying a platen for coöperation with the printing wheel.

1,352,692. GRAIN-DOOR FOR CARS. EDWARD POSSON, Chicago, Ill. Filed June 5, 1916. Serial No. 101,798. 7 Claims. (Cl. 20—32.)



3. In a device of the class described, a door post, a door jamb attached to said post, a guide plate detachably connected to said door jamb to form a guideway between said plate and post, a grain door comprising a plurality of sections movable in said guideway, and a bracket adapted to receive said sections therefrom and to support the same in inoperative position.

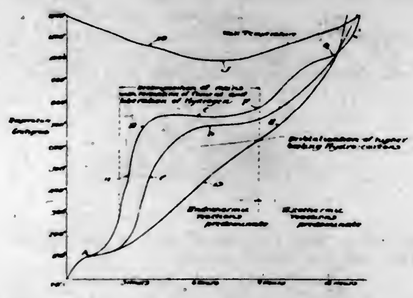
1,352,693. SPARK AND THROTTLE LEVER LOCK. JOSEPH H. PRICE, Cape Girardeau, Mo. Filed Nov. 24, 1919. Serial No. 340,126. 3 Claims. (Cl. 70—126.)



1. The combination with a steering post, control levers and quadrant on which the said levers work, of a securing member including a body plate seatable on the quadrant with one edge opposing the control levers in their inactive positions, movable arms carried by the said body plate and shiftable into embracing relations around the steering post, and means for locking the arms around the steering post, said lever opposing edge of said body plate having extensions adjacent to its opposite sides projecting beneath the levers in inactive positions for the purpose stated.

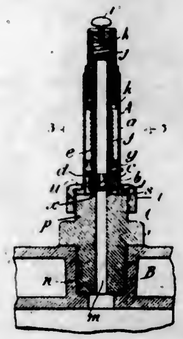
1,352,694. TIME-LOCK. JAMES S. RAY, Duluth, Minn. Filed Mar. 21, 1919. Serial No. 284,120. 2 Claims. (Cl. 284—1.)

1. The combination with a suitable case, of a spring actuated bolt adapted in operative position to extend therefrom; a clock mechanism including a minute shaft, an hour stem concentric with said shaft, means for driving said shaft and stem, a stationary plate, a plate mounted upon said hour stem concentrically therewith and adapted to rotate therewith, said rotatable plate being approximately parallel with said stationary plate and spaced therefrom; a rod extending rearwardly from said bolt toward said clock mechanism and adapted to extend a short distance into the space between said two plates when said bolt is retracted; a gate positioned across the path of movement of said rod toward said space; a finger extending from said gate into said space; means carried by said rotatable plate and adapted at some time during the rotation of said plate to engage said finger and thereby lift said gate; means for guiding said gate in a path eccentric to the path of said finger-engaging means, whereby said finger will be drawn out of engagement with said engaging means when said gate is lifted.



1,352,695. WEATHER-STRIP. LLEWELYN MORRIS REES, Hamilton, Ontario, Canada. Filed Sept. 12, 1919. Serial No. 323,311. 2 Claims. (Cl. 20—68.)

1. In a weather strip, the combination of a transverse wooden strip adapted to be secured to the face of a door; metal end frames provided with flanges secured to said wooden strip; a vertically movable strip fitted below the fixed strip and behind the end frames; a rock shaft journaled in the end frames; rock arms on said shaft adapted to engage the upper edge of the movable strip; a rock arm on said shaft the end of which is adapted to engage the door jamb to rock the shaft and thus depress the movable strip; springs connected to the fixed strip and the movable strip and tending to raise the latter; and springs tending to press the movable strip toward the door.



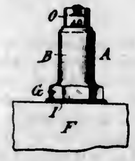
1,352,696. ART OF COKING COAL. ARTHUR ROBERTS, Evanston, Ill., assignor to American Coke and Chemical Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 1, 1919. Serial No. 341,696. 22 Claims. (Cl. 202—8.)

11. The process of treating coals to produce metallurgical coke in which said coals the amount of disposable hydrogen does not exceed approximately fifty-eight per cent. of the amount of disposable oxygen, which consists in charging the same into a retort and introducing heat into the coal mass through the medium of the retort, the heat being introduced so rapidly that the temperature of the mass is raised to the temperature of decomposition of its resinous constituents before excessive evaporation thereof, whereby a sufficient residue of said resinous constituents is decomposed in contact with the humous bodies

in each portion of the mass to bind said humous bodies together with the consequent production of a metallurgical coke.

1,352,697. GAGE FOR GAS-ENGINES OR THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed June 3, 1911, Serial No. 631,059. Renewed Dec. 3, 1919. Serial No. 342,267. 17 Claims. (Cl. 73—111.)

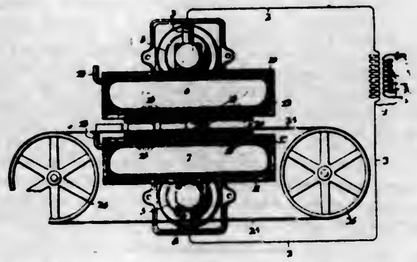
1. The combination of a pressure gage and a fitting adapted to connect said gage to the cylinder of a gas engine or the like, said gage having a packing attached thereto at one end adapted to fit against said fitting when applied to an engine and to make a contact-connection with a tire-valve when disconnected from said fitting.



2. The combination of a pressure gage and a fitting adapted to connect said gage to the cylinder of a gas engine or the like, said gage having a packing chamber at one end, a packing in said chamber adapted to fit against said fitting when applied to an engine and to make a contact-connection with a tire-valve when disconnected from said fitting.

3. The combination of a pressure gage and a fitting adapted to connect said gage to the cylinder of a gas engine or the like, said gage having a packing chamber at one end, a packing in said chamber adapted to fit against said fitting when applied to an engine and to make a contact-connection with a tire-valve when disconnected from said fitting, said fitting having a nipple or lead x of substantially the same size as the end of a tire valve adapted to project into contact with said packing.

4. The combination of a pressure gage and a fitting adapted to connect said gage to a cylinder of a gas engine or the like, said gage comprising a casing having a flange at one end, and said fitting comprising a swivel collar adapted to engage said flange and to slip off said casing at the end opposite said flange.

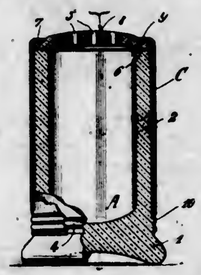


5. A pressure gage having a pressure member and an indicating member, said members being normally disconnected, and means for connecting said members whereby said indicating member may partake of the expansive and contractile movements of said pressure member.

1,352,698. PRESSURE-GAGE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Aug. 26, 1911, Serial No. 646,107. Renewed Dec. 5, 1919. Serial No. 342,803. 10 Claims. (Cl. 73—111.)

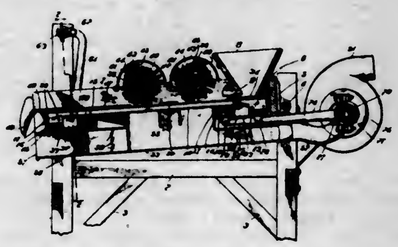
1. A gage comprising a casing, a pressure responsive element in said casing adapted to move in response to variations of pressure acting against it, said casing being made of a single piece of metal and having engaging means on the exterior thereof for attaching the same to a recessed part of a fluid container, said gage having other means on the end of the casing adapted to make connection with a container, said gage when applied to a container by the use of the exterior engaging means, inclosing said other means for making connection with a casing, said gage having a restricted orifice through which communication with the pressure responsive element is established.

1,352,699. PROCESS OF DESTROYING INSECT LIFE. FRANKLIN S. SMITH, Philadelphia, Pa. Filed Apr. 30, 1918, Serial No. 231,666. Renewed Oct. 21, 1919. Serial No. 332,318. 18 Claims. (Cl. 175—311.)



2. The process of treating products within containers for the purpose of destroying insect life, which consists in the subjection of the products within such containers to the action of disruptive conduction of current density limited to a value below that which would damage the products or containers and in which the voltage gradients across the products and containers are less than the rupturing gradients of the products and containers being treated.

1,352,700. METHOD OF PRODUCING SILICATE OF SODA AND THE LIKE. WILLIAM H. STANTON, Ridley Park, Pa. Filed Jan. 26, 1917. Serial No. 144,634. 6 Claims. (Cl. 49—77.)

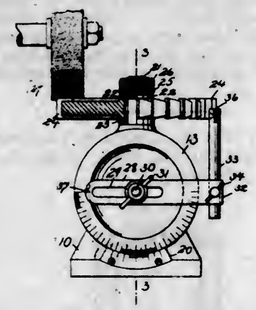


1. The process or method of operating a furnace having separate hearths in the treatment of silicate of soda, which consists in heating a charge on one hearth by means of the gases of combustion at substantially their maximum temperature and simultaneously heating a newly introduced charge on the other hearth by the same gases at a reduced temperature until the treatment of the first-mentioned charge is completed, drawing said completed charge, substituting a fresh charge and reversing the direction of the travel of the gases through the furnace and heating said second mentioned charge to completion.

1,352,701. SALTCELLAR. EMERY B. SWEETSER, Brooklyn, N. Y. Filed June 12, 1916. Serial No. 103,308. 1 Claim. (Cl. 65—45.)

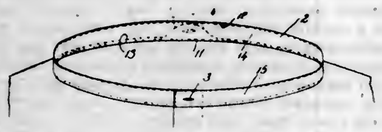
A sprinkling dispenser for pulverulent material comprising a hollow body having an opening at the top and a surrounding upwardly directed seat, external screw threads a material distance below said seat and an external portion between said threads and said seat free from shell engaging means; a perforated dispensing cap overlying and seating upon said seat; an external shell having inwardly extending means for gripping said cap, fitting freely and loosely about said external portion of said body free from shell engaging means and having screw threads for engaging said screw threads on said body to clamp said cap upon said seat with a self-adjusting uniform pressure about said seat.

1,352,702. PEANUT-BLANCHING MACHINE. FRED TOWNSEND, Chicago, Ill., assignor of one-half to James R. Randall, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,912. 33 Claims. (Cl. 146—14.)



1. In a machine for freeing nuts of their membranes, the combination of membrane loosening means, mechanism for reciprocating slantingly said means, rotary means for advancing the nuts over said membrane loosening means and in engagement therewith, and means for withdrawing the loosened membranes from the nuts.

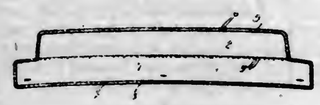
1,352,703. FIXTURE FOR USE IN CUTTER-GRINDING AND SIMILAR OPERATIONS. WILLIAM B. TULEK, New York, N. Y. Filed July 8, 1919. Serial No. 309,437. 3 Claims. (Cl. 51—7.)



1. A cutter holder for grinding purposes comprising a base member, a movable member, the members having coacting parts so that the movable member can be par-

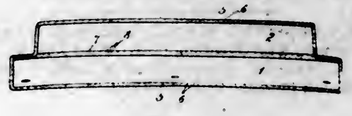
tially rotated, a spindle secured to one of said members and passing through the other member, a nut on said spindle, a radial stud on the movable member, an exten-

sion on said spindle, a slotted strap on said extension, a nut for locking the strap on the extension, and a spring finger supported by said strap.



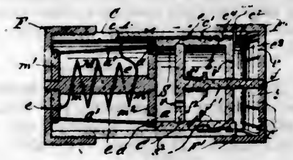
1,352,704. SHIRT. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass. Filed Dec. 27, 1917. Serial No. 209,032. 8 Claims. (Cl. 2—41.)

1. A shirt provided with a collar band made of a single width of fabric folded at an intermediate portion to form the upper edge, the inner portion and the outer portion of the band, one of the said portions having a divided edge between which the shirt is secured.



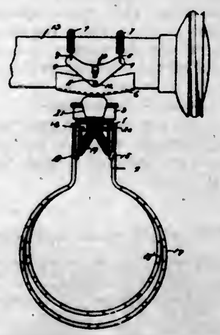
6. A shirt provided with a collar band woven in one piece, comprising an inner portion, an intermediate edge fold portion and an outer portion, the outer portion being longer than the inner portion so that the collar band takes on a curvilinear set, one of said portions having a divided edge integral therewith between which the fabric of the shirt is secured and having the inner and outer portions secured together, except near the back button-hole.

1,352,705. COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass. Filed Jan. 31, 1918. Serial No. 214,639. 4 Claims. (Cl. 2—67.)



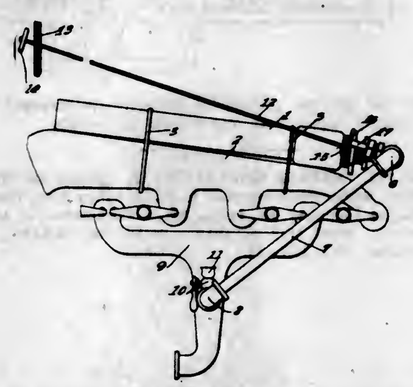
2. A folding or turn down collar having its neck band portion and its folding portion made up of multiple-ply interwoven fabric, and an additional layer of fabric secured to the neck band portion of the collar and providing a portion of increased thickness at the fold line between the neck band and folding portions of the collar.

1,352,706. COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass. Filed Jan. 31, 1918. Serial No. 214,640. 3 Claims. (Cl. 2—67.)



2. A folding or turn down collar made up of multiple-ply interwoven fabric forming both the neck band and folding portions of the collar, and a relatively narrow band of fabric having woven with its upper edge curvilinear and secured near the upper edge of the neck band portion of the collar so as to provide a portion of increased thickness and stiffness at the curvilinear fold line formed thereby, between the neck band portion and folding portion of the collar.

1,352,707. AUTOMATIC ELECTRICAL-CIRCUIT BREAKER. HARRY E. WADSWORTH, New York, and WILLIAM B. ENSIGN, White Plains, N. Y. Filed July 31, 1919. Serial No. 314,552. 3 Claims. (Cl. 200—106.)

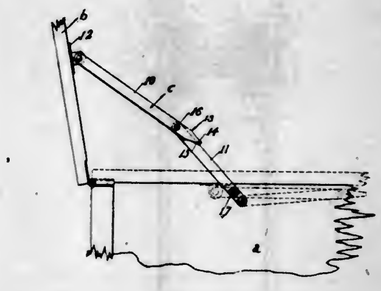


1. An automatic electric circuit breaker of the character designated, comprising a casing of insulating material, metallic ferrule caps formed externally for contactual engagement with electric circuit terminal spring clips, fixed electric contacts connected one with each of said ferrule caps, movable means for electrically connecting said fixed electric contacts, means which tend constantly to open the circuit, switch latch mechanism controlled by an electro-magnet, said electro-magnet having its coil interposed in the electric circuit when the latter is closed, and ferrule-cap-connected means for re-setting the parts after a break.

1,352,708. FLASH-LIGHT HOLDER. WILLIAM WAEGEL, Reading, Pa. Filed Oct. 7, 1919. Serial No. 329,188. 4 Claims. (Cl. 240—52.)

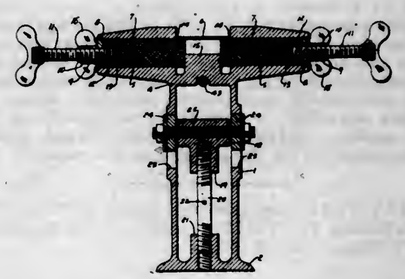
1. A flash light holder comprising a base plate, a housing mounted thereon, a cap threaded upon said housing, a ball head located within the housing cap, an angular holder carried by said ball head, means for securing a flash light upon said holder, a pair of clamps pivoted to the base plate, and springs for swinging said clamps toward each other.

1,352,709. FUEL-SAVING AND SPEED-INCREASING ATTACHMENT FOR ENGINES. FRED S. WARE, Fulton, N. Y. Filed Oct. 19, 1917. Serial No. 197,514. 1 Claim. (Cl. 123—122.)



The combination with the intake manifold of an internal combustion engine, of a relatively large air heating drum secured upon and extending along the exhaust manifold in close proximity thereto and having one end open directly to the atmosphere, there being a continuous unobstructed opening extending through the drum from one end to the other thereof, a relatively small pipe connected to the intake manifold and to that end of the drum remote from the end open to the atmosphere, a valve in said small pipe near its junction with the heating drum, means for operating said valve from a point remote therefrom, and a priming valve in said small pipe and adjacent the intake manifold, the connection between the relatively small pipe and the heating drum being stepped.

1,352,710. MANUFACTURE OF STEEL. GEORGE B. WATERHOUSE, Buffalo, N. Y. Filed July 31, 1919. Serial No. 314,442. 12 Claims. (Cl. 75—27.)

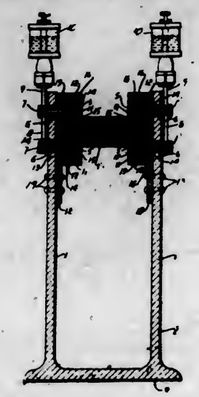


1. The herein described process for improving the physical structure of steels having a maximum carbon content of about .25% which consists in subjecting the molten steel to the influence of a silicon addition to effect uniformity in the sulfur distribution, said silicon addition being proportioned so as not to materially increase the silicon content of the resulting steel.

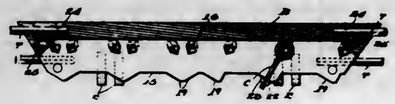
1,352,711. LID-SUPPORTING DEVICE. ARCHIBALD D. WATERS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 6, 1919. Serial No. 343,030. 3 Claims. (Cl. 217—60.)

1. A lid supporting device including a link having one end bent back upon itself to form a loop open along both longitudinal edges of said link, a second link having one end positioned between the sides of the said loop, and means pivotally connecting the end of the second link between the sides of said loop.

1,352,712. APPARATUS FOR SOFTENING MOTION-PICTURE FILMS. PAUL WERNER, St. Louis, Mo., assignor, by direct and mesne assignments, to Werner Film-Protector Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 7, 1919. Serial No. 288,421. 30 Claims. (Cl. 91—36.)



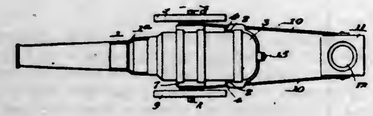
1. A motion-picture film anointing device comprising mechanism for presenting anointing means to said film as the same is being rewound from one reel to another, wiping or cleaning means acting on said film, and guiding means for said running film between said reels and said guiding means being adjustable to adapt said running film to be held in frictional contact with said anointing means to compensate for the wear of such means.



1,352,713. APPARATUS FOR SOFTENING MOTION-PICTURE FILMS. PAUL WERNER, St. Louis, Mo., assignor to Werner Film-Protector Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 7, 1919. Serial No. 302,525. 13 Claims. (Cl. 91—49.)

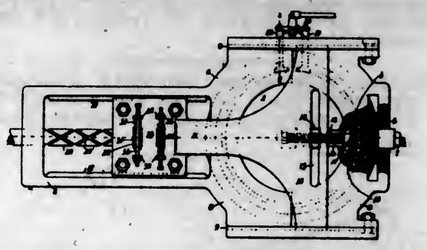
1. A motion-picture film-anointing device comprising mechanism for applying a liquid to the film while said film is being rewound on one reel from another, said mech-

anism consisting of upper and lower film-guiding rollers, hollow shafts on which said rollers revolve having outlets to discharge liquid to said rollers, a feed pipe leading to said shafts, and a supply reservoir for said feed pipes.

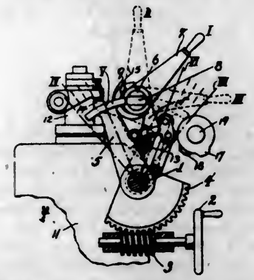


1,352,714. SCARIFIER ATTACHMENT FOR ROAD-GRADERS. JOHN ABSALOM WILLIAMS, Aurora, Mo. Filed Jan. 14, 1920. Serial No. 351,339. 2 Claims. (Cl. 287—54.)

1. In a scarifier, a block having a channel formed therein and openings in the walls of said channel inclined to the edges of the block, teeth slidable through said openings and adapted to bridge said channel, oblique projections formed on the edges of the walls of said channel, and clamping means working within said channel engaging said teeth at a point within the channel and having members engaging said projections which provide faces normal to the line of stress of said means.



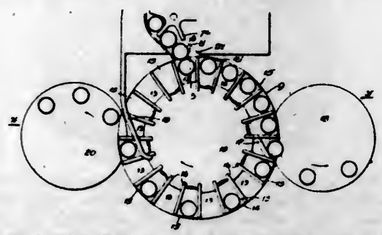
1,352,715. GAS-CANNON. JAMES H. WILY, South Bethlehem, Pa. Filed Nov. 4, 1915. Serial No. 59,692. 27 Claims. (Cl. 42—55.)



1. A cannon having an explosion chamber therein, means for admitting oxygen to said chamber, and means for generating within said chamber a gas which, when mixed with the oxygen therein forms an explosive gas.

1,352,716. SPEED-CHANGE MECHANISM. ROBERT E. WINTERS, Coraopolis, Pa., assignor of one-half to Anthony E. Dean, Pittsburgh, Pa. Filed June 5, 1918. Serial No. 238,277. 5 Claims. (Cl. 74—40.)

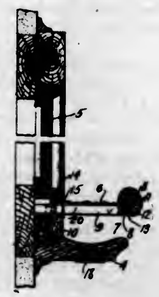
1. In speed change mechanism the combination of a drive wheel, an adjustable pitman, a positively actuated driving shaft, an eccentric connection between the driving-shaft and the drive wheel, a power shaft having reverse grooves, collars carried by the pitman and engaging with the grooves, and double-acting pawls arranged to alternately engage with and slip on the collars.



1,352,717. ENGINE REVERSE-GEAR. EUGEN ZBINDEN, Bern, Switzerland, assignor to Busch-Sulzer Bros. Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed May 3, 1917. Serial No. 166,129. 8 Claims. (Cl. 123—41.)

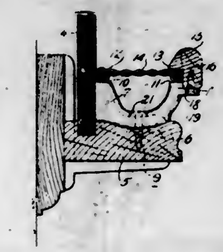
1. In an internal combustion engine, the combination with valves serving for air-starting, and combustion-running, respectively, valve gearing for operating the same, a first control active upon said gearing to cause the operation of one or other or neither of said valves, and a second control for adjusting said gearing for forward or backward running, of a swinging contact member connected with the second control, and a rotary gate united with the first control and constructed to prevent operation of the second control within the reversing limits except when the first control is in neutral position and further to prevent the first control or parts thereof being turned into position "air starting" or "combustion running" as long as the second branch of control is in the zone of reversing.

1,352,718. CAN-DISTRIBUTING DEVICE. CHARLES H. AYARS, Salem, N. J. Filed Nov. 24, 1919. Serial No. 340,360. 2 Claims. (Cl. 193—1.)



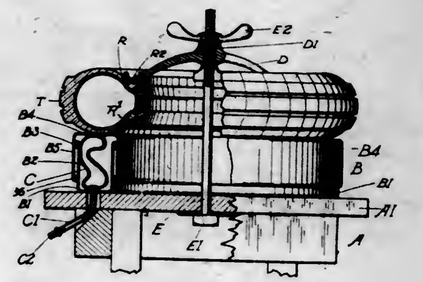
2. A can distributing device including a table; a member mounted above and rotatable relatively to said table and having notches in its outer edge alternating with extensions; delivery members; means for feeding cans into the notches and onto said extensions; a deflecting member interposed between said table and said first mentioned member and adapted to deflect the cans which are within said notches from said table to one of said delivery members; and deflecting means positioned above said first mentioned member and adapted to deflect the cans which are on said extensions upon another of said delivery members; substantially as described.

1,352,719. DRAFT-GAGE. ABRAM T. BALDWIN, Detroit, Mich.; Catherine P. Baldwin executrix of said Abram T. Baldwin, deceased. Filed Dec. 13, 1917. Serial No. 206,977. 3 Claims. (Cl. 73—110.)



1. In a draft gage,—an inclosing casing,—a plurality of dial windows disposed one above the other in the front face of the casing,—a corresponding plurality of dials visible through said windows,—a plurality of pointers corresponding and operative with respect to the dials,—a corresponding plurality of pointer-actuating mechanisms,—and a corresponding plurality of furnace-connecting pipes, said dials being arranged one above the other in the same order as the flow of gases of which the pressures are to be measured.

1,352,720. CHALK-TROUGH. CHARLES F. BERGER, Pelham, N. Y. Filed Dec. 31, 1919. Serial No. 348,693. 7 Claims. (Cl. 35—15.)



1. A chalk trough comprising two parts separated at the outer edge whereby a hand may be inserted between the parts, the lower part being adapted to receive the chalk dust, and the upper part having a lower side free from obstructions.

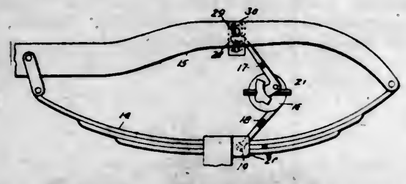
1,352,721. COMBINATION CHALK-TROUGH. CHARLES F. BERGER, Pelham, N. Y. Filed Dec. 31, 1919. Serial No. 348,694. 6 Claims. (Cl. 35—15.)

1. The combination with the chalk trough of a blackboard of a plurality of brackets adapted to rest in said trough, each of said brackets having rounded edges whereby the chalk dust may be pushed over each bracket in either direction, and a screen mounted on said brackets above said trough leaving a space between the screen and the trough whereby a hand may be inserted between the screen and trough, for the purpose set forth.

1,352,722. TIRE-REMOVING APPARATUS. NOAH L. CALDWELL, Knoxville, Tenn. Filed July 22, 1919. Serial No. 312,623. 8 Claims. (Cl. 157—6.)

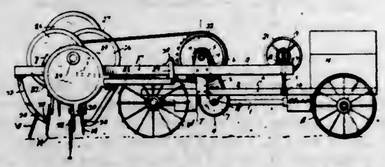
1. In an apparatus for the separation of two annular members one of which is a metal rim and the other of which is a rubber tire surrounding said rim, the combination of an annular expansion structure adapted to engage one of said members and to be expanded in the direction parallel to the axis of said member by the introduction into said structure of fluid under pressure, and means for engaging the other of said members and holding it against movement, substantially as described.

1,352,723. SHEET-METAL WHEEL. ALFRED COTTON and LOUIE F. KOELLNER, Hartford, Conn. Filed July 23, 1919. Serial No. 312,731. 8 Claims. (Cl. 301—64.)



1. A vehicle wheel comprising an inner sheet metal web member having radially extending corrugations increasing in width and decreasing in depth toward the perimeter of the member, an outer sheet metal web member, the inner face of which is engaged along radial lines by the outer face of the inner member along the summits of the

ridges formed by the corrugations at the outer side of the inner member, a hub extending through the web mem-

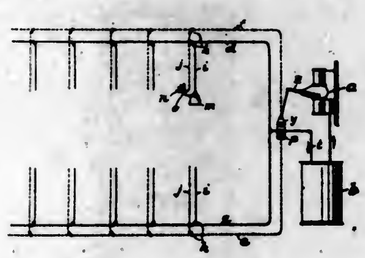


bers centrally thereof, and a rim supported by the web members.

1,352,724. SHOCK-ABSORBER. HARLAND A. DANFORTH, Saugus, Mass. Filed Mar. 20, 1916. Serial No. 85,340. 12 Claims. (Cl. 267—2.)

1. A shock absorber secured to a body and to a flexible support, comprising a centrifugal means operated by the vibrations of the body for counteracting the force of the vibration.

1,352,725. AGRICULTURAL MACHINE. HENRY JEFFERSON DAVIS, Waynesboro, Ga. Filed Apr. 14, 1919. Serial No. 289,802. 5 Claims. (Cl. 97—53.)



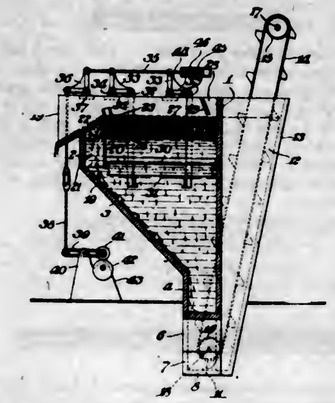
1. An agricultural machine of the class described comprising, in combination, a portable structure including a driving shaft, a ground working member supported for movement independently of the travel of the structure means driven from the shaft for imparting movement to the ground working member and means for regulating said last named means to vary the speed of the ground working member, said last means operating independently of the shaft.

3. An agricultural machine of the class described comprising a portable structure, an eccentric supported by the structure, means for rotating said eccentric at variable speeds, a strap surrounding said eccentric, a ground working member carried by said strap and movable therewith, and means connected directly with the strap for holding the same against rotation about its center.

5. An agricultural machine of the class described comprising, in combination, a portable structure including a driving shaft, a ground working member traveling in substantially a vertical orbit, means driven from the shaft for moving the ground working member in its orbit, and means for regulating said last named means to vary the speed of the ground working member in its orbit, said last named means operating independently of the shaft, said ground working member being carried by and depending from the lower portion of the strap.

1,352,726. MILKING MACHINERY. NORMAN JOHN DAYSH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, a Corporation of New Jersey. Filed Oct. 29, 1918. Serial No. 260,106. 15 Claims. (Cl. 31—101.)

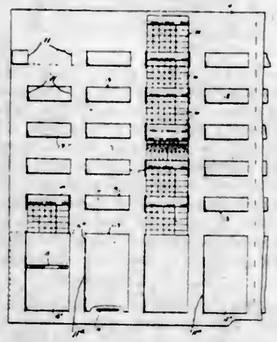
1. In a milking machine operating system, in combination, a milking machine unit comprising teat cups and a branch pulsation pipe, a plurality of independent pulsation pipe lines adapted for connection, at different points along their length, with such milking machine unit, a source of power, and pulsation means, independent of either pulsation line connected with and operable independently of its own pulsations, from said source of power to transmit pneumatic pulsations through the several pulsation lines.



3. In a milking machine operating system, in combination, a plurality of pulsation pipe lines adapted for connection at different points along their length with a milking machine unit, a source of vacuum, and means comprising a master pulsator operable independently of the pulsations produced thereby and adapted to simultaneously connect one pipe line with vacuum and another with pressure and alternately therewith to connect the first pipe line with pressure and the second with vacuum.

5. In a milking mahcine operating system, in combination, a source of vacuum, a vacuum pipe line connected therewith, a plurality of pulsation pipe lines extending along different parts of the vacuum line, and means comprising a master pulsator operable independently of the pulsations produced thereby and adapted to connect each pulsation line alternately with pressure and the vacuum line.

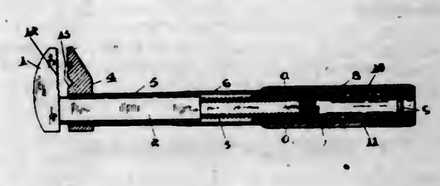
9. In a milking machine operating system, in combination, a source of vacuum, a vacuum pipe line connected therewith, a plurality of pulsation pipe lines extending along different parts of the vacuum line, a milking machine unit comprising teat cups and a secondary pulsator, said unit adapted for connection with the vacuum line and any pulsation line, and means comprising a master pulsator operable independently of the pulsations produced thereby and adapted to connect each pulsation line alternately with pressure and vacuum.



13. In a milking machine operating system, in combination, a vacuum pump, two pulsation pipe lines, a valve chamber provided with ports connected respectively to the vacuum pump, to a source of pressure fluid and to the pulsation lines, a master pulsator adapted to alternately connect each ppusation line port alternately with a pressure port and a vacuum port and to connect each pulsation line port with pressure while the other is connected with vacuum, and mechanical means to reciprocate the master pulsator from the vacuum pump.

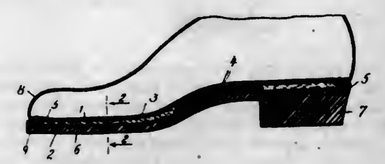
1,352,727. MINERAL-WASHING APPARATUS. GEORGE R. DELAMATER, Steelton, Pa. Filed May 21, 1919. Serial No. 298,740. 14 Claims. (Cl. 83—79.)

1. In apparatus of the class described, the combination with a body adapted for holding water, said body provided with separating means comprising a wall forming spaces within said body in communication above and below said wall, a screen extending across a space aforesaid, a gate for controlling the movement of materials over said screen to said wall, and a plunger having a perforated member extending across said space below said screen whereby water in said body is pulsated to effect the movement of substances on said screen beneath said gate and over said wall, said body being adapted for bringing together under said plunger substances passing over said wall and substances passing through said screen and plunger.



1,352,728. SEATING PLAN AND CLASS-RECORD. EDWARD C. DELANEY, New York, N. Y. Filed Feb. 5, 1919. Serial No. 275,163. 11 Claims. (Cl. 129—20.)

5. A register of the character described comprising a sheet formed to provide a plurality of longitudinal and transverse series of alined pockets to indicate the seating plan of a class room, each of said pockets indicating a seat in the class room, and cards insertible into the pockets and having thereon spaces designed to receive the pupil's name and other pertinent indicia and to be displayed above the pocket.

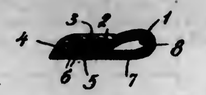


9. As an article of manufacture, a record card for class rooms having on one side a space designated to receive the name of the pupil, a series of spaces to receive the pupil's marks, a series of spaces to receive the general standing marks, and a plurality of spaces designated to receive pertinent data, the opposite face of the card having a different tint from the first named face of the card and being provided with a series of columns designated by the names of months to receive absent marks.

1,352,729. WRENCH. SAMUEL MCD. ROBERTSON and FREDERICK C. DYER, Toronto, Ontario, Canada. Filed Oct. 13, 1919. Serial No. 330,416. 1 Claim. (Cl. 81—169.)

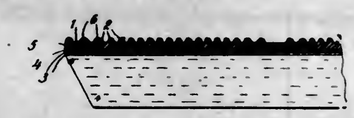
In an adjustable wrench, the combination of a movable jaw; a flat sided shank therefor; a threaded end on the shank; a fixed jaw; a tubular stem to one end of which said jaw is fixed, the tube adjacent said end being flattened to guide the flat sided shank, its end remote from the fixed jaw being cylindrical; a tubular nut fitting within the cylindrical part of the tubular stem and engaging the threaded end of the shank; a sleeve fitted over the cylindrical portion of the stem and having a driving engagement with the outer end of the tubular nut, and a connection between the sleeve and the cylindrical portion of the tubular stem preventing longitudinal movement of one or the other, but permitting a movement of rotation.

1,352,730. SHOE-SOLE. HENRY C. EGERTON, Passaic, N. J. Filed Feb. 23, 1918. Serial No. 218,679. 17 Claims. (Cl. 36—30.)



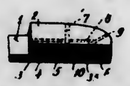
2. The shoe sole comprising a layer of woven fabric and additional inner strengthening material including paper united thereto by cured phenolic condensation cementing material and a rubber composition sole.

1,352,731. GRIPPING SHOE-SOLE. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct, 1, 1918. Serial No. 256,369. 14 Claims. (Cl. 36—59.)



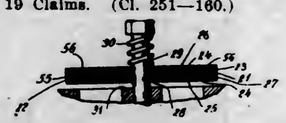
12. The composition shoe sole element formed with a series of ground gripping apertures and apertured reinforcing members secured in said apertures and comprising fabric carrying cured phenolic condensation cementing and stiffening material.

1,352,732. WEATHER-STRIP. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 15, 1918. Serial No. 258,277. 14 Claims. (Cl. 20—69.)



14. The yieldable closing member comprising a stiffening body portion including fibrous material carrying cured phenolic condensation cementing material, and a vulcanized rubber facing strip permanently secured to said body portion.

1,352,733. MAT, &c. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 18, 1918. Serial No. 258,741. 14 Claims. (Cl. 154—49.)

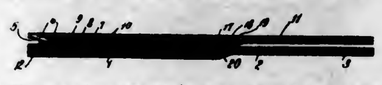


1. The rubber faced mat havingg a contact surface of vulcanized rubber formed with projecting contact portions, a stiffening backing member formed of a plurality of layers of canvas fabric carrying and impregnated with cured phenolic condensation cementing material, reinforcing members comprising fabric fibrous material carrying cured phenolic condensation cementing material and incorporated sheet metal members cemented and secured to said backing member and projecting toward said contact surface and a fabric connector having a frictioned rubber coating engaging and vulcanized to said vulcanized rubber forming such contact surfaces.

1,352,734. GRIPPING RUBBER SHOE-HEEL. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 18, 1918. Serial No. 258,743. 17 Claims. (Cl. 36—59.)

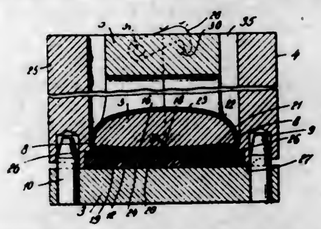
1. The rubber shoe heel comprising a spiral gripping heel rib formed of a composite fabric strip impregnated with cured phenolic condensation cementing material and arranged transversely to the wearing surface of the heel and forming substantially rigid separated convolutions provided with junction holes, vulcanized rubber composition forming the body of said heel and substantially surrounding and vulcanized to said heel rib and forming connecting plugs extending through said junction holes and a connected fabric stiffening and backing member carrying cured phenolic condensation cementing material.

1,352,735. VALVE MEMBER, &c. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 18, 1918. Serial No. 258,744. 19 Claims. (Cl. 251—160.)



2. The valve comprising a metallic valve plate, stiffening supporting fabric coöperating with said valve plate and carrying cured phenolic condensation cementing and stiffening material uniting said supporting fabric to said valve plate, fabric connector members cemented to said supporting fabric by said cementing material and a vulcanized rubber facing adhesively and permanently secured to said connector members on both sides of said valve.

1,352,736. RUBBER SHOE-SOLE FOR TURN-SHOES. HENRY C. EGERTON, Ridgewood, N. J. Filed Dec. 2, 1918. Serial No. 264,935. 7 Claims. (Cl. 36—22.)



4. The integral rubber shoe sole for turn shoes and the like which comprises a sole, a fabric sewing flap member united to said sole and having a reinforced multiple thickness edge portion forming a fabric sewing flap which is adapted to be sewed to the shoe upper and a fabric stiffener member carrying cured phenolic condensation stiffening material secured to said sewing flap member so as to leave its edges projecting beyond the edges of said stiffener member.

1,352,737. PARTIALLY-STIFFENED SHOE-SOLE. HENRY C. EGERTON, Ridgewood, N. J. Filed Dec. 24, 1918. Serial No. 268,157. 10 Claims. (Cl. 36—30.)

6. The one-piece shoe sole comprising a vulcanized rubber composition wearing surface having readily yielding shank portions and having its front body stiffened and strengthened by a connected fibrous stiffener member comprising a plurality of layers of fabric carrying cured phenolic condensation cementing material, said fabric layers having rear portions formed adjacent the shank portion of the shoe sole with an external alining recess for a coöperating stiffener member.

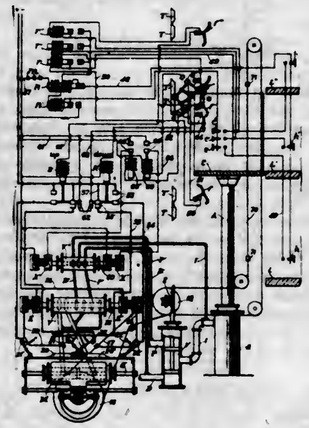
1,352,738. PROCESS OF MAKING BOOTS AND SHOES. HENRY C. EGERTON, Ridgewood, N. J. Filed Feb. 4, 1919. Serial No. 274,937. 19 Claims. (Cl. 12—142.)

6. The process of making shoes which comprises assembling on a molding last an upper and sole elements having fibrous connecting portions carrying phenolic condensation cementing material, forcing said last and assembled elements into coöperation with a partition member and with a vulcanizable rubber sole adjacent said partition member into engagement with said sole elements and holding said shoe elements together during a heat curing treatment to vulcanize said rubber sole and cure said phenolic condensation cementing material and unite the connecting portions of said shoe elements.

1,352,739. FABRIC. HENRY C. EGERTON, Ridgewood, N. J. Filed Mar. 3, 1919, Serial No. 280,352. Renewed Feb. 16, 1920. Serial No. 359,199. 12 Claims. (Cl. 154—46.)

1. The sheet of composite fabric comprising a number of layers of canvas body fabric thoroughly impregnated with and containing considerable proportions of phenolic condensation cementing material securely uniting said layers of fabric and in partially cured condition so that it is rendered plastic on heating to make the composite fabric pliable, an absorbent securing facing fabric on one side of said body fabric and embedded in such phenolic condensation cementing material and thereby united to said body fabric, and a layer of securing facing fabric on the other side of said body fabric and permanently united thereto by such phenolic condensation cementing material and carrying on its exposed surface adherent vulcanizable rubber cementing composition.

1,352,740. VULCANIZED RUBBER HOSE. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 5, 1918, Serial No. 256,988. Renewed July 27, 1920. Serial No. 399,412. 14 Claims. (Cl. 137—90.)



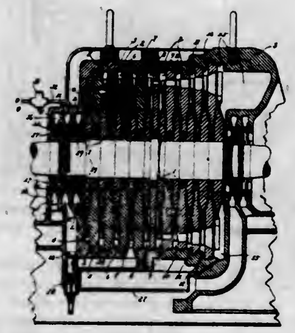
1. The flexible vulcanized rubber hose comprising an inner rubber lining and a rubber covering, and comprising a plurality of staggered layers of spiral fabric stiffening strips of canvas impregnated with cured phenolic condensation cementing material, and connector strips interposed between said stiffening strips and the adjacent rubber and cemented and vulcanized thereto, said stiffening strips being longitudinally separated along said hose and having an interposed cushioning layer of rubber between them.

1,352,741. FILLER COMPOSITION. ALBERT F. FRENCH, Detroit, Mich. Filed Dec. 16, 1918. Serial No. 266,932. 2 Claims. (Cl. 134—79.)

1. A filler composition comprising as essential ingredients celluloid, shellac, rosin, alcohol, and ether.

1,352,742. MICRO-DRIVE HYDRAULIC ELEVATOR. FLOYD C. FURLOW, Montclair, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 5, 1917. Serial No. 189,897. 12 Claims. (Cl. 187—29.)

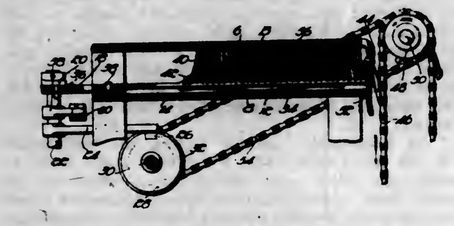
1. In a hydraulic elevator system, the combination with the car, a main valve, a hydraulic motor to actuate the valve, and means automatically controlled from the car and by the motor, to control the said motor the said means comprising cams actuated by the motor, electric circuits, and switches in the said circuits actuated by the cams.



2. In a hydraulic elevator, the combination with the car, a main valve, a hydraulic motor device to actuate the valve, valve mechanism to control the hydraulic motor, electro-magnets to actuate the second named valve, manually controlled switches each controlling circuits to both electro-magnets, normally open switches controlled by the motor, in one of the circuits from each manually controlled switch to the electro-magnets, and normally closed switches controlled by the motor, in the other of the circuits from each manually controlled switch to the electro-magnets.

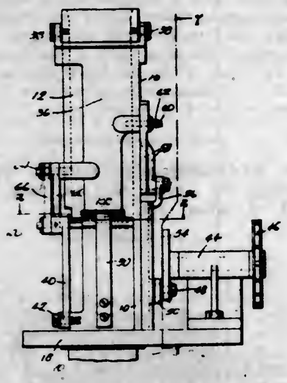
3. In a hydraulic elevator system, the combination with the car, a main valve, a hydraulic motor device to actuate the valve, valve mechanism to control the hydraulic motor, electro-magnets to actuate the second named valve, electro-responsive switches controlled from the car, each controlling circuits to both electro-magnets, additional switches included in each of the said circuits, and cams operable by the motor and adapted to actuate the latter named switches.

4. Controlling apparatus for hydraulic elevators comprising a controlling valve, a motor device, and a shipper sheave, the said sheave comprising an inner section positively connected with the motor device, an outer section positively connected with the main valve, and a connection between the inner and outer sections whereby operation of the sections as a unit, by the motor device is effected, but allowing the release of one section from the other if the motor device is at rest.



5. In a hydraulic elevator system, the combination with the car, a main valve, a motor device to actuate the valve, valve mechanism to control the motor, electro-magnets to actuate the latter named valve mechanism, connected to opposite ends of the valve stem, a single auxiliary valve to effect operation of the car independently of the main valve, and electro-magnets to actuate the auxiliary valve mechanism, connected to opposite ends of the valve stem.

1,352,743. FLUID-PRESSURE MOTOR. THOMAS HALL, Harrisburg, Pa. Filed Dec. 13, 1919. Serial No. 344,561. 7 Claims. (Cl. 253—39.)

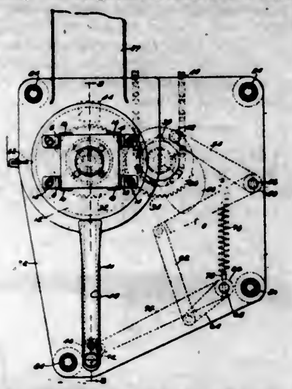


1. The combination with a turbine comprising successive stages of progressively lower pressures, of a packing chamber, a duct connecting said chamber to a low pressure stage of the turbine, a self-opening relief valve in said duct between said chamber and said low pressure stage, said relief valve having loading means tending to prevent its opening below the pressure to be maintained in said chamber, and to cause it to close when the pressure in such chamber falls to a predetermined pressure, and means for supplying working fluid at a predetermined pressure to said chamber.

1,352,744. MEANS FOR FEEDING ARTICLES IN STACKED RELATION. FRED V. HART, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 16, 1916. Serial No. 125,952. 22 Claims. (Cl. 12—42.)

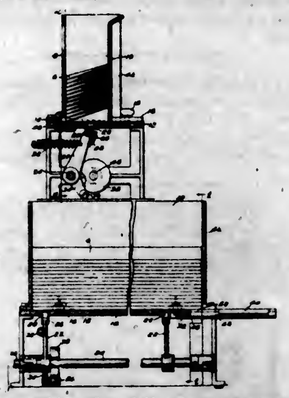
13. Mechanism for feeding uniformly tapering articles having, in combination, means for clamping a plurality of said articles in face-to-face stocked relation with their thin ends spaced apart, means for feeding said stack of articles, and means for ejecting said articles from one end of the stack.

1,352,745. MEANS FOR FEEDING ARTICLES IN STACKED RELATION. FRED V. HART, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 16, 1916. Serial No. 125,953. 24 Claims. (Cl. 12—42.)



1. A shoe machine for feeding tapering articles of sheet heel material, having, in combination, means for holding the articles in a stack in face-to-face relation with their thicker and thinner extremities alternating, and means for delivering articles from the stack successively and all in similar positions with respect to their thicker and thinner extremities.

20. Mechanism for feeding substantially rigid articles of sheet material having, in combination, means including members spaced apart a distance less than the corresponding dimension of the articles for supporting an article at separated marginal points, and means for pushing the article in substantially its own plane first in one direction and then in another to feed it past the supporting members and through the space between them.

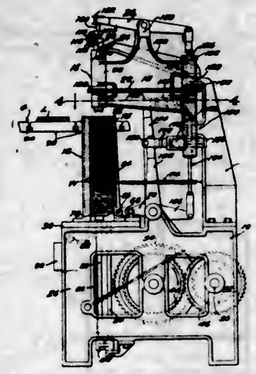


1,352,746. FEED MECHANISM. FRED V. HART, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 14, 1916. Serial No. 136,935. 21 Claims. (Cl. 12—42.)

1. Feed-mechanism having, in combination, a rotatable magazine for holding a stack of dissimilarly disposed tapering articles; means for removing articles successively from the end of the stack; and means for partially rotating the magazine between the removal of the

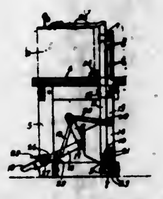
successive articles in such manner that the removed articles are similarly disposed.

1,352,747. FEED MECHANISM. FRED V. HART, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 22, 1916, Serial No. 99,259. Renewed Nov. 17, 1917. Serial No. 202,643. 30 Claims. (Cl. 12—42.)



1. A shoe machine for delivering tapering pieces of sheet heel material, having, in combination, means for holding a stack of such pieces and for supporting independently the thin ends of such pieces while the thick ends rest against each other; and separate means for discharging the pieces successively from one end of the stack.

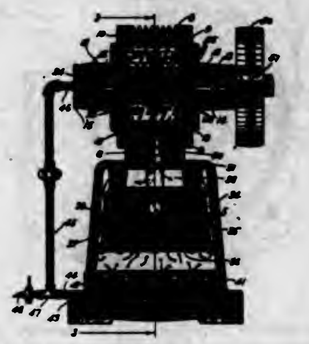
8. Feed-mechanism, having, in combination, a magazine with parallel walls between which strips of sheet-material, wider than the space between the walls, may be stacked in inclined position, one of said walls being interrupted at the bottom of the stack; and means for moving the lowermost strip first laterally into the space afforded by the interruption of said wall, and then longitudinally out of the magazine.



1,352,748. FEED MECHANISM. FRED VERNE HART, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 27, 1918. Serial No. 231,159. 25 Claims. (Cl. 12—42.)

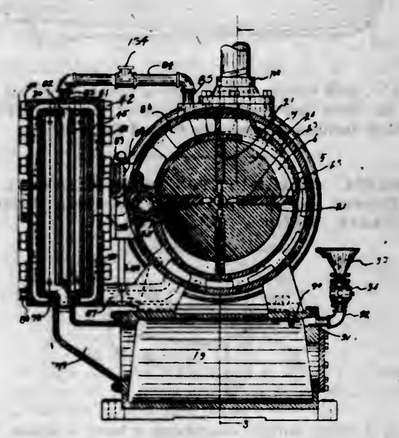
1. Blank feeding mechanism having, in combination, a holder for a stack of blanks and mechanism acting to transfer the blanks successively from the stack to a point of delivery and to impart varying angular movements to the blanks in substantially the planes of their faces.

13. A stock-handling machine having, in combination, a support, an axially rotatable and longitudinally movable picker carried thereby, means for longitudinally actuating said picker, and means for rotating said picker about its axis while permitting longitudinal movements thereof.



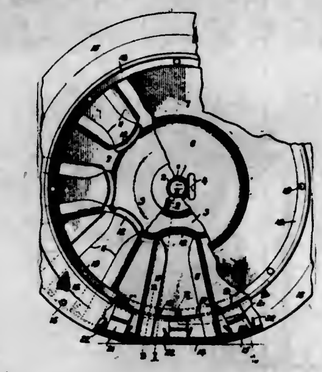
1,352,749. BOX-PRESS. WALTER V. HART, Jacksonville, Fla., assignor to Simon F. Williams, Jacksonville, Fla. Filed Aug. 1, 1919. Serial No. 314,670. 3 Claims. (Cl. 100—57.)

3. A device of the class described including a frame comprising a table and an upright, said table adapted to support a container, a guide strip adjustably secured to the table and adapted to limit the movement of the container upon the said table, a bar slidably secured to the said upright, a gripping arm extending perpendicularly from the upper terminal of the said bar and adapted to engage the cover member of the container, an adjusting plate having elongated slots formed therein, means for adjustably securing the plate to the said bar, a toggle mechanism operably connected with the adjusting plate and the frame, a link operably connected with the toggle mechanism, a composite bell crank lever operably connected with the link to thereby move the toggle mechanism past the dead center to a locking position, a lever pivotally secured to said frame and adapted to operably engage the bell crank lever to release it from its locking position, and a retractile spring to normally support the sliding bar in an elevated position.



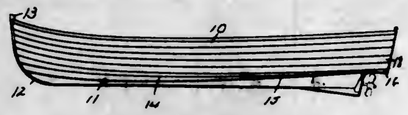
1,352,750. ROTARY AIR-COMPRESSOR. HENRY O. JACKSON, Denver, Colo., assignor to The Jackson Compressor Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 19, 1918. Serial No. 212,539. 18 Claims. (Cl. 230—30.)

18. In a rotary air compressor, the combination of a chamber, a rotor eccentrically mounted therein and having an axial passage and radial slots in communication therewith at their inner extremities, blades slidable in said slots and whose outer extremities engage the inner surface of the chamber, a liquid-containing receptacle below the chamber and in communication, below the level of the liquid with the said passage of the rotor and said slots, the slots being the only outlet for the liquid after it



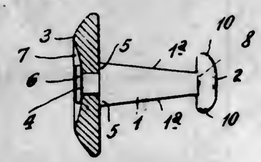
enters said passage, an air and liquid separator arranged above the said receptacle and in communication with the rotor chamber on the outlet side and with the said receptacle for the return of the liquid, and whereby the liquid in the receptacle is under the service pressure of the air when the machine is in operation for air-compression purposes.

1,352,751. ROTARY AIR-COMPRESSOR. HENRY O. JACKSON, Denver, Colo., assignor to The Jackson Compressor Company, Denver, Colo., a Corporation of Colorado. Filed June 19, 1919. Serial No. 305,312. 17 Claims. (Cl. 230—30.)



10. A rotary air compressor, comprising a chamber, a rotor therein, a liquid-containing receptacle below the rotor chamber, a connection between the receptacle and the chamber, whereby the liquid is caused to enter the chamber and pass out with the compressed air, means in communication with the compressed air outlet of the chamber for separating the liquid from the air and returning the liquid to the liquid receptacle, and a tube leading from the said receptacle above the liquid therein and whose outer extremity enters the rotor chamber outlet and extends in the direction of the passage of the fluid to the separator, to facilitate the circulation of the liquid through the system.

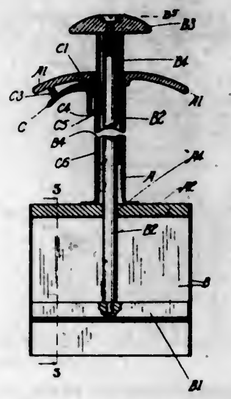
1,352,752. RESILIENT WHEEL. GEORGE JACOBS, Detroit, Mich. Filed Sept. 3, 1918. Serial No. 252,340. 7 Claims. (Cl. 152—30.)



7. In a resilient wheel, a hub, an annular pneumatic member about said hub, side plates connected to said hub, a felly member supported by said side plates, double spokes extending through said felly member and engaging said pneumatic member, articulated shoes connected to the outer ends of said double spokes, an outer casing on said shoes having its edges connected to said side plates, and cushion members between said shoes and said felly member in said outer casing and held by said shoes.

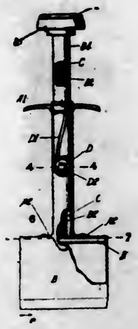
1,352,753. SKIFF. STEWART B. KING, Highlands, N. J. Filed Dec. 13, 1919. Serial No. 344,559. 3 Claims. (Cl. 114—56.)

1. A skiff having a hull with a keel terminating short of the stern, the overhanging part of the stern having a bottom inclined downwardly toward the rear.



1,352,754. COLLAR-BUTTON. AMBROSE LENTATZ, West Hoboken, N. J. Filed Feb. 20, 1919. Serial No. 278,214. 4 Claims. (Cl. 24—101.)

1. A collar button, comprising a base, a shank, and a head connected at one of its sides to the outer end of the shank, the shank being narrow in a direction parallel to the vertical dimension of the head and relatively much wider horizontally for at least part of its length.

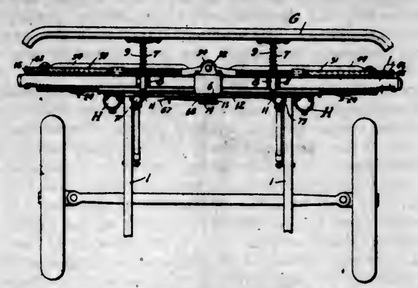


1,352,755. ICE-CREAM DIPPER. SAMUEL LEVY, Knoxville, Tenn. Filed June 30, 1919. Serial No. 307,846. 7 Claims. (Cl. 107—48.)

7. In a mechanism of the nature described, the combination of a hollow body, a tubular handle on said body, said handle having a lateral aperture, a plunger within said body, a guide tube within said handle and having a lateral aperture, a stem extending from said plunger upward through said handle and guide tube, a cross-head joined to the guide tube and the stem, and a member supported by the handle in position to permit a part

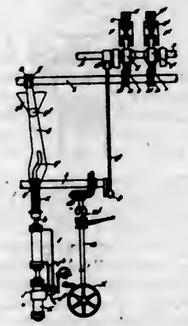
thereof to enter the aperture on the handle and also the aperture in the guide tube which at the time registers with the aperture in the handle, substantially as described.

1,352,756. ICE-CREAM DIPPER. SAMUEL LEVY, Knoxville, Tenn. Filed Sept. 16, 1919. Serial No. 324,201. 13 Claims. (Cl. 107—48.)



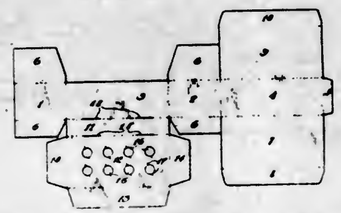
1. In a mechanism of the nature described, the combination of a hollow body, a tubular handle rigid on said body and extending in the same direction as the body, a plunger head located within said body, a stem extending from the plunger head through the tubular handle, a guide tube rotatably attached to the upper end of said stem and telescoping with the tubular handle, one of said tubular members being slotted and notched and the other bearing a stop member arranged to relatively travel in the slot and engage in the notch of the other of said tubular members, substantially as described.

1,352,757. SAFETY-FENDER. ANGELO LOSCALZO, New York, N. Y. Filed Dec. 9, 1916, Serial No. 136,082. Renewed Dec. 6, 1919. Serial No. 343,112. 19 Claims. (Cl. 293—16.)



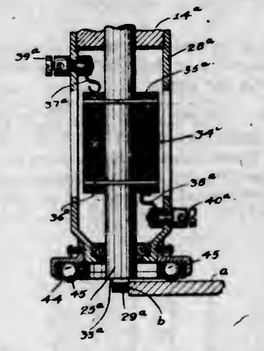
1. A device of the class described, comprising a fender mechanism, means for connecting one end of the fender mechanism to a vehicle, said means comprising in part a pivotal mounting for the fender mechanism whereby said

fender mechanism may be swung bodily in a horizontal plane for giving more convenient access to portions of



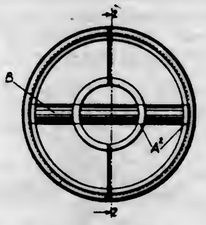
the vehicle, and independent supporting means for connecting the opposite end of the fender mechanism to the vehicle.

1,352,758. VALVE-GEAR OF INTERNAL-COMBUSTION ENGINES. JAMES MCKECHNIE, Barrow-in-Furness, England, assignor to Vickers Limited, London, England. Filed Feb. 27, 1920. Serial No. 361,806. 7 Claims. (Cl. 123—41.)



1. In reversing valve gear for internal combustion engines, axially displaceable forward and reverse cams, a valve lever adapted to coöperate with the said cams, a pivoted slotted lever for effecting the axial displacement of the cams, means engaging in the lever slot for turning the said lever through an angle for reversing purposes and means associated with the said slotted lever for raising the valve lever clear of the cams during their sliding movement.

1,352,759. CARTON. JOHN P. MARKERT, New York, N. Y. Filed June 28, 1919. Serial No. 307,279. 3 Claims. (Cl. 229—16.)

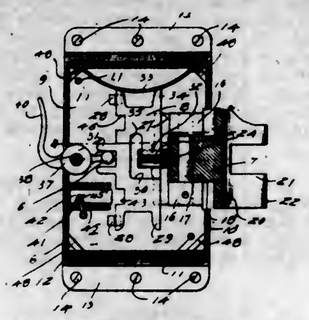


1. A carton including side walls formed from a single continuous strip of material and having their upper edges on substantially the same plane, a bottom, a top, an intermediate shelf adapted to lie transversely of the carton between said top and bottom when in closed position, means for hingedly connecting one edge of the shelf to one side of the carton with said edge located against said side and below the upper wall edge thereof, an integral flap carried by said shelf and extending downwardly into engagement with the carton bottom, and an integral flap carried by said shelf and extending upwardly into engagement with the carton top the construction being such that said shelf is held positively against both upward and downward movement by the engagement of said extensions with the top and bottom of the carton, when closed, and the carton may be collapsed diagonally by folding said shelf outwardly about said hinged connection.

1,352,760. UNIVERSAL METAL-CUTTING APPARATUS. STUART PLUMLEY, Westfield, N. J., assignor to Davis-Bournonville Company, New York, N. Y., a Corporation of New York. Filed Jan. 13, 1919. Serial No. 270,835. 18 Claims. (Cl. 266—23.)

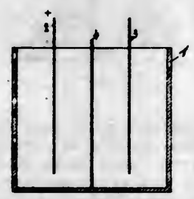
16. In an apparatus of the kind described, having a frame universally movable in horizontal directions, a mechanically-driven tracer device comprising a member rotatable about a vertical axis and having coaxial friction-top-bearing and roller-side-bearing portions to coöperate with a guide or templet.

1,352,761. SPLIT PULLEY. GEORGE E. ST. JOHN and CLYDE BOWMAN, Hammond, Ind. Filed Sept. 2, 1919. Serial No. 321,111. 10 Claims. (Cl. 64—18.)



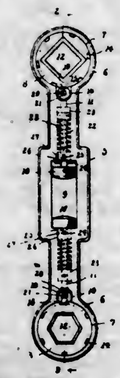
1. A split pulley, a pin adapted to secure it to a shaft, a single means for holding the parts of said pulley together and for holding said pin in place.

1,352,762. UNIVERSAL LOCK AND LATCH. AUGUST J. SCHULTZE, Galveston, Tex. Filed Oct. 31, 1919. Serial No. 334,803. 3 Claims. (Cl. 292—216.)



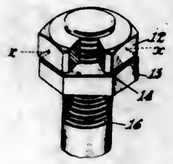
1. In a lock, a base plate, a latch member pivoted on the base plate, a supported keeper to be engaged by the latch member, an extension carried by the pivoted end of the latch member and provided with recesses in its upper face, one of the side walls of one of the recesses being inclined upwardly, a longitudinally movable member mounted on the base plate and adapted to engage in the recess provided with the inclined wall to retain the latch member in a position to move into engagement with the

keeper, the longitudinally movable member being lifted out of said notch upon being engaged by the inclined wall



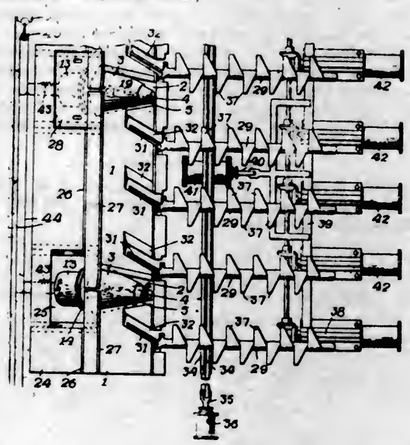
upon the pivotal movement of the latch member, and engaging the other notch to retain its latch member in locked engagement with the keeper.

1,352,763. DIAPHRAGM FOR ELECTROCHEMICAL AND ELECTRO-OSMOTIC PURPOSES. BOTHO SCHWEAIN, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 16, 1914. Serial No. 839,085. 1 Claim. (Cl. 204—28.)



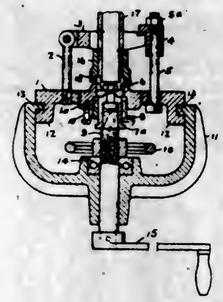
A diaphragm for use between the electrodes of an apparatus for electrochemical and electro-osmotic purposes which consists of an imperforate, colloidal partition formed of cellulose which is regenerated and is homogeneous and chemically uniform so as to receive electric current uniformly throughout the entire mass.

1,352,764. RATCHET-WRENCH. THADDEUS SEVERÉN, Bridgeport, Conn. Filed Apr. 16, 1919. Serial No. 290 460. 1 Claim. (Cl. 81—60.)



In a ratchet wrench of the class described, the combination with a handle having a headed end portion with a cylindrical chamber therein and an opening distant from the chamber, said handle having a hole extending therethrough from the opening to the chamber, a bushing having a headed socket formed therein adapted to fit in the chamber, said bushing being provided with a series of transverse parallel grooves in the outer surface, and an annular shoulder upon one end, a turn button to hold the bushing in position, said bushing having an annular groove in its periphery into which the turn button is received for maintaining the bushing in the handle chamber, the transverse grooves extending from one end of said bushing and terminating at the flange at the opposite end thereof with the transverse and annular grooves intersecting at the end of the bushing opposite the flange, the base of the annular groove being spaced outwardly from the base of the said transverse grooves, a pawl mounted in the hole to engage the grooves in the bushing, a collar mounted upon the pawl and a collar within the hole of the handle, a spring positioned around the pawl intermediate of the two said collars to normally hold the pawl in engagement with the bushing, the said handle having slots in its opposite side portions adjacent to the pawl, a pin mounted in the pawl to engage the said slots and also adapted to be shifted to support the pawl out of engagement with the bushing and against the action of the spring, said bushing being capable of removal from the handle with the pawl remaining in the adjacent transverse groove.

1,352,765. LOCK-NUT. HENRI ALFRED SÉVIGNÉ, Winthrop, Mass. Filed Feb. 6, 1920. Serial No. 356,612. 3 Claims. (Cl. 151—21.)

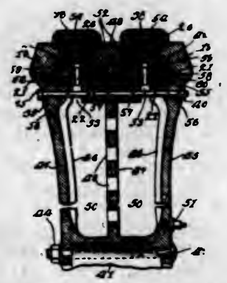


2. A nut having all of its threads continuous, said nut being partially divided transversely and having its inner and outer portions relatively offset laterally.

1,352,766. CONVEYING MECHANISM. JOHN W. SHEPERDSON, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1917. Serial No. 186,874. 18 Claims. (Cl. 193—1.)

1. In an apparatus of the class described, the combination with a series of bearing members each rotatable about a vertical axis, of a shaft journaled in each of said bearing members at an angle to the axis of the bearing member, a conveyer roll attached to one end of said shaft, and a motor operatively connected to the opposite end of said shaft and supported by said bearing member.

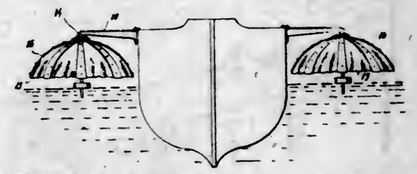
1,352,767. PIPE-JOINING DEVICE. BENNET CARROLL SHIPMAN, San Francisco, Calif. Filed Jan. 8, 1919, Serial No. 269,446. Renewed Feb. 10, 1920. Serial No. 357,520½. 11 Claims. (Cl. 90—12.)



1. In a pipe joining device, the combination of a recessed union, with a tool adapted to be secured firmly to the pipe and to be seated in the recess of the union, and having a cutter movably mounted adapted to cut away the outside of the pipe to an extent transversely exceeding the depth of the thread on said pipe, and longitudinally equaling the depth of the recess in said union.

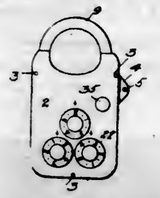
1,352,768. PROCESS FOR PRODUCING TANNATE-LIME COMPOUND DIFFICULTLY SOLUBLE IN DILUTE ACIDS. RUDOLF TAMBACH, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Mar. 10, 1917. Serial No. 153,984. 2 Claims. (Cl. 167—7.)

1. The process for producing basic tannate of calcium which consists in heating a solution of calcium hydroxid, tannic acid and water for such a period as to render the product difficult in dissolving in dilute acid, filtering the product thus produced, washing the same with water and then drying and finally powdering and screening the product.



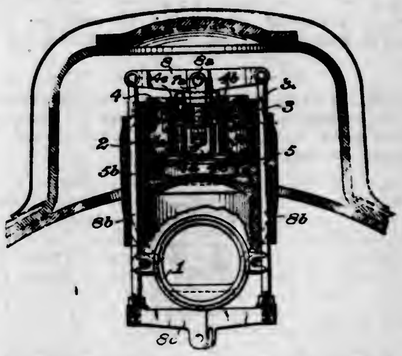
2. The process for producing basic tannate of calcium which consists in heating a solution comprising 2 kg. of calcium hydroxid, 5 kg. of tannic acid and 25.1 of water to about 100° C. for a period of about six hours or until a test of the product of reaction will be found to difficultly dissolve in dilute acid, filtering the product and washing it with water, and then drying the product and powdering and screening the same.

1,352,769. RESILIENT WHEEL. AUGUST W. TESCH, Lansing, Ill. Filed Feb. 2, 1920. Serial No. 355,692. 6 Claims. (Cl. 152—10.)



1. In a wheel of the class described, the combination with a hub, of a circular hollow body concentrically mounted around the same and supported thereby and having an inlet opening, spaced apart circumferentially extended jaws at the outer periphery of said body, each of said jaws having its inner face circumferentially grooved and provided with an inwardly extended floor, a resilient channeled tread piece located circumferentially in the space between said jaws and an orificed core located circumferentially in the channel of the tread piece.

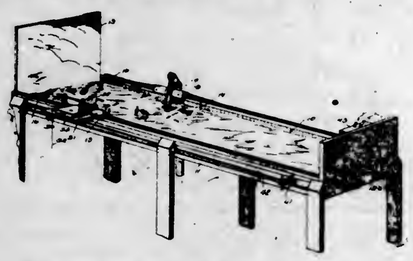
1,352,770. FLOAT FOR BOATS. SAMUEL E. VAN HORN, Manhasset, N. Y. Filed Feb. 21, 1919, Serial No. 278,378. Renewed Mar. 26, 1920. Serial No. 369,047. 3 Claims. (Cl. 9—3.)



1. Floats for boats formed of waterproofed flexible material arranged in the form of an umbrella, and adapted to open to act as a float upon striking the water.

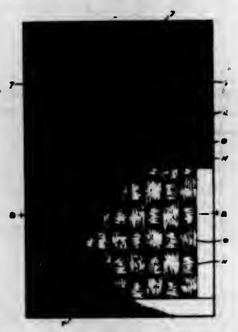
1,352,771. COMBINATION-LOCK. FRANCIS C. VARTULI, Winooski, Vt. Filed May 22, 1920. Serial No. 383,423. 11 Claims. (Cl. 70—113.)

1. In a combination lock, the combination of a casing provided with a knob device, a shackle slidably mounted in said casing, said shackle provided with a spring-pressed dog, means formed upon said knob device for receiving and holding one end of the dog for retaining the shackle in a locked position within the casing, and a spring in the casing and pressing against a portion of the shackle for forcing the shackle outwardly when the knob device is operated for releasing the dog.



1,352,772. THROTTLE-VALVE. HARRY S. VINCENT, Ridgewood, N. J. Filed Sept. 26, 1919. Serial No. 326,626. 5 Claims. (Cl. 277—37.)

1. The combination of a steam supply pipe; a single seated poppet throttle valve controlling said pipe; a sub-

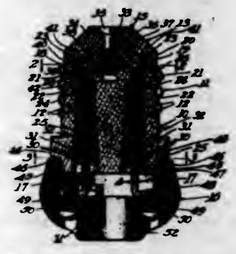


stantially balanced poppet pilot valve, having opposite end faces, each fitting a seat in said throttle valve, said pilot valve being movable relatively to the throttle valve; and means for successively unseating the pilot valve and the throttle valve.

1,352,773. SPOTTER'S TRAINING DEVICE. HARRY A. WENTWORTH, Spokane, Wash., assignor to The Government of the United States. Filed Feb. 18, 1919. Serial No. 277,734. 39 Claims. (Cl. 124—15.)

39. The method of training spotters which consists in simulating splashes of projectiles in the vicinity of a miniature target movable within a restricted area and at relatively close range and determining the relative location of the splashes with respect to said miniature target whereby corrections in range or deflection may be applied.

1,352,774. COMPOSITE SHEET. EDWARD H. ANGIER, Framingham, Mass. Filed Nov. 11, 1915. Serial No. 60,921. 3 Claims. (Cl. 128—156.)



1. An absorbent pad for surgical and like uses, comprising a tray having upturned edges and formed of paper having a waterproof coating and an absorbent body formed of separate crumpled pieces of paper set side by side.

1,352,775. SPARK-PLUG. GEORGE A. BELL, Silver Creek, N. Y., assignor of one-half to Le Roy C. Hammond, Silver Creek, N. Y. Filed May 26, 1917. Serial No. 171,140. 3 Claims. (Cl. 123—169.)

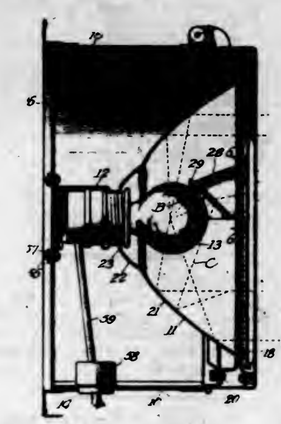
1. A spark plug provided with a pair of alined electrodes, a cleaning device comprising a comparatively small body having a center bore and a counterbore at one end of said center bore, said center bore being adapted to receive said electrodes and permit lengthwise movement of said body on said electrodes, said body having a passage extending therethrough from the periphery thereof to said counterbore.

1,352,776. SEPARABLE ATTACHMENT DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1915. Serial No. 18,455. 7 Claims. (Cl. 173—343.)

1. In a device of the character described, an insulating base having a recess therein provided with an abutment, and an opening leading from said recess adjacent said abutment, a flat metal retaining member extending through said opening and having a shoulder engaging said abutment, and a pair of spring contacts within said recess secured to opposite sides of said retaining member out of engagement with said abutment.

2. In a device of the character described, an insulating base having an elongated recess therein, a pair of contact blades extending longitudinally of said recess, the walls of said recess extending beyond said blades, the ends of said blades having guide portions narrower than said blades extending away from each other, said base having additional recesses narrower than said blades to afford clearance for the projecting ends of said fingers.

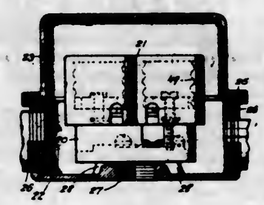
3. An attachment plug receptacle having an insulating body pierced to afford a contact chamber, a receptacle terminal in said chamber and a tongue and groove engagement between said terminal and a wall of said chamber, said tongue being arranged to prevent the entry of the jack of a coöperating plug into engagement with one side of said terminal for the purpose described.



4. An attachment plug receptacle having an insulating body pierced to afford a contact chamber, a receptacle terminal in said chamber and a tongue and groove engagement between the free end of said terminal and the wall of said chamber, said tongue being arranged to prevent the entry of the jack of a coöperating plug into engagement with one side of said terminal.

5. An attachment plug receptacle having an insulating body pierced to afford a contact chamber, a receptacle terminal in said chamber and a tongue and groove engagement between said terminal and the wall of said chamber, said tongue being arranged to prevent the entry of the jack of a coöperating plug into engagement with one side of said terminal, the engaging parts being of less width than the width of the terminal.

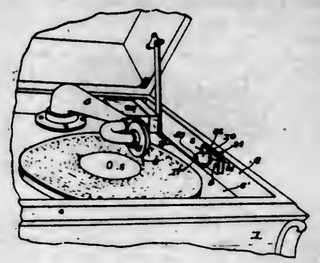
1,352,777. ILLUMINATING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1916. Serial No. 72,699. 13 Claims. (Cl. 240—44.)



1. A receptacle for electric lamps comprising an insulating base, a casing for said base, means for adjustably supporting said base for universal movement in said

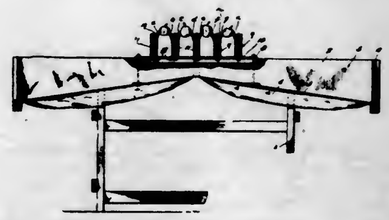
casing, and means mounted on said base and movable therewith for electrical connection with a lamp and for

mechanically securing said lamp to said base to move therewith.



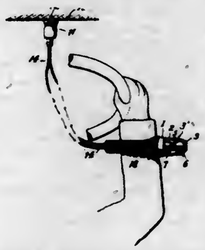
1,352,778. COMBINED CONNECTING-BLOCK AND FUSE-BLOCK. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1918. Serial No. 243,144. 9 Claims. (Cl. 175—369.)

1. The combination of a connecting block, a pair of connecting plates carried thereby, binding terminals for said connecting plates, an insulating block mounted on said connecting block and formed with a recess, a shell contact in said recess, said block having an aperture communicating with said recess, a binding terminal for said shell contact accessible through said aperture, and means for securing said insulating block to said connecting block, said means also providing a center contact corresponding to the shell contact and communicating with one of the connecting plates on the connecting block.



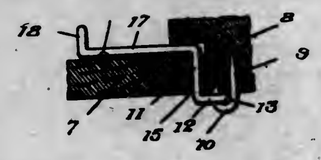
1,352,779. PHONOGRAPH-LIGHTING ATTACHMENT. GEORGE E. BERNECKER, Milwaukee, Wis., assignor to Standard Accessory Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 30, 1919. Serial No. 293,704. 3 Claims. (Cl. 240—2.)

1. A lighting attachment for sound reproducing machines comprising a fixed panel of a conductive material and having a guide channel in one straight face thereof, a lamp having one terminal grounded to the panel and its other terminal insulated from the panel and connected with one of two electrical feed wires, a contact in the bottom of the guide channel and insulated from the panel, the other of said feed wires being connected with said contact, and a switch member mounted in said guide



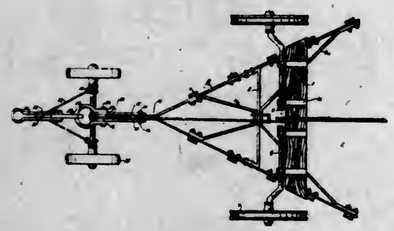
channel and grounded directly to the panel and movable to engage said contact.

1,352,780. FRUIT-GRADING MACHINE. MILTON W. BIRD, Wenatchee, Wash. Filed Aug. 21, 1919. Serial No. 318,912. 9 Claims. (Cl. 130—32.)



1. In a machine of the class described, sorting mechanism including an endless series of rolls, means for imparting travel to the series, and spaced elements arranged in the path of movement of the upper stretch of the series for coaction with the rolls to individually rotate the same.

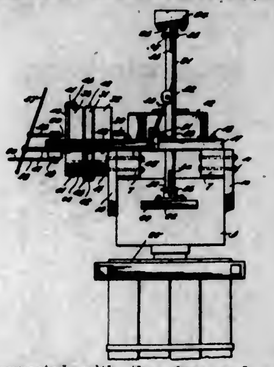
1,352,781. AUTOMOBILE SIGNALING DEVICE. BENJAMIN BIRKENFELD, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,435. 1 Claim. (Cl. 177—339.)



A signaling device of the kind described comprising a band adapted to be detachably engaged about the forearm, a supporting base mounted to be securely carried on the outer face of the band, an electric lamp socket opening outwardly from the base, an electric lamp having a plug to engage the socket, said plug being of a length to project outside of the socket when engaged therein with the lamp bulb standing out prominently from the forearm entirely clear of and at a substantial distance from the lamp socket, a guard for the lamp consisting of a wire frame secured to said supporting base and extending outwardly therefrom over the lamp bulb, and means for supplying current to the lamp.

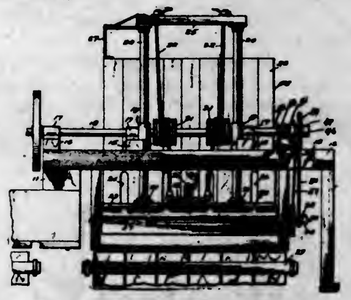
1,352,782. HINGE OR HANGER. JAMES G. BROOKS, Rushville, Nebr. Filed June 4, 1920. Serial No. 386,445. 4 Claims. (Cl. 16—48.)

3. In a hinge construction, the combination with a frame and a barrier, of hinge members carried by the frame, and pivoted hinge members carried by the barrier, the hinge members having loops and hooks movable into and out of engagement in one position of the barrier and so arranged as to prevent disengagement in the other position of the barrier.



1,352,783. CULTIVATOR. ARTHUR O. COX and PETER SAGER, Watsonville, Calif. Filed July 22, 1919. Serial No. 312,528. 6 Claims. (Cl. 97—34.)

6. The combination with the main frame of a cultivator of a pair of wheels supporting the rear end of the frame, means for raising or lowering the rear ends of the frame with relation to the rear wheels, an axle and a pair of wheels supporting the front end of such frame, a plate, a king bolt turnably mounted on the plate, a fork-shaped member on the lower end of the king bolt through which the axle extends, a pin extending through the fork-shaped extension and the axle, an arm rigidly secured to the plate, a pivotal connection between the arm and the front end of the main frame, a second arm extending upwardly from the first-named arm, a lever pivotally mounted on the main frame, a grip actuated pawl on the lever, a rock bar with which said pawl is engageable, a link connection between the second named arm and the lever, a shackle ring pivotally attached to the first named arm, a draw-bar connected with the shackle, such draw-bar having a longitudinally disposed slot formed therein, a sliding block in said slot, and a pair of links connecting said block with the axle ends.

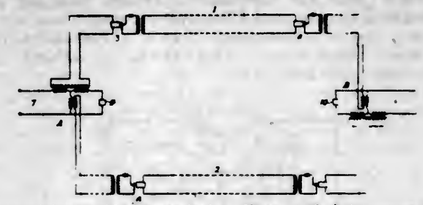


1,352,784. POWER REVERSING MECHANISM. THEODORE R. CAMERON, San Antonio, Tex. Filed Mar. 20, 1919. Serial No. 283,842. 4 Claims. (Cl. 64—4.)

1. A power reversing mechanism, comprising a support, a transverse driving shaft journaled in bearings on said support, a beveled gear connected with the driving shaft, an operating screw arranged near said bevel gear, a second beveled gear having screw-threaded engagement with the operating screw and meshing with first named beveled gear, a movable member connected with one end of the operating screw, a tight pulley secured to the transverse driving shaft, loose pulleys carried by the driving shaft and arranged upon opposite sides of the tight pulley, a plurality of belts engaging the pulleys, a belt shifting device comprising a tappet lever, rings secured to a portion of the movable member, and tappets

adjustably connected with the rings and arranged to contact with the tappet lever.

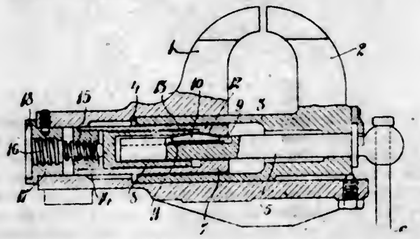
1,352,785. FEEDING APPARATUS FOR BALING-PRESSES. THEODORE R. CAMERON, San Antonio, Tex. Filed Sept. 2, 1919. Serial No. 321,208. 6 Claims. (Cl. 100—25.)



3. In a baling press, a ram, a lint shield carried by said ram, a rotatable shaft, means operated by the rotation of said shaft for raising and lowering said ram and lint shield, a rotatable paddle shaft provided with a brake, means positively connecting said first named shaft and said paddle shaft during a portion of the upward travel of said ram and lint shield whereby said paddle shaft is rotated, means for applying said brake when the shafts are not positively connected, and means actuated by the rotation of said first named shaft for rotating said paddle shaft, said brake preventing the rotation of said paddle shaft, when said ram and lint shield are being lowered.

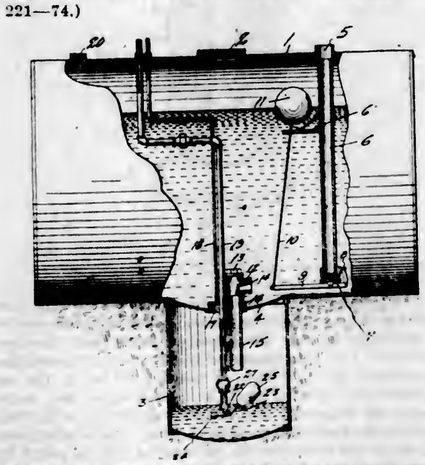
6. In a baling press, a ram, operating means therefor embodying a rotatable shaft, a member mounted upon said shaft and normally stationary with relation thereto, said member being adapted, when the shaft has rotated a predetermined number of revolutions in one direction, to engage said shaft and rotate therewith, and means carried by said member for limiting the rotation of said shaft and member after the engagement of said shaft by said member.

1,352,786. FOUR-WIRE TRANSMISSION SYSTEM. GEORGE A. CAMPBELL, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 17, 1916. Serial No. 72,606. 12 Claims. (Cl. 179—170.)



1. A transmission system comprising two stations, two transmission lines connecting said stations for tranmission in opposite directions, means at said stations interconnecting the ends of said lines, said means being so arranged that the transmission from one line to the other

is relatively small, and one-way repeaters in said transmission lines, the total transmission loss over the circuit

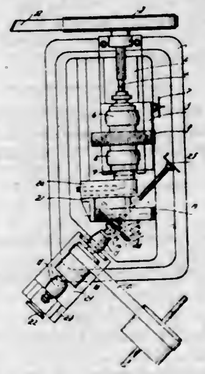


comprising said transmission lines and interconnecting means being at least equal to the amplification due to the repeaters.

1,352,787. PARALLEL BENCH-VISE. GUNNAR ELIAS CASSEL, Stockholm, Sweden, assignor to Aktiebolaget Gyro, Stockholm, Sweden, a Corporation of Sweden. Filed Feb. 17, 1920. Serial No. 359,477. 4 Claims. (Cl. 81—33.)

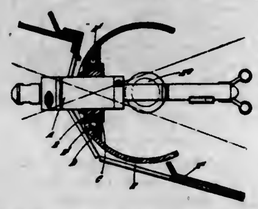
4. A bench vise, comprising in combination a fixed jaw, a jaw freely movable with respect to the fixed jaw, a bolt rotatably mounted in the movable jaw, there being longitudinal slots in said bolt, a fixed nut, wedge-shaped locking members in said slots, two sleeves movably mounted in the jaws and one of which is movably mounted within the other, said sleeves being engaged by the bolt and having inclined surfaces for engagement with said sleeves, and a screw engaging with said sleeves so as to cause a relative longitudinal movement thereof upon rotation of the sleeves.

1,352,788. LIQUID STORAGE AND DISPENSING APPARATUS. JOHN J. CATRON, Bonham, Tex. Filed May 2, 1919. Serial No. 294,277. 8 Claims. (Cl. 221—74.)



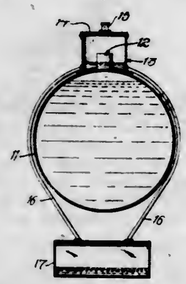
1. A liquid storage and dispensing apparatus, comprising a storage tank, an inlet pipe leading into the storage tank, a valve to close the inlet pipe, float controlled means to close the valve when the liquid reaches a predetermined level in the storage tank for permanently maintaining a space in the upper portion of the storage tank, a pressure tank arranged near the storage tank, a supply pipe having one end leading into the pressure tank and its opposite end leading into the storage tank, a check valve to close the supply pipe and seated by pressure within the pressure tank, an outlet pipe leading into the pressure tank, float control means to close the outlet pipe and arranged within the pressure tank, and a pressure supply pipe leading into the pressure tank.

1,352,789. COMBINED DENTAL MIRROR AND SYRINGE. JOSEPH E. CRAIG, Gary, Ind. Filed May 15, 1920. Serial No. 381,636. 4 Claims. (Cl. 128—10.)



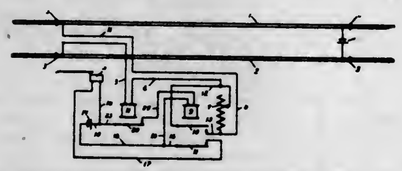
1. In a dental syringe, a bent tubular body open at its ends, a bulb mounted on one end of the body, an adjustable nozzle mounted on the opposite end of the body, an air-tube disposed in said body and having one end extending into the bulb, the other end of said tube projecting through the wall of the body, and a tension valve for controlling the flow of air through said tube.

1,352,790. MACHINE FOR GRINDING CONCAVE SPHERICAL SURFACES. AXEL DANIELSSON, Gottenborg, Sweden. Filed Oct. 7, 1919. Serial No. 329,178. 1 Claim. (Cl. 51—48.)



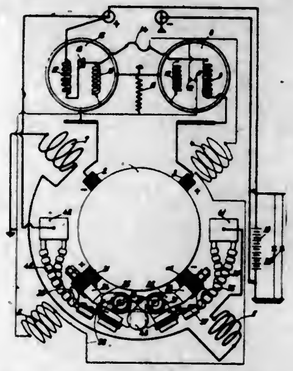
A machine for grinding concave spherical surfaces comprising in combination a rotatable shaft, a grinding-tool on one end thereof, another rotatable shaft, a holder on the last mentioned shaft for supporting a ring-shaped work-piece so as to leave a free space between the work-piece and the opposing end surface of the holder, and means for journaling said shafts so that their center lines intersect each other in the center of the spherical surface to be ground, substantially as and for the purpose set forth.

1,352,791. GUN-MOUNTING. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Dec. 16, 1919. Serial No. 345,443. 5 Claims. (Cl. 89—37.)



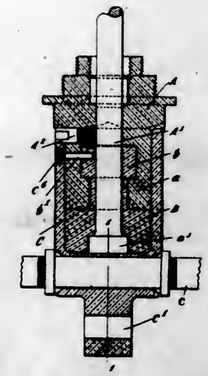
1. In a gun mounting, the combination with the gun and the part which supports it, of a universal joint device between the gun and the said part, this device comprising two part-cylindrical members, having their curved surfaces at right angles to each other and being so arranged that during training of the gun one of them moves about a vertical axis and during the elevation of the gun the other of them moves about a horizontal axis.

1,352,792. FUEL-TANK. JOHN L. DAY, Memphis, Tenn. Filed Apr. 29, 1920. Serial No. 377,530. 2 Claims. (Cl. 220—86.)



1. A portable fluid tank having an upper filling spout, a cylinder around the filling spout in spaced relation and extending thereabove, a valved cap for normally closing the cylinder, a waste storage tank, and a pipe connection leading from the lower portion of the cylinder to the said waste tank as described.

1,352,793. RAILWAY SIGNALING SYSTEM. FRANK L. DODGSON, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed July 1, 1916. Serial No. 107,019. 12 Claims. (Cl. 246—41.)

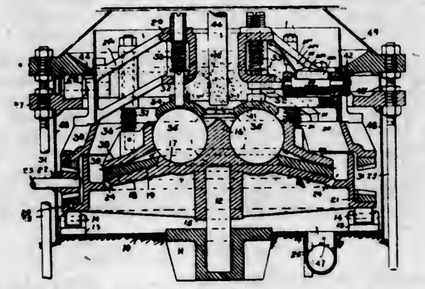


4. In a signaling system for railways, a track circuit comprising a source of electromotive-force and a relay, a resistance external to the windings of said relay, a movable device for controlling the inclusion and exclusion of said resistance in and from the path of the main circuit through the windings of said track relay, and means for causing said movable device to be controlled upon the movement of the armature of said relay to its extreme positions.

1,352,794. ELECTRIC STARTING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. AUGUSTE DUTREUX, Issy Les Moulineaux, France, assignor to Société Anonyme pour l'Eclairage Electrique des Vehicules, Issy Les Moulineaux, France, a Corporation of France. Filed Feb. 17, 1917. Serial No. 149,262. 2 Claims. (Cl. 290—31.)

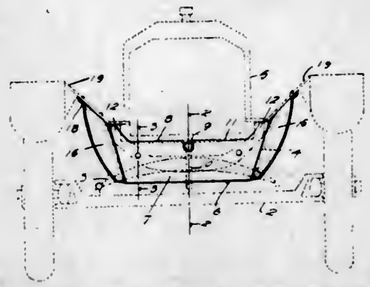
1. In an electric machine adapted to operate as a generator or a motor, a pair of brushes for the same when operating as a generator, a second pair of brushes for the same when operating as a motor, means for putting the latter brushes in contact with the commutator and means operable to establish an electrical contact between said latter brushes and the accumulators, after said brushes have engaged the commutator, and subsequently operable to permit the movement of said brushes out of contact with the commutator subsequently to breaking the contact between these brushes and the accumulator.

1,352,795. SUBMARINE MINE. GIOVANNI EMANUELE ELIA, Westminster, England, assignor to Vickers Limited, Westminster, England. Filed June 20, 1917. Serial No. 175,726. 11 Claims. (Cl. 102—3.)



1. In firing gear for submarine mines of the type comprising a buoyant chamber for an explosive and an anchor for normally holding the chamber submerged, the combination of a socket adapted to be secured to the chamber, a firing-rod for the mine, a member to which the rod is connected, coacting parts on the member and socket forming an interlock, and a casing inclosing said coacting parts and secured to said member, said casing being adapted to be connected to the anchor and to carry the firing-lever by which the member is turned relatively to the socket.

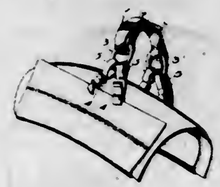
1,352,796. WATERPROOF FIBROUS MATERIAL AND PROCESS OF MAKING SAME. JAMES P. ELLIOTT, Chicago, Ill. Filed Sept. 14, 1917, Serial No. 191,341. Renewed July 8, 1920. Serial No. 394,804. 10 Claims. (Cl. 91—68.)



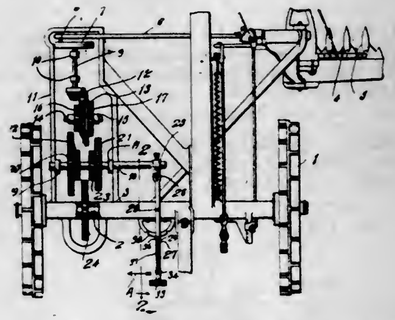
1. The process of producing a water-proofed body or sheet of any desired color which consists in making it of pulp having small particles of waterproofing material distributed throughout the mass thereof, and then immersing it in a hot bath having the desired color, to melt the aforesaid small particles of waterproofing material and at the same time cover the body or sheet with a coating of the desired color.

1,352,797. CRUSHING-MACHINE. WILLIAM ELLE, Pittsburgh, Pa., assignor of one-half to Joseph Sinkovitz, Carrick, Pa. Filed Mar. 26, 1919. Serial No. 285,170. 8 Claims. (Cl. 83—45.)

8. A crushing machine comprising a pair of superposed grinding members mounted to rotate one upon the other, a casing surrounding said grinding members so as to provide a chamber for the ground particles, a hood above said grinding members for connection with an exhaust means, and supplementary means for crushing any particles falling back from said hood and returning them to said chamber.



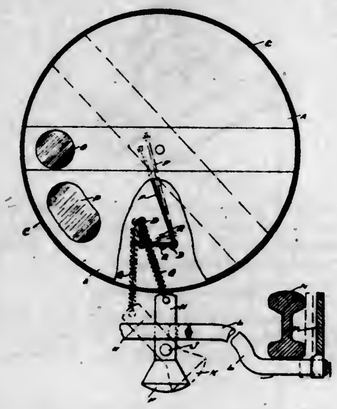
1,352,798. MUD AND DUST SHIELD FOR AUTOMOBILES. OSCAR R. EMERY, Milwaukee, Wis. Filed Jan. 14, 1920. Serial No. 351,431. 4 Claims. (Cl. 180—59.)



2. A shield comprising an elongated body adapted to close the space between the lower edge of the radiator and the front end of the chassis of an automobile, an inwardly directed flange formed on said body and underlying the radiator, extensions formed on the upper corners of said body and lying in close proximity to the chassis, and means securing the body to an automobile.

1,352,799. PATCH-HOLDER. CLARENCE ALBERT ERDLEY, Mifflinburg, Pa. Filed Aug. 6, 1919. Serial No. 315,711. 1 Claim. (Cl. 24—81.)

A device for holding an inside blow-out patch within a tire while the tire is being placed upon a rim, the blow-out patch including flaps passing beneath the beads of the tire; comprising clasps engageable with the flaps of the patch, and a member connecting the clasps and adjustable whereby to be drawn snugly against the outer periphery of the tire to hold the flaps firmly against the sides of the tire whereby to prevent folding of the flaps into the tire or shifting of the patch.

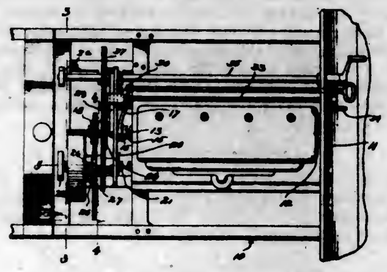


1,352,800. GEAR-SHIFT MECHANISM FOR MOWING-MACHINES. PAUL L. ETCHISON, Musella, Ga. Filed Sept. 12, 1917. Serial No. 190,994. 2 Claims. (Cl. 74—58.)

1. A gear shift comprising an axle, a gear wheel mounted on said axle for rotation therewith, a pair of shafts spaced in parallel relation with respect to one another and with respect to said axle, a driving gear mounted on one of said shafts, gears of different diameters mounted on said shaft to either side of said driving gear, the second shaft between the first mentioned shaft and the axle being slidably mounted for longitudinal movement, pairs of shift gears mounted in spaced relation upon said second shaft, means for sliding said second shaft to bring one of the shift gears of either pair into operative engagement with the gear on said axle and the other gear of said pair into operative engagement with one of the gears on the first mentioned shaft, and means for locking said second shaft in adjusted position.

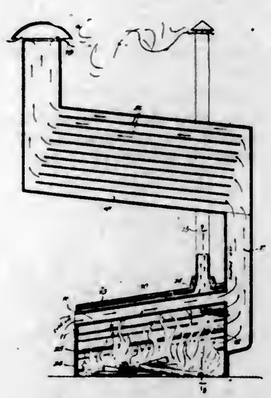
2. A gear shift comprising an axle, a gear mounted on said axle, a shaft parallel with said axle and carrying a driving gear and gears of different diameters to either side of said driving gear, an intermediate shaft positioned between said first mentioned shaft and said axle and parallel therewith, spaced pairs of shift gears carried upon said intermediate shaft, a lever connected with said intermediate shaft for moving the latter longitudinally to bring one of said shift gears of one of said pairs into operative connection with the gear on said axle and the other gear of said pair into operative connection with one of the gears on the first mentioned shaft, a pivoted foot operated member carried by said lever, and means connected with said pivoted foot operated member for normally locking said lever against movement, said foot operated member being normally held in one position by the last mentioned means and serving as the member by which the lever may be released and moved in either direction when released.

1,352,801. RAILWAY-SIGNAL. FREDERICK JOHN EVANS, Barry, Wales. Filed Feb. 28, 1920. Serial No. 362,011. 23 Claims. (Cl. 246—476.)



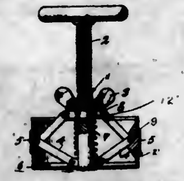
1. The combination of a railway signal, points, and a snap action lever so connecting the said signal to the points that the signal is at danger except when the points are substantially closed.

1,352,802. WATER-HEATER. LOUIS F. FAUST, Comfort, Tex. Filed July 25, 1919. Serial No. 313,140. 1 Claim. (Cl. 122—115.)



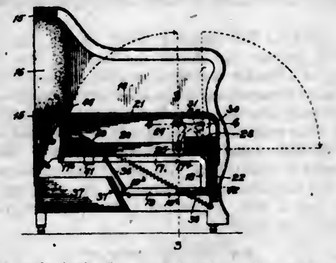
In a water heater, a bottom being provided at its periphery with a base flange, an outer shell having its lower end fitting within the base flange and resting upon said bottom, an inner shell disposed in spaced concentric relation within the outer shell for forming therewith a dead air space, said inner shell having its upper and lower ends bent outwardly to engage the inner surface of the outer shell, the lower end of the inner shell contacting with the outer shell adjacent its engagement with the base flange and thereby serving to reinforce and stiffen the same, legs supporting the base flange and secured thereto, a cover secured to the upper end of the outer shell, a water tank arranged in spaced concentric relation within the inner shell and having longitudinal flues, elements secured to the inner shell and supporting the lower end of the water tank, and inlet and outlet pipes for the water tank serving to connect the cover and water tank and retaining the proper concentric position of the tank with relation to the inner shell.

1,352,803. AUTOMOBILE-STARTER. HENRY C. FENTRESS, Glen Dean, Ky. Filed Oct. 21, 1919. Serial No. 332,334. 4 Claims. (Cl. 74—7.)



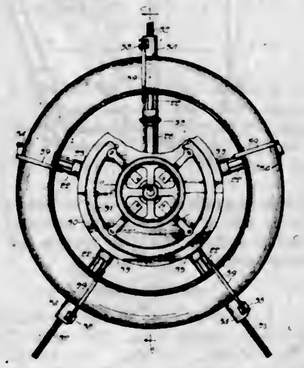
1. In an engine starter, the combination of a sectional engine shaft, one of the sections is normally disconnected from the other and adjustable into engagement therewith, a train of gearing operatively connected to the first named section for rotating the same, means for shifting one of the gears into and out of operative connection with the others, means for operating said train of gearing when the gears thereof are in operative relation, and a fly wheel yieldably connected to one of said gears.

1,352,804. HOT-AIR HEATER. JOHN W. FIEBER, Shaw, Oreg. Filed Apr. 30, 1919. Serial No. 293,662. 1 Claim. (Cl. 126—109.)



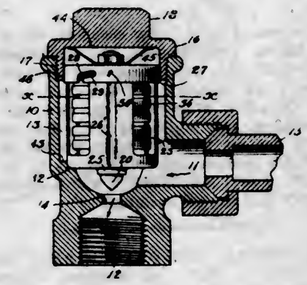
A hot air heater including a portable casing of inverted U-form in cross section tapering from one end to the other and having small and large front and rear walls respectively, said casing having an open base and adapted to rest at its lower side edges on the ground, a plurality of air flues inclined within the heating chamber formed by said casing, in a series following the contour of the casing and opening at their opposite ends through the said front and rear walls, said flues being spaced from one another and from the casing in parallel relation, and a hot air pipe connected at its lower portion to the rear wall of the heater and in communication with the upper rear ends of the several air flues of the series, said casing having a door and an air inlet in its said front wall and an upper outlet adjacent to the rear wall, as described.

1,352,805. COMMUTATOR-GRINDER. FRED E. FULLER, Portland, Oreg. Filed Apr. 21, 1919. Serial No. 291,769. 6 Claims. (Cl. 51—187.)



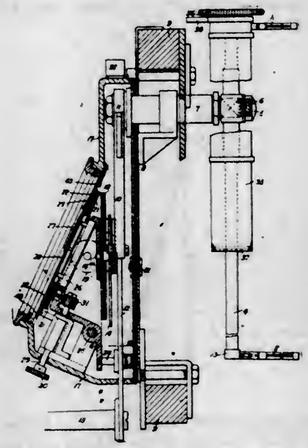
1. A grinder, comprising a body with openings, and abrasive means inside the body, with associated means projecting the abrasive means out of the opening.

1,352,806. SOFA-BED. JULIUS J. GRUENFELD, JR., Chicago, Ill. Filed Sept. 13, 1916. Serial No. 119,817. 4 Claims. (Cl. 5—51.)



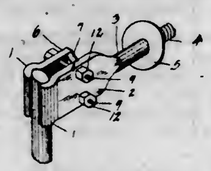
1. In a sofa bed, the combination of a sofa frame, a bed comprising foldably connected sections and connections between the sides of the bed and the frame respectively, each comprising a plurality of pivots and means for causing them to be successively and alternately held to successively act as stationary fulcra about which the bed swings, the corresponding pivots of the connections being coaxially disposed to cause both ends of the bed to successively swing about differently disposed stationary fulcra.

1,352,807. TIRE-CASING SPREADER. PAUL E. HAWKINSON, Minneapolis, Minn., assignor, by mesne assignments, to Kehawke Mfg. Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 29, 1919. Serial No. 334,274. 14 Claims. (Cl. 154—9.)



1. In a tire casing spreader, the combination with a plurality of pairs of members disposed in circular arrangement adapted to engage the edges of a tire casing, said members all mounted for movement around a horizontal axis, means arranged when operated to move all of said members in straight lines radial to the axis of their rotation, and means arranged when operated to move one of the engaging members of each pair in a straight line parallel to the said axis of rotation.

1,352,808. THERMO-VALVE. GEORGE D. HOFFMAN, Pasadena, Calif., assignor to Hoffman Specialty Company, Chicago, Ill., a Corporation of Illinois. Continuation of application filed June 28, 1915, Serial No. 36,859. This application filed Sept. 2, 1916. Serial No. 118,300. 15 Claims. (Cl. 236—58.)



14. A thermostatic valve unit for steam traps comprising a holder having opposite end portions and longitudinal connecting side walls, one of the end portions having an opening, a valve extending through said opening and being movable endwise therein, and an expansible thermodynamic element contained in said holder and containing a fluid adapted to be expanded and contracted by rise and fall of temperature, respectively, said element being confined between the valve and the opposite end portion of the holder and coöperating with the valve.

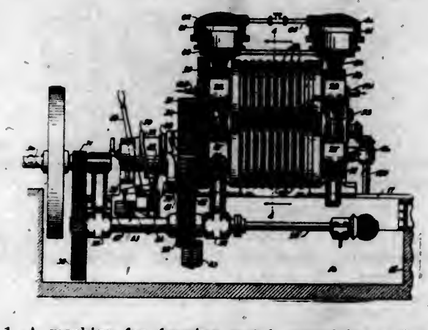
1,352,809. MEANS FOR MEASURING THE VELOCITY OF A MOVING BODY. NATHANIEL HARVEY HUNT, London, England, assignor of one-half to Walter George Kent, London, England. Filed July 9, 1918. Serial No. 244,065. 14 Claims. (Cl. 33—46.)

1. In an instrument for measuring the velocity of a body having movement relative to the instrument, the combination of means forming a movable sight line adapted to be directed upon said body, a stop watch and means controlled by the movement of the first named means for starting and stopping the watch.

1,352,810. CLAMP. OTTO H. HUNT, Walla Walla, Wash. Filed Feb. 4, 1920. Serial No. 356,313. 2 Claims. (Cl. 24—135.)

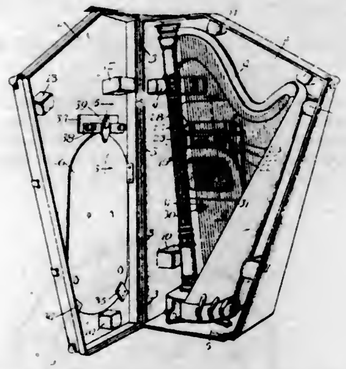
2. In a clamp, a pair of jaw members, one of said jaw members having a rear portion and an extended portion forming a shank, and terminating in a threaded stem, the other of said jaw members having a rear portion and an inwardly extending projecting lug, said lug having a triangular form and positioned with the apex of the triangle in contact with the rear portion of the first mentioned jaw member, conical openings in the rear portion of both of said jaw members, and a clamping means positioned in said conical openings.

1,352,811. METAL SUPPORTING AND TRANSFERRING TABLE. PERCY E. HUNTER, Pittsburgh, Pa. Filed June 29, 1918. Serial No. 242,568. 6 Claims. (Cl. 193—55.)



1. In combination with a supporting framework having an upper common plane of travel, a plurality of simultaneously adjustable supporting rollers and shafts having projecting terminals, vertically arranged guides therefor, and toggle joint mechanism for actuating all of said shafts and rollers simultaneously.

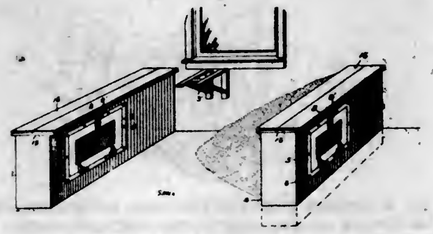
1,352,812. SHORTENING ATTACHMENT FOR REINS. EMIL F. JOHNSON, Lamberton, Minn. Filed Mar. 27, 1920. Serial No. 369,191. 1 Claim. (Cl. 54—74.)



The combination with a driving rein having a longitudinal series of openings at the driving end and a series of openings intermediate its length, of a device for taking up the excess of length of the rein including a strap having a buckle on each end extending in opposite directions with respect to the strap, one buckle being arranged for adjustable engagement with the intermediate portion of the rein and the other buckle arranged for adjustable engagement with the driving end of the rein.

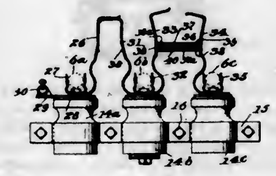
1,352,813. MACHINE FOR FORMING METAL. CASS L. KENNICOTT AND CHARLES P. KEMBLE, Chicago Heights, Ill.; said Kennicott assignor, by mesne assignments, of his entire right to Abner C. Harding, Chicago, Ill. Filed Aug. 13, 1918. Serial No. 249,641. 2 Claims. (Cl. 153—77.)

1. A machine for forming metal comprising a frame, a pair of geared roll-shafts mounted in the frame, a plurality of annular members sleeved upon the said roll-shafts and detachably secured thereto, certain of said annular members on one roll-shaft constituting male forming dies and the opposed annular members on the other roll-shaft constituting female forming dies removable elements inserted in the peripheral surfaces of said annuli and constituting portions of the forming surfaces thereof, and a stop on one of said rolls for positioning the metal to be formed.



1,352,814. TRUNK FOR HARP OR LIKE INSTRUMENTS. WALTER I. KIRK, Chicago, Ill., assignor to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1916. Serial No. 113,076. 2 Claims. (Cl. 206—13.)

1. A trunk comprising a casing of substantially harp shape having one of its side walls provided with strips and fastening devices and also sockets for engaging a cross member and the legs of a chair.

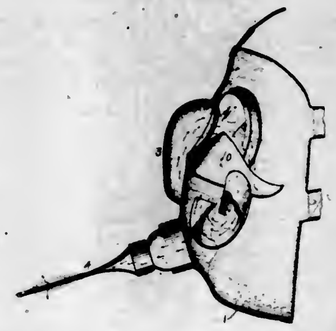


1,352,815. FITTINGS FOR MOLDING PLANTS. HUGH LESLIE KIRSH, Beaver Dam, Wis. Filed Jan. 12, 1920. Serial No. 350,899. 1 Claim. (Cl. 72—1.)

In a molding plant having side walls, the combination of individual work stalls associated therewith, comprising a pair of parallel fire proof hollow walls extending from the side wall, the hollow wall constituting a storage chamber, each of which is provided with an opening in one side for communication with a stall, a fire proof closure for the opening, the opposite face of said wall being uninterrupted to constitute a support for the hot sand to be banked thereagainst, and wooden panels detach-

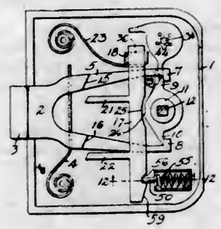
ably secured to the upper surface of each wall to constitute a smooth surface molding table having a solid support thereunder.

1,352,816. REPEATING FUSE APPARATUS. LAURENCE M. KLAUBER, San Diego, Calif., assignor of one-half to San Diego Consolidated Gas & Electric Company, San Diego, Calif., a Corporation of California. Filed Dec. 6, 1918. Serial No. 265,536. 9 Claims.. (Cl 200—126.)



1. In a repeating fuse apparatus for high tension lines, the combination of a primary fuse and a secondary fuse each connected at one end in the circuit, the other ends of said fuses being insulated from each other, and a cut-out between the insulated ends of said fuses constructed to resist dielectrically the normal potential developed across it and between said insulated ends, and operating to rupture under the potential developed across it when said primary fuse burns out.

1,352,817. ATTACHMENT-PLUG. CHARLES J. KLEIN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 4, 1917, Serial No. 159,602. Renewed Nov. 8, 1917. Serial No. 200,996. 6 Claims. (Cl. 173—343.)

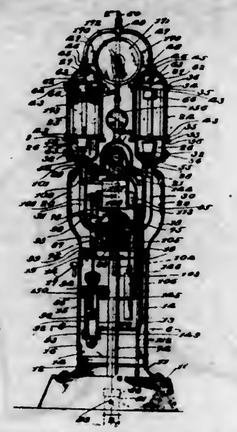


1. The combination with a molded insulating base and a contact to be secured thereto, of a metal insert molded in said base and having integral lugs projecting from said base and engaging with said contact at spaced points to definitely position the same, and one of said lugs being utilized to rivet said contact to said base.

1,352,818. RESPIRATOR. ARTHUR B. LAMB, Washington, D. C., ELTON W. MILLER, Akron, Ohio, and PAUL W. CARLETON, Penns Grove, N. J. Filed June 24, 1919. Serial No. 306,359. 4 Claims. (Cl. 128—141.)

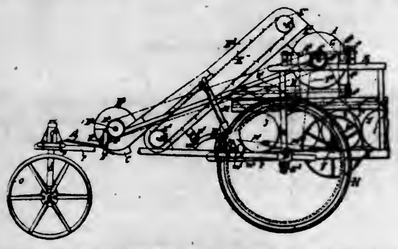
1. In a respirator a diaphragm dividing the same into eye and mouth spaces and one or more tubes extending through the said diaphragm connecting the spaces so formed.

1,352,819. DOOR-LOCK. WELLINGTON LOUGHEED, Wyandotte, Mich., assignor of one-half to Jacob B. Sparks, Royal Oak, Mich. Filed Aug. 11, 1919. Serial No. 316,712. 5 Claims. (Cl. 70—29.)



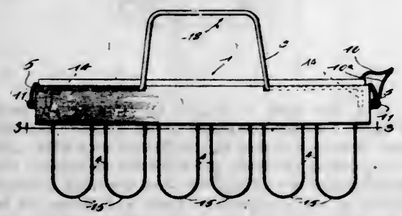
1. In a door lock, a member operable by an interior door knob, a member operable by an exterior door knob, a latch member actuated by the interior door knob, a locking bar holding the latch member from movement, means for disengaging the locking bar from the latch member by operation of the interior door knob, and means for holding the locking bar in disengaged position to allow operation of the lock by both door knobs.

1,352,820. GASOLENE-MEASURING DEVICE. JOHN C. MCKALLIP, Houston, Tex. Filed Apr. 16, 1918. Serial No. 228,889. 22 Claims. (Cl. 221—99.)



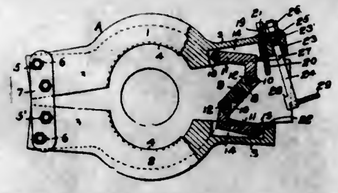
1. A device of the character described including a storage tank, a measuring vessel connected therewith, a discharge for the vessel, means for establishing communication between the vessel and the storage tank or between

the vessel and the discharge, and means communicating with the vessel for receiving and containing air dis-



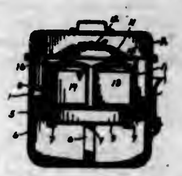
placed therefrom and movable to compensate for excess pressure in the vessel.

1,352,821. THRESHING-MACHINE. HUGH VICTOR MCKAY, Sunshine, Victoria, Australia. Filed Dec. 28, 1916. Serial No. 139,307. 7 Claims. (Cl. 130—27.)



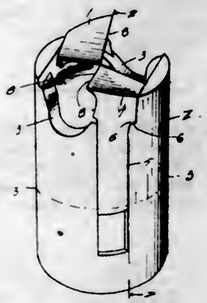
1. In a threshing machine, a spindle, a peg drum on the spindle, an intake fan at one end of the spindle, an exhaust fan at the other end of the spindle, and baffles below said spindle and coacting with said peg drum.

1,352,822. EGG-CANDLER. CHARLES T. MCLELLAN, Sioux City, Iowa. Filed Dec. 13, 1919. Serial No. 344,614. 7 Claims. (Cl. 99—6.)



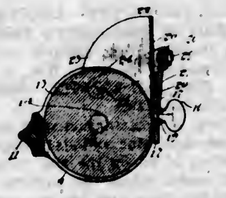
1. A candling device comprising an elongated casing to extend over a row of eggs provided with a plurality of openings in one side thereof, illuminating elements disposed in the casing opposite the openings, rocking members disposed on opposite sides of the casing and pivotally secured to the ends of the casing, handles carried by and extending from one edge of the rocking members, egg-gripping members carried by and extending from the opposite edge of the rocking members and disposed on opposite sides of the openings in the casing, and spring means for actuating the egg-gripping members toward each other.

1,352,823. DIE-HEAD. WILLARD C. MARKS, Etna, Pa., assignor to Spang, Chalfant & Co., Incorporated, a Corporation of Pennsylvania. Filed Oct. 1, 1919. Serial No. 327,753. 6 Claims. (Cl. 10—100.)



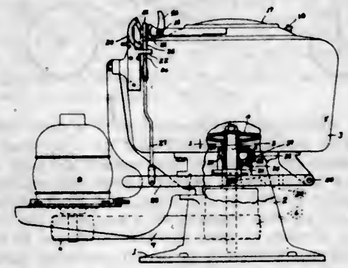
1. A die head formed of two yokes movably connected together at one end, lever means positioned entirely between the yokes at the opposite end of the same for opening and closing said yokes, said yokes being recessed for the reception of said lever means when in closed position, and operating means for the lever means at one side thereof.

1,352,824. COMBINATION-BOILER. ELIZABETH M. MARTIN, Sterling, Ill. Filed Apr. 18, 1917. Serial No. 162,824. 2 Claims. (Cl. 53—2.)



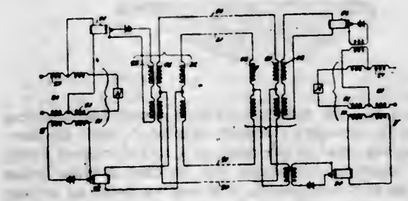
1. In a device of the class described, a boiler provided with a cover; an annular support provided with suitable legs, and formed of two parts adjustable with relation to each other; brackets attached to said support; and a vessel provided with a drop bottom adapted for support on said brackets, and spaced apart from said support.

1,352,825. BORING-TOOL. WILLIAM C. MEREDITH and WILLIAM C. WILLIS, Atlanta, Ga., assignors of one-third to R. H. White, Atlanta, Ga. Filed Dec. 19, 1916. Serial No. 137,798. 4 Claims. (Cl. 145—120.)



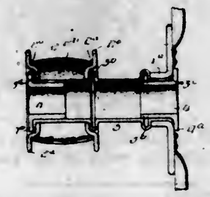
1. A boring tool comprising a cylindrical head having a bore, and a pair of bits removably secured to said head and disposed over one end of the bore and arranged in offset relation with respect to each other, said bits being inclined both to the transverse axis and longitudinal axis of said head and each having one longitudinal side thereof beveled to provide cutting edges so that the inner end of one cutting edge opposes the inner end of the other cutting edge and at obtuse angles to each other, said head having oppositely disposed cut-out portions and arranged adjacent the outer ends of the bits.

1,352,826. NOODLE-MACHINE. FRANK MICHALEK, Chicago, Ill. Filed June 26, 1914, Serial No. 847,389. Renewed Feb. 12, 1920. Serial No. 358,126. 13 Claims. (Cl. 107—14.)



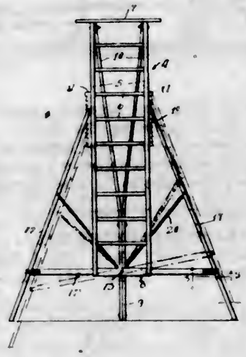
2. A noodle machine comprising in combination a hopper having a wall formed to present a perforated die for containing a mass of dough, a plain surfaced roll having an axis not higher than the perforations in said die, means for operating said roll to force the dough from the hopper through the die portion, a resilient reciprocating severing blade, a suitable support suspending said blade, and means whereby said blade is retracted from its cutting position including the flexing and releasing of said blade.

1,352,827. SAFETY DEVICE FOR EXTRACTORS. ERNEST W. MILLER, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 23, 1916, Serial No. 133,041. Renewed Jan. 10, 1920. Serial No. 350,682. 6 Claims. (Cl. 74—46.)



1. An extractor, comprising a rotating basket, an electric motor for driving the same, a motor circuit including a switch, a controlling circuit for actuating said switch and including a second switch, said controlling circuit when completed closing said motor switch, a brake for said basket, and a cover for closing the opening to said basket, said second switch being controlled by either said brake or cover.

1,352,828. FOUR-WIRE CIRCUIT. JOHN MILLS, Wyoming, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 7, 1918. Serial No. 238,713. 6 Claims. (Cl. 179—170.)

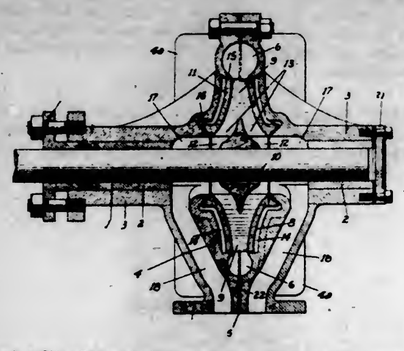


1. A transmission system comprising two pairs of conductors extending between stations a connection at one station delivering current substantially equally to said pairs in parallel, a connection at another station delivering current to two circuits in parallel each of which comprises one conductor of each of said pairs, means at each station for taking off current delivered by the other, and amplifiers for the currents traveling in either direction.

1,352,829. ROTARY FAN. ARVID NELSON, Chicago, Ill., assignor to Howe Lamp & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1920. Serial No. 360,521. 5 Claims. (Cl. 64—17.)

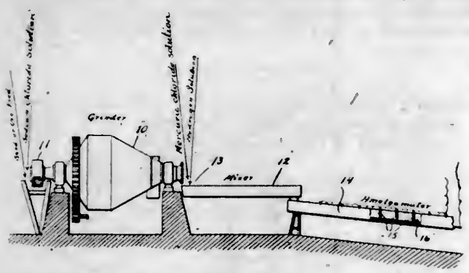
1. A rotary fan comprising a tubular body member of thin metal having its cylindrical wall, at places intermediate of its length, displaced radially outward to provide a pair of integral abutting shoulders thereon, and face-disk and pulley members fitted to the respective ends of said body portion and in abutment against the shoulders thereof.

1,352,830. ADJUSTABLE LADDER. EDWARD C. OBERMEYER, Nessen City, Mich. Filed Oct. 4, 1919. Serial No. 328,479. 2 Claims. (Cl. 228—64.)



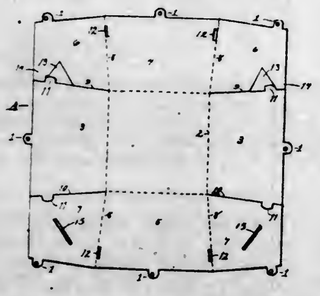
1. In a device of the character described, a ladder including side rails, said rails having a plurality of notches associated therewith, adjustable supplemental legs pivotally connected with the ladder, and springs for retaining one end of each leg in engagement with said notches.

1,352,831. DOUBLE-SUCTION CENTRIFUGAL PUMP. JAMES W. PINKERTON, Lodi, and ELMER TOMLINSON, Stockton, Calif., said Tomlinson assignor to said Pinkerton. Filed Oct. 21, 1919. Serial No. 332,346. 2 Claims. (Cl. 253—191.)



1. A centrifugal pump comprising a casing, a shaft turnable therein and having a hub thereon and a runner secured on the hub, the runner comprising vanes and having spaced webs connecting the side edges of the vanes and spaced from the walls of the casing, the casing

being split transversely of the shaft and centrally of the runner, whereby gaskets may be placed between the ad-

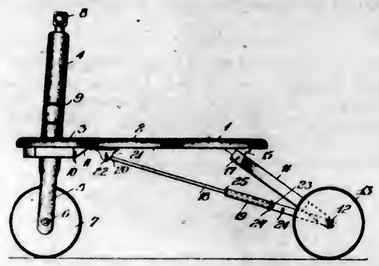


jacent split edges of the casing to alter the distance between the same and the walls of the runner.

1,352,832. PROCESS FOR EXTRACTING PRECIOUS METALS. CHARLES P. PRIEST, Philadelphia, Pa. Filed Aug. 21, 1919. Serial No. 318,947. 2 Claims. (Cl. 83—65.)

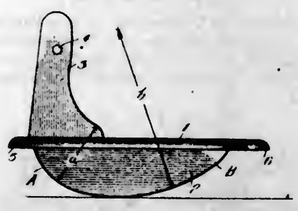
1. A process of extracting precious metals from ores or sands consisting in grinding the ores or sands in a solution of a sodium compound, then mixing with a hydrogen solution and a mercury compound solution, and then electrolyzing the slime whereby to effect amalgamation.

1,352,833. COLLAPSIBLE BERRY-BOX. CHARLES W. ROBINSON, Battle Creek, Mich. Filed Dec. 2, 1919. Serial No. 342,028. 4 Claims. (Cl. 229—35.)



1. A box formed from a blank comprising a rectangular bottom portion having radiating extensions forming sides, means for interlocking said sides at their intersections, said sides having tongues extending from their edges and holes formed through said tongues, a cover having openings coincident with and adapted to receive the tongues of said cover and pins adapted to engage through said holes and retain said cover on said box.

1,352,834. OIL-PROTECTED ELECTRIC BATTERY AND METHOD OF PRODUCING THE SAME. OTTO E. RUHOFF, Madison, Wis., assignor to French Battery & Carbon Company, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1919. Serial No. 293,049. 3 Claims. (Cl. 204—29.)

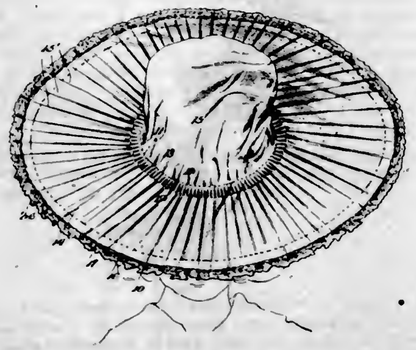


1. In a battery, in combination with the usual carbon, depolarizing materials, zinc and electrolyte, an attenuated protecting coating of oil on the zinc protecting the zinc from chemical action when the battery is at rest, but which does not interfere with efficient action of the battery when in use.

1,352,835. TOY VEHICLE. HENRY G. RUNNE, Rochester, N. Y., assignor, by mesne assignments, of one-half to Charles L. Townsend, Rochester, N. Y. Filed Jan. 24, 1919. Serial No. 272,956. 8 Claims. (Cl. 208—165.)

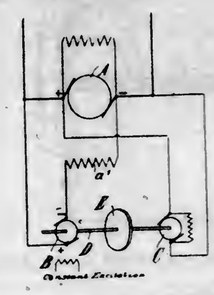
1. In a vehicle, the combination with a body and a swinging axle support hinged thereto, of a two-part adjustable radius rod connecting the support and body and embodying a latch member pivoted to one element and a socket member pivoted to the other, said members being loosely guided to slide longitudinally one upon the other and loosely pivoted to their carrying elements to have universal movement thereon to permit the latch member to be deflected laterally into and out of locking engagement with the socket member.

1,352,836. TOY. HENRY G. RUNNE, Rochester, N. Y., assignor of one-half to Charles L. Townsend, Rochester, N. Y. Filed Apr. 28, 1919. Serial No. 293,184. 4 Claims. (Cl. 46—22.)



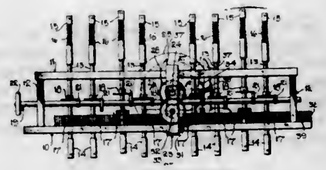
1. In a toy, the combination with a seat board having a forwardly arranged standard adapted to limit the forward seating point of the rider, of a rocker support therefor of eccentric curvature, the forward portion being struck on a radius having said seating point as an approximate center and the rear portion being struck on a longer radius having its center above the first mentioned center.

1,352,837. WRINGER-MOP. GEORGE A. SANGUINET, St. Louis, Mo. Filed Apr. 24, 1920. Serial No. 376,330. 4 Claims. (Cl. 15—43.)



1. In combination with a tubular handle, a rod reciprocable in the bore of the handle, a mop secured to the rod below the handle, spring-controlled squeezing rolls leading from the handle and positioned to engage the mop from opposite sides with a movement of the rod and mop in a given direction, and means interposed between said rolls and the rod carrying the mop for drawing the mop and rod back to their original position.

1,352,838. SUN-HAT. ROSA P. SATTERFIELD, San Antonio, Tex. Filed Sept. 3, 1919. Serial No. 321,344. 1 Claim. (Cl. 2—108.)

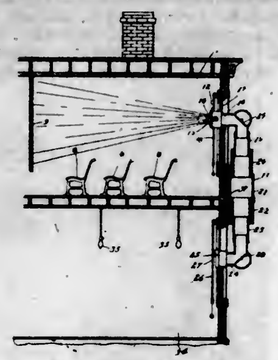


A hat including a single piece of cloth, a strip stitched in annular formation beneath said piece of cloth at a point spaced from its edge, an elastic band confined between said strip and said piece of cloth for dividing the piece of cloth into a crown and a brim and for yieldably contracting the crown to conform to the shape of the head, a second strip secured in annular formation to the edge portion of said brim, and a stiffening wire secured between said second named strip and the adjacent portion of said brim.

1,352,839. ARRANGEMENT FOR AUTOMATICALLY REGULATING THE VOLTAGE OF DYNAMOS. LUDWIG SCHÖN, Essen-on-the-Ruhr, Germany, assignor to Fried Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 23, 1913, Serial No. 808,470. Renewed Feb. 27, 1920. Serial No. 361,719. 4 Claims. (Cl. 171—225.)

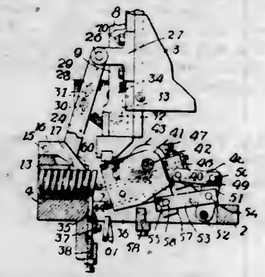
1. Arrangement for automatically regulating the voltage of a dynamo comprising a shunt winding and an auxiliary exciting winding for said dynamo, which winding is normally inoperative and only rendered operative when the voltage of said dynamo varies; a generator constituting an auxiliary source of voltage practically independent of the load of said generator, the armature of said generator being connected in opposition to the armature of said dynamo through said exciting winding, and an electric motor for driving said generator, said electric motor being fed by said dynamo and means for constantly exciting said auxiliary generator.

1,352,840. VALVE-GRINDER. RALPH A. SHANTZ, Salem, Oreg., assignor of one-third to Oscar A. Steelhammer, Salem, Oreg., and one-third to John F. Steelhammer, Woodburn, Oreg. Filed Feb. 19, 1920. Serial No. 359,835. 11 Claims. (Cl. 51—29.)



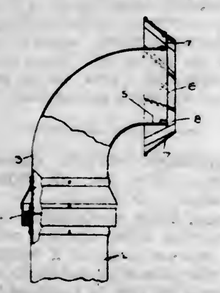
1. A valve grinding mechanism including a plurality of rotatable and vertically shiftable grinding shafts, means for continuously oscillating the said shafts in both their normal and vertically shifted positions, means for actuating said oscillating means, means for intermittently shifting each of the shafts, and means for varying the stroke of the oscillating means during oscillation and vertical shifting of the shafts as described.

1,352,841. AMUSEMENT DEVICE. HERBERT A. SILVER, Cincinnati, Ohio. Filed Dec. 22, 1919. Serial No. 346,497. 2 Claims. (Cl. 88—24.)



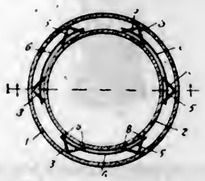
1. An amusement device consisting of the combination in an image projection device affording visible communication between adjacent rooms of a building containing the device, of a tube connecting the rooms, means adapted detachably to mount the tube in openings in walls of the rooms, a shade in one of the adjacent rooms, adapted to disguise the end of the tube in that room, and a lens at the end of the tube in the other of the adjacent rooms,

adapted to permit the projection of images from the first to the second mentioned rooms, and whereby the projec-



tion of images from the second to the first mentioned rooms is prevented.

1,352,842. COIL FEEDING AND CUTTING MECHANISM. FRANK H. SLEEPER and WILLIAM H. BLOUNT, Worcester, Mass., assignors to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1917. Serial No. 153,901. 14 Claims. (Cl. 164—48.)



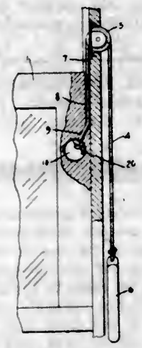
1. In a machine of the class described, a coil feeding mechanism comprising a stationary block, a bushing held in said block, said block and said bushing having longitudinal slots, reciprocating coil engaging devices projecting through said slots and adapted to move said coil, and means for applying frictional resistance to the movement of a coil held in said bushing.

1,352,843. VENTILATOR ATTACHMENT. FRANK C. SMITH, Minneapolis, Minn. Filed Jan. 25, 1917. Serial No. 144,335. 1 Claim. (Cl. 98—3.)

A ventilator comprising an elbow mounted for rotary movement on a vertical axis and having an exit opening, a ring in the form of a truncated cone encircling the outer end of said elbow and said exit opening, the tapered walls of said cone being obliquely arranged with respect to the end of said elbow and spaced therefrom, an unobstructed annular air passage being thereby formed between said cone and elbow, the walls of said cone directing such air currents inwardly to create a suction through the exit opening of said elbow, the opening in the discharge end of said cone being of greater diameter than the adjacent opening in said elbow to prevent choking of the air currents passing therethrough, and substantially straight blades mounted obliquely on the inner surface of said cone and extending substantially from end to end thereof and converging from their rear toward their forward ends to impart a rotary movement to the currents of air passing between said cone and elbow.

1,352,844. VACUUM-BOTTLE. HERBERT M. SMITH, Farmington, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed May 3, 1920. Serial No. 378,380. 6 Claims. (Cl. 215—118.)

2. In a separator for vacuum bottles, the combination of a non-metallic elastic strip of low heat conductivity having two projecting legs, means connecting said legs at points removed from their extremities and holding them in spaced relation, said strip being V-shaped.

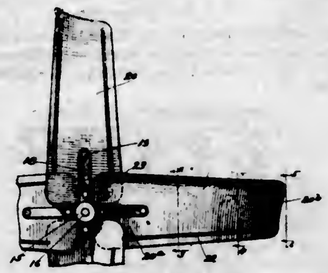


1,352,845. MANUFACTURE OF METAL FORMS. WALTER SNYDER, Philadelphia, Pa. Filed Sept. 12, 1916. Serial No. 119,608. 2 Claims. (Cl. 223—17.)

1. The method of constructing a drying form which consists in superposing metal plates having the general contour of the article to be dried, with an intervening spacing member remote from their edges; bending the plates about said member as fulcrum so as to bring their edges together; and integrally uniting said edges to form a relatively flat, hollow, unitary metallic envelop.

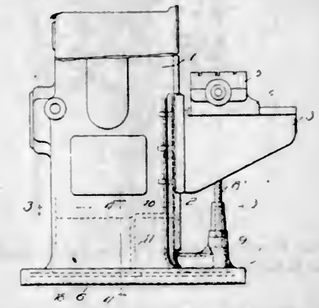
1,352,846. SASH-CORD DEVICE. MICHAEL SORG, Indianapolis, Ind. Filed Jan. 29, 1920. Serial No. 354,836. 2 Claims. (Cl. 16—16.)

1. A sash cord device comprising a window sash, a slot on the edge thereof, an angularly disposed passage leading from said slot into the body of said sash, an opening in said sash, said angularly disposed passage communicating therewith, a cylindrical lining member secured in said opening, an opening in the periphery of said member registering with said passage, means for securing said lining member on said sash, and means for covering the



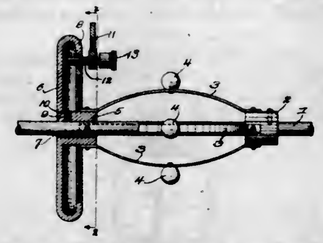
same, comprising a recess in said lining member, a cover plate fitting therein, spring members secured to said cover plate, said spring members being adapted to engage said lining member to hold the cover plate in position, and means thereon to facilitate removal.

1,352,847. LUBRICATING-CUP. ANTOINE SOUDY, Lyon, France. Filed Apr. 7, 1919. Serial No. 288,153. 2 Claims. (Cl. 184—91.)



1. A cup comprising a body having a bore and a chamber having an internally spherical mouth in continuation of said bore, a hollow cap in the form of a portion of a sphere larger than a hemisphere fitting in said mouth and a lateral spring one end of which is axially fixed in said body and the other end axially fixed in said cap and allowing said cap to be tilted to allow oil to be introduced into said chamber, the said spring automatically retarding said cap when released to the closed position.

1,352,848. FAN-WHEEL. DESIDER STANTO, Milwaukee, Wis. Filed Oct. 30, 1917. Serial No. 199,249. 2 Claims. (Cl. 170—159.)

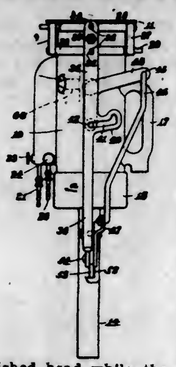


1. The combination with a hub of blades mounted thereon and radiating therefrom, the projection of each unit of length of each blade on a plane containing the axis of rotation of said hub and the center line of the blade being inversely proportional to the distance of said unit from said axis.

1,352,849. MILLING-MACHINE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford Ill., a Corporation of Illinois. Filed Apr. 30, 1919. Serial No. 293,869. 11 Claims. (Cl. 90—58.)

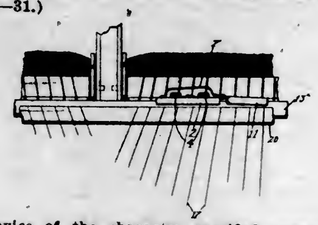
1. A milling machine having, in combination, a hollow column having a front wall and two side walls, a base for the column, said base projecting forwardly of the column, a guide on the front wall of the column, a knee vertically slidable upon said guide, means for exerting force tending to separate the knee and said projecting portion of the base, a web extending rearwardly from the front wall of the column and from one side wall of the column to the other, and a vertical web extending across the angle between the front wall of the column and the other web substantially midway between the two side walls of the column, said vertical web extending into the forwardly projecting portion of the base.

1,352,850. SELF-OILING GOVERNOR. WILFRED VAN BUREN THOMAS, Catskill, N. Y. Filed Apr. 5, 1919. Serial No. 287,811. 3 Claims. (Cl. 184—7.)



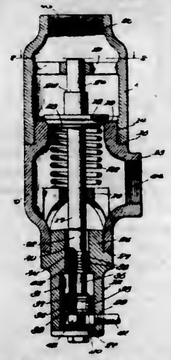
1. A self-oiling governor comprising a shaft, a disk slidably mounted thereon and constrained to rotate with the same, means adapted to be operated by centrifugal force for moving the disk, a brake means or friction speed control adapted to be lubricated and engaged by the disk, said disk being provided with means for preventing the lubricant from flying from the same by centrifugal force and means for supplying a lubricant to the disk and friction speed control.

1,352,851. RIVETING-MACHINE. HARLOWE EDSON TRUMBULL, Amesbury, Mass. Filed Dec. 13, 1918. Serial No. 267,552. 13 Claims. (Cl. 78—46.)



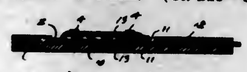
13. In a machine of the class described, the combination of a portable casing provided with a centrally disposed cylindrical heating chamber and alined inlet and outlet passages communicating with and in alinement with said chamber; means for feeding a partially headed blank through said inlet passage into said heating chamber and subjecting it to the heat therein; and means for giving a

final shape to said head when delivered from said heating chamber, said shaping means being adapted to provide a



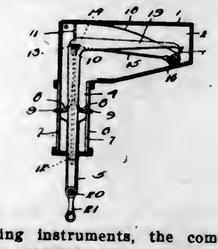
support for the finished head while the opposite end of said blank is being upset.

1,352,852. ROLLER-CLEANER. MATTHIAS E. VAN BROCKLEN AND RICHARD HAIDEN, Amsterdam, N. Y. Filed Jan. 3, 1920. Serial No. 349,316. 3 Claims. (Cl. 19—31.)



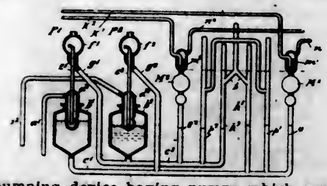
1. A device of the character specified, comprising a channel-shaped support having openings in the body thereof, and rollers journaled in the openings and having their axes inclined to the long axis of the support for the purpose specified, and a guide arm extending laterally from the support and adjustably connected therewith.

1,352,853. AUTOMATIC STARTING AND EQUALIZING PRESSURE-VALVE FOR COMPOUND ENGINES. JAMES B. VERNON, Princeton, W. Va. Filed Aug. 21, 1917. Serial No. 187,459. 3 Claims. (Cl. 121—105.)



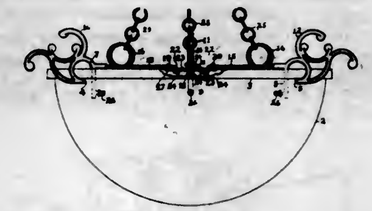
1. An automatic starting and regulating valve for compound steam engines comprising a casing having means whereby the same may be connected to the live steam duct of a compound steam engine and provided intermediate its ends with a valve-seat and a valve thereby forming a live steam chamber between said valve and said connecting means, said casing being provided with means whereby the same may be connected to the passage between the high and low pressure cylinders of a compound steam engine, and spring means assisted by the steam pressure in the passage between the high and low pressure cylinders for opening the valve against the pressure of the live steam in said chamber when the pressure of the live steam in said chamber drops below the combined pressure of said spring means and the steam within said passage.

1,352,854. HEATER FOR CARBURETERS. CLARENCE E. WARWICK, Whitetail, Mont. Filed June 24, 1919. Serial No. 306,313. 1 Claim. (Cl. 219—38.)



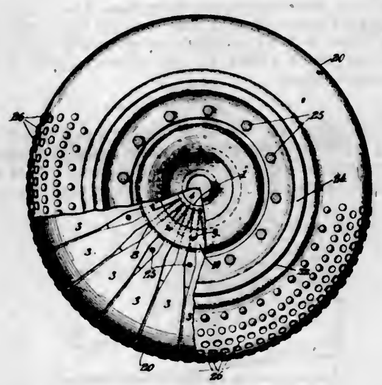
A heater for carbureters comprising a stem having an elongated cut out portion intermediate its ends and a passage through one of its end portions, circular plates positioned in the cut out portion and one of said plates being concaved with its edges in abutting engagement with the other plate, fastening elements extending through the plates and secured to the stem, mica disks engaging the inner faces of the plates, said disks and plates having alining grooves in one of their edges, and an electrical heating medium arranged between the disks and extending through the grooves and the passage of said stem.

1,352,855. MECHANICAL INDICATOR. CLARENCE JOHN WAY and WILBUR ALBERTON WAY, Cleveland, Ohio. Filed Nov. 17, 1919. Serial No. 338,717. 2 Claims. (Cl. 33—172.)



1. In measuring instruments, the combination of a cylinder bearing measurement markings, said cylinder having longitudinal slots, an indicating ring slidable longitudinally over said cylinder, arms on which the ring is mounted, said arms extending through the slots, a movable sleeve on which the arms are mounted, a bell crank lever operatively connected at one end with the aforesaid sleeve, an actuating arm, an L-shaped lever having one end in contact with the other arm of the aforesaid bell crank lever, and having its other end operatively connected with said actuating arm, resilient means normally holding said bell crank lever in contact with the end of the L-shaped lever, and a casing for the levers and resilient means.

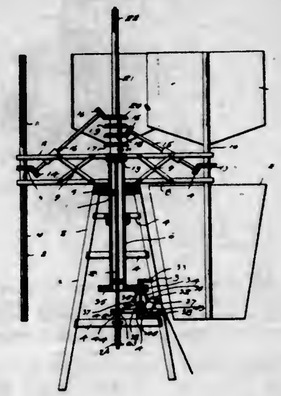
1,352,856. PUMPING DEVICE. NILS WENER, Stockholm, Sweden, assignor to Svenska Aktiebolaget Mono. Filed June 17, 1918. Serial No. 240,541. 5 Claims. (Cl. 230—16.)



1. A pumping device having pumps which work alternately and are provided with oscillating liquid-pistons and two receptacles connected with each other, having each connected to deliver at each stroke a small quantity of the pump liquid to the other pump.

1,352,857. LIGHTING-FIXTURE. ARTHUR EDWARD WIEDENHOEFT, Chicago, Ill. Filed June 30, 1919. Serial No. 307,700. 4 Claims. (Cl. 240—115.)

1. The combination with a central apertured plate, of radial rods adjustable into either one of several positions on said plate, a shade-engaging hook mounted upon each rod, and a coiled spring loop formed in each rod with which the means for supporting said rods in suspension are engaged.



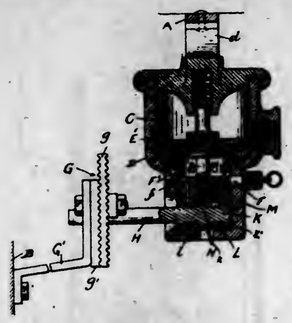
1,352,858. RESILIENT WHEEL FOR VEHICLES. RALPH LINDEKVIST WILSON, Bergen, Norway. Filed Nov. 24, 1916. Serial No. 133,232. 13 Claims. (Cl. 152—29.)

1. A resilient wheel comprising a hub having U-shape springs, the ends of which are fastened to said hub, and means for adjusting said springs radially outward, said means comprising a ring having a beveled shoulder co-acting with beveled shoulders on said springs.

1,352,859. WINDMILL. WALTER A. WILSON, Elkhart, Kans. Filed Apr. 15, 1919. Serial No. 290,221. 4 Claims. (Cl. 170—25.)

4. In a wind mill construction, a hollow shaft, a plurality of outwardly extending arms carried by the hollow shaft, a vertical shaft carried by each one of the arms, vanes carried by the last mentioned shaft, an inner shaft rotatably and slidably mounted in the hollow shaft, a plurality of gears carried by the inner shaft, means operatively connecting the gears with the shaft carried by the arms, means for raising and lowering the inner shaft, means for operatively connecting the inner shaft with the gears for causing a certain limited rotation upon movement of the shaft, and a governor connected to the inner sliding shaft to cause the same to raise and

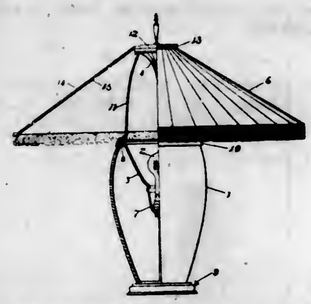
lower according to the velocity of the wind, as and for the purpose specified.



1,352,860. INCANDESCENT ELECTRIC LAMP. NATHAN WISE, Brooklyn, N. Y. Filed Aug. 21, 1916. Serial No. 116,136. 15 Claims. (Cl. 176—16.)

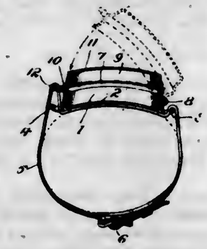
14. In an incandescent lamp, a bulb having a pocket in its wall, the interior of said pocket communicating with the interior of the bulb, a stem within the bulb, and lead in wires and filament supports mounted in said stem, the portions of the stem having said lead in wires and filament supports being located within the pocket.

1,352,861. SAFETY RAILWAY-BRAKE. JOHN B. WRIGHT and FRANS O. LAWSON, Greensboro, N. C., assignors to Wright Safety Air-brake Company, Greensboro, N. C., a Corporation of North Carolina. Filed Dec. 19, 1919. Serial No. 345,979. 7 Claims. (Cl. 246—170.)



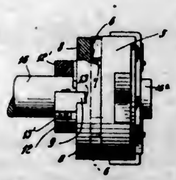
1. In a derailment control mechanism for railway brakes, the combination of the valve carried on the car body, an actuating member therefor movable laterally and vertically in any direction by relative abnormal movements of the car body and truck to unseat said valve, a bearing member for said actuating member, coöperating cam surfaces on the actuating and bearing members adapted to move the actuating member away from the bearing member in a direction at substantially right an-

gles to the face of the bearing member to unseat the valve upon relative abnormal movements of the truck and



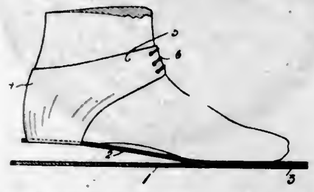
car body, and a second operating member carried by the truck adapted to operate said actuating member.

1,352,862. PORTABLE LAMP. LORIN W. YOUNG, New York, N. Y. Filed May 3, 1918. Serial No. 232,195. 3 Claims. (Cl. 240—81.)



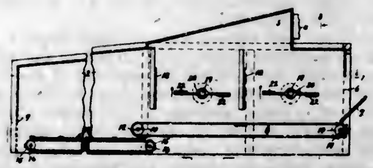
1. In a portable lamp, in combination, a standard, an illuminant supported thereby, an opaque cupped reflector about said illuminant arranged to intercept the direct rays below the upper horizontal plane of said illuminant and to direct such rays upwardly, an opaque diffusing reflector above and in alinement with said illuminant to direct laterally the rays impinging thereon, a translucent silk shade laterally concealing said diffusing reflector, said shade having a mat inner lining adapted to direct downwardly a major portion of the rays impinging thereon, and a bracket supported by said standard and supporting said diffusing reflector and said shade.

1,352,863. JEWEL WRIST-SAFE. MARY S. ZEITLER and WINFIELD S. LLOYD, Washington, D. C. Filed June 23, 1920. Serial No. 391,043. 4 Claims. (Cl. 224—26.)



2. A water proof container comprising an elongated receptacle adapted to be attached to the wrist of a user and having a closed bottom bowed to conform to the contour of the wrist, walls integral with said bottom, the top of said receptacle being open, a bead formed in said walls parallel with the bottom, a cover hinged to one end of the receptacle below said bead and having a groove formed therein to be sprung over said bead in water tight relation, and means to attach said receptacle to the wrist of a user, said means serving to retain the cover in closed position.

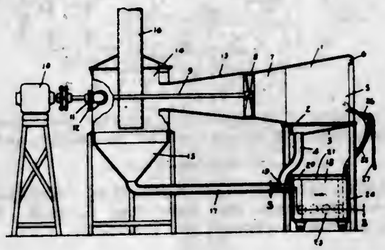
1,352,864. COUPLING FOR IMPULSE-STARTERS. FREDERICK W. ANDREW, Brooklyn, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 15, 1919. Serial No. 311,029. 7 Claims. (Cl. 64—91.)



1. In a coupling, a rotatable driving member and a rotatable driven member arranged substantially in axial alinement, metallic lugs projecting axially from the adjacent ends of said members, and a coupling disk arranged between the adjacent ends of said members for operatively connecting them, said disk being composed of textile material impregnated with and held together by a hardened waterproof cement, said disk being substantially inert under the action of temperature and moisture and being capable of withstanding the requisite torsional strain of operation without requiring the use of metallic reinforcements, the opposite faces of said disk having grooves or recesses for receiving the metallic lugs of said members and thereby coupling said members together, said lugs and grooves forming a silent automatically adjustable connection which allows for the eccentric play of the rotatable members.

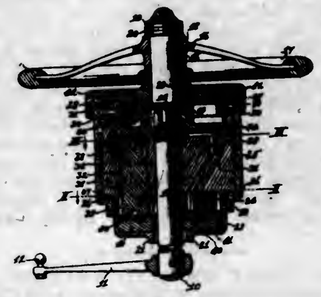
1,352,865. INLAY-SOLE FOR THE PREVENTION OF THE DEVELOPMENT OF GALLS. ARENT AUGESTAD, Marka Brandbu Station, Hadeland, Norway. Filed July 8, 1919. Serial No. 309,368. 7 Claims. (Cl. 36—71.)

1. An inlay device for shoes, comprising a flexible sole, a comparatively rigid sole connected to said flexible sole at the toe tip of the latter, and means for fastening said flexible sole to the foot of the wearer.



1,352,866. HARD-STOCK WHIPPER. GEORGE L. BIDWELL, Riegelsville, Pa. Filed Mar. 1, 1920. Serial No. 362,326. 4 Claims. (Cl. 19—9.)

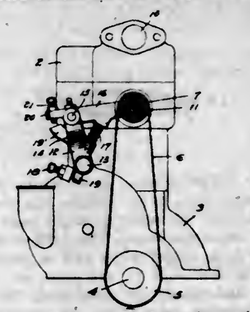
3. The combination, in a hard-stock whipper, with a whipper-house, an apron in said house, means to drive



said apron, a perforated apron mounted to travel in said house, and a slotted drawboard receivable on said last-mentioned apron, the arrangement being such that said drawboard can be pushed forward beneath said first-named apron at the rear end of the latter, of a rotary paddle in said house above said first-named apron, and a baffle in said house behind said paddle.

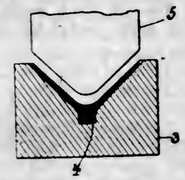
1,352,867. WASHING SYSTEM. SHIRAS A. BLAIR, Indianapolis, Ind. Filed Jan. 20, 1920. Serial No. 353,148. 4 Claims. (Cl. 141—1.)

2. A washing system compriaing a chamber, means for spraying cleansing liquid therein, means for removing said liquid therefrom comprising a pipe in the bottom of said chamber and an exhaust fan connected to said chamber, a separating chamber connected to said first chamber, means for removing the liquid from said separating chamber, and means for cleansing said liquid.



1,352,868. STEERING MECHANISM. CARL H. BLOMSTROM, Detroit, Mich. Filed Aug. 19, 1919. Serial No. 318,480. 7 Claims. (Cl. 74—79.)

1. An irreversible steering gear mechanism comprising a stationary member, a stationary internal gear carried by said member, a rotatable shaft supported by and extending through said stationary member and adapted to be attached to a steering gear, a rotatable internal gear attached to said rotatable shaft, a rotary wheel on said stationary member, a rotatable driving flange connected to said rotary wheel, two integrally connected planetary pinions rotatably supported on said driving flange and revolving around said rotatable shaft, one of which pinions is in mesh with the stationary internal gear and the other in mesh with the rotatable internal gear, whereby said rotatable shaft is capable of rotation within said driving flange by means of said wheel.

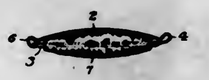


1,352,869. RADIATOR-FAN-SUPPORTING MEANS. VITUS A. BOKER, Minneapolis, Minn., assignor to The E. G. Staude Manufacturing Co., St. Paul, Minn., a Corporation. Filed Mar. 20, 1918. Serial No. 223,533. 8 Claims. (Cl. 64—52.)

1. The combination, with a gas engine frame, of an arm pivotally supported thereon, a fan shaft having a bearing in its arm, a driving belt for said fan shaft, and a spring mounted on one side of the pivot of said arm to

yieldingly support said arm and tension said belt and a stop device for said arm mounted on the other side of its pivot.

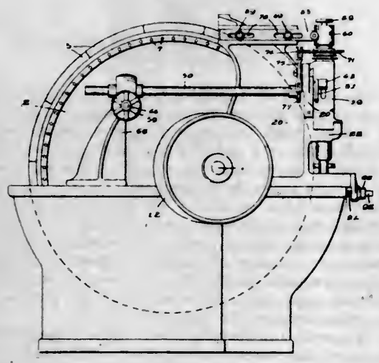
1,352,870. METHOD OF MAKING RING-MOUNTINGS. WALTER C. BOWERS, Dayton, Ohio. Filed Oct. 17, 1917. Serial No. 197,096. 4 Claims. (Cl. 29—10.)



1. The method of making a finger ring which consists in first forming a blank having a rectilinear shank and a solid central head integrally joined therewith without the intervention of a metal of low melting point, bending said blank so as to form two shanks extending substantially at right angles to each other from said head, flashing said head so as to form a cup-shaped member having superficial ribs on its upper surface, each rib projecting in such direction that it would, if extended, intersect the extension of a portion of the cup diametrically opposite thereto at an angle greater than a right angle, then rigidly supporting said blank and removing the intermediate metal webs between the aforesaid ribs.

2. The method of making a ring which consists in first forming a blank having a rectilinear shank and a solid central head integrally joined therewith without the intervention of a metal of low melting point, bending said blank so as to form two shanks extending substantially at right angles to each other from said head, flashing said head so as to form a cup-shaped member having superficial ribs on its upper surface, each rib projecting in such direction that it would, if extended, intersect the extension of a portion of the cup diametrically opposite thereto at an angle greater than a right angle, then rigidly supporting said blank and causing a reciprocating metal cutter to successively contact with the metal in close proximity to two adjacent ribs without contacting with a diametrically opposite metal portion of the cup so as to cut away the metal webs between the ribs.

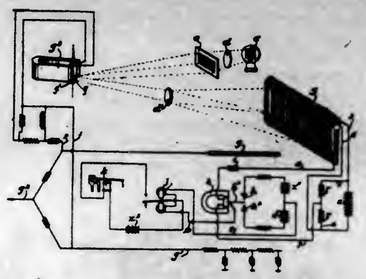
3. The method of making a blank for a finger ring consisting in first forming a blank having a rectilinear shank and a central head joined together, bending said shank to form two shanks extending at an angle to each other from the head, flashing said head to form a cup-shaped member, then rigidly supporting said blank and removing portions thereof in spaced relation providing intermediate fingers.



4. The method of making a blank for a finger ring consisting in first forming a blank having a head having two shanks extending at an angle to each other from the head, flashing said head to form a cup-shaped member, then removing portions of said head in spaced relation providing intermediate fingers.

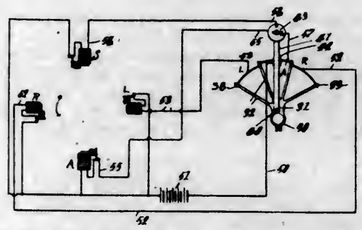
1,352,871. HAIR-CURLER. ORSON W. BRENIZER, Philadelphia, Pa. Filed Aug. 30, 1919. Serial No. 320,780. 2 Claims. (Cl. 132—19.)

1. A hair curler formed of a single piece of spring metal and comprising a flat flexible arm and a stiff arm, said arms having connected adjacent ends and diverging from their connected ends, the stiff arm causing the flexible arm to be bowed when hair is placed between the arms and the free ends of the arms are forced toward each other, and means for connecting the free ends of said arms together when they are sprung toward each other.



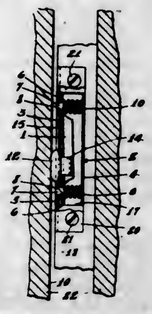
1,352,872. GEAR-GRINDING MACHINE. ALEXANDER T. BROWN, Syracuse, N. Y., assignor to The Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 13, 1914, Serial No. 818,473. Renewed July 15, 1920. Serial No. 396,613. 27 Claims. (Cl. 51—52.)

1. A gear grinding machine comprising a pair of grinding wheels opposed to each other and arranged with their axes inclined with respect to each other so that their working faces are in the planes of the pressure angles of the teeth of the gear to be ground and at right angles to the axes of the grinding wheels, and a gear carriage arranged to support the gear with its axis standing at an angle to the plane containing the axes of the grinder so that the teeth thereof are engaged with the grinders and the grinders extend between teeth of the gear and the working faces thereof are engaged with dissimilar faces of alternate teeth of the gear, substantially as and for the purpose set forth.



1,352,873. TELEGRAPHY. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed May 15, 1916. Serial No. 97,648. 6 Claims. (Cl. 178—63.)

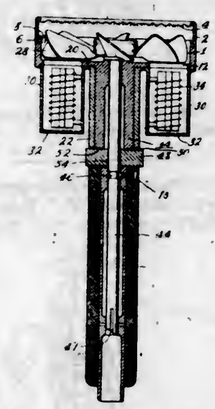
5. In a telegraphic system employing impulses of opposite polarity, a selenium organism comprising separate units or cells arranged in groups with the cells of each group connected in multiple one of the other, a light projecting device for deflecting alternate bars of light and shadow on said cells, and means for deflecting the same to cause the light or shade to cover said units, a connection from said multiple sets of units to a polarized relay,



and a source of current supply therefor, and condenser in series with said relay as and for the purpose specified.

1,352,874. AUTOMOBILE-INDICATOR. WILLIAM H. BUSCH, St. Louis, Mo. Filed June 13, 1918. Serial No. 239,798. 6 Claims. (Cl. 177—337.)

1. In an automobile indicator, the combination with the signal mechanism including the words "Left" "Right" and "Ahead," a grid carried rigidly by the steering pillar, and two spaced track sectors and an interposed sector carried by and insulated from the arms of the grid; of a switch arm pivoted on the grid and having a contact riding on said sectors as the arm is moved, signal operating mechanism actuated by circuits closed through the respective sectors and the switch arm in its several positions, and means for automatically restoring the arm to the intermediate sector and the signal to "Ahead" when the steering wheel is restored to its neutral or normal position after having been turned aside.

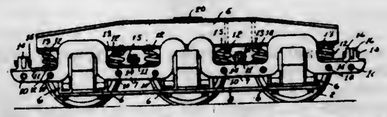


1,352,875. BRAKE FOR WINDOW-SASHES. EDWARD F. CHAFFEE, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 15, 1918. Serial No. 228,577. 7 Claims. (Cl. 16—77.)

1. A brake for window sashes comprising a compression member, springs acting on said member at points spaced apart, and a braking element movable rectilinearly

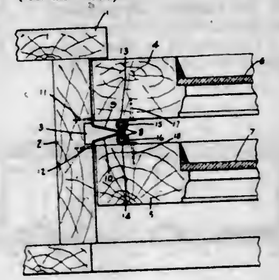
along said compression member between the points where the forces of the springs are applied to said member and arranged to be actuated by a sudden movement of the sash to carry the said member from the influence of one spring to that of another, substantially as and for the purpose described.

1,352,876. ELECTRIC HAIR-DRYING DEVICE. SAMUEL M. COFFMAN, Kansas City, Mo., assignor to The Barbers Electric Specialty Company, a Corporation of Kansas. Filed Apr. 1, 1919. Serial No. 286,643. 10 Claims. (Cl. 34—26.)



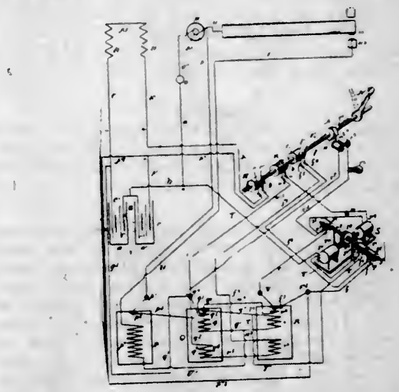
10. In a device of the character described, a chamber having a perforated front wall and equally-spaced openings in its rear wall for the passage of air therethrough, a plate rockably mounted at the rear of said chamber and having openings which register with the first-mentioned openings when said plate is rocked to one position, ducts fixed to said plate and arranged to communicate with the first-mentioned openings when the plate is rocked to another position, means for heating the air in said ducts, a handle to said device, and a fan for creating a current of air through the ducts and the chamber.

1,352,877. MARINE PROPELLER. TOMASO SALVATORE COGLIOLO, Genoa, Italy, assignor to Società Esercizio Bacini, Industrials, Genoa, Italy. Filed Feb. 13, 1917. Serial No. 148,467. 3 Claims. (Cl. 170—159.)



1. A propeller, having a blade the surface of which has a parabolic generatrix, but wherein the several points of the blade surface are transposed parallel to the axis of the propeller distances equal to the distances of corresponding points of projection from a straight generatrix to said parabolic generatrix.

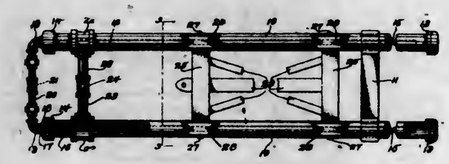
1,352,878. SIX-WHEEL PIVOTAL BOGIE-TRUCK. ELMER E. COOK, Sharon Hill, Pa., assignor of one-half to Douglas Thorton, Philadelphia, Pa. Filed Mar. 31, 1920. Serial No. 370,147. 4 Claims. (Cl. 105—195.)



1. The combination in a six wheel car-truck and its running-gear of the main truck springs supported outside of the wheel-gage on an equalizing frame, resting directly on the journal boxes of the truck, substantially, as described.

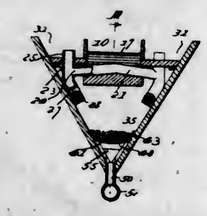
1,352,879. WEATHER-STRIP. HARRY S. DAVIS, Indianapolis, Ind. Filed Mar. 1, 1920. Serial No. 362,322. 2 Claims. (Cl. 20—69.)

1. A weather strip for windows comprising longitudinally placed members extending transversely between the movable parts of the window structure, the longitudinal edges of said members being formed into beads, legs integral with said beads and having their inner ends in juxtaposition to each other and their outer ends spread apart, means for securing the outer ends of said legs to the frame portion of the window structure, and coöperating members attached to the faces of the movable members of the window structure, said coöperating members having stockets thereon adapted to closely envelop the beads of said transversely extending members.



1,352,880. AUTOMATIC WEIGHING AND RECORDING SCALE. JOHN V. DAVIS, Kelseyville, Calif., assignor, by mesne assignments, to Boston Scale and Machine Co., Boston, Mass., a Corporation of Massachusetts. Filed July 14, 1909. Serial No. 507,638. 57 Claims. (Cl. 265—7.)

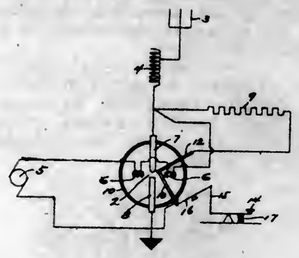
1. A reverse armature circuit consisting of two sources of electricity, a connection between the inside positive pole of one and the inside negative pole of the other, a wire leading from this connection to the armature, a wire connecting this armature with one end of a scale beam, a scale beam, a wire leading from a contact adjacent to the other end of the scale beam, in combination with three relay cups, the wire leading from the other end of the scale beam having a solenoid in one relay cup, a wire leading therefrom having a solenoid in another relay cup, a wire leading from the solenoid to a spring contact in the third relay cup, the spring contact, a wire leading from this spring contact to a spring contact in the



second relay cup, this spring contact, and a wire leading from this spring contact to the outside positive pole of the source of electricity, from the negative pole of which the wire runs to the armature.

1,352,881. WINDOW-GLASS-FLATTENING OVEN. HARRY E. DE VAUGHN, Morgantown, W. Va., assignor to United States Window Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed June 2, 1916. Serial No. 101,399. 3 Claims. (Cl. 49—44.)

1. An improvement in glass flattening ovens comprising a shove pan track formed of tubular rails closed at their ends, water-distributing tubes extended longitudinally into said rails through one closed end thereof, each water tube having a discharge end located contiguous to the other closed end of its rail, a transversely disposed rigid fluid supply pipe connecting the supply ends of said tubes, and a transversely disposed rigid discharge pipe lying contiguous to the supply pipe and connecting said rails, said supply and discharge pipes coöperating to brace said rails.

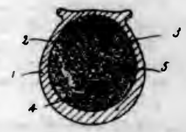


1,352,882. ORE-CONCENTRATOR. DAVID H. DONEGAN, Saw Pit, Colo. Filed Apr. 14, 1920. Serial No. 373,851. 7 Claims. (Cl. 83—82.)

1. A concentrator for metal bearing ores or earths, comprising a sluice and a series of riffles in said sluice, said riffles being in the form of pockets below the bottom of said sluice, and an outlet from said pockets for carrying off the concentrates settling in said pockets during the running of the sluice, and means for effecting a further separation of the gangue in said concentrates from the metal therein, said means comprising an upwardly directed spout connected with said outlet through which the liquid carrying the lighter portions of the concentrates may flow, and a second spout through which the liquid carrying the highly concentrated metal may flow, and a screen into which said second named spout discharges.

1,352,883. RADIOTELEGRAPHY. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed Mar. 23, 1920. Serial No. 368,193. 4 Claims. (Cl. 250—19.)

1. In a radio generator, an anode and a cathode between which an arc is formed, a stationary electrode arranged adjacent the anode and connected thereto, a resistor in the circuit between the stationary electrode and the anode, a movable electrode arranged adjacent the stationary electrode and connected to the cathode and

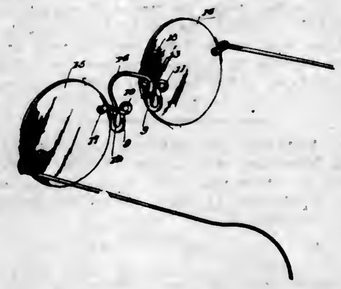


means for moving the moving electrode to make and break contact between the electrodes.

1,352,884. ADJUSTABLE LIFTING MECHANISM. ELMER E. EMORY, Canonsburg, Pa. Filed Sept. 27, 1919. Serial No. 326,912. 4 Claims. (Cl. 254—143.)

1. Lifting mechanism of the class described consisting of a pair of outer parallel standards spaced apart and having at top and bottom cross connecting guiding braces, an intervening relatively movable standard having a sheave wheel at its lower portion, a sheave wheel having a supporting clevis secured to the upper cross brace, a winding shaft mounted in bearings on the outer standards, a cable wound thereon, passing around the lower and upper sheave wheels and secured to the clevis with a depending loop, and a lifting sheave having a hook mounted in said loop.

1,352,885. ELASTIC TIRE. KINSUKE FUKUDA, Tokyo, Japan. Filed Dec. 18, 1919. Serial No. 345,830. 3 Claims. (Cl. 152—5.)



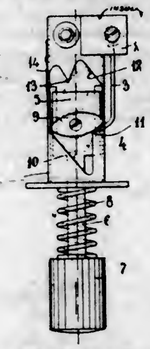
1. A core for tires, comprising a strip of spongy rubber having a plurality of ridges adapted to be rolled in contact with each other, and an inner core of rubber containing no sulfur constituent, the inner core being inserted between the contacting surfaces of the ridges when they are rolled.

1,352,886. RADIOTELEGRAPHY. LEONARD F. FULLER, San Francisco, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Sept. 19, 1917. Serial No. 192,209. 7 Claims. (Cl. 250—19.)

1. A radio telegraphy transmission system including an antenna circuit, an inductance coil in said circuit, a plurality of sector circuits inductively connected to said inductance coil, and means for opening and closing the sector circuits.

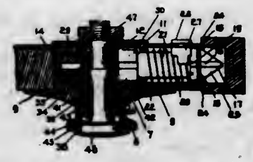
1,352,887. SPECTACLE NOSE-BRIDGE. JOSEPH S. GALESKI, Richmond, Va. Filed Jan. 29, 1920. Serial No. 354,800. 3 Claims. (Cl. 88—43.)

1. A nose piece for spectacles comprising a bridge member having lens clamps at each end thereof, the intermediate portion of said bridge member being brought rearwardly of the lens clamps at right angles to the plane of the lens and looped upwardly, thence downwardly and again upwardly to form nose pads with a connecting bridge.



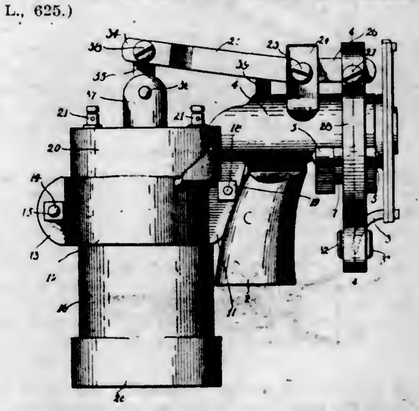
1,352,888. KNIFE-SHARPENER. STEPHEN H. GALLAGHER, Syracuse, N. Y. Filed Sept. 16, 1919. Serial No. 324,062. 4 Claims. (Cl. 76—84.)

4. A knife sharpener, comprising a tapering metal blade having a plurality of elongated surface grooves, and an abrasive material disposed in and filling said grooves, the said material at its exposed urfaces being substantially flush with the metal at all of its margins, whereby the cutting edge of a knife is first roughly abraded by contact with said material, and finally rendered smooth and keen by its subsequent contact with the metal of the blade adjacent said margins.



1,352,889. SWITCH. GALILEO GALLO and FELICE VILLARBOITO, Vercelli, Italy. Filed Apr. 6, 1920. Serial No. 371,624. 3 Claims. (Cl. 200—160.)

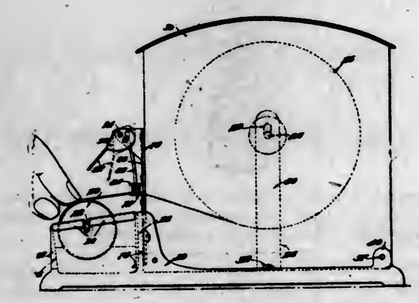
1. An electric switch operated by pressing in or pulling out, comprising a stationary frame, a stationary contact piece, a member mounted to move endwise in said frame, means for operating said member, a contact piece carried by said moving member and adapted to contact with the stationary contact piece at one end of the stroke of said moving member, said stationary frame providing projections and recesses at its two ends, a lenticular member pivoted on said moving member and coöperating with said projections and recesses of the stationary frame to be tilted at each end of its stroke so as to be stopped



alternately after a full stroke and before its contact piece meets the stationary contact piece and means for holding said lenticular member in its proper positions.

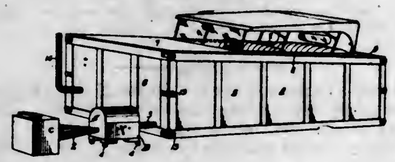
1,352,890. LOCK. WILLIAM H. GANSS, Toledo, Ohio. Filed Aug. 11, 1917. Serial No. 185,653. 7 Claims. (Cl. 70—53.)

1. A permutation lock comprising a tumbler having a recess, a housing having an outer sleeve surrounding the tumbler and an inner sleeve concentric with the outer sleeve providing a bearing on which the recessed tumbler is mounted, a spindle extending through the inner sleeve, said outer sleeve having an opening, a bolt movable into the opening and tumbler recess, and means mounted on the spindle for bringing the tumbler recess into registry with the outer sleeve opening to permit bolt movement thereinto.



1,352,891. ELECTRICALLY-CONTROLLED MECHANISM FOR FIREARMS. SAMUEL G. GREEN, U. S. Army. Filed July 2, 1919. Serial No. 308,300. 3 Claims. (Cl. 89—28.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. The combination with a firearm, of a saddle adapted to be secured thereto, an electro-magnet supported by said

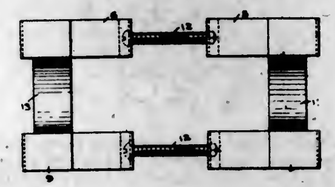


saddle and having an armature, a trigger-engaging member, a lever for moving said trigger-engaging member and actuated by the armature of said magnet, and an electric circuit including said magnet.

1,352,892. TAPE-MOISTENING MACHINE. HARVEY LESLIE GREGWARE, Beverly, Mass., assignor to Fred M. Page, Lynnfield, Mass. Filed Mar. 24, 1920. Serial No. 368,228. 8 Claims. (Cl. 91—14.5.)

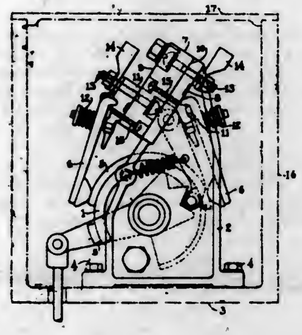
1. A tape moistening machine having, in combination, a base, a roll support mounted thereon, a moistener mounted on the base, means for severing the tape between the moistener and roll support, and a clamping device through which the tape passes adapted upon the initiation of the severing operation to depress the tape into a tortuous position and to clamp it in such position during the severing operation.

1,352,893. PORTABLE VARNISH-DRYING OVEN. WILLIAM O. GUICE, Seattle, Wash. Filed Oct. 29, 1919. Serial No. 334,314 6 Claims. (Cl. 34—19.)



5. In combination, a box having a motor therein, a fan on said motor, a vehicle carrying an electric heater, a collapsible varnish drying oven, said oven adaptable to receive an automobile, a conduit from said heater to said oven and a conduit from said blower to said heater.

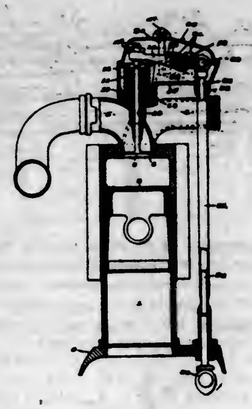
1,352,894. VIBRATOR. FRED G. HOFFINE, Kansas City, Mo. Filed Apr. 10, 1919. Serial No. 289,031. 6 Claims. (Cl. 74—14.)



1. A vibrator comprising a casing, a cam shaft rotatable in the casing and having an eccentric portion, a spring-pressed applicator shaft in line with the eccentric portion of the cam shaft and rotatable therewith, and means on the applicator shaft coöperating with the cam shaft to cause reciprocation of the applicator shaft in opposition to the spring.

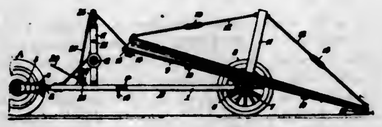
1,352,895. HANGER. EDGAR JEROME HOFFMAN, Akron, Ohio. Filed May 20, 1920. Serial No. 382,859. 1 Claim. (Cl. 248—32.)

A conduit hanger including opposed sections, each of said sections comprising a pair of spaced arms, a curved supporting member connecting the arms of each pair, said arms having upwardly extending hook members formed integral with one end thereof, each of said arms having a depending flange, the flanges of one pair of arms being disposed in spaced relation with the flanges of the opposed arms, said flanges being provided with openings, and means disposed in the openings and contacting with the outer surfaces of the flange for securing the sections together.



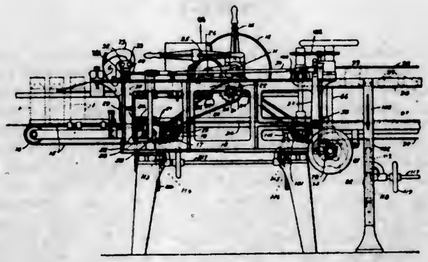
1,352,896. ELECTRICAL CONTROLLER. WILLIAM H. HOLDER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 14, 1918. Serial No. 240,092. 6 Claims. (Cl. 200—8.)

1. In combination, a rotatable drum, a fixed support and contact fingers of uniform length fixed to said support in an opposed relation, said support being disposed relatively to said drum to provide for mounting of said contact fingers upon the former in a common plane but in an offset relation to engage said drum at substantially diametrically opposed points.



1,352,897. VALVE-MECHANISM SUPPORT. ARTHUR HOLMES, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Jan. 19, 1914. Serial No. 813,084. 11 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination of a cylinder having inlet and exhaust passages, valves controlling said passages, valve operating mechanism, and a support for said mechanism carried at points spaced apart by the cylinder and a portion of the engine less subject to the heat of the engine than the cylinder, said support being mounted directly on the cylinder and spaced

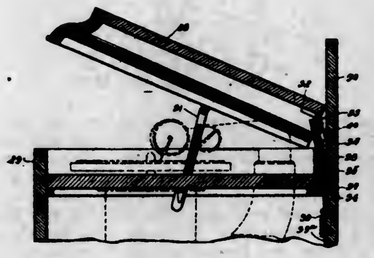


apart from the inlet and exhaust pipes, substantially as and for the purpose described.

1,352,898. WRECKING-TRAILER FOR AUTOMOBILES. GEORGE HENRY HOUCK, Tonawanda, N. Y. Filed July 8, 1919, Serial No. 309,317. Renewed Aug. 7, 1920. Serial No. 402,034. 7 Claims. (Cl. 214—85.)

1. A wrecking trailer for automobiles, comprising a truck provided with means at one end for connecting it to and supporting it by a hauling vehicle and a single pair of supporting wheels at the other end, whereby the truck is supported in part by the hauling vehicle and in part by said wheels, a tiltable platform of a size to receive and sustain an automobile and mounted intermediate of its ends on the wheeled end of the truck, and means connected to the forward end of the platform for tilting the platform to bring the rear end to the ground and hold it in the tilted position.

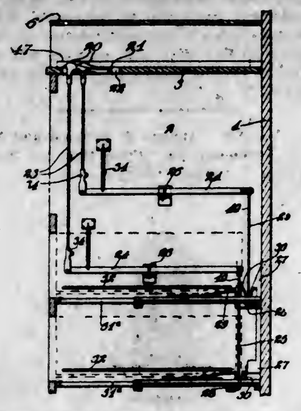
1,352,899. PACKAGE-SEALING MACHINE. HARRY L. JOHNSON, Boston, Mass., assignor to Percy E. Ginn, Boston, Mass. Filed Oct. 3, 1918. Serial No. 256,730. 17 Claims. (Cl. 93—6.)



17. In a package-sealing machine, the combination with a guideway, of a conveying device to convey packages along the guideway, means to fold the flaps of the packages, and a drier situated in line with said guideway, said drier having means independent of the conveying device to feed packages positively therethrough, the entering end of the drier being so situated relative to the delivery end of the guideway that each package will be fed directly into the feeding means of the drier by said conveying device.

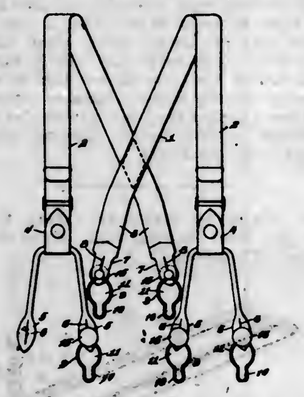
1,352,900. VALVE. ALBERT S. KELLAM and NORMAN F. NORVELL, Richmond, Va. Filed Mar. 15, 1919. Serial No. 282,975. 1 Claim. (Cl. 251—6.)

A device of the class described including a body having a recess in a face thereof, said recess comprising a conical portion and surmounting cylindrical portion, the lower portion of the recess affording a valve seat, said body having ports in communication with the valve seat, a conical valve plug rotatably mounted within the valve seat and provided with a transverse port adapted to register with the ports of the body, a lock extending within the outer end portion of the recess, said lock including a barrel, said barrel and body having coacting means for holding the barrel against rotation within the recess, and a rotatable member arranged within the barrel and bearing against the inner extremity of the barrel, said rotatable member directly engaging the adjacent conical end of the valve plug.



1,352,901. TALKING-MACHINE. JOHN S. KRAMER, Steger, Ill. Filed June 16, 1919. Serial No. 304,366. 2 Claims. (Cl. 45—52.)

1. The combination of a base rail, a rail hinged to the top thereof, a lid having a hinged connection with the top of the second mentioned rail parallel to the hinge connection thereof, resilient means normally holding the rails in vertical alinement, and a structure back of the rails and the lid against which said parts abut, the second mentioned rail swinging away from the structure when the lid is swung in one direction, and carrying said lid bodily away from the structure.



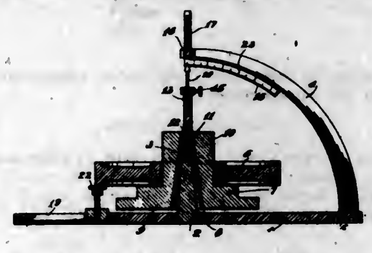
1,352,902. LOCKING DEVICE FOR DRAWERS. JOHN S. KRAMER, Steger, Ill. Filed June 23, 1919. Serial No. 306,224. 8 Claims. (Cl. 45—94.)

1. The combination of a pair of slidable drawers, independent locking means for the drawers, operating means

for the locking means, a third drawer, and an actuator in said third drawer adjustable to selectively engage the aforesaid operating means.

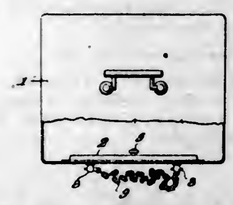
1,352,903. SUSPENDERS. NATHANIEL W. MCCONNELL, Florence, Colo. Filed Mar. 13, 1918. Serial No. 222,130. 1 Claim. (Cl. 241—25.)

Suspenders provided with end portions having tabs formed with button holes, buttons provided with headed ends and having shanks passing through said button holes, and wire connectors having wire engaging loops at one end, curved portions forming entrance spaces to said loops, and crossed portions at the opposite ends thereof extending on curved lines continuous with the aforesaid curved portions, said crossed portions terminating in reversely facing semicircular spring jaws embracing the shanks of the buttons, said jaws being disposed between the suspender ends and certain heads of the buttons.



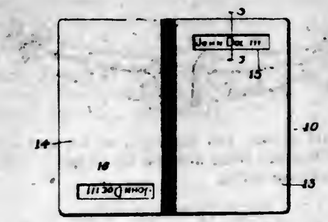
1,352,904. MACHINE FOR MANUFACTURING COMBINED SPIRAL REINFORCEMENT AND FASTENING. ARCHIBALD MCPHAIL, Fargo, N. D., assignor to Sterling Machine and Wire Works, Beneficial Trust Association (Unincorporated), Sterling, Ill. Filed Jan. 22, 1919. Serial No. 272,594. 60 Claims. (Cl. 140—90.)

37. The combination with a revoluble tubular needle adapted to receive a portion of the roll of a reinforcement to be formed, means for rotating the needle, parallel guide rods disposed respectively above and below the needle and paralleling the same, a reciprocating device swung between the guide rods and anti-frictionally mounted on the same and provided with let-out means for feeding the remaining portion of the wire to the exterior of the



needle, and an endless drive chain for the reciprocating device and means for intermittently operating the same.

1,352,905. FLYWHEEL-BALANCER. MICHAEL MACHROL, Kenosha, Wis. Filed Sept. 2, 1919. Serial No. 321,056. 4 Claims. (Cl. 73—51.)

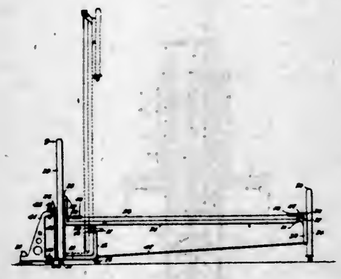


1. In a fly wheel balancing device, a base, a fulcrum post carried thereby, a fly wheel support having a portion arranged to enter the shaft opening of the center of the fly wheel, said support having a portion arranged to engage and be supported by said fulcrum post, a slidably adjustable pointer carried by said fly wheel support, and a scale coöperating with said pointer for indicating the excess weight on one side of the fly wheel, and being adjustable toward and away from said pointer.

1,352,906. ANCHORING DEVICE FOR SAFES. KATSUSABURO MAMIYA, Ohito, Japan, assignor to Kabushiki-Kwaisha Mamiyado, Tokyo, Japan, a Company of Japan. Filed May 8, 1919. Serial No. 295,644. 1 Claim. (Cl. 109—1.)

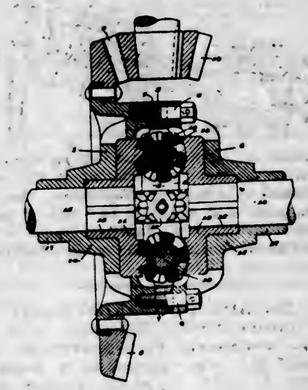
A safe provided with a pair of openings in its rear wall, a casing secured to the inner face of said rear wall and covering said openings, a slidable rod within such casing, such slidable rod being provided with a pair of plates adapted to move across the face of the openings, a spring interposed between one end of the rod and the opposing end of the casing for normally holding the rod in such a position that the plates tend to cover the openings, and a pair of anchoring members secured to some immovable object, such anchoring members comprising rods formed with notches adapted to be engaged by such plates, whereby, when the ends of such rod are projected within the openings formed in the safe, the plates will firmly engage such notches and prevent, by virtue of the spring, the withdrawal thereof by any exterior influence.

1,352,907. PASS-BOOK. THOMAS P. MARTIN, JR., Oklahoma, Okla. Filed Apr. 8, 1919. Serial No. 288,520. 6 Claims. (Cl. 281—17.)



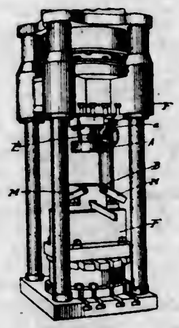
1. A pass book cover having inner and outer walls forming an enlarged inwardly opening pocket upon one portion thereof, the outer wall having an outer covering provided with a sight opening adjacent one end, and an inner covering between the pocket and the sight opening, said outer wall including an inner layer and an inner covering between the sight opening and the said pocket, the inner layer being provided with a slot opposite the sight opening and the said inner covering being provided with a slit adjacent the inner end of the sight opening through which access may be had to the slot of the said inner layer from the pocket of the cover.

1,352,908. SEPARABLE CUFF-BUTTON. FREDERICK R. MATTESON, Taunton, Mass., assignor to Freeman-Daughaday Company, Chartley, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1920. Serial No. 349,681. 5 Claims. (Cl. 24—102.)



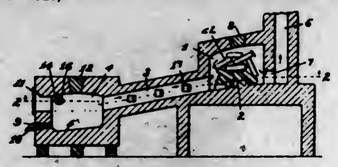
1. A separable cuff button formed in two parts each having an inner and an outer flange member connected by a post, one part being provided with an engaging head portion, the other part having a pair of elongated opposing yieldable arms mounted within its post and spaced apart at their free ends to receive and releasably retain the said head of the other part between them.

1,352,909. FOLDING BED. HENRY J. MEYERS, Los Angeles, Calif. Filed June 6, 1917. Serial No. 173,154. 7 Claims. (Cl. 5—54.)



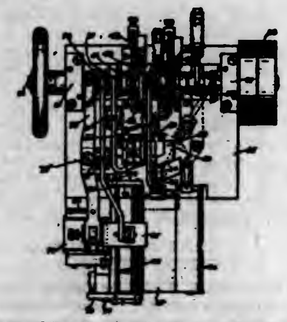
7. In a folding bed, a bed frame, a pair of members to which said bed frame is pivoted adjacent to its head end to swing vertically, said members being mounted for reciprocal movement and to swing on a vertical axis, and a vertically reciprocal guide member pivoted to the head of the bed frame.

1,352,910. COMPENSATING GEARING. DONALD D. ORMSBY, Syracuse, N. Y., assignor to Brown-Lipe-Chapin Co., Syracuse, N. Y., a Corporation of New York. Filed May 18, 1914. Serial No. 839,359. 4 Claims. (Cl. 74—99.)



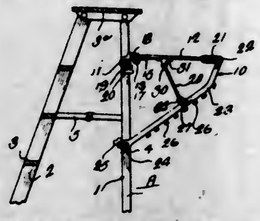
1. A compensating gearing comprising a casing including opposing side sections having opposing peripheral flanges, an intermediate section having a transverse recess therethrough and flanges extending between the peripheral flanges of the side sections, and means extending through the flanges of the side sections to clamp the same together onto the intermediate section, opposing gears located in the side sections, and a compensating pinion supported in the recess in the intermediate section and arranged with its axis extending crosswise of the axis of the opposing gears and of a line radial to the axis of the opposing gears, substantially as and for the purpose described.

1,352,911. APPARATUS FOR FORMING FORGINGS. EDWARD J. PAQUE, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 1, 1919. Serial No. 314,696. 5 Claims. (Cl. 78—18.)



1. In an apparatus for forming metal the combination of a lower die member having a recess conforming to the shape of the walls of a part of the article to be formed, an upper die member having a central recess and adapted to coöperate with the recess in the lower die member to form a die chamber of the shape of the article to be manufactured, a punch seated in the recess in the upper die member and a removable stop block adapted to hold the punch in a retracted position.

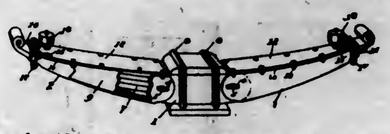
1,352,912. PROCESS AND APPARATUS FOR RECLAIMING AND REFINING COPPER AND OTHER METALS. ALLEN R. PARTRIDGE, Cleveland, Ohio. Filed Sept. 15, 1919. Serial No. 323,863. 11 Claims. (Cl. 75—62.)



1. A process for reclaiming and refining metals consisting in heating the materials from which the metals are to be reclaimed to a melting temperature, then reducing the heat to cause said materials to "sweat" and trickle down an incline, and then admitting oxygen to the trickling material for purifying the same, substantially as described.

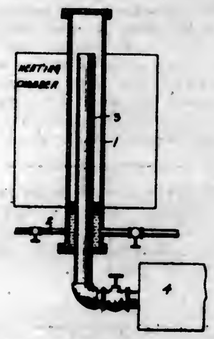
1,352,913. MACHINE FOR MAKING METAL FABRIC. JOSEPH ARTHUR PAYETTE, Providence, R. I., assignor, by mesne assignments, to General Chain Company, Providence, R. I., a Corporation of Massachusetts. Filed July 23, 1917. Serial No. 182,192. 6 Claims. (Cl. 140—3.)

1. In a machine for making link-mesh fabric, a plunger for holding the arms of the lock-link when in engagement with the ring-links, and a spur in said plunger for maintaining a slight separation at the ends of the arms when folded to facilitate soldering.



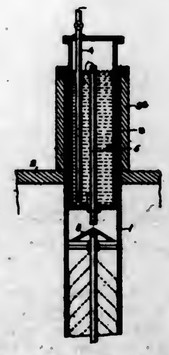
1,352,914. SHELF FOR LADDERS. SIDNEY PLASCLASCOVITIE, Denver, Colo. Filed Aug. 30, 1918. Serial No. 252,075. 5 Claims. (Cl. 304—34.)

1. In a shelf attachment for ladders, the combination, of a supporting plate, a rod carried by said supporting plate parallel to the inner edge thereof, and attaching brackets adjustably mounted upon said rod for lateral movement with respect to the plate and for movement toward or from each other.



1,352,915. MEANS FOR LUBRICATING LEAF-SPRINGS. JAMES I. RICHEY, Cincinnati, Ohio. Filed Sept. 14, 1918. Serial No. 254,092. 2 Claims. (Cl. 267—37.)

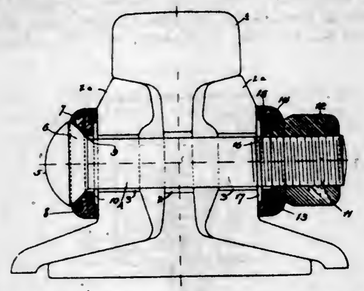
1. A device of the character specified, comprising in combination with a leaf spring, a housing for said spring, said housing comprising a middle section, end sections pivotally secured to said middle section, said middle and end sections being arranged to fit around the bottom and



sides of said spring, and cover plates for said end sections, said housing being adapted to contain a supply of lubricant for said spring.

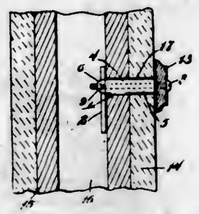
1,352,916. APPARATUS FOR TREATMENT OF HYDROCARBONS. WALTER F. RITTMAN, Pittsburgh, Pa. Filed Aug. 3, 1917. Serial No. 184,232. 2 Claims. (Cl. 196—3.)

1. In an apparatus for the treatment of hydrocarbons, the combination of a substantially vertical tubular retort, a tube extending upwardly into said retort, the tube extending upwardly into said retort, the tube and retort being constructed and arranged to leave an unobstructed annular chamber therebetween, the portion of the tube within the retort having openings for the passage of fluids, means for feeding the hydrocarbon to be treated into the lower portion of one of the foregoing members, means for maintaining vaporizing and cracking temperatures within the retort, and means for segregating the products of cracking connected to the other member.



1,352,917. APPARATUS FOR TREATMENT OF HYDROCARBONS. WALTER F. RITTMAN, Pittsburgh, Pa. Filed Nov. 7, 1917. Serial No. 200,731. 7 Claims. (Cl. 196—3.)

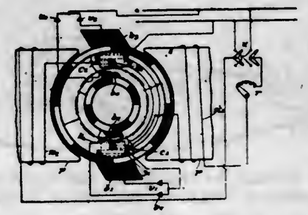
1. In an apparatus for treating hydrocarbons, the combination of a furnace, a main retort arranged in a substantially vertical position in said furnace, an auxiliary



retort arranged in such relation to the main retort as to receive heat therefrom, means for feeding oil into the auxiliary retort, means for maintaining a body of oil in said auxiliary retort and means for conducting fluid from the auxiliary retort into the main retort.

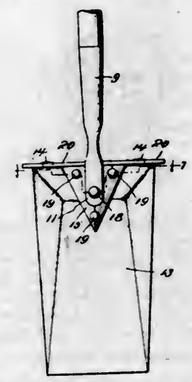
1,352,918. FASTENING DEVICE. WILLIAM L. ROHBOCK, Cleveland, Ohio. Filed Feb. 21, 1920. Serial No. 360,291. 3 Claims. (Cl. 85—1.)

1. Fastening means comprising a bolt threaded at one end and provided at its other end with a head having a partly spherical portion, a head on the threaded end of the bolt having a partly spherical portion, and resilient seat-plates having curved seats in which the spherical portions of said heads are movably mounted.



1,352,919. COMBINED CLAMP AND FASTENER. CLAUDE C. SALMONS and JAMES MAHONEY, West Philadelphia, Pa. Filed Sept. 14, 1917. Serial No. 191,403. 2 Claims. (Cl. 85—3.)

1. As an article of manufacture, a fastening device comprising a body formed of a pair of flat strips of a pliable material, a cross piece formed integrally with the lower edges of the strips and holding the same in spaced parallel relation, said cross piece connecting said strips at a point intermediate their ends whereby to provide long and short sections extending to either side thereof, a tumble bolt eccentrically pivoted to the short sections of the strips and having an opening therein, and a fastening member adapted to be extended through the body for engagement with the opening in said tumble bolt, the construction being such that the long sections of the strips may be bent laterally in opposite directions and severed at any point along their length beyond said cross piece whereby to form retaining members of any required length.

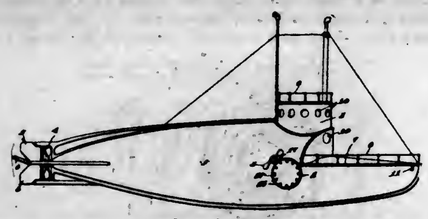


1,352,920. DIRECT-CURRENT MACHINE. ARTHUR SCHERBIUS, Berlin, Germany. Filed Nov. 25, 1914, Serial No. 874,061. Renewed Feb. 4, 1920. Serial No. 356,125. 4 Claims. (Cl. 171—228.)

1. A direct current dynamo electric machine, comprising in combination an armature having a closed winding, two commutators having electrically conductive segments alternating with insulation pieces and connected alternately to the individual ends of the armature winding, a pair of brushes operating on each commutator, narrower than said insulation pieces, connections between the two brushes of a single pole, means for producing a commutating field, sharply defined in the direction of the armature conductors which first enter the commutating field, for

over-commutating the current in the armature coils which are short-circuited by the brushes, and means for preventing current from flowing in a direction opposite to that in which the normal commutating current flows through said connections.

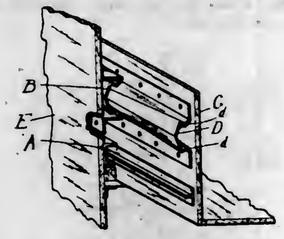
1,352,921. SPADE OR SHOVEL. JOHN A. SOUTHWELL, Scranton, Pa. Filed Apr. 24, 1919. Serial No. 292,418. 4 Claims. (Cl. 294—60.)



1. In a spade or shovel, a blade having a central, substantially V-shaped forwardly offset deformed portion at the upper end thereof, a shank having front and rear blade engaging portions, said front blade engaging portion being arranged to overlie the front surface of the deformed portion of the blade and the rear blade engaging portion being substantially of triangular form and arranged to fit within the concavity at the rear side of said concaved portion, said rear blade engaging portion being provided with a rearwardly projecting longitudinally extending stiffening offset disposed in alinement with the rear surface of the body of the blade, the said blade engaging portions of the shank being arranged to extend downwardly in convergent relation to each other, fastening means connecting the body portion of the rear blade engaging portion of the shank with the deformed portion of the blade, and fastening means connecting the offset of said rear blade engaging portion of the shank with the deformed portion of the blade and the said front blade engaging portion of the shank.

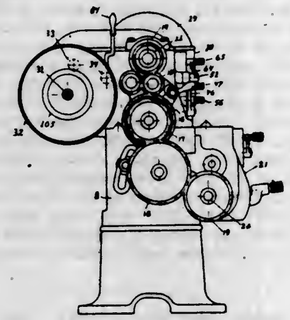
1,352,922. PROPULSION MECHANISM. LEO ALMONT SPRAGUE, Henderson, N. Y. Filed Sept. 2, 1916. Serial No. 118,289. 3 Claims. (Cl. 114—16.)

1. In a propulsion mechanism, the combination of a hull, and a propeller at one end of the hull, and side propellers located forward from the central part of the hull, shafts for the side propellers extending in planes which extend lengthwise of the hull, the shafts for the side propellers



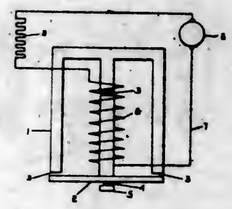
being shiftable in said planes into different radial positions, means for rotating the side propeller shaft and

means for shifting the shafts into different radial positions, substantially as and for the purpose described.



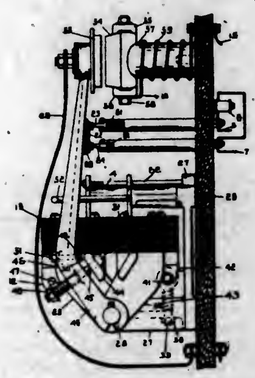
1,352,923. [WITHDRAWN.]

1,352,924. DRAWER-STABILIZER. WILLIAM F. STREICH, Detroit, Mich. Filed Dec. 26, 1919. Serial No. 347,362. 2 Claims. (Cl. 45—77.)



1. In a drawer stabilizer the combination with a cabinet wall and a drawer, of a channel strip mounted upon the cabinet wall and having formed in it a longitudinal dove-tailed groove, and a guide rail mounted on the drawer and having formed upon it a head with under-cut sides and adapted to fit the dove-tailed groove of the channel strip in the closed position only of the drawer.

1,352,925. LATHE-GEARING. LOUIS THIEL, Cincinnati, Ohio, assignor to The Cincinnati Lathe & Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 28, 1919. Serial No. 285,885. 8 Claims. (Cl. 74—58.)

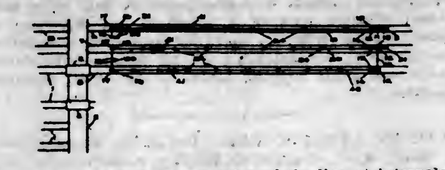


1. A spindle driving mechanism comprising a headstock having a chamber formed therein to serve as a housing for speed-changing mechanism, a spindle journaled in said headstock and provided with a plurality of spindle driving gears of different diameters rigidly mounted thereon toward the forward or chuck supporting end of said spindle, first, second, and third speed-changing shafts journaled in said housing each provided with speed changing gears at their forward ends adjustable endwise to engage corresponding gears rigidly mounted upon the next succeeding shaft and shifting means actuated from the exterior of the headstock to adjust endwise and lock said adjustable gears.

1,352,926. ALTERNATING-CURRENT ELECTROMAGNET. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator and Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 24, 1917. Serial No. 164,310. 14 Claims. (Cl. 175—338.)

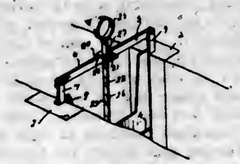
2. A pair of normally spaced magnetic members, an alternating electric circuit coil for establishing a magnetic flux through said members to reduce the spacing therebetween, and non-inductive means having its resistance at an angle to the resistance of the first coil.

1,352,927. ELECTRIC SWITCH. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator and Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 24, 1917. Serial No. 164,311. 13 Claims. (Cl. 200—91.)



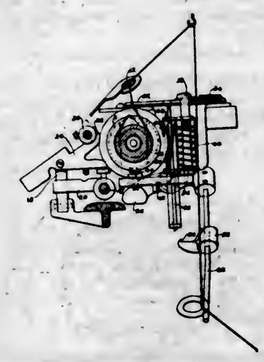
12. A single phase alternating current electro-magnet embodying opposing interchangeable multi-polar laminated members having a plurality of pairs of poles, and a pivotal mounting for the members a common radial distance from said poles.

1,352,928. PROGRESSIVE MANUFACTURE CONVEYER. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Sept. 3, 1918. Serial No. 252,489. 18 Claims. (Cl. 104—165.)



1. A horizontally disposed way, a drive line provided with an end, said line coacting to progress material along

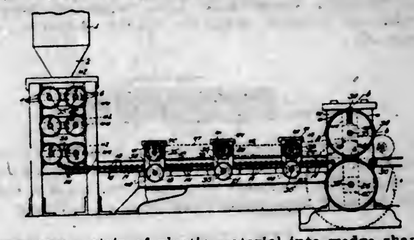
the way, an actuator for the line end for effecting material progress in one direction, and additional means for



effecting reversal of the actuation of the line at intervals intermediate the extent of the way.

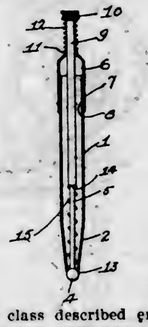
1,352,929. WEIR FOR IRRIGATION-DITCHES FOR MEASURING WATER. MONTRAVEL H. TUCKER, Blanca, Colo. Filed Jan. 7, 1920. Serial No. 349,843. 6 Claims. (Cl. 61—28.)

1. In a weir, the combination with an irrigating ditch having opposite guides in its walls, of a weir frame including a weir plate and guides engaging the guides of the ditch, said weir having upper and lower openings, and a sand gate mounted in the guides of the weir for closing either of said openings.



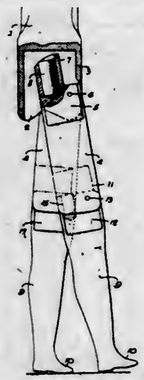
1,352,930. WINDING-MACHINE. WILLIAM P. WOOD, Pawtucket, R. I., assignor to Jenckes Spinning Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Jan. 3, 1919. Serial No. 269,461. 12 Claims. (Cl. 242—31.)

1. A winding machine, having, in combination, winding mechanism, bunch building mechanism, and means for controlling the starting of the driving mechanism for the winding mechanism from the bunch building mechanism.



1,352,931. MACHINE FOR MAKING COMPOSITE SHINGLES. OSCAR ALTPETER, Milwaukee, Wis. Substitute for application Serial No. 83,714, filed Mar. 13, 1916. This application filed Oct. 13, 1919. Serial No. 330,249. 12 Claims. (Cl. 25—42.)

1. A machine for making composition shingles, including a compression roller divided longitudinally into alternate bulging and depressed portions to form a wave-like surface, the radial dimensions in any given longitudinal plane radiating from the axis of the roller being equal, and the radial lines in any cross-sectional plane continuously varying in length, whereby said roller is adapted

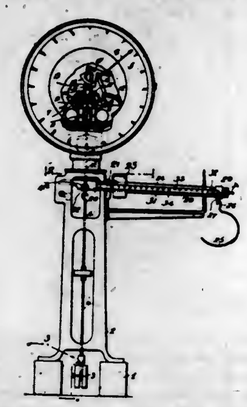


to compress a strip of plastic material into wedge shaped members, substantially as described.

1,352,932. ANTISEPTIC-POWDER-DISPENSING PENCIL. NILS OLAF ANDERSON and CONRAD SCHEICH, Chicago, Ill. Filed Sept. 8, 1919. Serial No. 322,464. 3 Claims. (Cl. 128—265.)

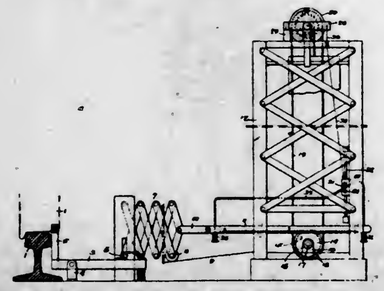
1. A device of the class described embodying therein a barrel having an end portion provided with an opening, means for closing the opening, and means for discharging powder from the barrel through said opening, said discharging means including a stem arranged for longitudinal movement and a plurality of convolutions thereon movable as a whole with said stem and part thereof passing through said discharge opening during the discharge operation and thereby carrying powder therewith for discharge.

1,352,933. WALKING DOLL. CLARENCE F. ARNOLD, Philadelphia, Pa. Filed Dec. 3, 1919. Serial No. 342,184. 3 Claims. (Cl. 46—40.)



1. The combination in a doll, of a body portion; leg members pivoted to the body portion; a weight mounted on each leg member back and above the pivot thereof which tends to move the legs forward so that, when pressure is taken off of a leg, the weight will advance it.

1,352,934. ELECTRIC-HEATING BODY. ANDERS ARNTZEN and KNUT TROSDAHL, Sarpsborg, Norway, assignors to Elektrisk Varmeteknik A/S., Sarpsborg, Norway. Filed Oct. 17, 1919. Serial No. 331,456. 4 Claims. (Cl. 219—48.)



1. An electric resistance element, comprising a base formed with relatively-deep surface grooves which extend in the direction of current flow, and a coating of a heavy metal having a high fusing point filling said grooves.

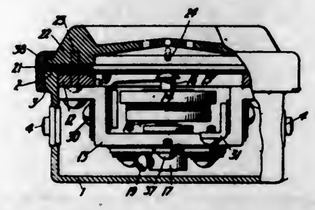
1,352,935. WEIGHING-SCALE. JOSEPH C. BARRETT, Brooklyn, N. Y., assignor to American Kron Scale Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1916. Serial No. 77,161. 5 Claims. (Cl. 265—62.)

1. A scale comprising an indicator and dial, mechanism to operate one of the former with respect to the other, a draft rod connected with said mechanism, means connected with the draft rod to support articles to be weighed or counted, a pivoted beam operatively connected with said draft rod between said means and mechanism, means carried by said beam at a distance from its pivot to receive articles as counters, said beam having means between its pivot and said article-receiving means to support an article as a counter at different distances from such pivot.

1,352,936. POWER TRANSMISSION AND STORAGE APPARATUS. THOMAS F. BARRETT, South Pottstown, Pa. Filed Aug. 5, 1919. Serial No. 315,564. 9 Claims. (Cl. 185—33.)

8. The combination of a member mounted to be actuated by the wheels of a train; a reciprocable element; a movement magnifying device connected between said element and said member; a shaft; means for causing said reciprocable element to rotate the shaft only when said wheel actuated member is moved in one direction; a power storing device; a clutch for connecting said device to the shaft; and means for causing closing of the clutch while said shaft is being turned by the wheel actuated member.

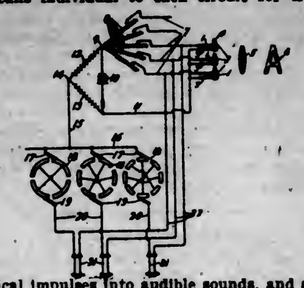
1,352,937. BELT-BUCKLE. DANIEL S. BEARS, Providence, R. I., assignor to Reliance Manufacturing Co., Providence, R. I., a Copartnership comprising David A. Hart and Dexter E. Partelow. Filed May 4, 1920. Serial No. 378,893. 2 Claims. (Cl. 24—194.)



1. A belt buckle comprising a body having side walls, each provided with an inclined guide slot, a belt-gripping plate being adapted to grip one end of the belt against the inner surface of said body and the opposite edge thereof being inclined so that when in operative position it rests against said inner face of said body to guide the incoming opposite belt-end thereover, said plate being provided with trunnions mounted in said slots to both slide and tip therein and so lift its belt-engaging edge clear of the belt to completely release the same.

1,352,938. FIREARM. ROBERT S. BLAIR, South Orange, N. J. Filed Nov. 6, 1915. Serial No. 59,914. 12 Claims. (Cl. 42—76.)

12. In gun construction of the class described, a barrel having a bore which is substantially circular at a section adjacent the breech end and a section which is elliptical adjacent the muzzle thereof, the inner walls of said barrel extending substantially evenly from one of said sections to the other.



1,352,939. TELEPHONE-TRANSMITTER. WILLIAM T. BOOTH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1917. Serial No. 150,632. 11 Claims. (Cl. 179—122.)

2. A casing for acoustic apparatus comprising a cup, a diaphragm supported within the cup, a cover for the casing, and a moisture proof gasket providing moisture proof joints between the cover and cup and between the diaphragm and cup.

1,352,940. OPTIPHONE. FAY C. BROWN, Berkeley, Calif. Continuation of application Serial No. 26,357, filed May 6, 1915. This application filed July 31, 1916. Serial No. 112,294. 9 Claims. (Cl. 250—1.)

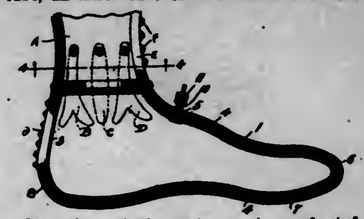
1. An optiphone comprising a group of circuits each including a resistance, means for producing electrical impulses in the different circuits at audible rates and of different characteristics from each other, telephonic receiving means individual to each circuit for translating

the electrical impulses into audible sounds, and a common earpiece for said receiving means.

1,352,941. METHOD AND MEANS FOR MAKING ASBESTOS SHINGLES. ALFRED CROOK and RICHARD D. CHAPMAN, Philadelphia, Pa., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Apr. 11, 1919. Serial No. 289,347. 5 Claims. (Cl. 25—42.5.)

1. The method herein-described, which consists in preparing a substantially flat core or matrix of wet cementitious material, establishing a localized air blast, feeding flocky asbestos material in the presence of said blast, whereby some of it is caused to adhere to said martix, and then incorporating said materials by subjecting them to exerted pressure.

5. Apparatus for the purpose stated, comprising the combination of means for establishing a substantially flat core or matrix of wet cementitious material, means for establishing a localized air blast in proximity therewith, means for delivering asbestos in the presence of said blast, whereby, some of it is caused to adhere to the matrix, and means for incorporating and compacting the cement and asbestos.

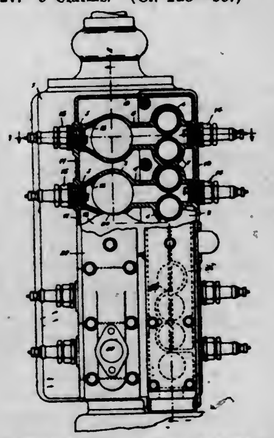


1,352,942. PNEUMATIC FOOT. LEWIS DODGE and CHARLIE B. DODGE, Morse Bluff, Nebr. Filed Oct. 6, 1919. Serial No. 328,832. 4 Claims. (Cl. 3—8.)

1. In an artificial foot, the combination with an outer casing of rubber or rubber fabric substantially of the shape of the human foot, having an opening therein for the insertion of an inner tube, of an inner tube of soft rubber substantially of the configuration of the outer casing adapted to fit within the latter and means which will permit of the inflation of said inner tube.

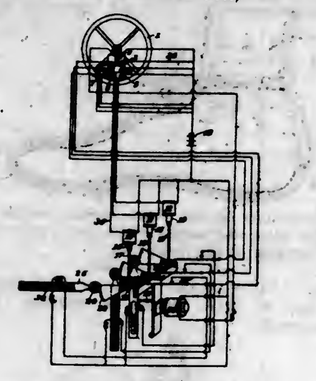
1,352,943. PNEUMATIC FOOT. LEWIS DODGE and CHARLIE B. DODGE, Morse Bluff, Nebr. Filed Feb. 9, 1920. Serial No. 357,184. 3 Claims. (Cl. 3—8.)

1. In an artificial foot, the combination of an outer casing of rubber or rubber fabric substantially of the shape of the human foot, its upper part being provided with metallic braces or supports embedded in the fabric on each side of the leg at or about the location of the ankle and means to secure them to an artificial leg, with an opening in the outer casing for the insertion of an inner tube, an inner tube of soft rubber substantially of



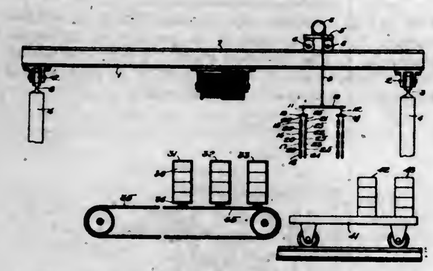
the configuration of the outer casing, adapted to fit within the latter and means which will permit and control the inflation of the inner tube.

1,352,944. UNDERWEAR. ADELE DUVALL, Chicago, Ill. Filed Apr. 9, 1917. Serial No. 160,672. 1 Claim. (Cl. 2—144.)



An undergarment having a crotch opening, an apron adapted to conceal and cover said opening, said apron extending to approximately the knees of the wearer and being attached by a line of stitching or its equivalent to the back of the undergarment on a line immediately below and parallel with the waist line thereof, said line of stitching being thence curved forwardly and downwardly to approximately half-way around the garment to substantially the axis of the hip joints on either side of the leg portions thereof, whereby a close fitting of the apron to the body of the wearer is insured in all postures.

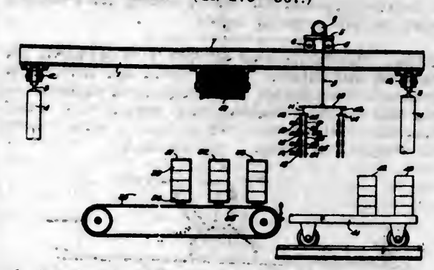
1,352,945. INTERNAL-COMBUSTION ENGINE. THOMAS J. FAY, Brooklyn, N. Y., assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1915. Serial No. 53,927. 9 Claims. (Cl. 123—59.)



1. In an internal combustion engine, a compression chamber of elongated narrow shape communicating with the engine cylinder at a point adjacent one end of said chamber, and means for simultaneously igniting the mixture at both ends of said chamber.

1,352,946. AUTOMOBILE-SIGNAL. CHARLES H. FELTEN, West Hoboken, N. J. Filed May 6, 1918. Serial No. 232,777. 1 Claim. (Cl. 177—327.)

In an automobile signaling device, a swinging signal-arm, means adapted to swing said signal-arm to display position comprising a lever and a solenoid operating said lever, an electric circuit embodying said solenoid, said circuit being adapted to be opened and closed, and when closed, to energize said solenoid, a second electric circuit, adapted to be opened, and means for closing said second circuit by the operation of the aforesaid lever, a signal-arm lamp and an indicator lamp in series in said second circuit, a signal-arm holder adapted to support one end of said lever and through it said signal-arm when in display position, a third electric circuit, a magnet in said circuit, said circuit being adapted to be opened and closed, and when closed, to energize said magnet and withdraw said signal-arm holder away from said lever permitting the signal-arm to drop into normal position.

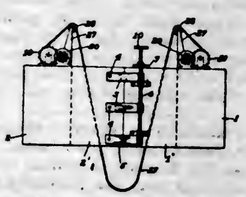


1,352,947. PROCESS FOR HANDLING CLAY PRODUCTS. JONATHAN P. B. FISKE, Newton, Mass. Filed Oct. 29, 1917. Serial No. 198,992. 2 Claims. (Cl. 294—88.)

1. That improvement in the art of manufacturing hollow clay articles, which consists in first piling a plurality of said articles into a vertical column with the air spaces substantially in vertical alinement, lowering a pair of clamping devices adapted to be electrically energized through adjacent vertical air spaces in the column of clay articles, said pair of electrical clamping devices being positioned on each side of an inner web in said clay articles, then supplying electrical energy to said clamping devices, whereby the pair of devices will clamp automatically on opposite sides of said inner web of each article in the column and then lifting the clamping devices and said column of articles while the clamps are energized.

2. The improved process of handling hollow clay articles having an inner web adjacent air spaces, which consists in providing a pair of electrical clamping devices, one device comprising a magnet and the coöperating member a keeper, piling a plurality of said articles into a plurality of columns with the webs and air spaces of each article substantially in alinement, then positioning a plurality of said electrical clamping members arranged with separate members for each article in each column, lowering the clamping devices while normally separated and deënergized, energizing said magnets when a magnet and keeper are positioned to engage each article in each column and then lifting the plurality of columns of articles while the magnets are so energized, transporting the same, lowering the column, deënergizing the magnets and releasing the articles.

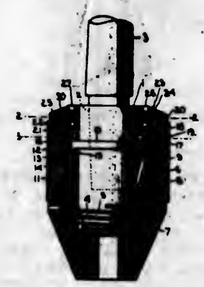
1,352,948. ELECTRICAL CLAMP. JONATHAN P. B. FISKE, Newton, Mass. Filed Oct. 31, 1917. Serial No. 199,442. 6 Claims. (Cl. 175—367.)



1. An electrical clamping apparatus of the kind described, comprising a supporting member, a pair of coöperating magnetic members flexibly united to said support, the coöperating members being normally spaced from each other, and means to magnetize said coöperating members to clamp an article between them.

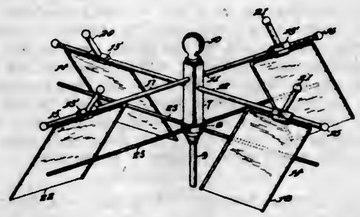
1,352,949. MULTIPLE-TOOL HOLDER. JOHN H. FULLMER, Buffalo, N. Y. Filed Jan. 10, 1920. Serial No. 350,579. 3 Claims. (Cl. 29—48.)

1. A multiple tool holder comprising a supporting arm, a turret adapted to support a plurality of tools on different parts of its periphery, and means by which said turret is pivotally connected with said arm and relatively to which said turret is movable lengthwise of the axis thereof, said arm being provided with a shoulder facing the axis of said turret, said arm being provided with a centering boss around said axis and said turret being provided with a circular socket around said axis which receives said boss.



1,352,950. SHIP-SALVAGE DEVICE. KAZIMIEZ GALESKI, Harrah, Okla. Filed Dec. 30, 1919. Serial No. 348,269. 1 Claim. (Cl. 114—49.)

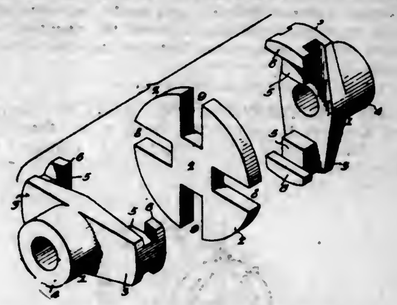
A ship raising device comprising a rectangular pontoon separated along its median line into two sections and inclosing a rectangular space, said sections being



hinged together at one end, releasable means locking the other ends of the sections together, said means comprising brackets on said sections, a vertical shaft journaled in said brackets, a series of arms fixed to said shaft and provided with apertures, a series of pins adapted to engage the apertures of said arm, a spur gear on said shaft, and a pinion in mesh with said spur gear and adapted to be operated by a hand-wheel on the vertical stub shaft on said pinion, and means adapted to raise the ship into the said space.

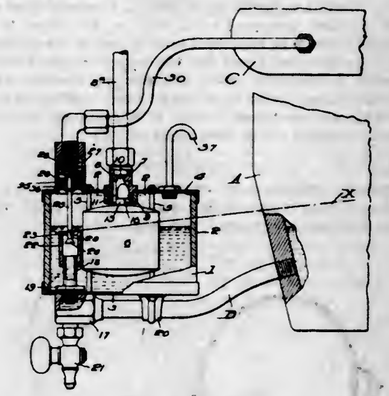
1,352,951. CHUCK. CHARLES E. GILBERT, North Chichester, N. H. Filed May 29, 1919. Serial No. 300,514. 5 Claims. (Cl. 279—63.)

1. A chuck comprising a head having a tapered screw threaded end, an inclosing integral body portion having converging guide-ways, jaws slidably mounted in said guide-ways having threaded faces engaging the screw threads of said head, oppositely disposed thrust bearings intermediate of said head and body comprising an integral flange on said head, a complementary recess in said body, balls in said recess on opposite sides of said flange, and an adjustable nut engaging one set of balls and with the walls of the recess forming a race-way therefor.



1,352,952. WIND-MOTOR. JAMES G. GRACEY, St. Louis, Mo., assignor of one-fourth to Emanuel Longmeyer, St. Louis, Mo. Filed Nov. 8, 1919. Serial No. 336,665. 3 Claims. (Cl. 170—17.)

3. A wind motor comprising a plurality of axially mounted arms, a center support for said arms, vane supporting blocks rigidly attached to said arms, vane frames swivelly attached to said blocks, the position of the vanes on the blocks being so arranged that when one is vertical the opposite vane is horizontal, counter balance weights attached to the vane supporting blocks, said vane being adapted to be turned edgewise to the wind for stopping the movement of the motor, substantially as specified.



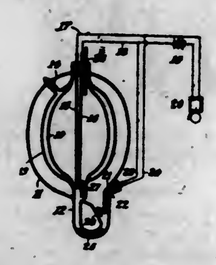
1,352,953. FLEXIBLE COUPLING. JOHN R. GRUNDY, Philadelphia, Pa. Filed Oct. 30, 1919. Serial No. 334,519. 2 Claims. (Cl. 64—96.)

1. A flexible coupling consisting of two shaft-carried elements each including radially extending portions having outwardly projecting blocks on their adjacent faces; and an intermediate cushioning member in the form of a substantially flat plate having recesses for the reception

of the blocks of said members, each of said blocks having a head overhanging the adjacent face of the intermediate member.

1,352,954. ENGINE-CONTROLLED LUBRICATING SYSTEM. VIGGO N. HANSEN, Winnetka, Ill., assignor to Standex Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 30, 1919. Serial No. 314,282. 6 Claims. (Cl. 123—196.)

1. In a device for the purpose indicated, in combination with a chamber of a motor in which the liquid level is to be governed, a receptacle having a float-controlled inlet and an outlet provided with a valve, together with means actuated by operation of the motor for closing the outlet valve, and means adapted to open the valve upon cessation of such motor operation.



1,352,955. SHOCK-ABSORBER. JOHN H. HAMER, Warsaw, Ohio. Filed July 8, 1919. Serial No. 309,418. 1 Claim. (Cl. 267—29.)

A combined link and shock absorbing instrumentality comprising a yoke member having spaced-apart sides; a base connecting said sides; said sides being provided with slotted openings; a bolt passing through the slotted openings and adapted to connect a vehicle spring to the yoke; a plate having angulated extensions bearing on the sides and provided with openings through which the bolt passes; shock absorbing means confined between the plate and

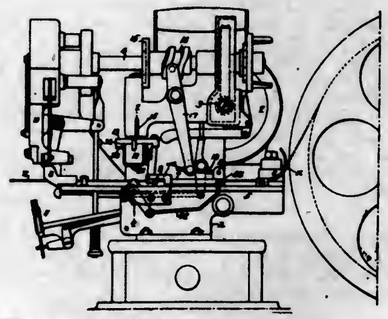
yoke; ears disposed on the sides and extending outwardly therefrom to constitute a housing; auxiliary shock absorbing means disposed therein; and means for creating a varying frictional resistance between the angulated extensions of the compressing member and the sides of the yoke.

1,352,956. TELETHERMOSCOPE. HARRY W. HARDINGE and HARLOWE HARDINGE, New York, N. Y. Filed Apr. 19, 1916. Serial No. 92,110. 3 Claims. (Cl. 200—141.)

1. In a device of the kind described, a pair of gas-filled chambers, one being heat-insulated, an electrical contact freely movable between the chambers, a pair of fixed separated contacts arranged to be electrically closed by the movable contact in its travel toward one of the chambers, and a by-pass for permitting the escape of gas from one chamber to the other when the movable contact reaches a predetermined point in its travel after closing said fixed contacts, whereby rapid change of temperature will cause repeated closing of the fixed contacts.

1,352,957. BLOW-OUT PATCH. WILLIAM VAN V. HAYES, New York, N. Y. Filed Dec. 5, 1919. Serial No. 342,608. 5 Claims. (Cl. 152—26.)

5. A blow out patch, comprising a body having aprons and formed of a plurality of layers of fabric, and a wedge-shaped insert between the layers of fabric of the aprons at the outer portions thereof, whereby the said outer portions of the aprons will be wedge-shaped in cross section.

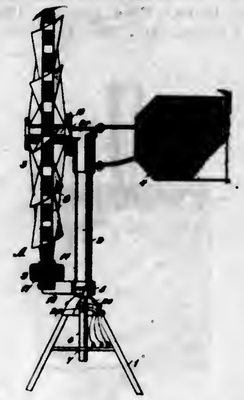


1,352,958. MUSICAL INSTRUMENT. HENRY R. HELLER, New York, N. Y., assignor, by mesne assignments, to Auto Pneumatic Action Co., a Corporation of New York. Filed Oct. 18, 1916. Serial No. 126,296. 1 Claim. (Cl. 84—40.)

In a pneumatically operated musical instrument, a wind-chest, a reservoir pneumatic and connection therebetween, means for applying pressure directly to the pneumatic and for closing the connection from said chest to said pneumatic, said means including a smaller pneumatic operatively secured upon the wall of said first-mentioned pneumatic, said smaller pneumatic having a resiliently retained movable wall, said connection including several passages opening into said smaller pneumatic, a communicating passage between said several passages,

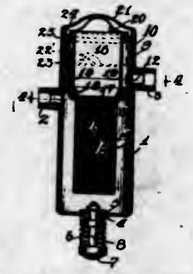
and means for varying the capacity of said communicating passage.

1,352,959. NUMBERING ATTACHMENT FOR PINTICKETING MACHINES. GEORGE W. HENRY, Jr., Philadelphia, Pa., assignor to H. G. Davis Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 18, 1918. Serial No. 240,645. 4 Claims. (Cl. 101—79.)



1. The combination in a pin ticketing machine, of a slide; a reciprocating type carrying form; a series of numbering disks carried by the form, some of the disks being automatically operated, while others of the disks are manually operated; a plunger in the form arranged to actuate the first mentioned disks; a wheel having high and low points adapted to operate the plunger; means for actuating the wheel from the slide; and means for releasing the wheel from the control of the slide.

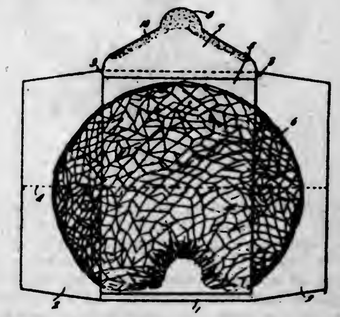
1,352,960. WIND-WHEEL ELECTRIC GENERATOR. ALBERT H. HEYROTH, Geraldine, Mont. Filed Dec. 28, 1916, Serial No. 139,248. Renewed Feb. 10, 1920. Serial No. 357,745. 4 Claims. (Cl. 290—44.)



1. An electric generator comprising stator and rotor elements, said rotor including a plurality of inductors, and the stator including a group of three poles, a field winding on the central pole connected with the windings on the other poles in which alternating current is generated, each inductor being of a length substantially equal to the polar faces of two adjacent poles and the intervening gap, and the inductors being spaced apart a distance substantially equal to the gap between the adjacent poles of the stator, a wind wheel on the periphery of which the inductors are mounted, a rotatable head for the wheel, an outside circuit, and a brush and slip ring device connecting the outside circuit with the windings.

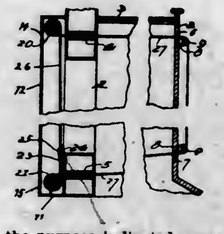
2. The combination of a wind wheel, a rotatable head carrying the wheel, a series of inductors on the periphery of the wheel, a stator having a group of poles, an energizing field winding on one pole, windings on the other poles in which alternating current is induced, a commutator rectifier mounted on the wheel, means connecting the alternating current windings with alternate segments, and means engaging the segments to receive continuous current therefrom.

4. The combination of a wind wheel, a head on which the wheel is mounted, a generator rotor in the form of inductors on the periphery of the wheel, a generator stator mounted on the head at a point outwardly from the periphery of the wheel and including a group of poles having windings, the winding on one pole serving as a generator of magnetic lines of force and the other windings having alternating electro-motive force induced therein, a commutator rectifier carried by the wheel, means for connecting alternate commutator segments into groups, means for connecting the groups of segments with the respective windings in which alternating current is generated, a brush bearing on the commutator segments for receiving continuous current therefrom, and a housing for the commutator including a part carried by the wheel and a part carried by the head.



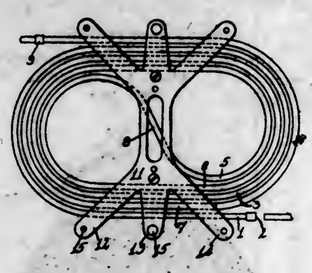
1,352,961. FILTER. HENRY A. HILLS, Grand Rapids, Mich. Filed July 28, 1916. Serial No. 111,906. 8 Claims. (Cl. 210—165.)

3. In a filter of the class described a cylindrical casing, an inlet and outlet thereon, a cylindrical filtering element disposed axially within said casing comprising inner and outer cylindrical screens, and a fabric bag interposed therebetween, a cylindrical member fitted within said casing to support said filtering element, a cup member within said cylindrical member spaced therefrom and bearing upon the upper end of said filtering element to retain the same in position on said supporting member, a cap fitted around said inner cylindrical supporting member and abutting the upper end of said casing between said cap and said cylindrical member, and resilient means interposed between said cap and said cup member to thrust said cup member tightly upon said filtering element to positively retain the same in position.



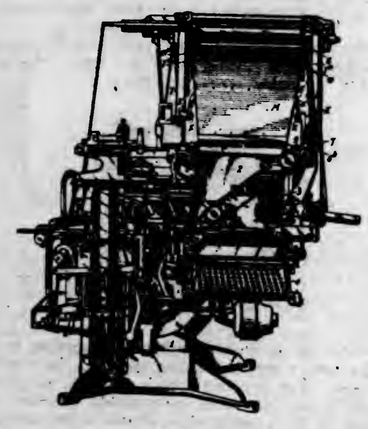
7. In a device of the class described a cylindrical casing, an inner cylindrical member fitted into the upper end thereof, a water proofed filtering means pervious to the liquid to be filtered supported on said inner cylindrical member, a cup member bearing on said means to hold the same attached, a packing ring around the upper end of said inner cylindrical member, and a cap fitted over said cylindrical member and bearing on said packing ring.

1,352,962. PACKAGE. PAUL EDWARD HITZIGRATH, Rockville Center, N. Y. Filed Apr. 2, 1920. Serial No. 370,722. 1 Claim. (Cl. 206—46.)



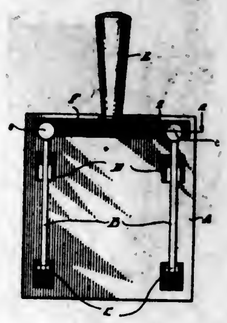
As a new article of manufacture, a package comprising a blank having a pair of parallel fold lines spaced from the edges thereof and having a central longitudinal fold line at right angles to the first mentioned fold lines, a hair net located on the central portion of the blank with its ends extending over said parallel fold lines, a covering sheet on the net between said parallel fold lines, the ends of the net and the ends of the blank outside of the parallel fold lines adapted to fold over the covering sheet whereby the ends of said net are confined between said ends of the blank and said covering sheet and all of said parts adapted to be folded on the longitudinal folded line, and a covering flap at one edge of the blank adapted to be secured to the main portion of the blank when folded.

1,352,963. RADIATOR-COVER. AUBREY F. HOFFMAN, Longford, Kans. Filed May 15, 1918. Serial No. 234,638. 1 Claim. (Cl. 257—132.)



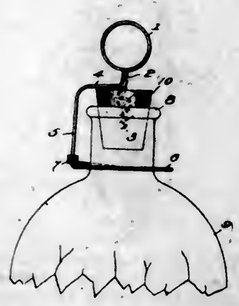
A device for the purpose indicated comprising the combination with a vehicle radiator and dash, both of which are formed with top and bottom openings adjacent one side, of upper and lower transversely disposed rollers mounted on the front of the radiator, a curtain having one end connected to one of the rollers, operative connections between the other end of the curtain and the remaining roller, upper and lower idlers mounted adjacent corresponding openings on the dash, and a cable trained over said idlers and passing through the openings in the dash and in the radiator and having its opposite ends encircling and connecting to the upper and lower rollers, respectively, whereby movement of that section of the cable between the said idlers in one or the other direction may effect the raising or lowering of the curtain, as herein shown and for the purpose specified.

1,352,964. EXPANSION-COIL FOR REFRIGERATING SYSTEMS. CLARENCE M. HOLLEY and FLOYD W. ROBISON, Detroit, Mich., assignors to Utility Compressor Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1918. Serial No. 210,435. 4 Claims. (Cl. 257—248.)



2. An expansion coil for artificial refrigerating systems consisting of a series of units connected together to form a continuous coil, each unit consisting of a return flat-coiled tube, the ends thereof terminating on adjacent sides of the coil and each end being connected with the adjacent end of a contiguous coil on opposite sides thereof, the composite coil thus formed having an inlet at one end and an outlet at the other, and means for securing the units in superimposed relation.

1,352,965. TYPOGRAPHICAL MACHINE. THOMAS SIMMONS HOMANS, Hempstead, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 17, 1918. Serial No. 229,187. 6 Claims. (Cl. 199—20.)

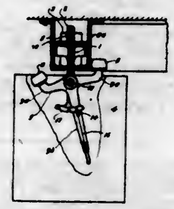


1. In a typographical machine having a frame and matrix assembling and distributing mechanisms thereon, the combination of a pivot bearing on said frame, and a plurality of units of different relative capacities to contain respectively different numbers of matrix magazines and having respectively pivot bearings complemental to the pivot bearing on the frame, the bearings on said frame and units being so determined and located that any one of said units will interchangeably fit said frame and a magazine thereon will be thereby brought into operative relation with the matrix assembling and distributing mechanisms when the respective unit is swung in one direction about said pivot bearings as an axis.

1,352,966. ELECTRIC SWITCH. HANS F. IBRGANG, St. Maries, Idaho. Filed Oct. 16, 1919. Serial No. 331,022. 1 Claim. (Cl. 200—171.)

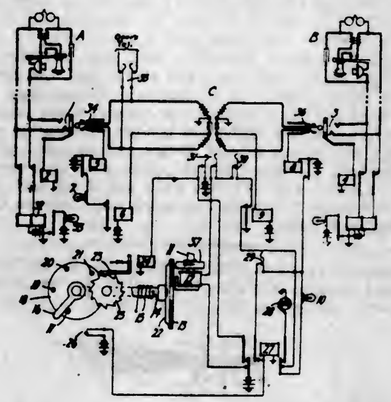
In an electric switch of the character described, a circuit making and breaking means and means for manipulating the same, an insulated connection between the manipulating means and the circuit making and breaking means comprising an insulating piece having slots in the inner face thereof adapted to receive the ends of the circuit making and breaking means, the said ends of the circuit making and breaking means being split providing outwardly, flaring tongues and means for maintaining the said tongues in said slots and insulated from the outer face of the insulating piece.

1,352,967. BOTTLE-STOPPER PROTECTOR AND SUPPORTER. THOMAS ARTHUR JOHNSON, Rockford, Ill. Filed Feb. 14, 1920. Serial No. 358,659. 5 Claims. (Cl. 215—2.)



1. An attachment for bottle stoppers serving as a protector and supporter for the stopper, comprising a longitudinal arm having at one end a means of attachment to the stopper and at the other end a guard loop of a size to slip over the neck of the bottle, said loop holding the end of the stopper out of contact with a supporting surface when the stopper is removed from the bottle, and a loop or handle provided at the end opposite the guard loop by means of which the attachment may be manipulated.

1,352,968. CAP. JULIUS JOSEPHS, New York, N. Y., assignor to The Crofut & Knapp Company, New York, N. Y. Filed May 20, 1920. Serial No. 382,698. 5 Claims. (Cl. 2—107.)

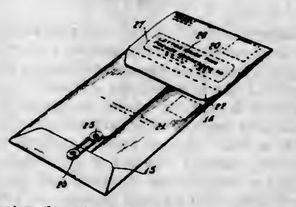


5. In a cap, the combination comprising detachable ear flaps and a strip secured at its ends to the top of said cap on the interior for carrying said ear flaps when not in use.

1,352,969. CARRIER. JOHN KALIX, White Plains, N. Y. Filed May 29, 1920. Serial No. 385,234. 12 Claims. (Cl. 104—91).

1. A carrier having one or more supporting wheels and provided with a movable member having means on opposite sides to coöperate with the outer sides of supporting means for said carrier in different positions of said member.

1,352,970. TELEPHONE-EXCHANGE SYSTEM. CHARLES W. KECKLER, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1918. Serial No. 256,834. 5 Claims. (Cl. 179—73.)

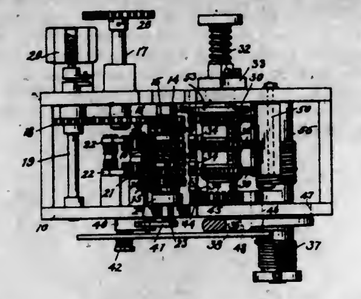


1. In a telephone exchange system, a plurality of lines terminating at a central office, a plurality of link circuits thereat for interconnecting the lines, a timing means for association therewith and adapted for continuous operation for a predetermined period, means controlled jointly by the operator and the subscriber on a connected line for starting the timing means, and operator-controlled means for holding the timing means at any time prior to the expiration of such period.

1,352,971. BALANCED WINDOW. WALDO S. KELLOGG, New York, N. Y., assignor to Austral Window Co., New York, N. Y., a Corporation of Maine. Filed May 24, 1912, Serial No. 699,414. Renewed July 21, 1920. Serial No. 398,396. 14 Claims. (Cl. 20—42.)

14. In a window of the kind described, the combination with upper and lower sashes, of a frame therefor provided with parting strips against which each of said sashes engages, balancing levers connected at their ends to the upper and lower sashes, and guide means for said sashes which guides the sashes by engaging the parting strip and permits them to assume angular positions with respect to the frame, and which maintains a contact of the sashes with the parting strips in any position which the sashes may assume.

1,352,972. ENVELOP. EUGENE U. KIMBARK, Evanston, Ill. Filed Jan. 26, 1920. Serial No. 354,048. 2 Claims. (Cl. 229—72.)



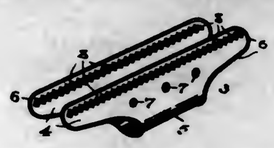
1. An envelop for the transmission in one package of first class and inferior class postal matters consisting of a single flat tubular sheath open at both ends, provided at each end with a flap, and folded upon itself along a transverse line nearer one end of the sheath than the other, to form two separate receptacles which are wholly free from each other except along the line of fold, the flap on the shorter receptacle being provided with an adhesive substance adapting it to be sealed down upon the longer receptacle and the flap of the longer receptacle being provided with a non-sealing closing device.

1,352,973. SETBACK-REGISTER. ROBERT E. KIMBALL, Cleveland, Ohio. Filed Oct. 22, 1915. Serial No. 57,284. 8 Claims. (Cl. 235—144.)

1. In a set-back register, registering mechanism comprising counting wheels with counting numerals, and carrying means including single toothed gears adjacent the carrying wheels, and set-back mechanism comprising stop devices arranged opposite the single toothed gears, and means for turning the wheels so as to bring corresponding numerals into alinement by the engagement of the teeth of the different single toothed gears with said

stop devices, and for then simultaneously rotating all the wheels through a predetermined portion of a revolution

sufficient to bring the alined zero numerals from one given position to another given position.

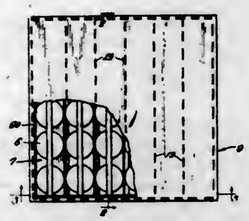


1,352,974. BRASSIÈRE. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros., New York, N. Y., a Firm. Filed Jan. 29, 1920. Serial No. 354,777. 4 Claims. (Cl. 2—73.)

3. A brassière comprising a front member having central and side sections stitched together so as to conform to the body of the wearer with extensions leading from the lower outer parts of the side sections adapted to extend to and to be secured in position about the waist of the wearer, said extensions leading from said side sections at such an angle that a draft thereon around the waist will cause a substantially straight downward pull upon said central section and a transversely diagonal pull across the front member thereby causing said member to produce a front flattening effect and to serve as a support for the busts of the wearer, tapes connected to said extensions adapted to be passed around the waist and to be secured at the front of the wearer for exerting a draft upon the extensions, said extensions being adapted to be drawn to overlapping relation at the back of the wearer to serve as a support for the small of the back, and a back member connected to the front member at its upper outer portions by means adapted to extend over the shoulders of the wearer and having extensions leading therefrom at the lower outer parts thereof adapted to extend to and to be adjustably secured in position around the waist of the wearer.

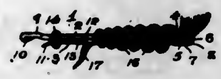
1,352,975. CREASE-RETAINING DEVICE FOR HATS. JOSEPH KORN, Newark, N. J. Filed Oct. 11, 1919. Serial No. 330,000. 3 Claims. (Cl. 2—108.)

3. A crease-retaining device for hats comprising a pair of longitudinally extending wings joined by a relatively short center portion, said center portion being bent upon itself to cause said wings to cause the device to assume a U-shaped cross-section adapted to embrace the crease of a hat, combined with marginal retaining means extending from and at the marginal gripping edges of said wings, said marginal retaining means consisting of a series of inwardly extended pointed projections adapted to be embedded in the surface-portions of the crease of the hat so



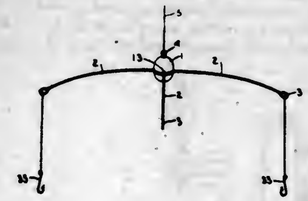
as to retain the said crease-retaining device in position, and additional retaining projections extending inwardly from said wings.

1,352,976. ELECTRIC RETOUCHING-PENCIL. JAMES R. KUGLER and EARL W. KUGLER, Clear Lake, Iowa, assignors to Peter Hauenstein, Minneapolis, Minn., and Charles C. Kastenholz, St. Paul, Minn. Filed Dec. 26, 1917. Serial No. 208,790. 5 Claims. (Cl. 95—101.)



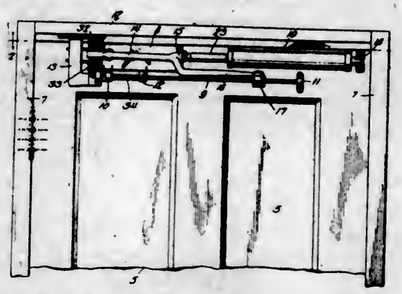
1. A photographic retoucher, comprising, in combination, a pencil barrel, a lead holding tube movably supported on a resilient fulcrum between its ends near an end of said barrel to permit tilting of the tube on the barrel and means for vibrating said tube laterally on its movable support.

1,352,977. SPRING STRUCTURE FOR CUSHIONS. PETER I. LANGLYKE, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,270. 1 Claim. (Cl. 5—13.)



A mattress structure having a plurality of inner coverings, each to contain a series of separated coil springs, each covering unit comprising a single piece of fabric folded in U-shape formation, said folds providing two vertical parallel side walls and a base wall, the latter as wide as the spring to be contained therein, said inner covering divided, at intervals, by vertical seams to provide a series of closed cylindrical pockets constituting a unit and a coil spring in each pocket and an outer covering comprising a series of parallel stalls, each stall rectangular in shape with two side walls and a top and bottom wall, whereby to provide four fabric walls between springs of adjacent units.

1,352,978. HAIR WAVER OR CURLER. FRANK LANTIERI and GABRIEL LANTIERI, Newark, N. J. Filed Feb. 5, 1920. Serial No. 356,526. 12 Claims. (Cl. 132—18.)



1. A hair waver or curler comprising a pair of end-connected members, said members being of semi-circular cross-sectional configuration with the flat surface portions of said members located opposite each other, and means connected with said members for forcing the same against each other into a clamping relation.

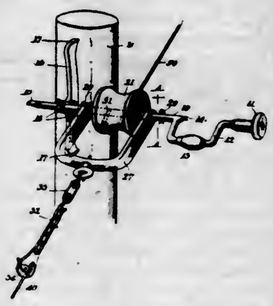
1,352,979. FISHLINE-SPREADER. MELVIN G. LAWRENCE, Revere, Mass. Filed May 20, 1919. Serial No. 298,378. 4 Claims. (Cl. 43—27.)

1. In a fish line spreader, the combination with a body having means by which it may be suspended and comprising two clamping members, of a plurality of spreader arms pivotally connected to one of said members to swing about parallel vertical axes when said body is suspended, said arms moving in the same plane and adapted to be swung from their operative spread relation into parallel folded relation, each arm having a portion received between the clamping members, and means connecting said clamping members by which they coöperate to clamp the arms between them and hold them in their spread relation.

1,352,980. DOOR-CONTROLLING APPARATUS. FRANZ O. LIMING, Chicago, Ill., assignor of one-half to John M. Liming, Fairfield, Iowa. Filed Mar. 27, 1919. Serial No. 285,587. 3 Claims. (Cl. 16—87.)

3. A door controlling means having in combinative relation, a cylinder pivoted to the door; a piston therein; a spring-urged arm pivoted to the door jamb and bifurcated at its free end by a short and a long member, said short member connected to said piston; a lost-motion device in said connection; a rod, substantially parallel with the upper end of the door and secured thereto; a lug, movable along said rod, by movement of said door, and pivotally connected to the longer member of said arm and a door-holding mechanism, operable by movement of said lug, along said rod, when the door has been opened to a predetermined degree.

1,352,981. TANK-CAR CONSTRUCTION. BURNS D. LOCKWOOD, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 25, 1919. Serial No. 306,736. 17 Claims. (Cl. 105—361.)

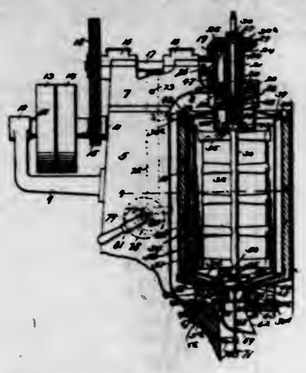


1. In a tank car, an underframe, a tank mounted on said underframe, and a cushioning device for said tank interposed between and connected with said tank and underframe, the ends of said device being adapted to engage the ends of said tank, the resilient portion of said device being arranged at substantially the longitudinal center line of the car.

1,352,982. SNAP-HOOK. JOSEF ALBERT LÜTHI, Lachen-Vonwil, Switzerland. Filed Aug. 13, 1919. Serial No. 317,309. 3 Claims. (Cl. 24—241.)

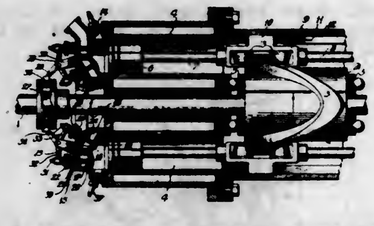
1. A snap hook comprising a casing substantially S-shaped in cross section and having longitudinal grooves in the opposite sides thereof, a resilient double armed lever pivotally mounted at each end of the casing, one arm of each of said levers constituting a hauling hook and the second arm of each lever adapted to engage in the grooves of the casing.

1,352,983. WIRE-STRETCHING TOOL. WALTER D. MANLY, Shackleford county, Tex. Filed Oct. 25, 1915. Serial No. 57,709. 4 Claims. (Cl. 254—162.)



1. In a device of the class described, a shaft, a drum loosely mounted on said shaft and removable therefrom, said shaft adapted for winding wire about the portion from which the drum is removed, means on said portion of the shaft for holding the end of the wire, similar means on said drum, such means coöperating so that the drum may be locked against relative rotation by the insertion of the end of the wire to be wound, and a clevis straddling said drum and adapted to hold the device against the tension of the wire.

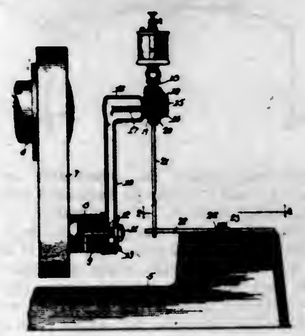
1,352,984. ICE-CREAM-MAKING MACHINE. FRANKLIN P. MILLER, East Orange, N. J. Filed June 17, 1918. Serial No. 240,479. 10 Claims. (Cl. 259—51.)



1. In an ice cream making machine, the combination with an inclosing tub, a cream containing can rotatably mounted in said tub and having a valve controlled outlet at its lower end formed by a depending collar extending through the bottom of the tub, joint forming devices between said collar and the lower end of the tub and including a wear sleeve removably surrounding the upper portion of the collar, supporting means for the lower end of the tub having an opening therethrough into which

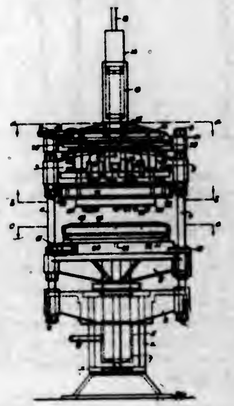
the collar projects, a thrust ring on said support engaged by a part of the joint means between the collar and the

bottom of the tub, and an outlet spout associated with the lower portion of the collar.



1,352,985. EXPLOSIVE-ENGINE. PETER W. MURPHY, Detroit, Mich., assignor to The Murphy Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 20, 1918. Serial No. 229,675. 3 Claims. (Cl. 123—58.)

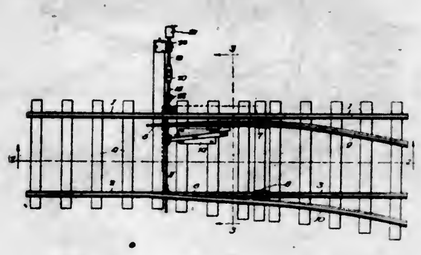
1. In an internal combustion engine a rotatable main shaft, sets of opposed cylinders disposed symmetrically around the shaft, pistons for the cylinders, driving connections between the pistons and the shaft adapted to cause interrotation between the cylinders and the shaft, a head common to the cylinders of each set and having an intake passage adapted to connect with a fixed source of supply and an exhaust passage which opens outwardly away from said shaft, intake valves controlling the communication between the intake passage and the cylinder, exhaust valves controlling the communication between the cylinders and the exhaust passage, a single grooved valve operating member secured on the main shaft and rotatable therewith and a T-shaped lever pivotally supported adjacent each cylinder and operated by said valve operating member, said T-shaped lever having one of its arms engaging the intake valve and its other arm engaging the exhaust valve and its third arm engaging the groove in said valve operating member and being arranged to open the intake and exhaust valves alternately in synchronism with the piston stroke.



1,352,986. GRAVITY CENTER-OILER. WILLIAM W. NUGENT, Chicago, Ill. Filed Feb. 23, 1918. Serial No. 218,644. 9 Claims. (Cl. 184—66.)

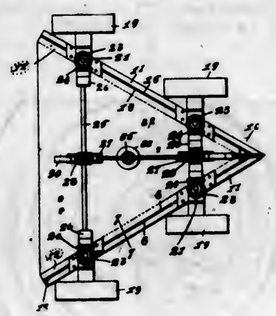
7. The combination with engine structure comprising a shaft, crank arm, crank pin and a bed plate, of a tubular arm secured to said crank pin and extending to the axis of said shaft, an extension from said tubular arm along the axis of said shaft, an oil cup holder mounted on said extension, an oil cup mounted on said oil cup holder in upright position for gravity feed, a rod depending from said oil cup holder, means for removably securing said oil cup holder to said extension while permitting rotation of said extension relatively to said oil cup holder, said oil cup holder and said oil cup and said rod being rigidly connected together in a unitary structure deriving its sole support from said extension, and a slotted member fixed in stationary position on said bed plate for engaging opposite sides of the lower end of said rod while providing

a free and unobstructed space between the lower end of said rod and said bed plate along said member for preventing said rod from interfering with the removal of said oil cup holder from said extension when a cooling medium is to be introduced quickly through said tubular member to the interior of said crank pin.



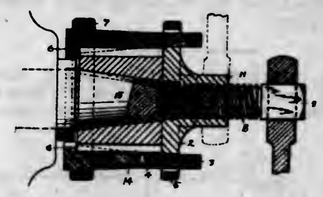
1,352,987. PRESS. CHARLES H. PEIRSON, Glenside, and CHARLES H. BUTLER, Philadelphia, Pa., assignors to E. F. Houghton & Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,606. 5 Claims. (Cl. 69—8.)

4. In a press, a fixed frame and a platen adapted to travel therein, a set of male dies carried by but not secured to said platen, and a set of female dies corresponding with said male dies secured to said frame, means for moving the platen toward the said female dies for forcing the male dies and articles to be compressed into their respective female dies, said platen being returned by gravity to its original position, and said male dies being frictionally retained in their respective female dies while an article is under compression therebetween, ejectors carried by each of the female dies for discharging said retained male dies therefrom together with the compressed articles, and means connected with said platen for actuating said ejectors, said actuating means comprising a carriage, pins carried thereby, means for adjusting said pins for engaging the ejector in any one of said dies,



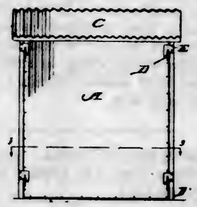
and means for moving said carriage to bring said engaging pins into operation simultaneously with each return movement of the platen.

1,352,988. RAILROAD-TRACK SWITCH. IGNATIUS G. POSPYHALA, Spring Valley, Ill. Filed Apr. 12, 1919. Serial No. 289,737. 6 Claims. (Cl. 246—347.)



1. In track construction, the combination of a side track switch, mechanism for operating said switch, and means whereby said mechanism is automatically controlled by the rolling stock of a train traveling in a direction to either take the side track or continue on the main track, after a forward portion thereof has traveled on one track beyond the switch, so that an uncoupled rear portion of the rolling stock may continue by momentum and take the other track, said mechanism comprising a lever pivoted on the road bed to swing in a horizontal plane, means to connect one end of said lever with the points of the switch, and means disposed on the other end of said lever in position to be operated by said portion of the rolling stock which has passed the switch and thereby automatically throw the latter in time to accomplish said switching operation.

1,352,989. ROAD-MACHINE. EDWARD PRENDERGAST, St. Louis, Mo. Filed Apr. 1, 1919. Serial No. 286,628. 7 Claims. (Cl. 37—5.)



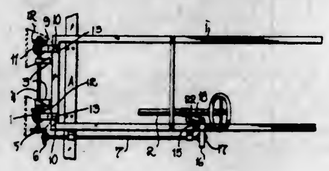
1. A road machine comprising a triangular shaped frame, each side being composed of a pair of channels spaced apart, a series of removable teeth secured between said channels, a shaft carried by the forward end of said frame, a shaft carried by the rear end of said frame, roller supports carried by the front and rear ends of said frame, a connection between said shafts and said roller supports, a connection between said shafts, and a means for raising and lowering said roller supports relative to said frame.

1,352,990. GEAR-REMOVER OR PINION-PULLER. CHRISTIAN REINKER, Lakewood, Ohio. Filed Dec. 27, 1918. Serial No. 268,541. 5 Claims. (Cl. 29—85.)

1. A gear remover, comprising a notched plate, a set of beveled grappling members having headed ends loosely engaged within the notches of said plate, a slip ring engaging the beveled portions of said grappling members, and a screw extending centrally through the plate.

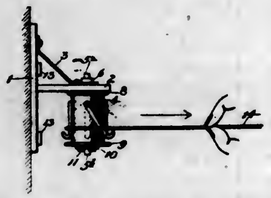
1,352,991. DISMOUNTABLE HOUSE. AUGUSTO ROURE, Buenos Aires, Argentina. Filed Mar. 2, 1918. Serial No. 220,074. 2 Claims. (Cl. 189—1.)

1. A house of the class specified embodying front, rear and side walls having angular iron frames provided with a suitable sheathing thereover, latch plates secured to the frames in planes at right-angles to each other and comprising flat plates arranged vertically with vertical straight slots adjacent to one side edge of each plate to form a single tooth having a flaring or inclined surface at the mouth of the slots, the teeth of the interlocking latch plates being in planes at right-angles to each other and located beyond the adjacent edge portions of the frames to which the coöperating latch plates are secured, and a roof covering mounted over the walls.



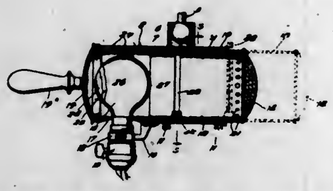
1,352,992. OBSERVATION-STATION. WILLIAM GUY RUGGLES, San Francisco, Calif. Filed Sept. 14, 1916. Serial No. 120,173. 19 Claims. (Cl. 114—16.7.)

1. In a device of the class described, the combination of an anchorage, a floating body of cylindrical form adapted to float in an upright position, a flexible con-



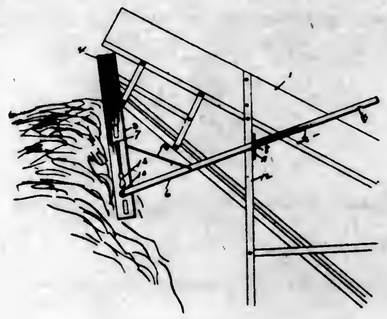
nection between the floating body and anchorage, said body provided with a fin construction rigidly connected thereto and extending in a plane containing the axis of the cylindrical body for minimizing rotary movement of the floating body.

1,352,993. DIRIGIBLE LIGHT. LINUS I. RYDER and MARY Z. RYDER, Briarcliff Manor, N. Y. Filed Oct. 31, 1919. Serial No. 334,881. 1 Claim. (Cl. 240—62.)



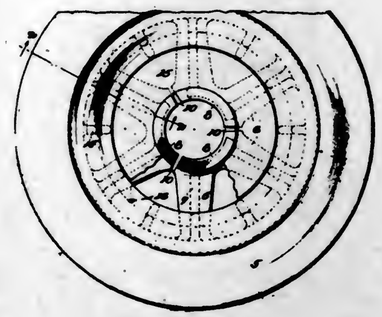
A dirigible light, and means for turning the same, including a chassis frame provided with a channel in the side, a pair of journals mounted within said channel, a shaft extending longitudinally of said frame and mounted in said journals, a yoke mounted on top of said channel, a pinion mounted on the end of said shaft, a rack slidable through said yoke at an angle to said shaft, engageable with said pinion, and means mounted upon the steering post for moving said rack.

1,352,994. CLOTHESLINE-REEL. JACOB SARDO, Johnstown, Pa. Filed Feb. 14, 1920. Serial No. 358,694. 1 Claim. (Cl. 68—3.)



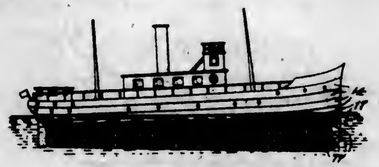
In a device of the character described, the combination with a vertical rotatable drum, of a plurality of hooks pivoted at their upper ends to the periphery of said drum and adapted to normally extend downwardly by gravity from their respective pivots in parallelism with each other, and having their lower ends free and turned outwardly.

1,352,995. DENTAL LAMP. NATHAN M. STONE, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,685. 3 Claims. (Cl. 240—1.)



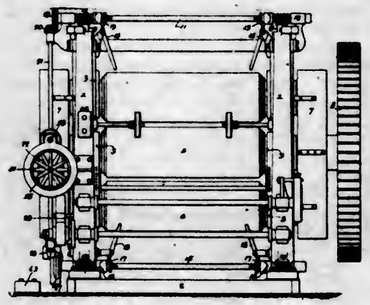
3. In a lamp of the character described, a telescopic casing having a condensing lens at one end, and closed at the other end, an incandescent electric light bulb in said closed end of the casing having a coating of mercury on its surface and an outside coating of opaque material; there being a clear spot on the bulb facing the lens, an electric light socket supporting said bulb and a bracket secured to the casing and supporting the socket.

1,352,996. ADJUSTABLE PLATFORM FOR HAY-LOADERS. JOHN G. STURTZE, Lowville, N. Y. Filed Sept. 4, 1919. Serial No. 321,571. 1 Claim. (Cl. 193—14.)



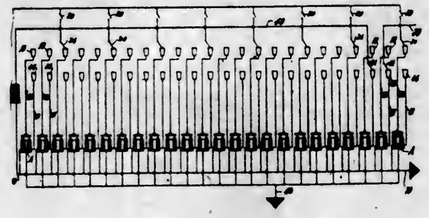
The combination with a hay loader of a platform pivotally connected at its upper end with the delivery end of said loader and including end bars, a pulley carried by one of said end bars and the other of said end bars having an opening, struts pivotally connected at one end thereof to said end bars and provided with notches on their under edges, keepers through which said struts are slidably projected and engageable with any one of said notches, cords secured at one end thereof to said struts intermediate the pivotal end thereof and said keepers, the cord secured to the strut adjacent the end bar having the opening being passed through said opening, the other of said cords attached to the other strut being passed over the pulley carried by the second end bar and thence extended through said opening of the first end bar, and a handle secured to the ends of said cords projecting through said openings.

1,352,997. DREDGE-TUMBLER. MARK LAFORE SUMMERS, Hammonton, Calif., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Oct. 6, 1919. Serial No. 328,771. 6 Claims. (Cl. 64—17.)



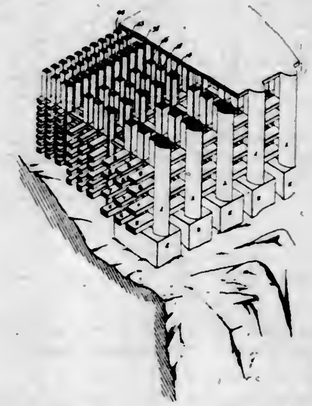
1. A dredge tumbler embodying a flanged member cast with hub-forming webs, collars secured upon the hub ends and overhangs on the flanged member coöperating with the collars to close the ends of the tumbler and having webs connecting them with the hub-forming webs.

1,352,998. CONSTRUCTION OF SHIPS. JAMES M. THOMPSON, Buffalo, N. Y. Filed July 3, 1919. Serial No. 308,563. 4 Claims. (Cl. 114—80.)



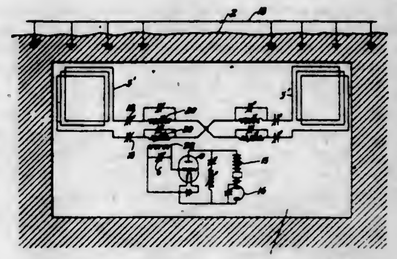
1. A vessel having its hull provided with external corrugations extending transversely of its bottom and sides.

1,352,999. MEANS FOR ADJUSTING ROLLS. JOSEPH W. THROPP, Trenton, N. J. Filed Apr. 27, 1920. Serial No. 377,017. 8 Claims. (Cl. 18—2.)



1. The combination in a calendering machine, of a series of rolls, independent means for adjusting the upper roll and the lower roll; a gear box; a power driven shaft in the box and means for independently driving the adjusting means for the upper and lower rolls from said shaft; a reversing motor driving the shaft; and switch mechanism controlling the motor.

1,353,000. APPARATUS FOR ELECTRICAL TRANSMISSION OF INTELLIGENCE BY WIRE. JAMES A. TILLINGHAST, Providence, R. I. Filed Sept. 19, 1918. Serial No. 254,812. 17 Claims. (Cl. 178—53.)



1. Electrical apparatus for transmitting intelligence, comprising a wire, distributing mechanism including a number of sets of instruments, each set including a transmitting instrument and a receiving instrument, a plurality of selective partial circuits, and mechanism for selecting from time to time and including in the transmitting circuit so as to be used by all the instruments in common that unit of the selective partial circuits which will enable the transmitting and receiving instruments of each set to operate unaffected by the operation of those of any other set.

1,353,001. BREAKWATER OR THE LIKE. GORGONIO URIARTE, Madrid, Spain. Filed May 18, 1917. Serial No. 169,595. 18 Claims. (Cl. 61—4.)

1. The combination in a break-water of a supporting frame; and a series of substantially horizontal perforated diaphragms carried thereby so as to present their edges to the waves.

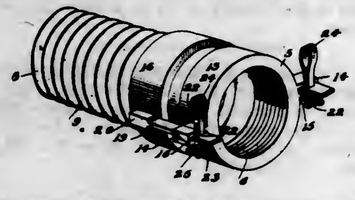
1,353,002. APPARATUS FOR PREVENTING STATIC INTERFERENCE IN RADIOSIGNALING. ROY A. WEAGANT, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 12, 1917. Serial No. 206,724. 4 Claims. (Cl. 250—20.)

1. A receiving station for radio signals, comprising a collector disposed beneath the surface of the ground, in combination with a conducting screen disposed at the surface of the ground over the collector.

1,353,003. BITUMINOUS PITCH AND SULFUR COMPOSITION AND METHOD OF MAKING THE SAME. JOSEPH JOHNSTON WHITE, Jr., Erie, Pa., assignor of one-half to H. G. Green, Columbus, Ohio. Filed Apr. 26, 1919. Serial No. 292,925. 4 Claims. (Cl. 106—31.5.)

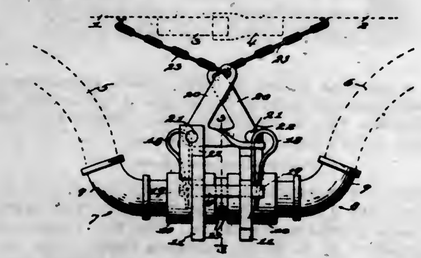
1. A bituminous pitch and sulfur composition in which the major portion of the ingredients are not chemically combined.

1,353,004. FILM-REEL. JOSEPH WILHELM and CHARLES A. KAYS, McKees Rocks, Pa. Filed Aug. 14, 1919. Serial No. 317,411. 6 Claims. (Cl. 242—74.)



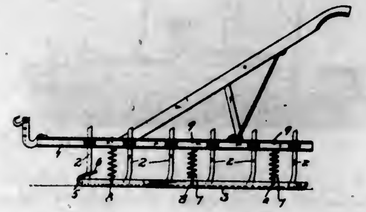
1. A hub for film reels comprising a cylindrical body portion, a resilient clamping tongue extending transversely of said body portion, said tongue having its inner end secured to the inner face of the body portion and further

having a part thereof arranged within the body portion and the remaining part thereof positioned against the



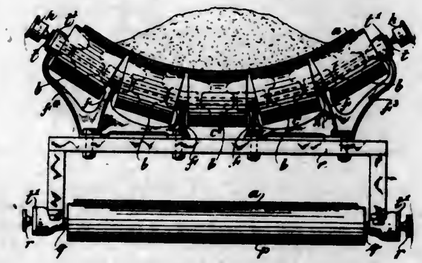
periphery of the body portion, and a removable clamping member positioned under said clamping tongue.

1,353,005. PIPE-COUPLING. JOHN WILLIAMS, Clinton, Iowa. Filed Jan. 21, 1920. Serial No. 352,978. 4 Claims. (Cl. 285—180.)



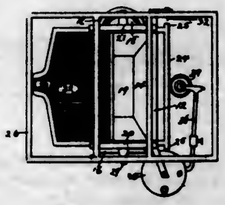
4. A coupling of the class specified, comprising coupling members respectively having separably engaging oppositely disposed coupling arms and sockets, and resilient devices adjustably inserted through the arms to hold the latter in association with the sockets.

1,353,006. TRAIN-PIPE COUPLING. JOHN WILLIAMS, Clinton, Iowa. Filed Dec. 15, 1917, Serial No. 207,351. Renewed Mar. 6, 1920. Serial No. 363,664. 16 Claims. (Cl. 285—57.)



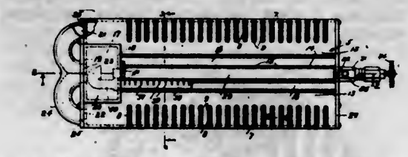
1. In a coupling for flexible pipe connections, the combination of a pair of tubular coupling heads each provided with an internal annular seat, a pair of gaskets fitted in said seats with their outer edge faces in abutting relation, locking means for the heads consisting of reversely disposed extensions engaging the opposing heads at the extremities of the latter, spring means vertically disposed with relation to the outer side of each head and removably engaging with the extension of the opposing head, means for drawing the heads together and with which said spring means also engage, and means for automatically withdrawing the said spring means for association with their respective heads.

1,353,007. RUNNER ATTACHMENT FOR HARROWS. LEONARD WILLETT, Paducah, Ky. Filed Feb. 3, 1920. Serial No. 356,017. 2 Claims. (Cl. 55—3.)



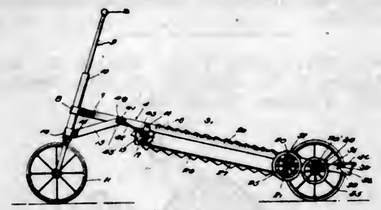
1. A sled attachment for harrows or the like, comprising a channel bar provided at one end with a forked flange adapted to straddle the front tooth of the harrow, and means for yieldingly holding said sled attachment beneath the lower ends of the harrow teeth, or in reverse position upon the tops of said teeth.

1,353,008. BELT CONVEYER. CHARLES S. WRAY, New York, N. Y. Filed May 7, 1919. Serial No. 295,329. 7 Claims. (Cl. 193—27.)



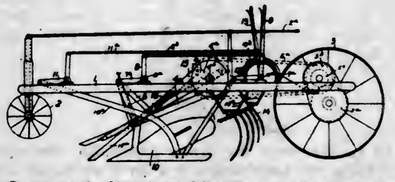
1. In a belt conveyer, idler rolls, means to support each roll, said means being independent of the supporting means for each other roll, a thrust bearing, and means to transmit the thrust of a plurality of said rolls to said thrust bearing.

1,353,009. MEANS FOR REPAIRING RADIATORS AND THE LIKE. WILSON M. WRIGHT, CLARENCE TEEPLES, and JAMES J. LAMB, Jefferson, Iowa, assignors to New Way Machine Company, Jefferson, Iowa, a Corporation of Iowa. Filed Sept. 5, 1919. Serial No. 321,899. 11 Claims. (Cl. 113—59.)



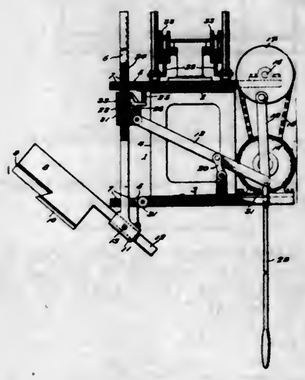
1. Means for repairing radiators and the like, comprising a suitable support, a carrier for a work object articulating on said support, adjusting means connecting said carrier and support, and a tray mounted for transverse reciprocation between said support and carrier, which tray includes a pan and an open frame adapted to register selectively with said support.

1,353,010. HYDROCARBON-BURNER. MATTHIAS S. YEAGER, Los Angeles, Calif., assignor to Liberty Burner Co., a Corporation of California. Filed Sept. 11, 1918. Serial No. 253,506. 4 Claims. (Cl. 158—61.)



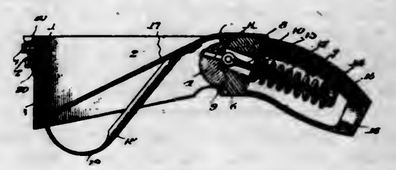
1. A gas generator construction, comprising a hollow burner head, the walls of which are provided with burner slots having gas inlet openings leading thereto, the said burner head being further provided with a gas mixing chamber having a gas outlet leading therefrom, a gas manifold secured to said burner head having passageways communicating and registering with the gas outlet opening of the mixing chamber and the gas inlet openings leading to the burner head, a gas generator mounted on said burner head adapted to deliver generated gases to the mixing chamber, means to regulate the volume of gas issuing from said generator, a gas pilot mounted on said burner head, said pilot being provided with gas flame slots adapted to direct the flames against the said generator, one end of said pilot projecting into the gas mixing chamber and having its mouth disposed in front of said gas generator outlet orifice, and means to bring said outlet mouth into or out of register with the outlet orifice of the generator.

1,353,011. TREAD-CYCLE. WILLIAM R. YOUNG, Medford, Oreg. Filed Apr. 12, 1919. Serial No. 289,578. 10 Claims. (Cl. 208—38.)



1. A vehicle of the class described including a wheeled frame, relatively stationary and movable journal boxes mounted on the frame, transverse shafts journaled in said boxes, an endless tread belt extending around said shafts, means for transmitting motion from the tread belt to the wheels of the vehicle, and means operatively connected with the movable journal boxes for tilting the latter to regulate the tension of the tread belt.

1,353,012. MACHINE FOR CULTIVATING UNBROKEN GROUND. GUSTAV AASETH, Christiania, Norway. Filed Mar. 13, 1919. Serial No. 282,455. 2 Claims. (Cl. 97—25.)

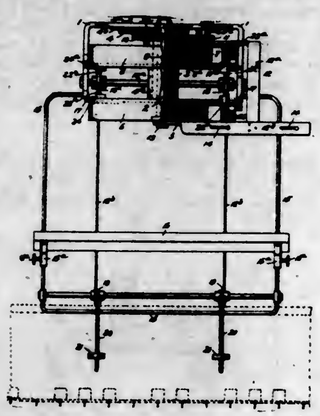


1. In an agricultural machine for breaking new ground the combination of a frame; a plurality of digging rods carried by said frame; crank arms operating said digging rods whereby said digging rods are given a digging movement; means operated by the forward travel of the machine for operating said crank arms; links for supporting the forward end of the digging rods; a frame for carrying said links; means for adjusting said frame to vary the digging operation of the digging rods; means located to the rear of said digging rods for turning the turf after the ground has been dug; and means mounted on said frame to the rear of said turf turning means obliquely to the longitudinal axis of the frame for pulverizing the soil prepared by the digging rods and the last named means.

1,353,013. BEEF-SPLITTING MACHINE. DANIEL L. APPELBERRY, Hammond, Ind. Filed Oct. 21, 1918, Serial No. 259,066. Renewed May 29, 1920. Serial No. 385,386. 7 Claims. (Cl. 17—25.)

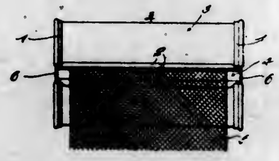
1. A beef-splitting machine, comprising a frame, an operating bar slidably mounted therein, a cleaver carried by the bar, means for raising the bar, and a trip carried by the frame to release the raising means.

1,353,014. TROWEL. EARNEST J. ASHBY, Henderson, Ky. Filed Mar. 19, 1919. Serial No. 283,560. 5 Claims. (Cl. 72—138.)



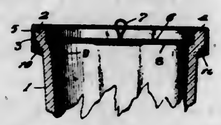
1. A pointing trowel having a hollow magazine, a handle pivotally supported thereon, a straight striking arm carried by the handle and movable through the magazine, and a curved striking arm carried by the straight arm.

1,353,015. LEAF-TURNING DEVICE. ERNST BEHR, Saratoga Springs, N. Y. Filed Aug. 6, 1919. Serial No. 315,706. 4 Claims. (Cl. 84—487.)



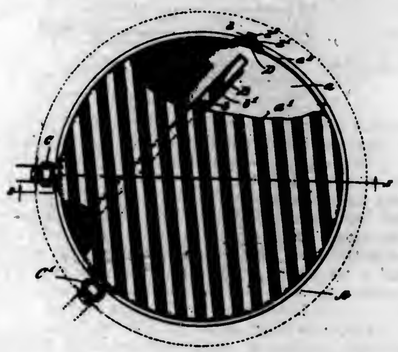
1. The combination in a leaf-turner, of a spring-actuated member, means for containing said spring-actuated member, means provided for effecting the movement of said spring-actuated member, including a stopping slide on said spring-containing means, adapted to temporarily retain the latter against movement, a plunger which serves to actuate the latch, a lever adapted to depress said plunger, an additional spring-pressed lever adapted to hold the plunger depressed until released from its depressing lever, said plunger, simultaneously with the

engagement therewith of said depressing lever, acting upon said sliding stop to allow the turning of said spring-



containing means and to force the leaf-turner out of engagement with said additional lever.

1,353,016. WIRE-SCREEN HOLDING AND DISPENSING RECEPTACLE. THOMAS E. BERNARD, Lakeview, Oreg. Filed May 17, 1920. Serial No. 381,963. 1 Claim. (Cl. 211—18.)

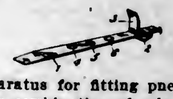


A drum formed of sheet metal and having a longitudinally extending open ended slot, and rings positioned about the end portions of the drum and extending across the end portions of the slot, the end portions of the drum being bent about the rings to hold the rings in place and the rings reinforcing the end portions of the drum and providing means for closing the ends of the slot and guiding material passing out of the slot.

1,353,017. RECEPTACLE - CLOSURE. DAVID BLOOM, Berkeley, Calif. Filed Aug. 28, 1919. Serial No. 320,466. 7 Claims. (Cl. 215—81.)

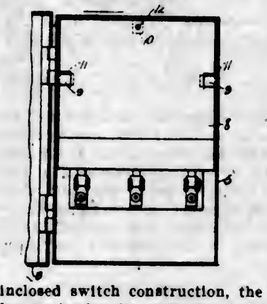
5. A receptacle closure including a sheet of material, a disk having one of its entire faces secured to said sheet of material, said sheet extending beyond the edge of such disk and in air-tight contact with the upper edge of the end of the receptacle to be closed, the disk terminating at a point short of the inner circumference of the upper edge of such receptacle, the receptacle being provided with an annular shoulder extending around its inner face, the disk being adapted to seat upon such shoulder subsequent to the destruction of its associated sheet of material, whereby to form a secondary closure.

1,353,018. WATER-COOLER FOR REFRIGERATORS. CHARLES H. BOECK, Jackson, Mich., assignor to White Frost Refrigerator Company, Jackson, Mich., a Corporation of Michigan. Original application filed Sept. 28, 1917, Serial No. 193,752. Divided and this application filed Aug. 6, 1918. Serial No. 248,514. 6 Claims. (Cl. 62—148.)



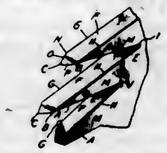
1. A water cooler adapted for use as a false bottom in the ice chamber of a refrigerating apparatus for supporting blocks of ice thereon, said cooler comprising a shallow receptacle having inlet and outlet passages through its outer wall and having a partition therein extending across the receptacle at one side of its center from between said inlet and outlet to the opposite side thereof so as to form a large and a small compartment separated by said partition, a water passage being provided at the end of said partition remote from said inlet and outlet for the circulation of water around the partition and through both compartments.

1,353,019. PULP-CANAL FILE. WILLIAM W. BOLLS, Washington, D. C. Filed Dec. 23, 1919. Serial No. 346,910. 2 Claims. (Cl. 32—10.)



1. A pulp canal file for shaping, enlarging and cleaning the canal scrapers, which are relatively short and closely related and said scrapers being of different formations and having their cutting edges variously arranged in irregular relation and at varying angles to the longitudinal axis of the file and adapted to cut both during longitudinal reciprocation as well as transverse rotation of the file.

1,353,020. APPARATUS FOR MOUNTING OR REMOVING PNEUMATIC TIRES. JOHAN WESSEL BRAND, The Hague, Netherlands. Filed Nov. 21, 1917. Serial No. 203,176. 2 Claims. (Cl. 157—6.)

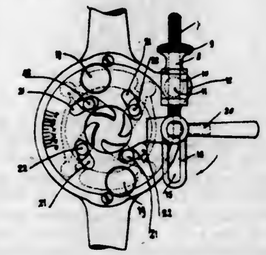


1. In an apparatus for fitting pneumatic tires on vehicle wheels, the combination of a lever having an annular end portion adapted to be passed around the wheel hub, a transversely disposed sliding member on said lever provided with hooks for engaging the rim edge of the wheel, a roller near the end of the sliding member adapted to be pressed against the bead of the tire, and a disk rotatable about the lever and adapted to be pressed into the depression of the tire above the bead, permitting the mounting of both beads simultaneously on the wheel.

1,353,021. INCLOSED-SWITCH CONSTRUCTION. HARRY M. BROADWELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Dec. 13, 1919. Serial No. 344,722. 4 Claims. (Cl. 200—166.)

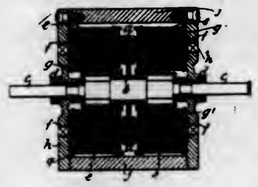
1. In an inclosed switch construction, the combination of a box, a lug projecting inwardly from the end thereof, lugs projecting inwardly from the opposite sides thereof, and a shield having tongues on the underside adapted to slidably engage the lugs at the sides of the box, and means for securing the end of the shield to the end lug.

1,353,022. GIN OR LINTER SAW TEETH. WARNER H. CAMP and ROBERT H. BUTTERS, Atlanta, Ga., assignors to The Butters-Camp Mfg. Co., Atlanta, Ga., a Corporation of Georgia. Filed Dec. 3, 1919. Serial No. 342,287. 2 Claims. (Cl. 13—14.)



1. A gin or linter saw whose teeth have each a base and an upper surface forming a throat with the base of the next preceding tooth, said base terminating in a point and said upper surface having a central apex which terminates at a point lying within the imaginary circumference of the saw and above the terminal point of said base.

1,353,023. DIRECTION - INDICATOR FOR AUTOMOBILES. BERT CARLISLE, Santa Ana, Calif. Filed June 24, 1919. Serial No. 306,431. 1 Claim. (Cl. 116—54.)

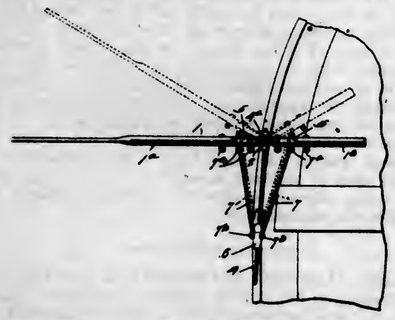


A direction indicator for automobiles, including a housing adapted to contain a semaphore arm pivotally mounted in the base thereof and having a weight for overbalancing the arm so that it will remain in a vertical position within the casing and completely out of sight from the front and rear; a pulley within the housing, positioned above and rearwardly of the arm pivot; and a cord extending around the weight and over said pulley whereby the arm may be swung outwardly into various signaling positions.

1,353,024. SCREWING APPARATUS. ARMAND CARETTE, Paris, France. Filed June 26, 1919. Serial No. 306,790. 4 Claims. (Cl. 10—122.)

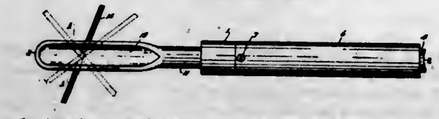
1. In a screwing apparatus comprising screwing dies in the interior of a casing, between plates located on opposite sides of said casing, in which each of said dies is terminated by a cylindrical head engaged in a recess formed for this purpose in the interior of said casing, in which it is adapted to oscillate, and comprising a stud on one of its faces; and in which one of the closing plates comprises as many grooves as there are dies, the said stud of each die being engaged in one of said grooves; the whole being so constructed and arranged that the rotation of said plate causes said dies to move away from or toward one another; an actuating mechanism comprising on one hand a screw so guided as not to be capable of rotating, pivoted on an axle pin carried by the plate, and on the other hand a nut rotatable in a support that is pivotally mounted on said casing, both parts being adapted to allow of effecting a gradual rotating of the grooved plate.

1,353,025. ELECTRICAL SIGNALING APPARATUS. CHRISTOPHER BRUNSWICK CHICKEN and JOSEPH HARRY THAIN, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Apr. 15, 1919. Serial No. 290,177. 2 Claims. (Cl. 172—239.)



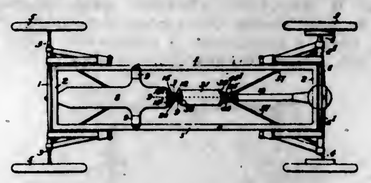
1. In an electrical motor, a set of armatures equally spaced around an axis, and two sets of electro-magnets, each set being equally spaced around the same axis, the number in each set being even and the number in the set of armatures being different from and not a multiple of the number in each of the two sets of electro-magnets, the coils of each pair of magnets being connected in series with one another and in parallel with the coils diametrically opposite to them.

1,353,026. HOOK. PETER CLARE, Valley, Wash., assignor of one-half to George W. Wilson, Valley, Wash. Filed June 8, 1918. Serial No. 238,906. 1 Claim. (Cl. 24—241.)



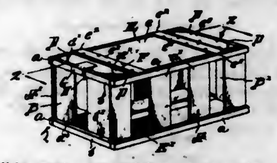
A hook of the class described comprising a shank having a hook at one end and spaced recesses in its front face, said hook having a wedge-shaped end, a U-shaped clip embracing said shank, a latch member bolted to the free end of said clip and having its end bent outwardly and provided with a V-shaped recess to receive the wedge-shaped end of the hook, a spring pressed pin carried by said latch member and adapted to engage one or the other of the recesses in the shank for holding the latch member in open or closed position and a hand engaging ring on the outer ends of said pin.

1,353,027. BOW-FACING OAR. WILLIAM HENRY CLAY, Eustis, Fla. Filed Dec. 27, 1919. Serial No. 347,744. 2 Claims. (Cl. 9—25.)



1. The combination of an oar including a blade and a handle member and means providing for a freely movable connection between said handle-member and blade, and a boat, comprising a rail secured to the gunwale of the boat, means effecting a sliding connection between said handle and blade and said rail, and a pivoting member having a lower end ring terminal slidably and rotatably positioned upon said rail.

1,353,028. ELECTRODE-HOLDER. WILLIAM EDWARD CLEMENTS, Oroville, Calif., assignor of one-half to Abram C. Penner, Oroville, Calif. Filed Mar. 9, 1920. Serial No. 364,560. 4 Claims. (Cl. 219—8.)

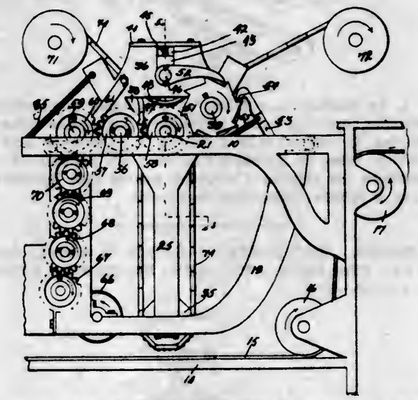


1. An electrode holder, comprising a fork having a pair of jaws projecting longitudinally of the fork, one of said jaws curved transversely and adapted to clamp an electrode against the other jaw, thereby providing a three-point contact between the fork and the electrode.

1,353,029. SHOCK-ABSORBING MECHANISM FOR MOTOR-VEHICLES. STEPHEN LEONARD CHAUNCEY COLEMAN, Fredericton, New Brunswick, Canada. Original application filed Sept. 13, 1916, Serial No. 119,934. Divided and this application filed Mar. 21, 1918. Serial No. 223,818. 31 Claims. (Cl. 180—73.)

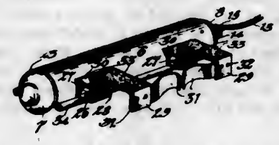
1. In a motor vehicle, the combination of a frame, axles therefor, a motor on the frame, a longitudinally adjustable drive connection between the motor and one of the axles, a casing for said drive connection, said casing being connected with the frame and with the driven axle and having intermediate telescoping portions, and cushioning means associated with said casing yieldably resisting movement of said portions of the casing relatively to each other.

1,353,030. COLLAPSIBLE CRATE. JOHN J. DAHLSTROM, Amite, La. Filed May 13, 1918, Serial No. 234,204. Renewed Feb. 7, 1920. Serial No. 357,015. 1 Claim. (Cl. 217—48.)



A collapsible crate comprising rectangular side frames and rectangular end frames, with a reinforcing strip at the top and bottom of each of said frames, with hinges in the form of loops, each having its central portion provided with an inwardly projecting lug, connecting the adjacent ends of said reinforcing strips, a bottom piece adapted to slip into the interior of the crate and to have its four corners rest upon the lower hinges, a cover provided with reinforcing strips extending across the same and projecting beyond the edges thereof, and adapted to rest upon the reinforcing strips at the sides of the crate, two adjacent corners of said cover being cut away to pass clear of the corresponding hinges of the crate, and a locking slat adapted to fit over the cut-away end of said cover and to engage beneath the adjacent hinges and to be normally locked in place by the lugs on said hinges, substantially as described.

1,353,031. VACUUM-BULB FOR SIGNALING APPARATUS. CHARLES S. DEMAREST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 26, 1918. Serial No. 246,910. 6 Claims. (Cl. 179—170.)



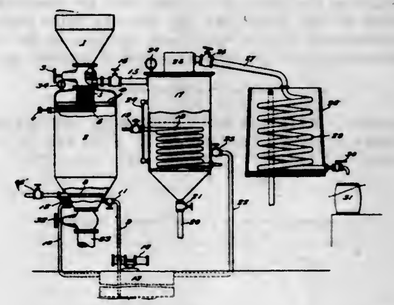
1. A transmission line, a bridge across said line adapted to transmit current of a frequency suitable for transmission over one section of said line, a vacuum bulb apparatus associated with said bridge and adapted to translate said first mentioned current into currents having frequencies which would be harmonics of the frequencies of said first mentioned current, and means to select one of said last mentioned currents and to impress said current on another section of said line.

1,353,032. PRINTING DEVICE. A'QUILLA DUENSING, Altoona, Iowa. Filed May 8, 1919. Serial No. 295,731. 10 Claims. (Cl. 101—54.)

1. In a machine of the class described; a fixed frame; a movable frame thereon; means for successively bringing printing devices to printing position with relation to said movable frame; and means for operating said frame for causing a printing operation from said printing devices while said printing devices are in movement; said means including mechanism for raising said movable frame and swinging it in one direction, and then lowering the movable frame and swinging it in another direction.

1,353,033. PIANO-LAMP. CLESURNE EBERHART, Jr., Buffalo, N. Y., assignor to Play-O-Lite Company, Incorporated, Buffalo, N. Y., a Corporation of New York. Filed Jan. 23, 1917. Serial No. 144,009. 3 Claims. (Cl. 240—4.)

3. A piano lamp having a bracket which includes an upright relatively stiff front jaw adapted to engage with the outer side of a piano front, an upper horizontal arm adapted to engage with the upper edge of the piano front and projecting rearwardly from the upper end of said front jaw, a flexible rear jaw arranged at the rear end of said upper arm and below the top of the latter and adapted to engage with the inner side of the piano front, and a lower horizontal arm projecting forwardly from the lower end of said front jaw and adapted to carry the piano lamp at its front end, said flexible jaw being constructed of a leaf spring which has its sides arranged vertically and which is arranged with its length horizontally and transversely relatively to said upper horizontal arm.



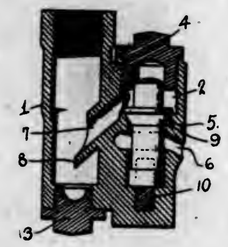
1,353,034. UMBRELLA. RAPHAEL ESTURO, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,457. 3 Claims. (Cl. 135—46.)

8. In an umbrella, a handle provided with a socket, a staff, a sleeve member carried by said staff and immovably secured thereto, and a resilient member carried by the socket and engaging the staff and the free edge of

the sleeve carried thereby to retain said staff within the socket.

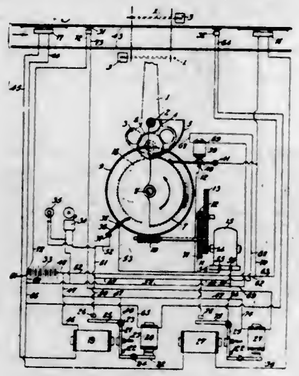
1,353,035. PROCESS OF EXTRACTION. TALIAFERRO J. FAIRLEY, New Orleans, La., assignor to Southern Pine Products Co., Inc., a Corporation of Louisiana. Filed July 14, 1917. Serial No. 180,506. 3 Claims. (Cl. 203—6.)

1. A process of extraction which consists in placing the material to be extracted in a closed vessel filled with water at approximately 180 degrees F. so as to leave no space in the vessel unfilled, and forcing live steam into the vessel to cause an increase of pressure therein from approximately 50 to 70 pounds to the square inch.



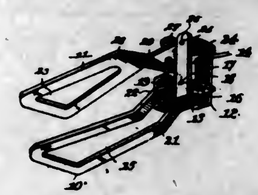
1,353,036. BOW-GUIDE. HENRY F. FISHER, Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,349. 7 Claims. (Cl. 84—283.)

4. A bow guide for violins including a pair of adjustable brackets, the outer ends of said brackets being formed to engage the side edges of the top of the violin, arms comprising strips upstanding from the inner end of said brackets, with the width of said strips extending parallel to the longitudinal axis of the violin, means for en-



gaging said arms to draw their outer ends firmly into engagement with the side edges of the top of the violin, one of said arms being twisted at right angles to present the width thereof for contact with the bow.

1,353,037. VALVE. FRANK FRANKE, Cincinnati, Ohio. Filed Apr. 15, 1919. Serial No. 290,171. 2 Claims. (Cl. 121—134.)

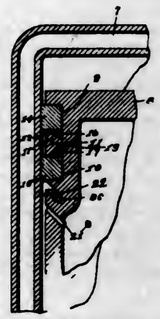


1. In a valve, a casing having a steam chamber adapted at one end for connection with an engine cylinder and also having a valve chamber in which latter is an eduction port and a valve seat, and also having a port intermediate the steam chamber and the valve chamber at the opposite side of the valve seat with respect to the eduction port, and further having in the steam chamber a conduit extending laterally inward from the wall of said chamber and forming a continuation of said port, for lessening the liability of dirt finding its way into the valve chamber, in combination with a valve body movable in the valve chamber and having a portion opposed to the seat thereof.

1,353,038. RAILWAY-GATE-CONTROL MECHANISM. FRANK A. GRANT, Cortland, N. Y. Filed Feb. 27, 1919. Serial No. 279,559. 8 Claims. (Cl. 246—127.)

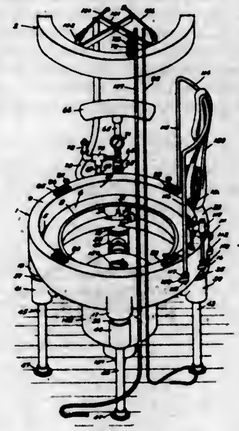
1. In an apparatus of the class described, a gate, a motor, mechanical reversing mechanism comprising a worm driven by said motor, a worm wheel engaging said worm, a plurality of gear segments arranged to turn with said worm wheel, a gear segment on said gate arranged to mesh for a part of the revolution with one of the above mentioned worm wheel gear segments to move the gate to a lowered position, another gear segment on said gate and an idler gear meshing therewith, said idler gear being arranged to mesh with the second worm wheel gear segment for a part of the revolution of the worm wheel to move the gate to a raised position.

1,353,039. ANATOMICAL BRIDGE-ARTICULATOR. LEON GREENFIELD, New York, N. Y. Filed Mar. 12, 1920. Serial No. 365,262. 7 Claims. (Cl. 32—1.)



1. An anatomical articulator embodying a plurality of movable members, means including a spring-like extension carried by one of said members, a portion of said extension being in yielding contact with another of said members for yieldingly allowing two of said members to have a relative compound movement.

1,353,040. WATCH-STEM. GEORGE D. GREIG, Peoria, Ill. Filed Jan. 3, 1919. Serial No. 269,435. 4 Claims. (Cl. 58—63.)



1. In a watch, the combination with a sleeve having a square bore, of a stem slidably mounted in the bore, and an adjustable head carried by the stem and shaped to conform to the configuration of the bore of the sleeve.

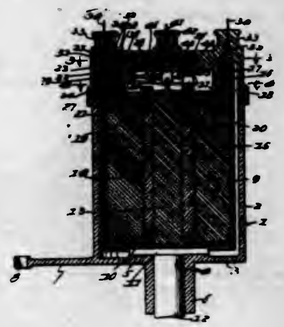
1,353,041. PISTON. FREDERICK HACHMANN, St. Louis, Mo., assignor of one-half to Herman Stifel, St. Louis, Mo., one-sixteenth to Philip E. Moody and one-sixteenth to Chauncey R. Watson, Detroit, Mich., one-eighth to David M. Hutchinson, Ferguson, Mo., and one-sixteenth to H. A. Wright, Detroit, Mich. Filed Dec. 23, 1918. Serial No. 268,016. 1 Claim. (Cl. 74—109.)

In combination with a piston having a pair of parallel piston ring grooves near its upper end, said piston ring grooves having their adjacent ends undercut, of a split ring triangular in cross section sprung into the undercut portion of each groove, a split ring rectangular in cross section sprung in each groove adjacent the triangular ring, said last mentioned ring being larger in circumference than the triangular ring and the circumference of the piston, said triangular ring adapted to force the rectangular ring away from the undercut surface of the piston ring groove.

1,353,042. RETREAD-VULCANIZER. EDWARD HARRIS, Los Angeles, Calif. Filed Feb. 8, 1919. Serial No. 275,896. 7 Claims. (Cl. 18—18.)

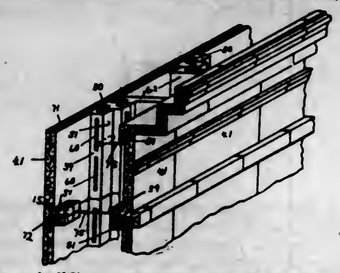
5. In a vulcanizer, an annular stationary mold section mounted horizontally and having a steam chamber; a pipe construction extending outwardly and upwardly from the stationary mold section; and an inside core mold fixed upon the upper end of the pipe.

1,353,043. TOOL-HANDLE. JOHN E. HULTBERG, Warren, Pa. Filed Dec. 12, 1918. Serial No. 266,469. Renewed Apr. 10, 1920. Serial No. 373,016. 2 Claims. (Cl. 279—96.)



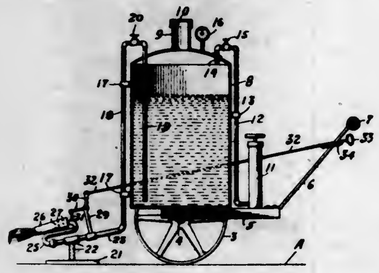
1. In a bit driver a handle having a bit receiving socket at its front end, a bit-ejecting rod slidable in said handle, said rod being rearwardly movable out of contact with the bit, means for preventing rotation of said rod and for limiting the rearward movement thereof, and a cap threaded on the rear end of said rod for contact with the rear end of said handle, to normally hold the rod at its limit of rearward movement and out of contact with the bit.

1,353,044. BALL RETAINER AND SEPARATOR FOR THRUST-BEARINGS. HENRY B. KEIPER, Lancaster, Pa. Filed Sept. 15, 1919. Serial No. 323,677. 6 Claims. (Cl. 64—58.)



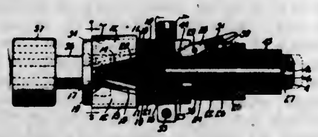
4. A thrust bearing comprising disk-like plates with balls therebetween projecting in opposite directions through oppositely disposed openings in said plates, and lubricating material filling the space between said plates around said openings and encircling the balls.

1,353,045. IGNITION SYSTEM FOR GAS-ENGINES. JAMES KELLY, Eagle Pass, Tex., assignor of one-half to George Honetschlager, Stanford, Mont. Filed Feb. 9, 1918. Serial No. 216,249. 1 Claim. (Cl. 123—148.)



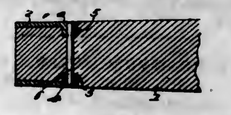
An apparatus of the kind set forth comprising a pair of casings, the one being rotatably mounted within the other, an induction coil carried within the rotatably mounted casing, one terminal of the primary of said coil being grounded to the casing, a ring centrally disposed on top of said rotatable casing and formed on its upper face with a plurality of uniformly spaced cam elements, the remaining terminal of the primary of the said induction coil being connected to this ring, a cover removably secured to the outer casing and inclosing the inner casing therein, binding posts carried by said cover and disposed at equi-angular distances thereon, contact elements electrically connected with the binding posts and carried on the inner face of the cover, a sliding contact element carried by the inner casing for engagement with the first said contact elements when the casing is rotated, one terminal of the secondary of the induction coil being connected to this last said contact element and the remaining terminal being grounded to the inner casing, a screw threadingly engaged in the cover member and passing therethrough, a binding post carried by the cover member with which the screw is electrically connected, a rocker arm pivotally mounted on the cover member, a roller contact carried by the rocker arm, and bearing upon the said ring and cam elements thereof when the inner casing is rotated, and a contact member carried by the rocker arm at the end remote from the roll, the last said contact member being brought into contact with and separated from the said screw when the inner casing is rotated, the screw providing adjustment to position it for contact with the last said contact member when the roll on the rocker arm rests on the ring between the cam element thereof.

1,353,046. CONCRETE BLOCK CONSTRUCTION. HERMAN M. KNIGHT, Rome, N. Y. Filed Apr. 6, 1914. Serial No. 829,757. 4 Claims. (Cl. 72—30.)



2. In a building construction, blocks having inwardly extending ribs, dove-tail grooves formed in the abutting surfaces of the ribs, double dove-tail keys inserted in the registering dove-tail grooves, said inwardly extending ribs being also provided with openings adapted to engage a binder.

1,353,047. STREET-CLEANER. GEORGE KOMARCSEVITS, Cleveland, Ohio. Filed Sept. 19, 1919. Serial No. 324,795. 2 Claims. (Cl. 158—28.)

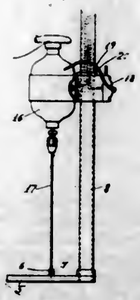


1. A burner for street cleaners including a supply pipe, a branch pipe extending transversely of the outer end thereof and rotatably supported by said supply pipe, distributing pipes reversely curved at their opposite ends and having one end connected to the branch pipe with the intermediate portion overlying the branch pipe, and jet nozzles supported on the distributing pipes forwardly of the free ends thereof.

1,353,048. COLLAPSIBLE TAP. VICTOR R. KOONTZ, Waynesboro, Pa., assignor to Victor Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1918. Serial No. 262,835. 6 Claims. (Cl. 10—145.)

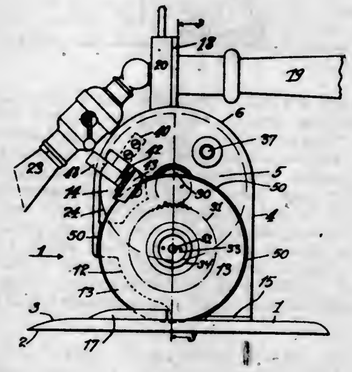
1. A tap comprising a body portion, chasers radially mounted in the end of said body portion, a plunger co-acting with said chasers, a second adjustable plunger coacting with the first mentioned plunger, a collar formed on said second plunger, a spring-pressed latch co-acting with said collar to hold said plunger at one end of its stroke, a nut secured at the opposite end of said second mentioned plunger, a flange formed on the inner side of the bore in said body portion, and a spring co-acting between said flange and said nut to retract the said plungers, substantially as set forth.

1,353,049. SWINGLETREE-CLIP. DAVID F. LAING, McDonald Hills, Saskatchewan, Canada. Filed Nov. 27, 1918. Serial No. 264,398. 1 Claim. (Cl. 21—79.)



The combination with a swingle tree formed with counterbores on diametrically opposite sides and inset from its end, of a clip attached to the swingle tree in surrounding relation to the end portion of the latter and provided with trace attaching means and formed with laterally projecting ears overlying the counterbores and formed with bosses disposed in the counterbores, and a bolt passing through the ears, through the bosses and through the swingle tree.

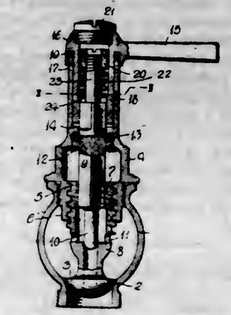
1,353,050. MILK-CAN HANDLE. PETER LAMBRAKOS, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,326. 6 Claims. (Cl. 220—94.)



5. A handle attachment to facilitate the handling of cylindrical containers such as milk cans, comprising: a ring having an opening formed therein, clamp jaws made on the ring at the opening, a clamp screw carried by the clamp jaws for drawing the ring together, a handle yoke made in the form of a U shaped member with free extremities of the yoke readily fixed to the ring, and a hand grip rotatably mounted on the yoke member coincident with the axis of the container to which it is attached, and an expansion loop made in the ring to facilitate the opening and closing of the ring.

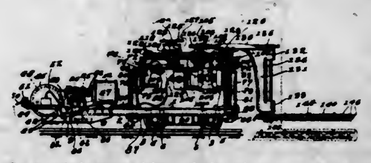
1,353,051. POCKET-MARKING MACHINE. FREDERICK M. LASERSON, New York, N. Y. Filed June 30, 1919. Serial No. 307,671. 1 Claim. (Cl. 77—6.)

A pocket marking machine comprising an open work base, provided with an aperture, a tool guide secured to said base and having an aperture in alinement with the aperture aforesaid, a slotted upright secured to said base, a block within said upright, a motor bracket surrounding said upright and adapted to slide thereon, means for connecting said motor bracket and the said block through the aforesaid slot in the upright, a motor supported in said motor bracket, a marking tool carried by said motor and adapted to operate through the apertures aforesaid, means for depressing said motor and tool, a stop secured on said upright and a spring within the latter and attached to the said block for automatically lifting said motor and tool after the same has been depressed.



1,353,052. ELECTRICAL CLOTH-CUTTER. FREDERICK M. LASERSON, New York, N. Y. Filed June 30, 1919. Serial No. 307,672. 1 Claim. (Cl. 164—76.)

In a cloth cutting machine the combination of a base, an upright bracket secured thereto, a semi-circular flange portion formed integral with the said bracket and extending to the one side thereof overhanging the said base, a motor having a hub supported in said upright bracket, means for securing the said motor to and underneath the said semi-circular flange, which latter serves as a means for partially protecting the said motor and its said support in the said bracket, a knife mounted on the latter on the side opposite the motor, means for driving said knife from the motor, sharpening wheels for the knife, sharpening wheels supporting means secured to the said upright bracket underneath the said protecting flange, said supporting means projecting through an aperture in said upright bracket to support the said sharpening wheels in position to contact with the knife, and means on the outside of said bracket for operating said sharpening wheels into contact with the said knife.



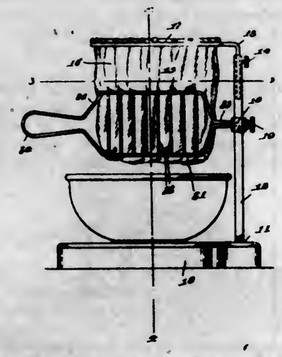
1,353,053. PACKLESS VALVE. JOSEPH P. LAVIGNE, Detroit, Mich., assignor to United States Novelty Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed June 12, 1915. Serial No. 33,656. 2 Claims. (Cl. 251—48.)

2. A valve comprising a casing having an inner annular valve seat, a bonnet closing the casing in substantially axial alinement with the seat and having an upwardly extending barrel, a closure for the seat, a hollow rotatable stem integral with the closure and screwthreaded into the bonnet, a post longitudinally reciprocable and non-rotatably related to the stem and revoluble in the barrel, a collar on the post, an annular flange in the bonnet above the collar, a compression washer between the collar and bonnet flange, a handle having a depending hollow stem journaled in the housing barrel in non-rotatable and longitudinally reciprocable engagement with the post, an annular flange on the handle telescoping over the upper portion of the barrel, joint sealing means between the handle flange and the adjacent end face of the bonnet, a

nut threaded on the upper portion of the post, and a spring in compression around the post between the nut and the depending portion of the handle stem.

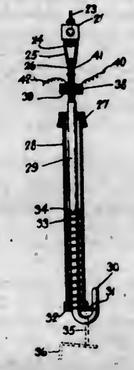
1,353,054. MINING-MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 12, 1914, Serial No. 818,314. Renewed Jan. 3, 1920. Serial No. 349,350. 9 Claims. (Cl. 262—29.)

1. In a mining machine of the class described, the combination of the wheeled track-guided truck having a bed frame held in rigid relationship to the wheel axis, a laterally swinging frame at the top of the machine comprising a horizontally widely extended approximately circular base frame element mounted on a fixed vertical axis and positioned directly above the bed frame, vertical column-like supports mounted upon and held in fixed relations to the bed frame, a horizontally widely extended ring-like frame element engaging with the extended base frame; arms extending downward from said ring-like element, a plurality of vertical-acting adjusting devices stationary on the bed frame and each adapted to vertically move a part of the said ring-like support independently of the other part, an elongated horizontally extended cutter arm mounted to be fixed in horizontal planes; a bracket extending downward from the base plate and supporting said cutter arm, a motor secured directly to the base plate, and power devices extending from said motor to the cutting apparatus.



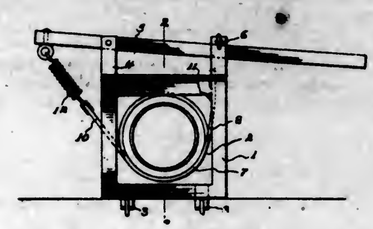
1,353,055. AUTOMATIC GRAPHITE-LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION-ENGINE CYLINDERS. JOHN D. LOOG, New York, N. Y. Filed July 8, 1919. Serial No. 309,275. 8 Claims. (Cl. 184—58.)

5. In a graphite lubricating system of the character described, a system of piping leading to the various cyl-



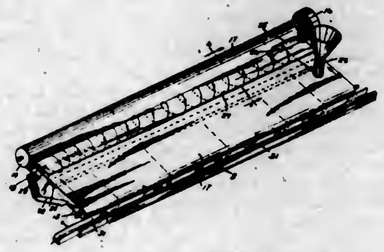
inders of the engine, a supply reservoir for supplying graphite to said piping, and a regulating construction for regulating the passage of graphite from the reservoir, said regulating construction comprising a casing having a feeding passageway and a valve bore, said feeding passageway merging into the valve bore, a cylindrical valve member slidingly fitted in said valve bore adapted to open and close said passageway, a rotatable manually operated head, means for connecting the head with said valve member in such a manner that when the head is rotated the valve member will be adjusted longitudinally of said bore for opening or closing to a greater or less extent said passageway according to the degree of movement of said head, and a locking spring carried by the casing engaging part of the head for locking same against accidental rotation.

1,353,056. JELLY-STRAINER. CHARLES S. LUDWIG, Trenton, N. J. Filed Mar. 20, 1920. Serial No. 367,364. 2 Claims. (Cl. 100—41.)



2. A device of the class described comprising a base, a standard secured thereto, a laterally extending horizontally disposed ring supported by said standard, a bag removably secured to the ring and a pair of squeezing members pivotally and adjustably mounted on said standard.

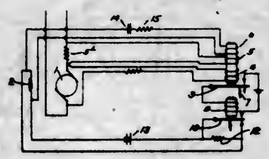
1,353,057. WEIGHT-OPERATED CIRCUIT-CLOSER. CHARLES H. MCNEIL, Beverly, Mass. Filed July 21, 1919. Serial No. 312,121. 1 Claim. (Cl. 200—85.)



A circuit closer comprising a ring adapted to be supported from a rod, a casing supported by the ring, a spring influenced rod movable through the casing and having its lower end hooked to support a fluid containing bottle and designed to be moved outwardly of the casing against the pressure of the spring when the bottle is filled, bridging members, forming one contact, mounted on the ring, a threaded core, forming the other contact, carried by but insulated from said bridging members, and an adjustable screw inserted in the core and adapted to make contact with the rod when a predetermined amount of fluid is removed from the bottle.

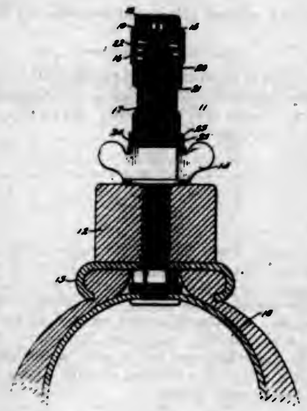
1,353,058. FRUIT-JAR VISE. CLARENCE A. MERSMAN, Hubbard, Iowa. Filed Sept. 29, 1919. Serial No. 327,116. 3 Claims. (Cl. 81—3.3.)

3. A jar gripping device comprising a frame having a jar receiving opening, an extension on said frame, a lever pivoted intermediate its ends upon said extension, a flexible member adapted for encircling engagement with a jar disposed within said opening and having one end secured to said frame, and a spring connected with the other end of said flexible member and with one end of said lever, a second extension on said frame, and a removable pin passing through said second named extension and engageable with said lever whereby to hold said lever in position with said spring under tension, and said flexible member in gripping engagement upon the jar.



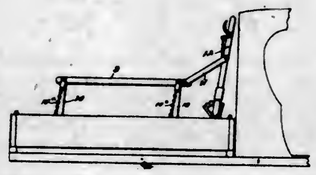
1,353,059. GRAIN-SEPARATOR. HENRY H. MEYER, Red Wing, Minn. Filed July 14, 1919. Serial No. 310,771. 12 Claims. (Cl. 130—18.)

1. In a grain separator, the combination with an apron having an upwardly moving separating surface, and a coöperating separating board extending transversely over said separating surface and arranged to permit the materials to be separated to be carried thereunder and operative to return said materials over the top thereof and back onto said separating surface.



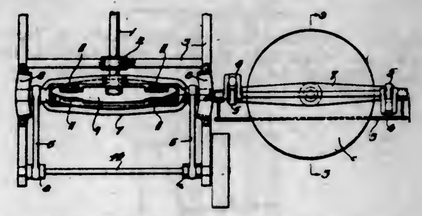
1,353,060. VOLTAGE-REGULATOR FOR DIRECT AND ALTERNATING CURRENT GENERATORS. JOSEPH W. MILNOR, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1918. Serial No. 212,333. 8 Claims. (Cl. 171—229.)

1. The combination with a generator having armature and field circuits, of relay means having an armature controlling the field strength of that generator, means for maintaining the armature in vibration at a rate relatively high as compared with ordinary changes of voltage of the generator, and comprising a quickening condenser, and electromagnetic means affected by voltage variation of the generator and arranged, in the event of material voltage variation, to prolong the period of rest of such



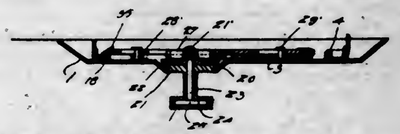
armature on one side or the other, as required to correct such voltage variation.

1,353,061. DUST-CAP FOR TIRE-VALVES. GEORGE B. MULLEN, Bay Side, N. Y. Filed Jan. 29, 1920. Serial No. 354,842. 4 Claims. (Cl. 152—12.)



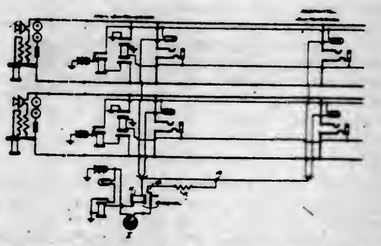
1. A device of the character described comprising an open ended cap having a central threaded recess in the closed end adapted to engage with and close the extremity of a valve stem, a cylindrical member telescopically received by said cap, means for effecting relative separation of the cap and said member, and means for limiting relative separation thereof.

1,353,062. DUMPING-BODY FOR VEHICLES. LEWIS B. NELSON, Wallingford, Iowa. Filed Sept. 16, 1919. Serial No. 324,084. 3 Claims. (Cl. 298—35.)



1. In a dumping body for vehicles, a pair of bottom sections adapted to swing longitudinally of the medial line of the body, operating means for said sections, comprising a pair of horizontal rocker arms, each connected by flexible members to one of said sections, and levers for operating each of said rocker arms, said levers connected to said rocker arms by a toggle joint.

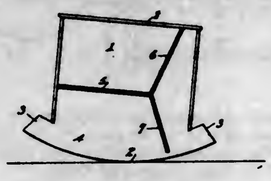
1,353,063. POWER TRANSMISSION. WILLIAM C. NUTT, Point Marion, Pa. Filed Feb. 17, 1920. Serial No. 359,355. 6 Claims. (Cl. 74—14.)



1. A power transmission, comprising a drive shaft, a cam wheel secured at an angle to the shaft, a frame straddling the cam wheel, a driven crank shaft, and links connecting the crank shaft and frame.

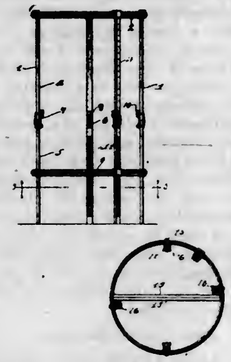
1,353,064. COMBINATION-LOCK FOR LETTER-BOXES. ADOLPH OLEVIN, Detroit, Mich., assignor to Alvin Electrical Products Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 22, 1917. Serial No. 203,392. 1 Claim. (Cl. 70—18.)

A lock including a door having a dial rotatably secured thereto, a plate slidably secured to said door and having an opening therein, a keeper engaging projection formed on said plate, a shank secured to said dial and extending through the opening, a dog pivoted to said plate and having one end disposed over said opening and having its other end of V-shape formation, a tension member secured to the plate and consisting of a pair of arms, one of said arms being disposed against one end of the plate and the other arm having its ends bent into substantially V-shape formation and disposed within the V-shaped end of the dog for limiting the pivotal movement of said dog, an actuating member secured to said shank, and a plurality of radially extending fingers formed on said actuating member and adapted to engage the first named end of the dog, and one of said fingers being of a greater length than the other fingers for retracting the plate on rotation of the dial.



1,353,065. ASSOCIATED-SWITCHBOARD TELEPHONE SYSTEM. WILLIAM S. PACA, Oil City, Pa., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 19, 1917. Serial No. 202,748. 16 Claims. (Cl. 179—54.)

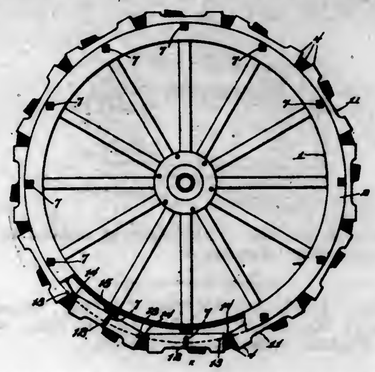
8. In a telephone system, the combination with a plurality of telephone lines therefor, the said lines being divided into groups, of signals individual to each of the lines, and means responsive to the actuation of more



than a predetermined number of said signals of a group with which a calling line is located to control the actuation of the signal of the said calling line.

1,353,066. REVERSIBLE CHAIR. FRANK S. PASCOE, Cristobal, Canal Zone, Panama. Filed Sept. 12, 1919. Serial No. 323,256. 1 Claim. (Cl. 155—73.)

A reversible chair, comprising sides, a seat connecting the sides, a pair of backs secured to the sides and projecting above and below the seat, flat arms on the upper ends of the sides, extensions on the edges of the sides at their lower end, and strips secured to the front and rear edges of the sides and projecting beyond the sides.

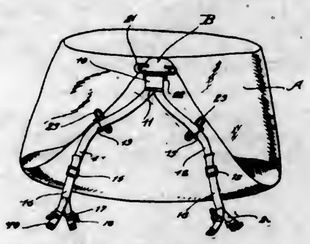


1,353,067. CURTAIN-STRETCHER. STANLEY PASTERNAK, Chicago, and JOSEPH PASTERNAK, West Harvey, Ill. Filed Dec. 8, 1919. Serial No. 343,279. 4 Claims. (Cl. 45—24.)

1. In a device of the class described, the combination of a plurality of supporting elements, a pair of annular members mounted in spaced relation on said supporting elements and coacting therewith to form a cylindrical-shaped frame, each of said annular members comprising a pair of arcuate-shaped sections hinged together so as to be foldable one upon the other when said rack is dismantled, one of said annular members being axially adjustable toward and away from the other said member longitudinally of said supporting elements, and fastening means on said members for securing a curtain or the like in stretched position on said frame.

1,353,068. TRACTOR-WHEEL. NIELS PETERSON, St. Anthony, Idaho. Filed Oct. 17, 1919. Serial No. 331,353. 3 Claims. (Cl. 305—13.)

3. In a tractor wheel, the combination of a rim having peripheral spaced flanges, bolts bridging the space between the flanges, and a circular series of tread members movable bodily on the bolts between the flanges and each tread member having a forwardly extending tongue arranged to raise the rear end of the next forward or preceding tread member, the said tread members

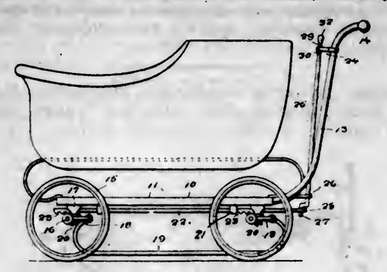


being backed by springs interposed between the same and the rim.

1,353,069. DEVICE FOR TRANSFERRING AND DISPENSING LIQUID. WILLIAM G. PILKINGTON, Buffalo, N. Y. Filed May 10, 1919. Serial No. 296,153. 3 Claims. (Cl. 226—63.)

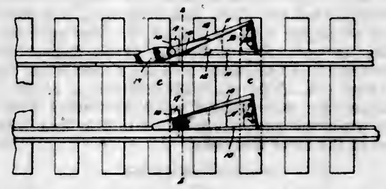
1. In a device of the character described, a closure for bottles and like containers, a vial secured to and depending from said closure, said vial having a discharge mouth at its depending end and a vent in the side thereof adjacent its connection with said closure, and a valve for normally closing said mouth.

1,353,070. GARMENT-SUPPORTER. JULIA M. REGAN, Darby, Pa. Filed Mar. 26, 1920. Serial No. 368,059. 4 Claims. (Cl. 241—3.)



1. A supporter of the character described comprising a loop, a pin associated with the loop, a pair of divergently disposed straps suspended from said loop, a pin carried by each strap, and hose supporting means suspended from the free end of each strap.

1,353,071. COMBINATION BABY-CARRIAGE AND SLEIGH. JOHN ROWLAND, Republic, Wash. Filed Nov. 26, 1918. Serial No. 264,207. 2 Claims. (Cl. 280—11.)



1. A perambulator including a frame, transversely disposed rock shafts thereon, wheels mounted for rotation upon each of said shafts, cranks included in the shafts, runners carried by said cranks, pinions carried by the rock shafts, a longitudinally movable rack bar engageable with the pinions, a rock shaft mounted upon the

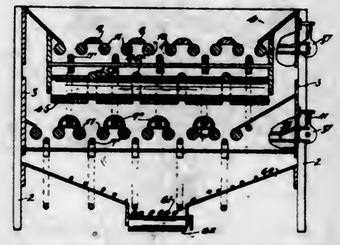
handle, and a crank and slot connection between the rack bar and the handle supported rock shaft, whereby the

former may be moved longitudinally of the perambulator by a rotary motion of the latter.

1,353,072. RERAILER. CLARENCE RUNYAN, Aurora, Ind. Filed Mar. 30, 1920. Serial No. 369,930. 3 Claims. (Cl. 104—269.)

1. A car rerailer comprising inner and outer blocks designed to direct the wheels of a car in the direction of the rails of the track, a tie engaging element carried by each block, and arranged transversely thereof, said member having teeth along one of its longitudinal edges, adapted to be embedded into the side of the tie, and means for securing the opposite end of the block to the adjacent tie.

1,353,073. FENCEPOST. CHARLES SCHIVINS, Millvale, Pa. Filed June 10, 1919. Serial No. 303,031. 1 Claim. (Cl. 189—23.)

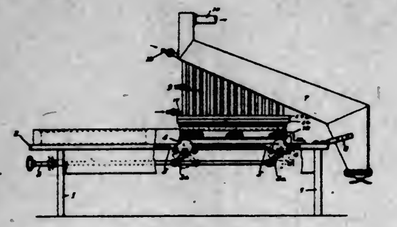


A fence post including a body of T cross section provided at its upper end with an upwardly directed substantially L-shaped element extending from the head of the T and forming therewith an upwardly directed U-shaped pocket open at its upper end adapted to receive the adjacent ends of fence rails, said post being further provided adjacent its lower end with upwardly directed L-shaped elements extending from the head of the T and from the lateral faces of the stem of the T and cooperating therewith to form pockets open at their upper ends adapted for reception of the ends of rails and acting to hold the rails against downward, lateral, and endwise movement in the direction of the post.

1,353,074. PULLEY. ALFONSO SCRITTA, Brooklyn, N. Y. Filed Apr. 8, 1919. Serial No. 288,438. 3 Claims. (Cl. 64—17.)

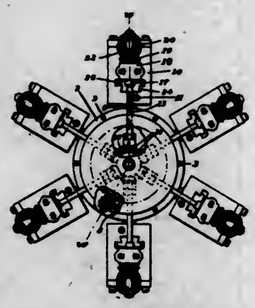
1. A pulley of the class described, having the smooth finished rim surface thereof provided with a plurality of circumferential strips of nurling, spaced laterally one from the other, and extending across said rim surface, as and for the purpose set forth.

1,353,075. FRUIT-GRADER. ROY I. SIBLEY, Gardena, Calif. Filed Nov. 7, 1919. Serial No. 336,476. 17 Claims. (Cl. 130—32.)



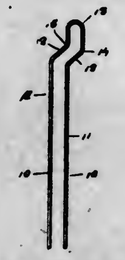
1. An apparatus for grading spheroidal bodies including a plurality of pairs of rollers spaced at different distances apart, one end of said rollers being reduced in diameter, a conveyer track extending longitudinally between and below each pair of said rollers, a conveyer extending transversely under the reduced ends of said rollers, and a conveyer extending longitudinally below each track conveyer and the pair of rollers above it.

1,353,076. THREADING ATTACHMENT FOR SHUTTLES OF LOOMS. JOHN W. SMALL, Burlington, N. C. Filed July 7, 1920. Serial No. 394,460. 5 Claims. (Cl. 139—46.)



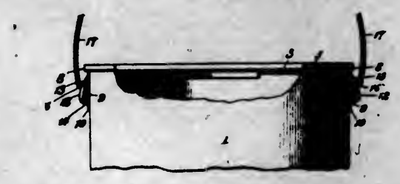
1. The combination with a loom shuttle, of a threader therefor comprising a guide plate mounted in the bobbin receptacle at one end of the shuttle, a guide and tension post, for the thread, carrying the plate, a guide and tension bar and finger carried by the plate on the under side thereof and engaged by the thread, and a guide and tension plate having an eye therein for the passage of the thread from the threader and associated with the first named plate.

1,353,077. MACHINE FOR CUTTING DOUGHNUTS, CAKES, &c. ARTHUR A. SMITH, Portland, Me. Filed Apr. 3, 1920. Serial No. 371,027. 8 Claims. (Cl. 107—24.)



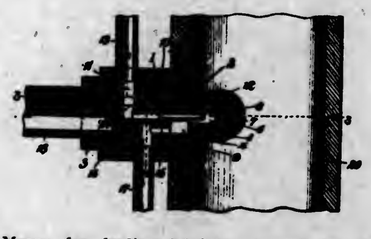
1. In a device of the character described, a waste chute, a plate carrying circular cutters, waste tubes entering said chute and registering with the waste spaces formed by said cutters, and means for forcing a fluid under pressure through said tubes into said chute.

1,353,078. AUTOMOBILE-TIRE REMOVER. ARTHUR A. Smith, Portland, Me. Filed Aug. 4, 1919. Serial No. 315,092. 2 Claims. (Cl. 157—1.)



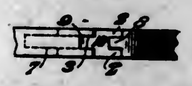
1. In a device of the character described, a base, a plurality of means for engaging one side of the tire of a wheel, a plurality of adjustable heads carried by said base, means carried by said heads for yieldingly engaging the other side of the tire, means for simultaneously moving the tire engaging means, whereby the tire is removed from the wheel, and means for adjusting the heads to fit tires of different sizes.

1,353,079. HAIRPIN. ERNEST L. SMITH, Sabula, Iowa. Filed Dec. 12, 1917. Serial No. 206,826. 1 Claim. (Cl. 132—22.)



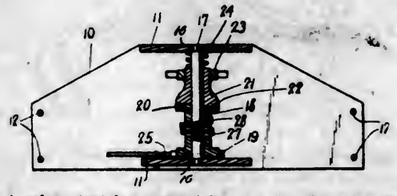
A hair pin formed from a single length of wire to provide a pair of limbs equidistantly spaced throughout the entire length of the pin, each limb including a long straight portion, a relatively short diagonally disposed portion and a relatively short straight portion all lying in a plane with the limbs of the pin, the said diagonally disposed portion extending in a common direction, whereby the closed end of the pin is slightly offset to one side of and parallel with the longitudinal center of the pin to impart a lateral edge-wise movement to each end of the pin in opposite directions, upon its final adjustment within the hair.

1,353,080. BAIL-EAR FASTENING FOR CANS. HARRY K. SMITH, Hamilton, Md. Filed Mar. 7, 1919. Serial No. 281,210. 3 Claims. (Cl. 220—91.)



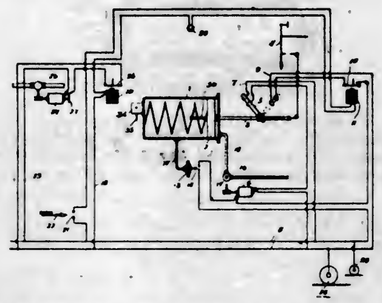
1. In a device of the class described, the combination with a container having an initially formed annular flange outstanding from its upper edge at substantially right angles to the sides thereof, and a head having a flange fitting over and partly inclosing the outstanding flange, of a bail ear comprising a base plate and a hollow boss projecting from the plate, said boss being provided with means to engage with an end of the bail, said ear also having an outwardly extending flange formed on the upper end of its base plate, said ear flange fitting against the under side of the aforesaid outstanding flange of the container, the three flanges being interlocked with each other when the flanges are rolled into a bead with the flange of the cover innermost.

1,353,081. METHOD OF AND MEANS FOR FEEDING LUBRICANT TO STEAM-ENGINES. WILLIAM FRANCIS STACK, Bay St. Louis, Miss. Filed Aug. 6, 1918. Serial No. 248,582. 10 Claims. (Cl. 184—56.)



10. Means for feeding lubricant into steam flowing through a steam pipe to a part to be lubricated, comprising a body member with a screw nipple at one end for introduction into a steam pipe, a nozzle entering the screw nipple and provided with a head having a relatively thin laterally expanded outlet for location horizontally in the installed position, and a pipe entering the head in line with the outlet, said body member having therein a chamber back of the head, a passage communicating with the second-named pipe and another passage distinct from the first-named passage and communicating with the chamber.

1,353,082. PISTON-RING. FRANK K. STEHLE and CHARLES A. KEFFER, Philadelphia, Pa. Filed June 11, 1920. Serial No. 388,096. 3 Claims. (Cl. 74—109.)

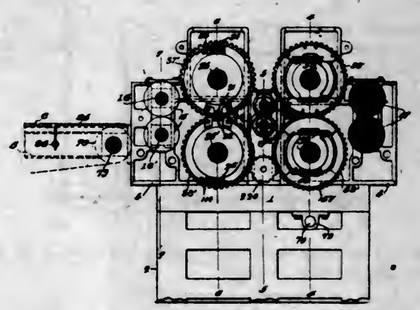


1. As a new article of manufacture, a piston ring having an outer tongue, an inner tongue projecting beyond said outer tongue, and an outer area 10 between said tongues and co-extensive with the width of said ring, said ring having inner and outer grooves, coacting with said tongues and an inner area 11 co-extensive with the width of said ring, said areas forming a lapped joint when the ring is compressed and said tongues and grooves interlocked.

1,353,083. WIRE-STRETCHER. WILLIAM B. STEPHENS, Sunset, Tex. Filed Oct. 27, 1919. Serial No. 333,433. 4 Claims. (Cl. 254—161.)

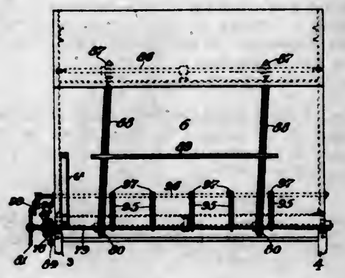
1. A wire stretcher comprising a pair of spaced longitudinally disposed plates, transverse plates connecting the longitudinal plates, a shaft having bearings in the transverse plates, a cable secured to the shaft and adapted to be wound thereon, a ratchet mechanism engageable with the shaft, an operating lever engaging said ratchet mechanism to rotate the shaft and a coiled spring surrounding the shaft and bearing against the ratchet mechanism to hold the latter in engagement with the shaft.

1,353,084. AUTOMATIC TRAIN-STOP. NICOLA STRAMAGLIA, Chicago, Ill. Filed Jan. 30, 1920. Serial No. 355,247. 3 Claims. (Cl. 246—187.)



1. An electrical train stopping system comprising a piston for connection with the throttle lever of the train, a cylinder for the piston, a valve controlling the flow of steam to and from the cylinder, a motor for turning the valve in either direction, a reverse switch for controlling the direction of rotation of the motor, a circuit closer operated upon a predetermined travel of the piston for controlling the operation of the motor, and electric circuits for connecting said circuit closer, switch, and motor to a source of current under danger conditions.

1,353,085. SEPARABLE CUFF-BUTTON. ERICK J. SWEDLUND, Williston, N. D. Filed Jan. 28, 1920. Serial No. 354,649. 6 Claims. (Cl. 24—102.)

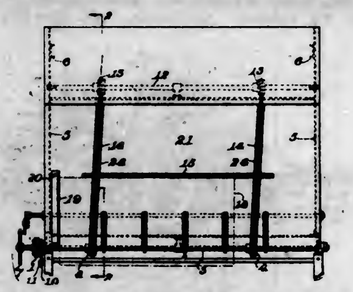


1. A separable cuff button comprising a male member and a female member and a ball and socket connection and a bodily slidable clutch lock between the male and female members.

1,353,086. CREASING AND SLOTTING MACHINE. GEORGE W. SWIFT, Jr., Bordentown, N. J. Filed Nov. 7, 1917, Serial No. 200,698. Renewed Dec. 16, 1919. Serial No. 345,301. 15 Claims. (Cl. 93—58.)

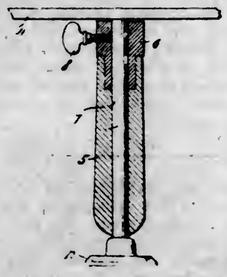
8. In a machine of the class described, the combination of a pair of shafts, interlocking means operative to maintain said shafts in constant angular relation, a set of transverse creasing bars secured to said shafts, a second set of transverse creasing bars movable about said shafts, means to normally secure said second set of creasing bars to their respective shafts, and interlocking means operative to maintain said second set of creasing bars in constant angular relation.

1,353,087. FEED MECHANISM FOR SLOTTING AND CREASING MACHINES. GEORGE W. SWIFT, Jr., Bordentown, N. J. Original application filed Nov. 7, 1917, Serial No. 200,698. Divided and this application filed Mar. 27, 1918, Serial No. 225,025. Renewed Dec. 19, 1919. Serial No. 346,168. 11 Claims. (Cl. 271—51.)



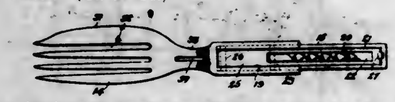
4. In a machine of the character described, a member comprising a ring provided with an L-shaped slot therein operative to form a flexible shaft gripping portion, and a segmental portion of said ring provided with a bearing eccentric to said ring.

1,353,088. FEED MECHANISM. GEORGE W. SWIFT, Jr., Bordentown, N. J. Original application filed Nov. 7, 1917, Serial No. 200,698. Divided and this application filed Feb. 17, 1919, Serial No. 277,550. Renewed Dec. 19, 1919. Serial No. 346,167. 5 Claims. (Cl. 271—49.)



1. In a machine of the character set forth, the combination of a feed table, a side guide upon said table, feeding means traversing said table in a path inclined from the longitudinal toward said side guide and having sheet engaging members adapted to frictionally engage

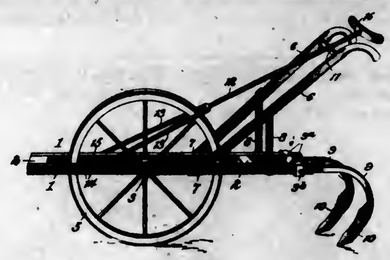
the rear edge of a sheet and push it forward in said inclined path until the sheet engages the side guide and



then slip laterally upon and complete the advance of the sheet parallel with the guide.

1,353,089. FILING-GAGE. GEORGE SANDERS SWYGERT, Columbia, S. C. Filed Feb. 17, 1919. Serial No. 277,549. 1 Claim. (Cl. 33—185.)

A filing gage for valve stems, comprising a shank, a gage block carried by one end of the shank, said shank having a longitudinal bore opening through opposite ends of the shank and continued through the block to the outer end thereof to receive the valve stem, said end being flat and perpendicular to the bore, and means for locking the valve stem in the bore.

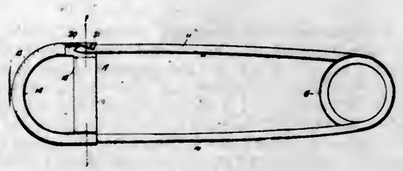


1,353,090. TABLE IMPLEMENT. EUGENIO DE TEIXEIRA, Setauket, N. Y., assignor to Anna Ir. H. de Teixeira, Setauket, N. Y. Filed Oct. 9, 1918. Serial No. 257,442. 1 Claim. (Cl. 7—16.)

An implement having a shank associated with such implement, such shank being provided with an upper and side walls, the lower edges of such side walls being bent inwardly toward one another and having their edges spaced, said shank being adapted to receive a second implement, the space between such inturned edges being adapted to permit of a moving of certain parts of such second implement.

1,353,091. GARDEN-PLOW. LEWIS T. THOMASSON, Corinth, Miss. Filed June 26, 1920. Serial No. 391,955. 2 Claims. (Cl. 97—42.)

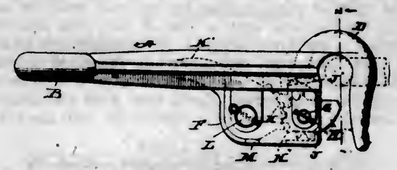
2. The combination with a frame mounted midway of its length upon a supporting wheel, said frame carrying shovels at its rear end and handles secured to the frame in rear of the axis of said wheel, of a push bar arranged longitudinally of the frame and having its forward end forked to straddle the said wheel, the arms constituting the fork terminating in pintles pivoted for vertically swinging action to the frame, said pivots being located at a distance in advance of the wheel axis substantially equal to the distance between the latter and the point of



attachment of the handles, said push bar being adapted to normally rest upon the cross bar of the handles, and a breast plate carried by the rear end of the push bar to fit the breast of the operator when elevated.

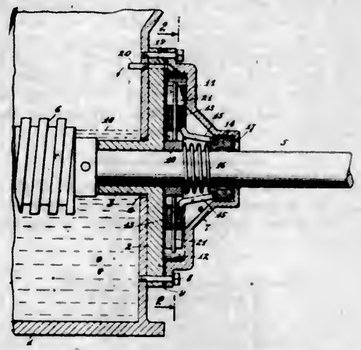
1,353,092. CARTRIDGE-MAGAZINE. JOHN TALIAFERRO THOMPSON, Newport, Ky., and HENRY HAVELOCK CUMMINGS, Newton, Mass.; said Cummings assignor, by meane assignments, of one-half to Thomas Fortune Ryan, New York, N. Y. Filed June 7, 1920. Serial No. 386,994. 27 Claims. (Cl. 42—49.)

1. A magazine for use with guns, a lubricant reservoir associated with the magazine and means adapted to positively lubricate cartridges placed in the magazine.



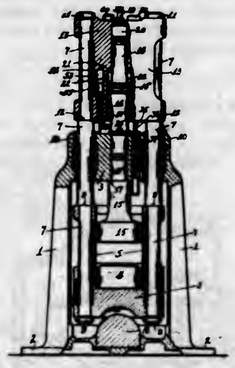
1,353,093. SAFETY-PIN. WILEY E. TIENCKEN, Mount Pleasant, S. C. Filed June 23, 1919. Serial No. 305,985. 2 Claims. (Cl. 24—156.)

2. A safety pin comprising main members connected at one end by a resilient element, a keeper rigidly secured to the opposite end of one of said members, said keeper including pockets spaced apart to provide a single entrance to the pocket openings for receiving the other member and means located centrally of said entrance to deflect said member laterally for entrance into one of the pockets.



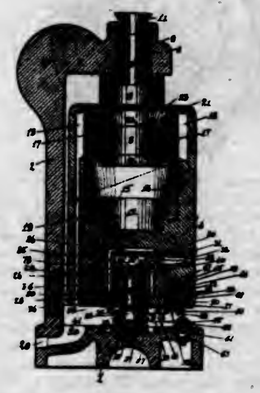
1,353,094. DRAFT APPLIANCE. FREDERICK J. TRUMPOUR, Washington, D. C. Filed June 25, 1919. Serial No. 306,751. 3 Claims. (Cl. 213—45.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A draft coupling, consisting of a draft member, a hook carried by said member, a casing carried by said member and provided with a pair of pivot pins, a latch mounted upon one of said pins and formed with teeth upon one surface thereof, a manually operated lever pivoted upon the other pin and formed with teeth on one surface thereof meshing with the teeth of said latch, whereby the movements of the latch are controlled by the



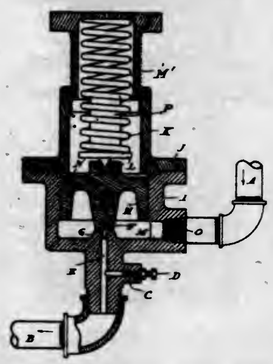
operation of said lever in effecting coupling and release movements.

1,353,095. OIL-RETAINER. HENRY C. UTTECH, Lebanon, and ARTHUR E. OHRMUNDT, Milwaukee, Wis. Filed Sept. 27, 1919. Serial No. 326,901. 6 Claims. (Cl. 64—22.)



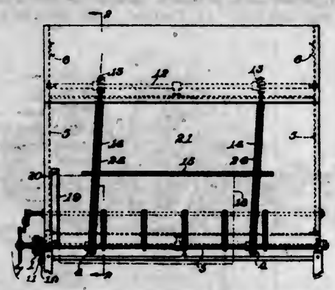
2. The combination with a housing adapted to receive a shaft projecting therethrough, a gasket in the housing adapted to surround the shaft, and a sliding collar around the shaft in the housing engaging the gasket, of a rotor in the casing adapted to be turned by the shaft, and a governor operated by the rotor and controlling the position of the collar.

1,353,096. STAMP-MILL. JAMES W. VANMETER, San Francisco, Calif. Filed June 30, 1919. Serial No. 307,680. 5 Claims. (Cl. 83—57.)



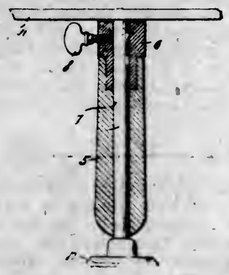
A stamp-mill comprising a fixed frame; a mortar monted on the frame for reciprocative movement; a stap fixedly mounted in the frame and over which the recirocative mortar plays to crush the ore by impact against said stamp; a cylinder connected with the mortar; a piton fitted in said cylinder fixed against reciprocative movement; fluid controlling connections to reciprocate said cylinder on said fixed piston; and means carried by the cylinder and actuated by contact with the fixed frame for operating said fluid controlling connections.

1,353,097. ORE STAMP-MILL. JAMES W. VANMETER, San Francisco, Calif. Filed Nov. 5, 1919. Serial No. 335,902. 11 Claims. (Cl. 83—57.)



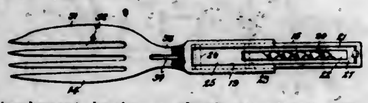
1. An ore stamp mill comprising a frame; guides fitted to the frame: a mortar fitted upon said guides for reciprocative movement, and adapted by the removal of one of said guides to be turned outwardly from the frame upon the other of said guides as an axis; a fixed stamp carried by the frame; and means for reciprocating the mortar to crush the ore against the stamp.

1,353,098. REGULATOR FOR AIR-COMPRESSORS. CHARLES WAINWRIGHT, Erie, Pa. Filed Apr. 13, 1918. Serial No. 228,424. 1 Claim. (Cl. 230—24.)



An unloader having a chamber, means extending laterally from the chamber to connect said chamber with a source of compressed air supply, a flat valve seat on the inner end wall of the chamber, a conduit of considerably less area than the flat valve seat leading through said seat and adapted to be connected with apparatus to be controlled, a spring-pressed piston having a flat surface opposed to the valve seat and arranged to permit compressed air from the source of supply to act against said surface, and a stop at the opposite side of the piston to said flat surface, whereby when the piston lifts the additional pressure in the chamber will cause the piston to jump to its limit stop.

the rear edge of a sheet and push it forward in said inclined path until the sheet engages the side guide and



then slip laterally upon and complete the advance of the sheet parallel with the guide.

1,353,089. FILING-GAGE. GEORGE SANDERS SWYGERT, Columbia, S. C. Filed Feb. 17, 1919. Serial No. 277,549. 1 Claim. (Cl. 33—185.)

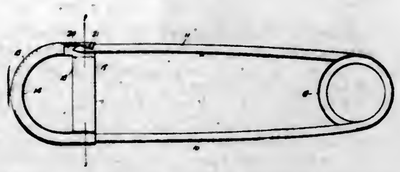
A filing gage for valve stems, comprising a shank, a gage block carried by one end of the shank, said shank having a longitudinal bore opening through opposite ends of the shank and continued through the block to the outer end thereof to receive the valve stem, said end being flat and perpendicular to the bore, and means for locking the valve stem in the bore.

1,353,090. TABLE IMPLEMENT. EUGENIO DE TEIXEIRA, Setauket, N. Y., assignor to Anna Ir. H. de Teixeira, Setauket, N. Y. Filed Oct. 9, 1918. Serial No. 257,442. 1 Claim. (Cl. 7—16.)

An implement having a shank associated with such implement, such shank being provided with an upper and side walls, the lower edges of such side walls being bent inwardly toward one another and having their edges spaced, said shank being adapted to receive a second implement, the space between such inturned edges being adapted to permit of a moving of certain parts of such second implement.

1,353,091. GARDEN-PLOW. LEWIS T. THOMASSON, Corinth, Miss. Filed June 26, 1920. Serial No. 391,955. 2 Claims. (Cl. 97—42.)

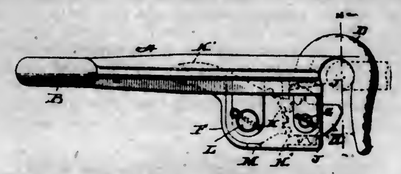
2. The combination with a frame mounted midway of its length upon a supporting wheel, said frame carrying shovels at its rear end and handles secured to the frame in rear of the axis of said wheel, of a push bar arranged longitudinally of the frame and having its forward end forked to straddle the said wheel, the arms constituting the fork terminating in pintles pivoted for vertically swinging action to the frame, said pivots being located at a distance in advance of the wheel axis substantially equal to the distance between the latter and the point of



attachment of the handles, said push bar being adapted to normally rest upon the cross bar of the handles, and a breast plate carried by the rear end of the push bar to fit the breast of the operator when elevated.

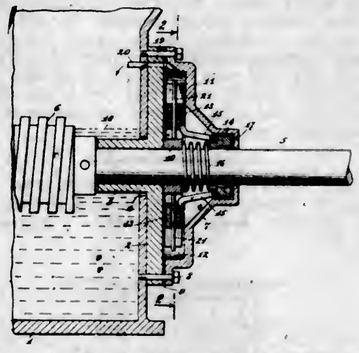
1,353,092. CARTRIDGE-MAGAZINE. JOHN TALIAFERRO THOMPSON, Newport, Ky., and HENRY HAVELOCK CUMMINGS, Newton, Mass.; said Cummings assignor, by mesne assignments, of one-half to Thomas Fortune Ryan, New York, N. Y. Filed June 7, 1920. Serial No. 386,994. 27 Claims. (Cl. 42—49.)

1. A magazine for use with guns, a lubricant reservoir associated with the magazine and means adapted to positively lubricate cartridges placed in the magazine.



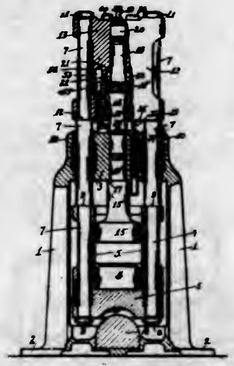
1,353,093. SAFETY-PIN. WILEY E. TIBNCKEN, Mount Pleasant, S. C. Filed June 23, 1919. Serial No. 305,985. 2 Claims. (Cl. 24—156.)

2. A safety pin comprising main members connected at one end by a resilient element, a keeper rigidly secured to the opposite end of one of said members, said keeper including pockets spaced apart to provide a single entrance to the pocket openings for receiving the other member and means located centrally of said entrance to deflect said member laterally for entrance into one of the pockets.



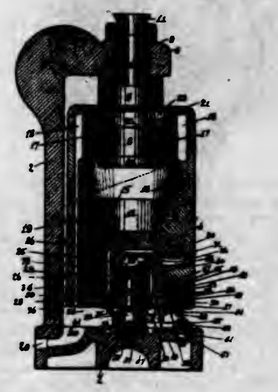
1,353,094. DRAFT APPLIANCE. FREDERICK J. TRUMPOUR, Washington, D. C. Filed June 25, 1919. Serial No. 306,751. 3 Claims. (Cl. 213—45.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A draft coupling, consisting of a draft member, a hook carried by said member, a casing carried by said member and provided with a pair of pivot pins, a latch mounted upon one of said pins and formed with teeth upon one surface thereof, a manually operated lever pivoted upon the other pin and formed with teeth on one surface thereof meshing with the teeth of said latch, whereby the movements of the latch are controlled by the



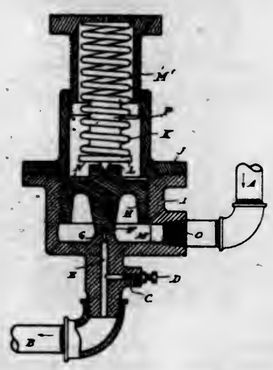
operation of said lever in effecting coupling and release movements.

1,353,095. OIL-RETAINER. HENRY C. UTTECH, Lebanon, and ARTHUR E. OHRMUNDT, Milwaukee, Wis. Filed Sept. 27, 1919. Serial No. 326,901. 6 Claims. (Cl. 64—22.)



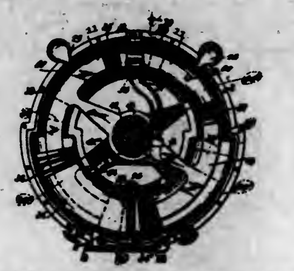
2. The combination with a housing adapted to receive a shaft projecting therethrough, a gasket in the housing adapted to surround the shaft, and a sliding collar around the shaft in the housing engaging the gasket, of a rotor in the casing adapted to be turned by the shaft, and a governor operated by the rotor and controlling the position of the collar.

1,353,096. STAMP-MILL. JAMES W. VANMETER, San Francisco, Calif. Filed June 30, 1919. Serial No. 307,680. 5 Claims. (Cl. 83—57.)



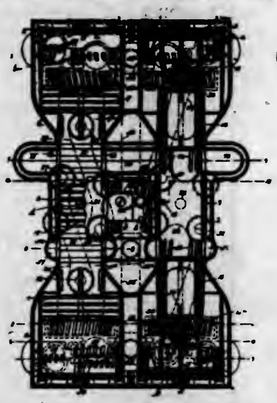
1. A stamp-mill comprising a fixed frame; a mortar mounted on the frame for reciprocative movement; a stamp fixedly mounted in the frame and over which the reciprocative mortar plays to crush the ore by impact against said stamp; a cylinder connected with the mortar; a piston fitted in said cylinder fixed against reciprocative movement; fluid controlling connections to reciprocate said cylinder on said fixed piston; and means carried by the cylinder and actuated by contact with the fixed frame for operating said fluid controlling connections.

1,353,097. ORE STAMP-MILL. JAMES W. VANMETER, San Francisco, Calif. Filed Nov. 5, 1919. Serial No. 335,902. 11 Claims. (Cl. 83—57.)



1. An ore stamp mill comprising a frame; guides fitted to the frame; a mortar fitted upon said guides for reciprocative movement, and adapted by the removal of one of said guides to be turned outwardly from the frame upon the other of said guides as an axis; a fixed stamp carried by the frame; and means for reciprocating the mortar to crush the ore against the stamp.

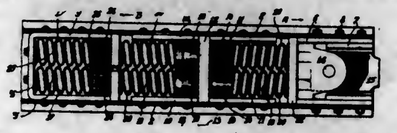
1,353,098. REGULATOR FOR AIR-COMPRESSORS. CHARLES WAINWRIGHT, Erie, Pa. Filed Apr. 13, 1918. Serial No. 228,424. 1 Claim. (Cl. 230—24.)



An unloader having a chamber, means extending laterally from the chamber to connect said chamber with a source of compressed air supply, a flat valve seat on the inner end wall of the chamber, a conduit of considerably less area than the flat valve seat leading through said seat and adapted to be connected with apparatus to be controlled, a spring-pressed piston having a flat surface opposed to the valve seat and arranged to permit compressed air from the source of supply to act against said surface, and a stop at the opposite side of the piston to said flat surface, whereby when the piston lifts the additional pressure in the chamber will cause the piston to jump to its limit stop.

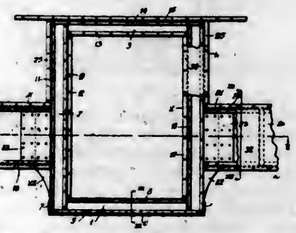
1,353,099. POWER PLANT FOR AUTOMOBILES. NATHANIEL B. WALES, New York, N. Y., assignor, by mesne assignments, to Wales Motors Corporation, a Corporation of Delaware. Filed July 25, 1917. Serial No. 182,692. 3 Claims. (Cl. 123—2.)

3. In an internal combustion engine, the combination of two cylinder structures arranged side by side and each comprising two arcuate cylinders closed at one of their ends to form air compression chambers, and cross-connected at their opposite ends by independent unchanging cross passages to form common clearance chambers connecting the end of each arcuate cylinder on one side with the end of the opposing cylinder on the other side, and a pair of connected power and air-compression variable stroke floating pistons in each arcuate cylinder, the pairs of pistons in the cylinders on one side being connected respectively with the pairs of pistons of the opposing cylinders on the other side to cause the connected pistons to move in unison but in opposite directions.



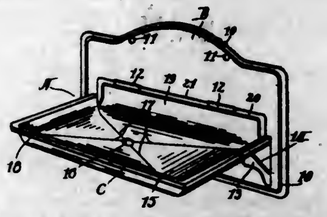
1,353,100. AIR-COMPRESSION POWER PLANT. NATHANIEL B. WALES, Detroit, Mich., assignor to Wales Motors Corporation, a Corporation of Delaware. Filed Aug. 1, 1918, Serial No. 247,725. Renewed June 8, 1920. Serial No. 387,510. 21 Claims. (Cl. 123—2.)

1. In a mechanism of the type described, the combination of a casing having oppositely positioned air compression cylinders, and an intermediate open-ended power cylinder, two variable-stroke reciprocating piston structures entering respectively the opposite ends of the power cylinder and the air compression cylinders, and means connecting said pistons to synchronize their reciprocatory movements in the cylinders.



1,353,101. DRAFT-RIGGING. AARON N. WARFIELD, London, Ontario, Canada. Filed Dec. 20, 1918. Serial No. 267,591. 1 Claim. (Cl. 213—42.)

In a draft rigging, a housing, a draw bar extending therein, a head connected to said draw bar, short and long stops carried by the confronting walls of said housing at one end thereof and the short stops adapted to be engaged by said head, a U shaped rear stop carried by the side walls of said housing at the opposite end thereof, sets of stops carried by the side walls of said housing intermediate said U shaped rear stop and said long stops, a partition between the intermediate sets of stops, rods carried by said head and extending through said partition into said U shaped rear stop, a follower on said rods normally engaging said long stops and adapted to be shifted by said head into engagement with one set of



stops, a follower on said rods normally engaging said U shaped rear stop and adapted to be shifted into engagement with the other set of stops, abutments on said rods in said U shaped rear stop for shifting the last mentioned follower, pick-up portions on said rods in said partition, abutments on the pick-up portitions of said rods normally engaging said partition and adapted to move with said rods in opposite directions, springs on said rods in said U shaped rear stop against the abutments therein, and springs on said rods against the partition abutments and said followers.

1,353,102. DOORWAY CONSTRUCTION FOR CARS. AARON N. WARFIELD, London, Ontario, Canada. Filed Dec. 20, 1918. Serial No. 267,592. 4 Claims. (Cl. 105—398.)

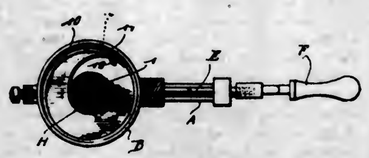
4. A doorway frame made of a single piece of material providing a web having an opening, a sill and a lintel connected by side rails, and vertical and transverse angle bars on the sill, lintel and side rails of said frame at the inner and outer edges thereof with the transverse angle bars at the upper and lower edges of the web opening between the vertical angle bars.

1,353,103. COLLAPSIBLE SOAP-DISH. PAUL H. WELCKER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed May 3, 1920. Serial No. 378,429. 6 Claims. (Cl. 45—28.)

2. A collapsible soap dish, including a supporting back, a soap tray, a holding flange formed along the rear edge of said tray, and engaging tongues and supporting brackets formed integral with and sheared out of said

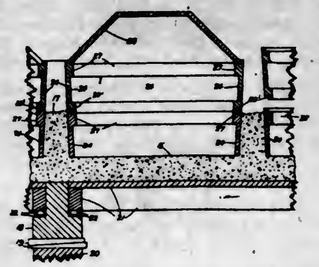
back, adapted to engage said flange and tray respectively, to hold said tray rigid to and detachable from said back.

1,353,104. PICKLING-WEIGHT. ANNA ELISABETH WETSLER, Portland, Oreg. Filed Jan. 12, 1920. Serial No. 350,807. 1 Claim. (Cl. 215—99.)



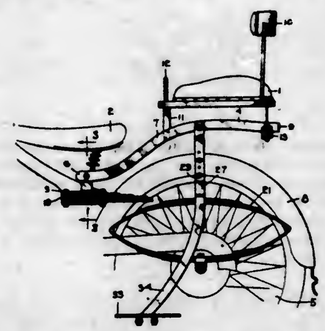
A pickling weight of disk formation having a central opening therein, flat upper and lower faces, each provided with radial grooves extending from said central opening to the periphery of the weight, and hand holes between said central opening and the aforesaid periphery.

1,353,105. ADVERTISING DEVICE. WELLINGTON BRASIL WHEELER, El Segundo, Calif. Filed Jan. 28, 1920. Serial No. 354,630. 5 Claims. (Cl. 40—78.)



1. An advertising device comprising a plurality of panels arranged behind one another, mechanism for removing the foremost panel and depositing the same at the rear of the remaining panels for successively visualizing said panels, and means co-acting with the panels for detecting improper alinement of said panels.

1,353,106. SAFETY DEVICE FOR SPRING-MOTORS. HENRY A. WICOFF, Decatur, Ill. Filed Mar. 1, 1920. Serial No. 362,469. 3 Claims. (Cl. 185—43.)



3. In a spring motor, the combination with the cylindrical spring box and the spiral spring disposed therein and adapted to be placed under tension, of an auxiliary spring disposed outwardly of said first named spring and frictionally engaging the inner wall of the box with its ends in overlapping relation, and a connection between the outer end of said first named spring and the inner end of said auxiliary spring, said connection comprising a tongue formed upon the innermost end of the auxiliary spring and engaged within an elongated opening in the outer end of the first named spring.

1,353,107. MODE OF CONSTRUCTING REINFORCED-CONCRETE SHIPS, BARGES, FLOATING STRUCTURES, AND THE LIKE. EVAN OWEN WILLIAMS, Parkstone, England, assignor to Williams Foreign Patents Limited, London, England. Filed May 15, 1918. Serial No. 234,764. 2 Claims. (Cl. 25—130.)

1. In combination with the bottom slabs of a concrete construction upwardly flaring box shaped molds resembling frustums of pyramids open at top and bottom, said molds being provided with inwardly extending lips and spigot joints for engaging one with the other so that when assembled, their outer walls form the spaces between them to receive concrete to provide stiffening ribs on said bottom slab, substantially as described.

1,353,108. MOTORCYCLE-SEAT. MILTON EDWARD WOOD, South Amboy, N. J. Filed Aug. 23, 1919. Serial No. 319,495. 7 Claims. (Cl. 208—24.)

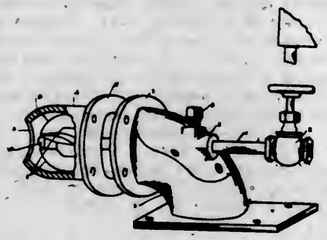
1. A device of the character described, comprising a member having one end thereof pivotally carried on a motor cycle, a seat supporting means arranged at the other end thereof, and means for yieldingly supporting said first named member, said means including an elliptical spring and a member fixed to the spring, a foot rest fixed to said last named member, and means for adjusting the distance between the said foot rest and seat.

1,353,109. CUFF-LINK. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 27, 1919. Serial No. 307,110. 5 Claims. (Cl. 24—102.)

1. A cuff link comprising a shank portion carrying at at least one end thereof a stud for passage through a cuff

buttonhole, and a snap fastener socket for engagement with said stud on the opposite side of the cuff from said shank portion, said socket separable from said stud by relative tipping of stud and socket.

1,353,110. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,783. 8 Claims. (Cl. 24—217.)

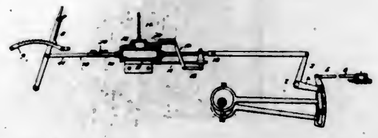


2. A separable fastener comprising, in combination, a stud having a head and a neck; a socket including a casing, a flat spring in the casing, said spring having a stud-receiving aperture therethrough and having a slit, and a notch communicating with said aperture.

1,353,111. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,784. 4 Claims. (Cl. 24—217.) 24—217.)

1. A separable fastener comprising, in combination, a stud having a head and a neck; a socket for engagement with said stud including a spring having a stud-receiving aperture therein, split at one side and providing as a part of the stud-receiving aperture a plurality of notches, said notches of less width than the major diameter of the neck of said stud.

1,353,112. LIQUID-FUEL BURNER. WILLIAM CLARKE, Montreal, Quebec, Canada. Filed Sept. 22, 1919. Serial No. 325,545. 1 Claim. (Cl. 158—76.)

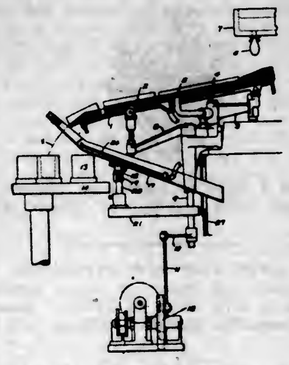


In a liquid fuel burner, an air pipe having an opening and a removable cover plate closing said opening, a gravity feed pipe extending through said cover plate, a slide valve closing the inlet end of said air pipe, a burner casing joined to the outlet end of said air pipe and having an outlet at the outer end thereof, a deflecting member inserted in said burner casing and formed of a central body having a fuel passage and a plurality of deflecting ribs longitudinally arranged and extending from the inner end of said body and in cross section shape gradually tapering to the inwardly converging ends beyond said body and running for about the length of the burner casing in substantially S-shape and a nozzle in the center of said converging ends.

1,353,113. FISHING-REEL. CLARENCE L. DEETS, Portland, Oreg. Filed Jan. 20, 1920. Serial No. 352,808. 10 Claims. (Cl. 242—84.5.)

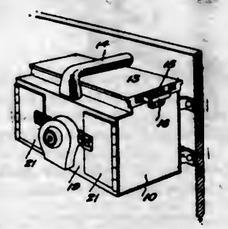
1. A fishing reel comprising a standard, a rotatable spool, a cam-lever having a hub and fulcrumed on the axis of the spindle between the standard and the adjacent side of the spool, cam-surfaces formed in the hub of the standard radially of, and concentric with the axis of the spool, corresponding cam-surfaces formed in the hub of the lever, whereby when the lever is depressed the cam-surfaces will move the hub of the lever against and cause it to exert a frictional bearing on the adjacent side of the spool.

1,353,114. VALVE-CHANGING MEANS. ARA B. EDWARDS and CHARLES A. TURNER, Hamlet, N. C., and THOMAS L. REED, Atlanta, Ga. Filed Oct. 16, 1918. Serial No. 258,364. 5 Claims. (Cl. 121—41.)



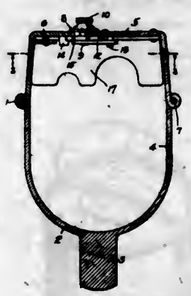
1. The combination in locomotive control equipment, of manually operable means, a reach rod comprising a member connected with said means and having a tappet and a second member with respect to which the first named member has a limited movement, the said second member carrying a piston and having exhaust conduits extending to opposite sides of the piston, valves carried by the second member and controlling said conduits and disposed at opposite sides of and adapted to be opened alternately by the tappet of the first member, a cylinder surrounding the second member of the reach rod and inclosing the piston, a valve chest carried by said cylinder and adapted to be connected with a source of fluid pressure supply, ports intermediate the valve chest and the interior of the cylinder at opposite sides of the piston, a control valve movable in said chest and having ports and also having a minor member in which are bleed ports for use in conjunction with the said ports, said minor member being capable of limited movement with respect to the remainder of the control valve, and a connection between the forward member of the reach rod and the minor member of the control valve for moving the latter by the former.

1,353,115. GLASS-WORKING MACHINE. ALFRED R. HUNTER, Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed Nov. 12, 1917. Serial No. 201,469. 10 Claims. (Cl. 49—55.)



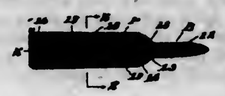
1. The combination with means for delivering mold charges of molten glass successively to a plurality of mold charging stations of means adapted to be selectively

interposed between either of said stations and delivery means for deflecting the glass from its normal path of



delivery to the said station while permitting delivery of the glass to the other of said stations.

1,353,116. COIL-BOX. VICTOR A. LINGLE, Lewisburg, Pa. Filed Mar. 5, 1920. Serial No. 363,557. 3 Claims. (Cl. 175—360.)

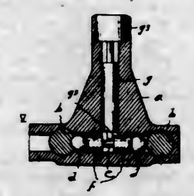


1. A coil box comprising a main coil compartment, a removable cover therefor, a terminal compartment and normally closed openings for said terminal compartment.

1,353,117. WHEEL-LOCK. CHARLES E. THOMPSON, New York, N. Y., assignor of one-half to Thomas J. Hill, New York, N. Y. Filed Nov. 8, 1919. Serial No. 336,554. 2 Claims. (Cl. 70—90.)

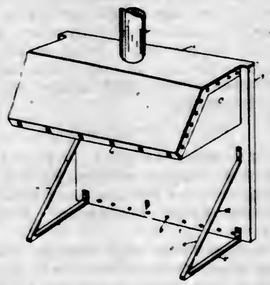
1. A device of the character stated, comprising a yoke, an enlargement on the yoke, a pair of angular members hingedly connected to the yoke, one of said members having a transversely extending slot therein, a locking pin projecting through the slot, a knob on the outer end of the pin, a disk and a locking dog on the inner end of the pin, said disk and dog both adapted to project across the meeting edges of the members, and means controlling the rotary and lateral movements of the pin.

1,353,118. CARTRIDGE. JOHN T. THOMPSON, Newport, Ky., assignor of one-half to Thomas F. Ryan, New York, N. Y. Filed Jan. 6, 1920. Serial No. 349,782. 20 Claims. (Cl. 102—12.)



5. A caseless cartridge comprising a body of solid explosive, and a bullet having a core and a jacket, a portion of the jacket extending exteriorly over said body and having its edge embedded therein to retain the two members in fixed relation.

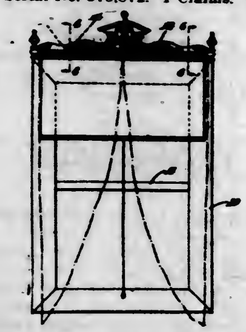
1,353,119. GEAR-LOCK FOR AUTOMOBILES. CHARLES G. TROSIEN, Pontiac, Mich. Filed Aug. 16, 1919. Serial No. 317,857. 4 Claims. (Cl. 70—126.)



4. In an apparatus of the kind described, two parts adapted to move parallel and adjacent to each other to shift the change speed gearing, a lug rising from one of said parts, a lug rising from the other of said parts, said lugs being so located that they shall come adjacent to each other at the neutral position of the gearing, and a rod extending through the gear casing adapted to engage said lugs to prevent the motion of said parts and to disengage said lugs.

1,353,120. GEAR-LOCK FOR AUTOMOBILES. CHARLES G. TROSIEN, Pontiac, Mich. Filed Jan. 26, 1920. Serial No. 354,108. 2 Claims. (Cl. 70—126.)

1. In an apparatus of the kind described, two shifting rods having cavities in their adjacent sides, a cavity extending between said rods, balls in the ends of said cavity, a transverse rod extending between said balls, sleeves surrounding said rod, and a locking cam to cause said sleeves to engage against said balls or to release the same.



1,353,121. STOVE-CABINET. TOM WONE, Montreal, Quebec, Canada. Filed Jan. 17, 1920. Serial No. 352,158. 2 Claims. (Cl. 126—37.)

1. In a stove cabinet, a hood portion extending outwardly from a back, each being of hollow wall formation

having air inlets, said back extending beyond said hood at each end thereof, brackets secured to said back extending forwardly therefrom and forming independent supports for said hood and back, an outlet pipe extending from said hood and side walls fitting to said back beyond said hood and abutting the latter and communicating therewith, said side walls being removably fastened in their position and with said back and hood forming an air jacket adapted to partially surround a heating element.

1,353,122. WINDOW CURTAIN AND SHADE SUPPORT. JHAN KROTOWITCH, Lillian, W. Va. Filed Apr. 22, 1920. Serial No. 375,872. 4 Claims. (Cl. 156—13.)

4. In a window curtain support, a headboard having at the ends a pair of rearwardly extending side bars, and curtain pole supporting devices on said side bars, one of said devices including an angular plate extending across the bottom and inner face of the side bar and covering a recess in the said bar, a latch pivoted on the horizontal flange of said plate, a spring pressing said latch against the vertical flange of said plate, said plate having a slot extending partly along the horizontal flange of the plate and partly up the vertical flange of the plate, the end of the curtain pole being beveled to engage and move said latch when the said end is moved upwardly in the said slot.

1,353,123. CARTRIDGE-FUSE. LAWRENCE F. KRIES, Baltimore, Md., assignor to Charles Morgan Marshall, trustee, Baltimore, Md. Filed Aug. 16, 1918. Serial No. 250,186. 3 Claims. (Cl. 200—119.)

2. A cartridge fuse comprising an elongated casing divided by a transverse partition into two compartments, a fuse in each compartment, said fuses being of different carrying capacities, and connected in series, the end wall of one of said compartments being readily removable to afford access to the fuse in that compartment, and the other compartment being sealed against opening except by destroying the casing.

1,353,124. ELECTRIC SWITCH. CHARLES J. KLEIN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1916. Serial No. 133,103. 8 Claims. (Cl. 200—168.)

7. A feed-through switch comprising, in combination, a casing having separable recessed sections united along a common plane, a snap switch mechanism inclosed therein, an operating member for said switch mechanism disposed in said plane, said sections being provided with registering grooves, one to receive said mechanism and the other to receive a feed-through conductor, said grooves

extending in a direction tending to intersect, the conductor groove being deflected to by-pass said switch mechanism.

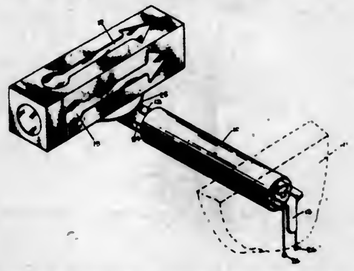
1,353,125. DUST-CAP FOR PNEUMATIC VALVES. JOHN CURRIE and HENRY W. BELL, Seattle, Wash. Filed Aug. 7, 1919. Serial No. 315,971. Renewed June 1, 1920. Serial No. 385,766. 4 Claims. (Cl. 152—12.)

3. A dust cap of the character described, comprising a shell open at one end and having an aperture in its periphery, a block extending into said aperture, said block being provided with screw threads on its inner face, and resilient means extending circumferentially about the shell and tending to yieldingly hold the threaded portion of the block within the chamber of said shell.

1,353,126. PROCESS OF TREATING MOLTEN METAL. OTTO THIEL, Landstuhl, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Dec. 28, 1916. Serial No. 139,431. 2 Claims. (Cl. 75—27.)

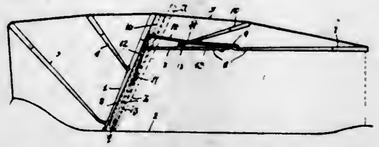
1. The herein described process of treating molten metal and slag to remove the slag which consists in adding to the molten metal a quantity of unmelted metal of a similar kind to cause the slag to flow away from the surface of the molten metal in quantity corresponding to the quantity of unmelted metal added.

1,353,127. GARBAGE-CAN. GUY W. FERDON, Creskill, N. J. Filed Jan. 26, 1920. Serial No. 354,186. 2 Claims. (Cl. 220—56.)



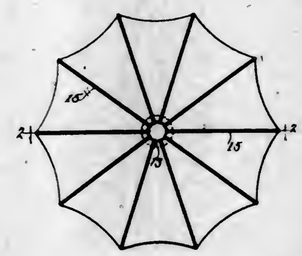
1. In a garbage can, in combination, a cylindrical pail, a bail semicircular in shape and of greater radius than the pail, pivoted to the pail at diametrically opposite points, a circular lid hinged to the pail so as to be capable of turning back over the pail at a point midway between

the pivot points of the bail and a removable link loosely pivoted to the lid forward of the plane of the bail when upright, said link extending to the upper part of the upright bail and loosely and slidably connected thereto, whereby side or downward pressure upon the link or the bail effects the moving of the lid upon its hinge to open and close the pail and whereby the pail may be lifted or moved by a mittened hand.



2. In a garbage can, in combination, a pail, a bail, a lid hinged to said pail, a link having a loose connection with the lid and a loose and sliding connection with the bail, the construction being such that the lid may be raised to any angle or turned back completely, and a spring clip having toe engaging means arranged on the pail to take over the lid and to hold the lid securely down, the clip being arranged as near as possible to the link whereby the clip may be swung back and the link pressed rearwardly by hand or foot with relatively little movement.

1,353,128. DIRECTION-INDICATOR. SEIHACHIRO NAKASORA, Niles, Calif. Filed Mar. 25, 1920. Serial No. 368,559. 5 Claims. (Cl. 116—46.)

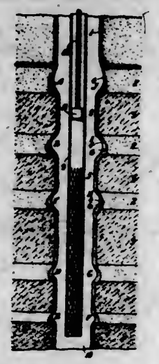


1. A vehicle direction indicator comprising a rectangular lamp containing casing with longitudinal, colored, translucent direction pointers in its sides, a horizontal bar upon which the casing is supported, a vertical pin journaled in the bar, upon which the casing is turnable, means connected with the casing by which it may be horizontally turned with the pointers indicating the direction of the turn to be made and a pair of oppositely coiled springs connected with the pin, the tension of one spring being increased when the casing is turned to return the casing to its normal balanced position when released, and means by which the bar may be revolved to place the indicator in a vertical position.

1,353,129. TOP FOR VEHICLES AND THE LIKE. FREDERICK K. LEWIS, Ashtabula, Ohio, assignor to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed Oct. 1, 1918. Serial No. 256,442. 9 Claims. (Cl. 296—116.)

5. In a top for vehicles and the like, the combination of a main bow; a two-part articulated outrigger bow having its rear portion pivotally connected to said main bow; a supplemental bow pivotally connected to such rear portion of said outrigger bow; and three links directly pivotally connected together, the intermediate link being pivotally attached to said supplemental bow and the other two links being respectively pivotally attached to said main bow and to said outrigger bow beyond the joint therein, the point of connection between the forward and intermediate links lying below a line through the points of connection of said forward link and said outrigger bow and between the rear link and said main bow when the top is extended.

1,353,130. PARACHUTE. WILLIAM J. RUFF, Quincy, Ill. Filed May 25, 1918. Serial No. 236,459. 10 Claims. (Cl. 244—21.)



1. In combination, a flexible member arranged to form when opened the dome of a parachute, a device for supporting a weight to be carried by said parachute, cords extending from said supporting device to the central portion of said flexible member, supplemental cords extending from said supporting device to the periphery of said flexible member, and means for adjusting the length of said last-mentioned cords.

1,353,131. PARACHUTE. WILLIAM J. RUFF, Quincy, Ill. Filed Sept. 3, 1918. Serial No. 252,309. 2 Claims. (Cl. 244—21.)

2. A parachute comprising a canopy having an opening at its center; a ring secured to the canopy around said opening; a supporting ring below the first-mentioned ring; a plurality of supporting strands secured to the periphery of the canopy and the supporting ring; an upright cable between said rings and disposed at the axes thereof; a plurality of short cables of substantially equal lengths, one end of each of said short cables being secured to one end of the upright cable and the other ends of said short cables being secured to one of said rings; and a plurality of short strands of substantially equal lengths, each strand having one end secured to the other end of said upright cable and their other ends secured to said other ring.

1,353,132. WELL CONSTRUCTION. PERCY E. VAUGHAN and STANLEY M. HALSTEAD, San Jose, Calif. Filed Oct. 13, 1919. Serial No. 330,230. 7 Claims. (Cl. 166—21.)

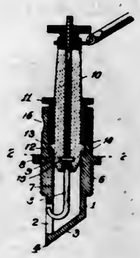
1. In deep well construction of the type wherein the bore is kept filled with a thick fluid throughout the drilling operation and wherein a casing of less diameter than the bore is employed and a filling of gravel or like porous material placed between, the method of preparing the well for the admission of gravel which consists in agitating said fluid throughout the depth of the well whereby to thoroughly equalize the fluid and take up in solution or suspension deposits of non-porous material formed on the walls of the bore and in the cavities surrounding the loose strata, said agitation being carried on progressively from top to bottom of the well.

1,353,133. ERASING-SHIELD. FREDERICK P. ZWICKER, San Francisco, Calif., assignor of twenty-five per cent. to Wilbur J. Ryan and twenty-five per cent. to Albert H. Holaday, San Francisco, Calif. Filed Oct. 27, 1919. Serial No. 333,669. 5 Claims. (Cl. 197—181.)

1. An erasing shield for typewriting machines comprising a curved shield, and supporting members at each end of the shield adapted to rest upon the platen of the typewriting machine and to slightly elevate the shield with relation to the platen.

1,353,134. PIVOTED LINK. WARREN L. SHIFFER and PETER K. SHNYDER, Williamsport, Pa. Filed May 24, 1920. Serial No. 383,886. 4 Claims. (Cl. 24—241.)

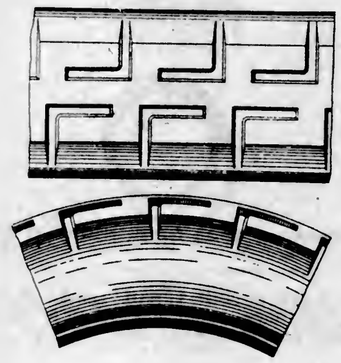
1. A device of the character described, comprising a pair of jaws pivoted together at one end and terminating at the other end in hooks lying in side to side engagement with each other in a plane disposed substantially at right angles to the longitudinal extent of the pivot, and having lugs adapted to lap the rear sides of the jaws.



REISSUES.

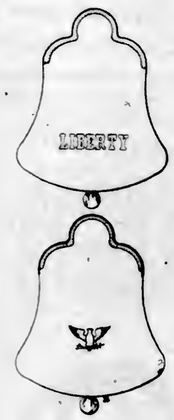
14,948. BANANA HEATER AND RIPENER. ALBERT LESLIE FRANKEBERGER, Bloomington, Ill., assignor to Illinois Specialty Manufacturing Company, McLean county, Ill., a Corporation. Filed Oct. 26, 1918. Serial No. 259,873. Original No. 1,232,270, dated July 3, 1917, Serial No. 99,183, filed May 22, 1916. 6 Claims. (Cl. 126—85.)

1. A banana heater and ripener, comprising a chamber entirely open at the bottom thereof and provided with light and heat burners, a door communicating with said chamber and a comparatively thin flat flue extending vertically and having a horizontal discharge upper end, the front wall sloping from the heating chamber of the flue, but having transparent means therein for transmitting light from the burners within the heating chamber, and brackets attached to the vertical flue for fastening the heater upon the side wall of a room intermediate of the floor and ceiling.



14,949. SPARK-PLUG. ALEXANDER JOSEPH PERRON, Sparta, Wis. Filed June 11, 1920. Serial No. 388,344. Original No. 1,308,107, dated July 1, 1919, Serial No. 249,888, filed Aug. 14, 1918. 8 Claims. (Cl. 123—169.)

1. A spark plug comprising a shell having an annular wall with a hole in its side and a closed bottom and substantially closed except for said hole to exclude substances from the interior of the shell, and a central electrode contained in and insulated from said shell, having a terminal to form a spark gap between the shell and the electrode.

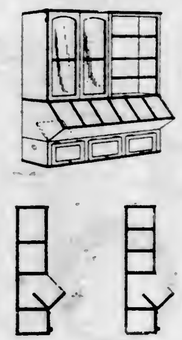


DESIGNS.

56,260. ELASTIC VEHICLE-TIRE. JOHN M. ALDERFER, Akron, Ohio. Filed Mar. 25, 1920. Serial No. 368,759. Term of patent 14 years.

The ornamental design for an elastic vehicle tire as shown.

56,261. HANDBAG OR SIMILAR ARTICLE. JOSEPH FREDRICK WRIGHT, Cincinnati, Ohio. Filed Sept. 18, 1919. Serial No. 324,703. Term of patent 3½ years.

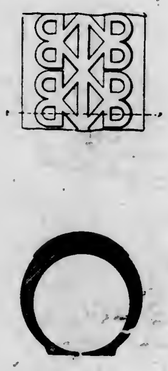


The ornamental design for a handbag or similar article as shown.

56,262. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 14, 1919. Serial No. 338,121. Term of patent 14 years.

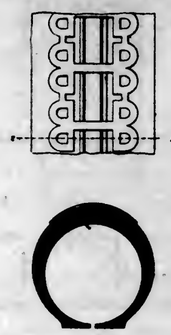
The ornamental design for an insulator, as shown.

56,263. HELP-SELF COUNTER AND DISPLAY-CABINET. WILLIAM J. BAILEY, Cleveland, Ohio. Filed Aug. 7, 1919. Serial No. 315,995. Term of patent 14 years.



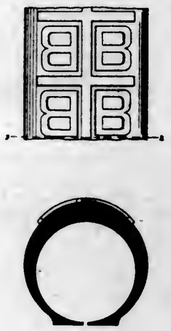
The ornamental design for a help self counter and display cabinet substantially as herein shown.

56,264. TALCUM-POWDER BOX. FRANCIS X. BECKMAN, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1920. Serial No. 382,986. Term of patent 14 years.



The ornamental design for a talcum powder box, as shown.

56,265. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,088. Term of patent 14 years.

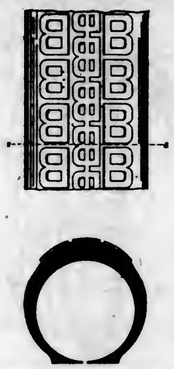


The ornamental design for an elastic tire tread as shown.

56,266. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,089. Term of patent 14 years.

The ornamental design for an elastic tire tread as shown.

56,267. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,090. Term of patent 14 years.

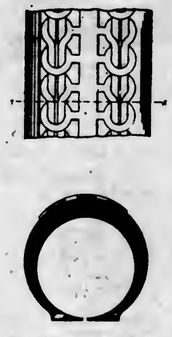


The ornamental design for an elastic tire tread as shown.

56,268. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,091. Term of patent 14 years.

The ornamental design for an elastic tire tread as shown.

56,269. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,092. Term of patent 14 years.

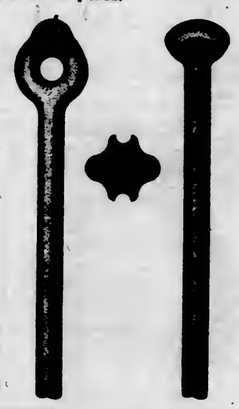


The ornamental design for an elastic tire tread as shown.

56,270. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,094. Term of patent 14 years.

The ornamental design for an elastic tire tread as shown.

56,271. ELASTIC-TIRE TREAD. EDGAR O. BLEKRE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,096. Term of patent 14 years.

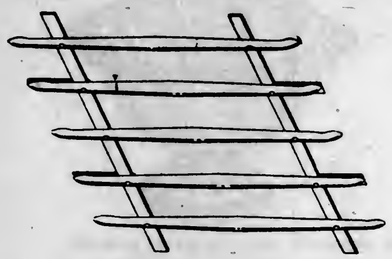


The ornamental design for an elastic tire tread as shown.

56,272. BOWL. SAUL BLICKMAN, New York, N. Y., assignor to Sophia Blickman, Brooklyn, N. Y. Filed July 31, 1920. Serial No. 400,401. Term of patent 3½ years.

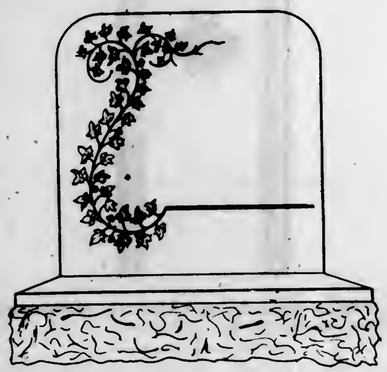
The ornamental design for a bowl as shown.

56,273. ANCHOR-ROD EYE. ALBERT B. CHANCE, Centralia, Mo. Filed Dec. 29, 1919. Serial No. 348,186. Term of patent 14 years.



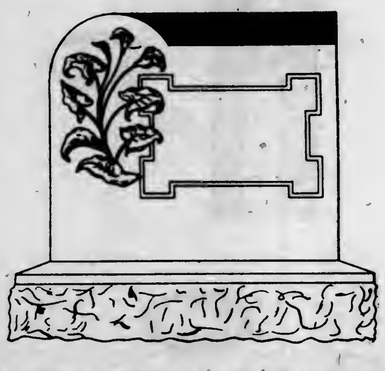
The original design for an anchor rod eye substantially as shown and described.

56,274. TALCUM-TIN. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed June 21, 1920. Serial No. 390,659. Term of patent 14 years.



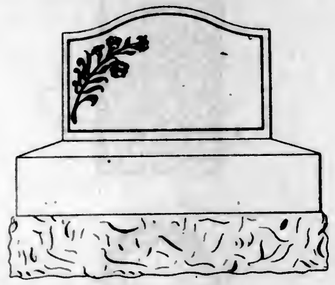
The ornamental design for a talcum tin, as shown.

56,275. GUARD FOR RADIATORS OF MOTOR-VEHICLES. EDWARD T. CURRAN, Detroit, Mich. Filed June 9, 1920. Serial No. 387,753. Term of patent 14 years.



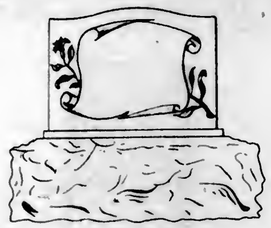
The ornamental design for a guard for radiators of motor vehicles, as shown.

56,276. TOMBSTONE. GEORGE F. EISENBROWN, Reading, Pa. Filed Apr. 6, 1920. Serial No. 371,768. Term of patent 3½ years.



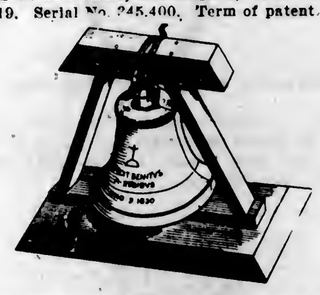
The ornamental design for a tombstone as shown.

56,277. TOMBSTONE. GEORGE F. EISENBROWN, Reading, Pa. Filed Apr. 6, 1920. Serial No. 371,769. Term of patent 3½ years.



The ornamental design for a tombstone as shown.

56,278. TOMBSTONE. GEORGE F. EISENBROWN, Reading, Pa. Filed Apr. 6, 1920. Serial No. 371,770. Term of patent 7 years.



The ornamental design for a tombstone as shown.

56,279. TOMBSTONE. GEORGE F. EISENBROWN, Reading, Pa. Filed Apr. 6, 1920. Serial No. 371,771. Term of patent 7 years.

The ornamental design for a tombstone as shown.

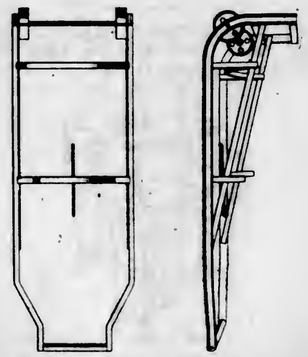
56,280. TABLE-BELL. ARMITAGE S. C. FORBES and HARRYE R. P. FORBES, Los Angeles, Calif. Filed Dec. 16, 1919. Serial No. 345,400. Term of patent 14 years.

The ornamental design for a table bell, as shown.

56,281. KEY-RING HOLDER. ABRAHAM F. HABER, Brooklyn, N. Y. Filed June 17, 1920. Serial No. 389,769. Term of patent 7 years.

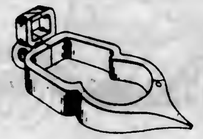
The ornamental design for a key ring holder, as shown.

56,282. TIRE-CASING. ROBERT IRDELL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 26, 1920. Serial No. 354,268. Term of patent 14 years.



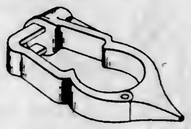
The ornamental design for a tire casing as shown.

56,283. RAZOR. HENRY H. JOHNSON, Oak Park, Ill., assignor to Collins Safety Razor Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 24, 1920. Serial No. 368,417. Term of patent 14 years.



The ornamental design for a razor as shown.

56,284. BARREL-TRUCK. THOMAS E. JORDAN, Malden, Mass. Filed June 12, 1920. Serial No. 388,648. Term of patent 14 years.



The ornamental design for a barrel truck, as shown.

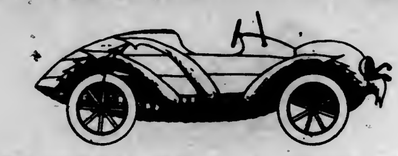
56,285. VEHICLE-WHEEL CHOCK. FORREST M. KESTON, Detroit, Mich. Filed Apr. 23, 1920. Serial No. 376,149. Term of patent 14 years.

The design for a vehicle wheel chock as shown in the figure of the drawing.

56,286. VEHICLE-CHOCK. FORREST M. KESTON, Detroit, Mich. Filed Apr. 23, 1920. Serial No. 376,150. Term of patent 14 years.

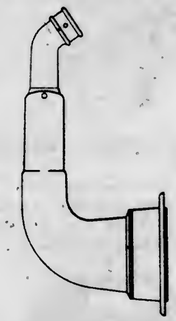
A design for a vehicle wheel chock, as shown in the figure of the drawing.

56,287. PHONOGRAPH-CABINET. TORKEL KNUDSON, Minneapolis, Minn. Filed Apr. 19, 1920. Serial No. 375,177. Term of patent 14 years.



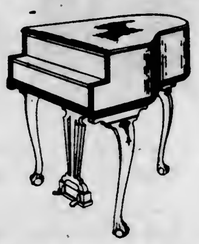
The ornamental design for a phonograph cabinet, as shown.

56,288. BICYCLE MUD-GUARD. EDWARD JULIUS LONN, Laporte, Ind., assignor to Great Western Manufacturing Co., Laporte, Ind., a Corporation of Indiana. Filed Jan. 29, 1920. Serial No. 354,941. Term of patent 14 years.



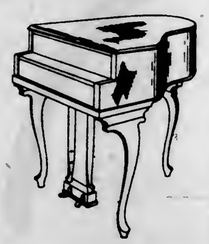
The ornamental design for a bicycle mud guard, as shown.

56,289. AUTOMOBILE-BODY. HARRY J. LOZIER, Spokane, Wash. Filed July 28, 1920. Serial No. 399,632. Term of patent 14 years.



The ornamental design for an automobile body as shown.

56,290. TONE-ARM FOR PHONOGRAPHS. HENRY LUBE, College Point, N. Y. Filed Jan. 3, 1920. Serial No. 349,337. Term of patent 3½ years.



The ornamental design for a tone arm for phonographs as shown.

56,291. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,631. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

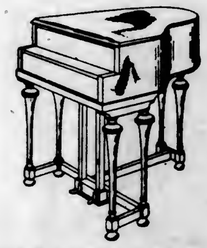
56,292. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,632. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

56,293. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,633. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

56,294. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,634. Term of patent 14 years.



The ornamental design for a talking machine, as shown.

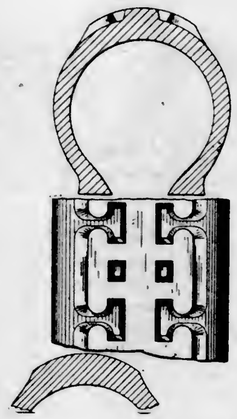
56,295. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,635. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

56,296. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,636. Term of patent 14 years.

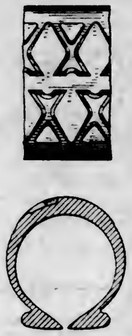
The ornamental design for a talking machine, as shown.

56,297. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,637. Term of patent 14 years.



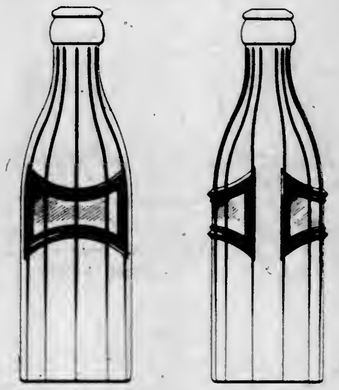
The ornamental design for a talking machine, as shown.

56,298. TALKING-MACHINE. EMERY H. MCCONNELL, Memphis, Tenn. Filed June 12, 1920. Serial No. 388,638. Term of patent 14 years.



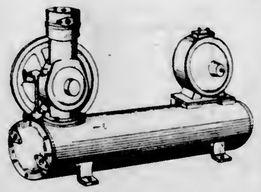
The ornamental design for a talking machine, as shown.

56,299. TIRE-TREAD. JOHN C. MCLEAN, Lakewood, Ohio, assignor to The McLean Tire and Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1919. Serial No. 333,131. Term of patent 14 years.



The ornamental design for a tire tread substantially as shown.

56,300. TIRE. JOHN C. MCLEAN, Cleveland, Ohio, assignor to The McLean Tire & Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 19, 1920. Serial No. 367,211. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

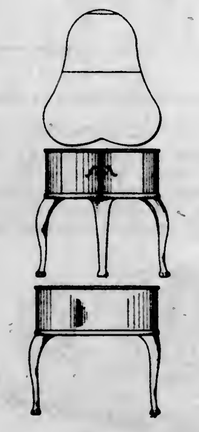
56,301. BOTTLE. HARRY R. NICHOLSON, Baltimore, Md., assignor to The Ver-Vac Company, Baltimore, Md., a Corporation of Maryland. Filed May 24, 1920. Serial No. 383,996. Term of patent 14 years.

The ornamental design for a bottle, as shown.

56,302. CONDENSER AND MOTOR AND COMPRESSOR BASE. EDWIN OLSEN, Milwaukee, Wis., assignor, by mesne assignments, to Milwaukee Ice Machine Company, Milwaukee, Wis., a Corporation. Filed Dec. 1, 1917. Serial No. 204,987. Term of patent 14 years.

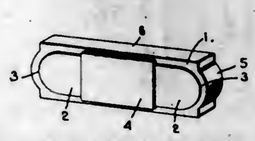
The ornamental design for a condenser and motor and compressor base, as shown.

56,303. BOLT. JOSEPH F. O'REILLY, Oakland, Calif. Filed Jan. 13, 1920. Serial No. 351,257. Term of patent 3½ years.

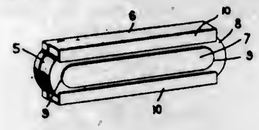


The ornamental design for a bolt, substantially as shown and described.

56,304. BOLT. JOSEPH F. O'REILLY, Oakland, Calif. Filed Jan. 13, 1920. Serial No. 351,258. Term of patent 3½ years.

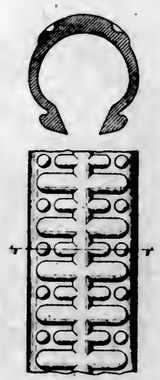


The ornamental design for a bolt, substantially as shown and described.



56,305. PHONOGRAPH-CASING. CARL J. PEARSON and SIGRID L. M. PEARSON, Chicago, Ill. Filed May 14, 1920. Serial No. 381,481. Term of patent 14 years.

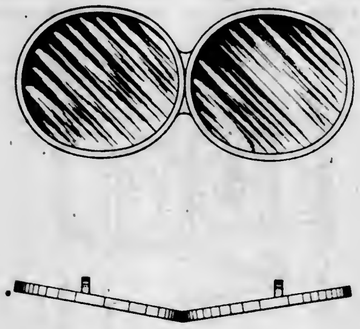
The ornamental design for a phonograph casing, as shown



56,306. BOX. EDWIN B. PHILIPS, Stratford, Conn. Filed Apr. 21, 1920. Serial No. 375,635. Term of patent 14 years.

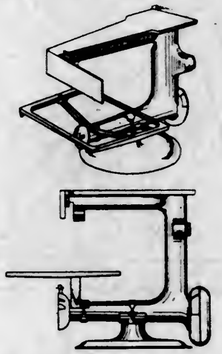
The ornamental design for a box as shown and described.

56,307. PNEUMATIC TIRE. ROBERT M. PIERSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 21, 1919. Serial No. 305,907. Term of patent 14 years.



The ornamental design for a pneumatic tire as shown.

56,308. CONFECTIONERY BOUQUET. ADELAIDE M. PORTER, Greenwich, Conn., assignor to Huyler's Inc. New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,681. Term of patent 14 years.



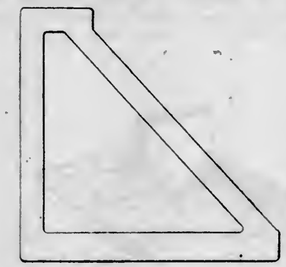
The ornamental design for a confectionery bouquet, substantially as shown.

56,309. REAR-SIGHT MIRROR FOR MOTOR-VEHICLES. FRANK W. REES, Seattle, Wash., assignor to Sees-All Manufacturing Company, Seattle, Wash. Filed June 30, 1920. Serial No. 393,192. Term of patent 14 years.

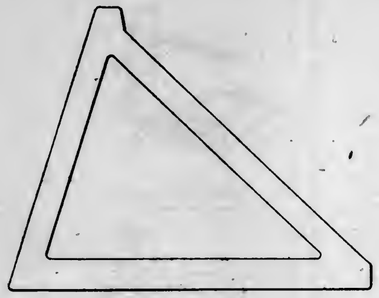
The ornamental design for a rear sight mirror for motor vehicles as shown.

56,310. BUNDLE-TIER-MACHINE FRAME. ALBERT H. SAXTON and JOSEPH J. BACHMAYER, Blissfield, Mich., assignors to National Bundle Tyer Company, Blissfield, Mich., a Corporation of Michigan. Filed Jan. 30, 1919. Serial No. 274,143. Term of patent 7 years.

The ornamental design for a bundle tier machine frame, substantially as shown.



56,311. POURING-SPOUT FOR CANS. HERMAN L. STRONGSON, Brooklyn, N. Y., assignor to Loeb-Strongson Corp., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1920. Serial No. 356,743. Term of patent 7 years.



The ornamental design for a pouring spout for cans, as shown.

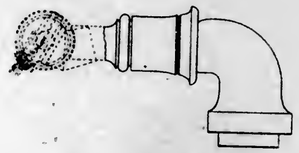
56,312. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed June 29, 1920. Serial No. 392,889. Term of patent 14 years.

The ornamental design for an automobile side curtain, as shown.

56,313. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed June 29, 1920. Serial No. 392,890. Term of patent 14 years.

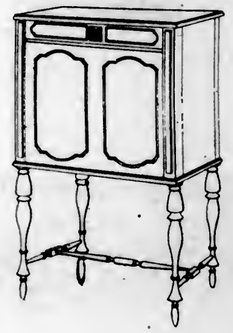
The ornamental design for an automobile side curtain, as shown.

56,314. JEWELRY-HOLDER. PETER VIGGIANO, Shinnston, W. Va. Filed June 17, 1920. Serial No. 389,771. Term of patent 14 years.



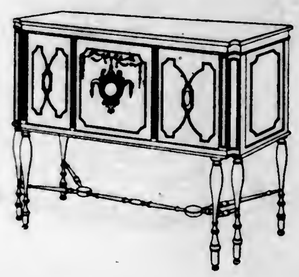
The ornamental design for a jewelry holder substantially as shown.

56,315. CULINARY FIXTURE. WILLARD R. WALKER, Syracuse, N. Y., assignor to Walker Brothers Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 21, 1919. Serial No. 291,768. Term of patent 7 years.



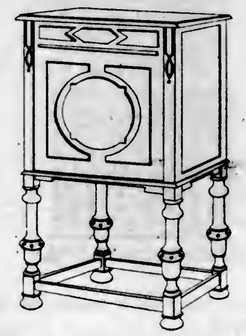
The ornamental design for a culinary fixture as shown.

56,316. TONE-ARM FOR TALKING-MACHINES. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Oct. 4, 1918. Serial No. 256,907. Term of patent 14 years.



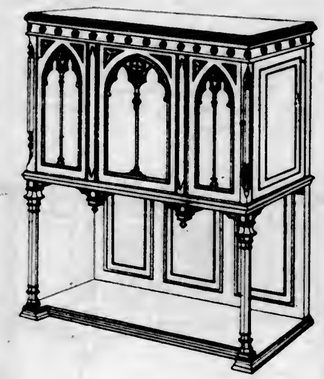
The ornamental design for a tone-arm for talking machines, substantially as shown.

56,317. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,014. Term of patent 14 years.



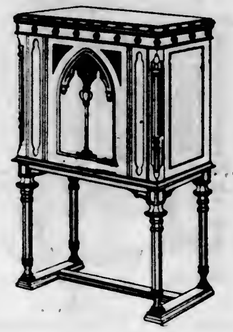
The ornamental design for a phonograph cabinet, substantially as shown.

56,318. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,015. Term of patent 14 years.



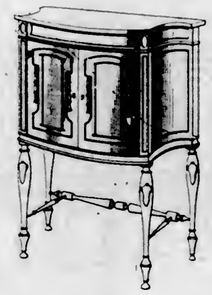
The ornamental design for a phonograph cabinet, substantially as shown.

56,319. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,016. Term of patent 14 years.



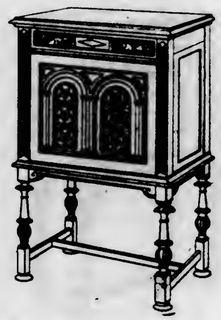
The ornamental design for a phonograph cabinet, substantially as shown.

56,320. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,017. Term of patent 14 years.



The ornamental design for a phonograph cabinet, substantially as shown.

56,321. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,018. Term of patent 14 years.

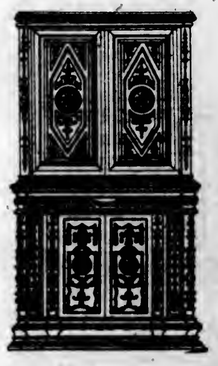


The ornamental design for a phonograph cabinet, substantially as shown.

56,322. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,019. Term of patent 14 years.

The ornamental design for a phonograph cabinet, substantially as shown.

56,323. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,020. Term of patent 14 years.



The ornamental design for a phonograph cabinet, substantially as shown.

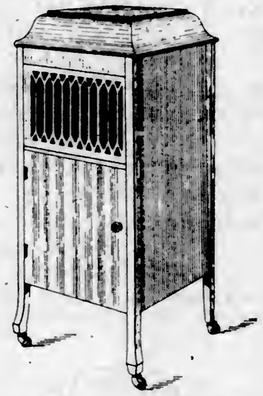
56,324. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,021. Term of patent 14 years.

The ornamental design for a phonograph cabinet, substantially as shown.

56,325. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,022. Term of patent 14 years.

The ornamental design for a phonograph cabinet, substantially as shown.

56,326. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,023. Term of patent 14 years.



The ornamental design for a phonograph cabinet, substantially as shown.

56,327. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed June 14, 1920. Serial No. 389,024. Term of patent 14 years.

The ornamental design for a phonograph cabinet, substantially as shown.

56,328. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Nov. 20, 1918. Serial No. 263,425. Term of patent 14 years.

The ornamental design for a phonograph cabinet, substantially as shown.

56,329. PHONOGRAPH - CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Nov. 20, 1918. Serial No. 263,427. Term of patent 14 years.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

HOENIG *v.* PARKER.

Decided June 2, 1920.

1. PATENTS—INTERFERENCE—REDUCTION TO PRACTICE—SIMPLE DEVICE.

A two-part insulation having means for holding the parts in assembled relationship is of such a simple nature that it needed no test to show that it would do what was claimed for it.

2. SAME—SAME—ALLEGED ABANDONMENT—BURDEN OF PROOF.

In an interference proceeding one asserting the abandonment of the invention by another party has the burden of proving it, and where the only evidence relied upon is a delay of ten months after reduction to practice in filing the application for patent the burden is not sustained where the delay is explained by evidence of financial embarrassment.

Mr. E. Hume Talbert for the appellant.

Mr. George E. Tew and *Mr. George A. Rockwell* for the appellee.

SMYTH, *C. J.:*

This was a tri-party interference involving the application of Parker, filed January 8, 1915; Kendig, filed in February, 1915; and Hoenig, filed in October, 1915. It embraces but a single count, which reads:

> A device of the character described comprising a member with a passage; a member for attachment to a support and having a fixed head, the body of said attachment member extending through said passage, said fixed head positively preventing accidental withdrawal of the first-mentioned member from one end of said attachment member; and means to positively limit, at a predetermined point, movement of the first-mentioned member toward the tip of said attachment member.

The invention relates to two-part insulators and means for holding the parts in assembled relationship. The means consist of a nail passing through perforations in the cap and base portions, and a struck-up portion on the shank of the nail for positively limiting the movement of the nail and base in one direction. The issue is directed broadly to the means for positively limiting the movement.

The idea was to provide an insulator which could be assembled at the factory, shipped to the point of use and then readily installed. The Examiner of Interferences was of opinion that to prove reduction to practice it was necessary to show commercial use of the device, involving assembling, shipment, handling, and installation. He held that Parker and Kendig were entitled to their respective filing dates for reduction to practice, and that Hoenig should be given the last of December, 1914, for his time of conception, but that not having put the device into commercial use and because of the shortness of the nail used, he had not actually reduced to practice, and since he was not diligent between the time of conception and the date of filing, he must be confined to the latter date. Parker, was, therefore, awarded priority. Kendig did not appeal. Hoenig did.

The Board of Examiners held that Hoenig was entitled to the date given him by the Examiner of Interferences for conception; also that the device was of such a simple nature that it needed no test to show that it would do what was claimed for it, and that Hoenig should be allowed December 31, 1914, for actual reduction to practice. Differing, however, from the Examiner of Interferences with respect to Parker, they ruled that he, having prepared his application December 24, 1914, and filed it with due diligence January 8, 1915, was entitled to December 24 as the date of his invention, and, hence, to priority over Hoenig. The First Assistant Commissioner, ignoring Parker's application date, ruled that he was limited to his filing date, January 8, 1915, for constructive reduction to practice; rejected the testimony on behalf of Hoenig with respect to a conception and reduction to practice in December, 1914, and held that he had failed to establish that he had disclosed the invention prior to Parker's filing date, January 8, 1915. In consequence he awarded priority to Parker.

Parker asserts that he conceived and reduced to practice in 1913. We agree with the First Assistant Commissioner that the record does not sustain him in this. He is not entitled to any date before December 24, 1914, the date accorded him by the Board of Examiners.

Hoenig claims that about the middle of November he went to Pittsburgh to pay interest on a note given to the Baird Machinery Company in part payment for a large machine that he had previously purchased. While there he had a conversation with the purchasing agent of the Iron City Electrical Company, who spoke of the salability of a two-piece porcelain knob if it was economically put together for shipping and resale. Hoenig, who had extensive experience in porcelain-die making, says that shortly after his return from Pittsburgh he conceived the device of the issue, and about November 18 or 20 commenced to make a die to be used in producing it. He completed the die near January 1, 1915. On cross-examination he exhibited a canceled check dated November 18, 1914, and payable to the Baird Machinery Company, for the purpose of supporting his statement that he had paid the company money at that time. After completing the die he assembled, he says, two knobs—the insulators are sometimes spoken of as knobs—in the manner called for by the claim of the issue. This was done, he declared, in the presence of C. C. Smith, Worthen, and Lyde. The next day he showed the assembled knobs to Hellyer, J. T. Smith, and Hetzel.

C. C. Smith fully corroborated him in important particulars. He testified that he was a porcelain-die maker of several years' experience; that he was employed by Hoenig, and commenced work on the dies about the 1st of December, 1914. Hoenig supplied him sketches from which he worked. Along near the middle of December he learned that the dies on which he was employed were for the purpose of producing the device of the issue. One of the means by which he recalled the dates was the fact that at the time he worked on the dies, he also did some work for the Louthan Supply Company. This he remembers because from the work done for that company Hoenig, who was financially embarrassed, procured the money to pay him wages which were past due and for which he had been compelled to institute suit against Hoenig before one Bennett (presumably a justice of the peace, though he calls him a notary public) some time before Christmas, 1914. He says that he saw Hoenig put a die on the press and crimp two nails on it some two weeks after work on the dies had been started by him. Having described the die which was used, he then described the fins produced by it on the nail. He said in that connection that two halves of a knob were put together with a nail through it, and after the nail had been punched it left two little fins—the struck-up parts—one on each side of the nail. He thus indicated the invention of the issue. His testimony shows conception and disclosure by Hoenig before the middle of December, 1914, and reduction to practice as early as January 1, 1915.

J. T. Smith, after describing the invention by saying that it was a nail put through two parts of a knob, with two little "wickers" pressed on the nail, declared that he first saw it in Hoenig's machine-shop the first week in January, 1915, and he fixes the time by the circumstance that Hoenig was then back in his payments for some real estate which he had purchased from Smith in 1913. Hoenig in attempting to excuse his failure to make the payments when they became due, showed Smith the knob as a thing out of which he might get the money necessary to discharge the debt.

Worthen testified that he was also an employee of Hoenig; that he had talked with him about a patent knob in which he was interested, and then he described the knob by saying that it had a nail run through it—

and flattened out on the end or near the end, after it was assembled.

He fixes the time of the conversation by a job done by him for one Hammerton, but the year in which he did it is not satisfactorily established.

The other persons referred to above as being cognizant of what Hoenig had done were not called, but there is nothing to show that they were not available to Parker if he desired them. If C. C. Smith's story that he sued Hoenig for his wages near Christmas, 1914, was not true, it was very easy for Parker to contradict it. He tied his testimony to Christmas. It is most improbable that the things related took place at Christmas, 1915, for that was after all the parties to the interference had filed. On the other hand, if they transpired at Christmas, 1913, it would place Hoenig ahead of his rivals beyond a doubt. Hoenig and his witnesses were not mistaken. They either told the truth or deliberately falsified, and there is nothing in the record which would warrant so harsh a conclusion as the latter. We agree with the Board of Examiners that the invention is a simple one and that any person by trying a specimen could determine at once whether or not it would stand the strains to which it would be subjected in actual use. The record establishes that Hoenig conceived and disclosed the invention before the middle of December, 1914; that he reduced to practice as early as January 1, 1915, and was diligent in the meantime.

It is asserted by Parker that even if Hoenig was the first to conceive and reduce to practice, he abandoned his invention. We do not think so. The burden of affirmatively proving abandonment is on him who asserts it. (*Hathaway* v. *Field*, 48 App. D. C., 370, 371; 261 O. G., 413, and cases there cited.) The only evidence upon which Parker relies in this regard is the failure of Hoenig for about ten months after reducing to practice to file his application. This failure, we think, is sufficiently explained by his financial condition already referred to.

The decision of the Patent Office is reversed and priority awarded to Harry Edward Hoenig.

Reversed.

Mr. Justice VAN ORSDEL took no part in the consideration or decision of this case.

Court of Appeals of the District of Columbia.

LAMBERT *v.* HOPE AND LAMBERT.

Decided June 2, 1920.

1. PATENTS—INTERFERENCE—BURDEN OF PROOF—INADVERTENTLY-GRANTED PATENT.

In an interference between an inadvertently-granted patent and an application filed jointly by the patentee and another prior to the filing of the application on which the patent was granted the burden of proof is heavily upon the patentee.

2. SAME—SAME—EVIDENCE OF JOINT OR SOLE INVENTORSHIP.

In an interference between Lambert, whose patent was inadvertently granted during the pendency of an application filed jointly by him and Hope, evidence considered and *Held* that it failed to sustain Lambert's contention that he was the sole inventor.

Mr. Chas. C. Stauffer for the appellant.

Mr. Hervey S. Knight for the appellee.

VAN ORSDEL, *J.*:

This appeal is from an award of priority to appellees Hope and Lambert for an invention relating to an apparatus for drying wood veneer, consisting of a rectangular housing in which the material to be dried is placed, and heated air, acting directly upon the material, is drawn through the housing by means of a radiator in one end of the housing and a fan in the other. The single count of the issue reads as follows:

A dry kiln comprising a rectangular shaped housing, a radiator located in one end of said housing forming an end way thereof and provided with opening through which air may be drawn, the opposite end of said housing closed by an end wall, and an exhaust fan connecting with the interior of said housing through said wall.

It appears that Hope and Lambert filed a joint application November 29, 1915, and thereafter Lambert filed an individual application on May 8, 1916, which inadvertently went to patent June 5, 1917, while the joint application was copending. Lambert gains nothing by the issue of the patent to him, and, being the junior party and in the position of assailing a prior application in which he joined as joint inventor, the burden is heavily upon him.

In view of the prior art, the Commissioner expresses doubt as to the disclosure of a patentable invention, but by reason of the issuance of the patent to Lambert sustains the interference on the authority of *in re Orcutt*, (32 App. D. C., 345.) On this point the Commissioner said:

The small advance over the prior art in accordance with this decision shall be assumed for the purpose of this controversy to be patentable, but the very small advance should be kept in mind in reading the testimony, for example, Lambert criticizes Hope because he (Hope) does not state specifically the feature or features he contributed or suggested to the joint invention of Hope and Lambert. In view of these references (patent to Zappert of May 19, 1896, and patent to Soverhill of October 10, 1893) it is questioned if Lambert can specifically state what novel features he has added to the prior art and as he is entitled to claim only what is novel as his invention, his testimony as to what he invented must be weighed in the light of the prior art.

The testimony has taken a wide range, but considering only that material to the very narrow advancement over the prior art, we find no basis upon which the contention of Lambert can be sustained. He totally fails in his attempt to carry reduction to practice back to an earlier structure of 1894. In his effort to eliminate Hope from inventive cooperation in the present 1915 structure, he stands alone; while Hope is corroborated directly by his father and indirectly by Brown, the attorney, who prepared the joint application.

Without stopping to review the somewhat voluminous testimony, we fully agree with the conclusion of the Commissioner that—

Lambert joined Hope in executing the joint oath that they were joint inventors. As against Lambert's statement that this oath was fraudulently obtained, the two Hopes and Brown, the latter Lambert's own witness, deny this. The joint oath was not repudiated until Hope and Lambert quarreled, when Lambert filed his sole application. There is not a word of testimony to show that Lambert instead of Hope and Lambert invented anything novel over the prior art.

The decision of the Commissioner of Patents is affirmed, and the clerk is directed to certify these proceedings as by law required.

Affirmed.

Court of Appeals of the District of Columbia.

THE PROCTER AND GAMBLE COMPANY *v.* ENEY SHORTENING COMPANY.

Decided June 2, 1920.

1. TRADE-MARKS—SIMILARITY—"ESCO" AND "CRISCO."

The mark "Esco" is so similar to "Crisco" as to be likely to cause confusion when used on substantially identical goods.

2. SAME—SAME—ORIGIN HAS NO BEARING ON QUESTION OF IDENTITY.

That a mark is made up of the initials of the corporation applying for registration with the termination "Co." has no bearing on the question of its identity with another mark.

Mr. Paul Finckel for the appellant.

Mr. E. T. Fenwick for the appellee.

SMYTH, *C. J.*:

From a decision of the Patent Office overruling the opposition of The Procter and Gamble Company to the application of Eney Shortening Company for the registration of the sign "Esco" as a trade-mark for a lard substitute, the former appeals.

The opposer shows that it is the owner of the sign "Crisco" as a trade-mark for a lard substitute, and alleges that as its goods are of the same descriptive qualities as the goods of the applicant, the marks being similar, confusion would be likely to result in the minds of the public with respect to the origin of the goods upon which the marks appeared, and that, in consequence, the opposer would be damaged thereby, (33 Stat. L., 725, chap. 592, secs. 5 and 6.) The Examiner of Interferences sustained the opposer, but he was reversed by the First Assistant Commissioner, who held that no likelihood of confusion had been shown.

It is conceded that the goods are substantially identical. The only question, then, is as to whether or not the two marks are so similar as to be likely to produce confusion in the minds of purchasers with respect to the origin of the goods upon which they are used. As no testimony was taken we must determine it by an inspection of the marks themselves. What constitutes objectionable similarity in marks has been so often considered by this court (*Wayne County Preserving Co.* v. *Burt Olney Canning Co.*, 32 App. D. C., 279; *Phoenix Paint & Varnish Co.* v. *John T. Lewis & Bros. Co.*, *Id.*, 285; *Kaut-Reith Shoe Co.* v. *International Shoe Co.*, 45

App. D. C., 545; *Thomas Manufacturing Co.* v. *Aeolian Co.*, 47 App. D. C., 376; *William Waltke & Co.* v. *George H. Schafer & Co.*, 263 Fed., 650) that we do not deem it necessary to enter upon a discussion of it here. For the reasons given in those decisions we hold that the use of the marks before us upon the goods to which they are applied in this case would be likely to produce confusion. Even if we doubted it, we would still rule in favor of the opposition on the authority of *William Waltke & Co.* v. *George H. Schafer & Co.*, *supra*, and *Lambert Pharmacal Co.* v. *Mentho-Listine Chem. Co.*, (47 App. D. C., 197).

The applicant says that its mark is made up "of the initials of the corporation with the termination Co.; Eney Shortening Co., Esco," and seems to think that there is something in that which should entitle it to have the mark registered, but we perceive no force in the suggestion. The trade-mark statute takes no account of the origin of a mark. The question is, Would its use be likely to result in confusion? If so, it is unregistrable. As was said by the Examiner of Interferences, the—

consuming public know little and care less about the origin of any mark and very seldom if ever take it into consideration.

The statute does not contemplate that the public should do so. It follows that the decision of the Patent Office must be reversed and the opposition sustained.

Reversed.

Changes in Classification.

(ORDER No. 2,602.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 31, 1920.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 254, Pushing and Pulling Implements, (Division IV,) establish the following subclass and definition:

28.5. **Thill-coupling jacks.**

28.5. THILL-COUPLING JACKS. Devices for forcing thill-irons into axle-clips against resilient antirattling devices or for forcing antirattlers into their positions in thill-couplings.

The patents contained in this subclass have been taken for the most part from class 21, Carriages and Wagons, subclass 107, Thill-couplings, Jacks, hereinafter abolished.

Abolish class 21, Carriages and Wagons, (Division X,) the subclasses remaining therein, viz:

76. **Draft-equalizers,**
27. **Holdbacks,**
75. **Horse-detachers,**
189. **Miscellaneous draft appliances,**
77. **Neck-yokes,**
92. **Pole-tips,**
36. **Poles and shafts—**
91. Convertible,
Sleds—
95. Shifting thills,
57. **Thill-couplings—**
106. Antirattlers,
107. Jacks,
108. **Thill-supports,**
63. **Tongue-supports,**
79. **Whiffletree-hooks,**
78. **Whiffletrees,**

having been placed for the most part in class 278, Land-Vehicles—Apimal Draft Appliances, which is hereby established in Division X, with the following subclasses and definitions:

278.—LAND - VEHICLES — ANIMAL DRAFT APPLIANCES.

1. **Miscellaneous.**
2. **Load-starters.**
Draft-equalizers—
3. Horses longitudinally alined—
4. Two abreast.
5. Horses abreast—
6. Five-horse type—
7. With pole or poles,
8. Four-horse type—
9. With pole or poles—
10. Offset pole—
11. Three-against-one pull,
12. Two - against - two pull—
13. Lateral evener connection,
14. Three-horse type—
15. With pole or poles—
16. With intermediate evener—
17. Offset,
18. Two-horse type—
19. Leverage adjustment—
20. Automatic.
21. **Horse-detachers—**
22. Automatic,
23. Combined brake,
24. Traces from swingletree—
25. Trace positively moved,
26. Movable trace-eye-engaging element—
27. Pivoted,
28. Sliding pin or rod,
29. Thills or poles from vehicle—
30. Retracting axle-clip bolts,
31. Doubletree from pole,
32. Swingletree from thill or evener.
33. **Poles and thills—**
34. Plural,
35. Special-purpose attachments,
36. Poles—
37. Agricultural-implement type,
38. The pole-body,
39. Selective positioned,
40. Slip-tongue,
41. Axle-attached—
42. Width adjustment,

278.—LAND - VEHICLES — ANIMAL DRAFT APPLIANCES—Ctd.

Poles and thills—
Poles—
43. Axle-hounds attached,
44. Thills—
45. Two-wheeled vehicles,
46. Offset draft—
47. Selective direct,
48. Sectional,
49. Joints and braces,
50. Tips—
51. Safety neck-yoke retainers.
52. **Thill-couplings—**
53. Resilient,
54. Safety attachments,
55. Plural,
56. Special-position release—
57. L-head type,
58. T-head type,
59. D-head type,
60. Removable transverse pin or bolt—
61. Antirattling—
62. With special pin-retainers,
63. Resilient—
64. Adjustable,
65. Special pin-retainers,
66. Opposed lug engaging or carrying jaws,
67. L-head type,
68. T-head type—
69. Coöperating hooks—
70. Retainers—
71. Spring,
72. D-head-type—
73. Coöperating hook—
74. Retainers—
75. Pivoted,
76. Spring,
77. Plural-part eye—
78. Pivoted jaws—
79. Grapple type,
80. Ball and socket.
81. **Thill-supports—**
82. Plural position,
83. Spring-latches,
84. Spring,
85. Separate props.
86. **Pole-supports—**
87. Ground-engaging props,

278.—LAND - VEHICLES — ANIMAL DRAFT APPLIANCES—Ctd.

Pole supports—
88. Spring—
89. Coil.
90. **Whiffletrees—**
91. Resilient,
92. Metallic—
93. Trussed,
94. Trussed,
95. Connections—
96. Link,
97. Resilient—
98. To pole or thills,
99. To pole or thills—
100. Pivot-bolt—
101. Offset pivot,
102. Trace and whiffletree connections—
103. Resilient,
104. Clamp,
105. Trace-eye-engaging head or end—
106. Loop-retainers,
107. Hook-retainers,
108. Spring-detent retainers,
109. Pivoted button or lug retainers,
110. Rotatable-button retainers,
111. Hooks—
112. Trace-retaining—
113. Movable keeper—
114. Snap-hook type,
115. Special-position release—
116. Opposed lapping hooks,
117. Whiffletree-fastenings.
118. **Trace and thill or pole connections.**
119. **Neck-yokes—**
120. End construction,
121. Pole-couplings—
122. Modified pole and yoke (center)—
123. Permanently attached,
124. With safety devices,
125. Leather eye or ring.
126. **Holdbacks—**
127. Harness attached—
128. Breech-strap—
129. Adjustable,
130. Automatic release.

M. H. COULSTON, *Acting Commissioner.*

Patents Nos. 1,353,135 to 1,353,815.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 278—No. 3. TUESDAY, SEPTEMBER 21, 1920. Price—$5 per year.

[PUBLISHED SEPTEMBER 22, 1920.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 30, 1920.

Pyro Paint Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of George F. Johnston, of Fort Dodge, Iowa, for registration of a trade-mark and trade-mark registered May 16, 1899, No. 32,902, to Pyro Paint Company, of 37–39 Commercial Place, Norfolk, Va., and a notice of such declaration sent by registered mail to said Pyro Paint Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Pyro Paint Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULTSON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 13, 1920.

William A. Green, his assigns or legal representative, take notice:

An interference having been declared by this Office between the application of Herbert B. Lederer Co., of 91 Fifth avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered May 21, 1912, No. 86,586, to William A. Greer, of 315 Pennington avenue, Passaic, N. J., and a notice of such declaration sent by registered mail to said William A. Greer at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said William A. Greer, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULTSON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 15, 1920.

Gillespie-Benedict Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Barrett Company, of 17 Battery Place, New York, N. Y., for registration of a trade-mark and trade-marks registered June 4, 1907, Nos. 62,955 and 62,956, respectively, to Gillespie-Benedict Company, of Old Colony Building, Chicago, Ill., and a notice of such declaration sent by registered mail to said Gillespie-Benedict Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Gillespie-Benedict Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULTSON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 15, 1920.

Ben Strauss Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the China, Japan & South America Trading Co., Ltd., of 80 Maiden Lane, New York, N. Y., and the application of J. A. Migel, Inc., of 422 Fourth avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered April 26, 1910, No. 77,614, to the Ben Strauss Company, 31 Union Square, New York, N. Y., and a notice of such declaration sent by registered mail to said Ben Strauss Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ben Strauss Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,286,617.

On July 30, 1920, a decision was rendered that Charles C. Hebbard was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, and 8 of his Patent No. 1,286,617, subject, "Head-motion for ore-concentrators," and no appeal having been taken within the time allowed such decision has become final.

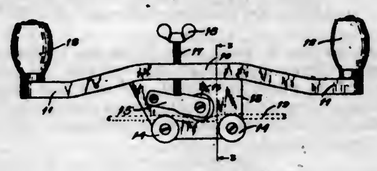
PATENT No. 1,307,780.

On August 16, 1920, a decision was rendered that Charles M. Kendall was not the first inventor of the subject-matter covered by claim 1 of his Patent No. 1,307,780, subject, "Manifold-heaters," and no appeal having been taken within the time allowed such decision has become final.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business September 11, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Mar. 1	Mar. 22	616
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Jan. 2	Feb. 27	1,035
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Feb. 17	Apr. 16	184
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Nov. 17	June 1	1,611
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Apr. 24	May 15	488
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Apr. 3	July 12	523
312	7. Games and Toys; Optics; Photography; Velocipedes	May 10	June 5	889
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	June 14	July 19	457
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Mar. 1	Feb. 14	594
235	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 24	June 17	1,072
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Aug. 7	Apr. 15	440
222	12. Machine Elements	Jan. 12	June 10	1,138
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Dec. 15	June 26	1,202
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 12	July 19	730
308	15. Bread, Pastry, and Confection Making; Coating; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Nov. 19	Apr. 23	1,319
111	16. Radiant Energy; Telegraphy; Telephony	Jan. 14	Mar. 1	918
307	17. Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	June 18	July 10	201
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Feb. 9	Apr. 5	1,277
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Jan. 2	Mar. 15	633
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	June 1	June 4	793
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 29	June 18	526
249	22. Aeronautics; Firearms; Ordnance	Jan. 12	June 29	309
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Jan. 21	June 12	751
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Mar. 3	June 4	576
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Jan. 26	July 30	213
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Jan. 30	Feb. 18	801
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	June 5	May 29	591
225	28. Internal-Combustion Engines	Feb. 16	May 21	779
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Mar. 10	June 9	667
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 31	Aug. 9	1,114
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Dec. 11	Mar. 5	1,408
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Jan. 6	June 3	1,168
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Apr. 15	Apr. 29	458
301	34. Electricity-Transmission to Vehicles; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Track-Sanders; Vehicle-Fenders.	July 24	July 7	232
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	July 16	July 31	351
201	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Apr. 5	Apr. 21	1,216
107	37. Electric Lamps; Electricity, Circuit Makers and Breakers; Electricity, General Applications	Mar. 16	Mar. 26	1,289
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Apr. 21	May 3	876
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Nov. 5	Jan. 2	1,329
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 5	Mar. 25	1,156
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Feb. 21	June 12	864
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Mar. 1	June 27	1,216
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Dec. 16	Mar. 16	1,100
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Apr. 26	Aug. 6	350
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors	Mar. 22	Apr. 2	1,083
264	46. Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 30	Apr. 1	663
332	47. Brakes; Clutches; Fluid Pressure Brake and Analogous Systems	Jan. 8	Nov. 25	980



Oldest new case, Nov. 5; oldest amended, Nov. 25.
Total number of applications awaiting action..... 38,186

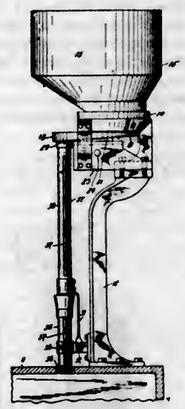
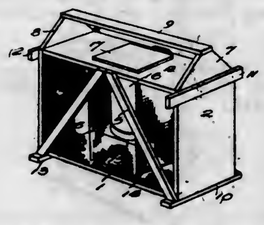
PATENTS



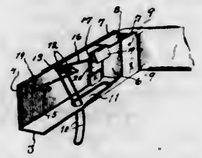
GRANTED SEPTEMBER 21, 1920.

1,353,135. MUSICAL-INSTRUMENT-STRING RETONER. LAWRENCE L. ALNUTT, Chattanooga, Tenn. Filed Dec. 28, 1918. Serial No. 268,626. 1 Claim. (Cl. 29—81.)



A retoning tool for piano wires and the like, the same comprising a horizontal bar having upstanding handles at its ends, a plate depending from the bar, a pair of spaced rollers mounted on pins projecting laterally from said plate, a single roller mounted in a support movably connected with said plate, and means for setting the support to move its roller more or less into the space between the other rollers.

1,353,136. FEEDING ATTACHMENT FOR CROWN-CORK-MAKING MACHINES. EMILIO ALBERTI, New York, N. Y., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 17, 1918. Serial No. 250,378. 2 Claims. (Cl. 113—113.)

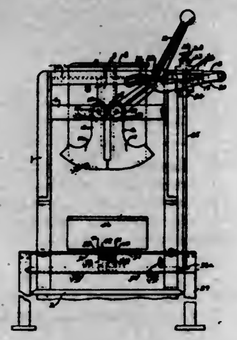


1. In a device for stacking disks, the combination with a receptacle having a discharge opening, of a downwardly extending tube connected to the said receptacle and into which the latter is adapted to discharge through said opening, a stationary element below said receptacle, the lower end of said tube being in swinging engagement with said stationary element, means for shaking the said receptacle and the tube connected therewith, a hopper arranged above said receptacle and delivering the disks into the latter, and a member carried by said hopper projecting into and across said receptacle, the lower edge of said member being disposed a substantial distance above the bottom of said receptacle, whereby the latter is divided into two communicating compartments, one of which is provided with said discharge opening and the other one receives the disks from said hopper.

1,353,137. BEE-CAGE. EUGENE B. AULT, Calallen, Tex. Filed Mar. 19, 1918. Serial No. 223,344. 1 Claim. (Cl. 6—9.)

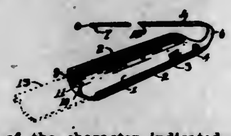
A portable shipping bee cage construction, comprising a frame having top and bottom, vertical end pieces connecting said top and bottom, wire mesh sides, bee clustering means within the frame, means for feeding bees and disposed relative to the clustering means and suspended from the top, and projecting portions on the frame constructed and arranged to extend beyond the top to prevent the frame from being placed in inverted position or receiving any article upon its top.

1,353,138. TOY GUN. ROBERT BAISCH and OSCAR KREUTZ, Detroit, Mich. Filed Nov. 3, 1919. Serial No. 335,401. 6 Claims. (Cl. 46—46.)



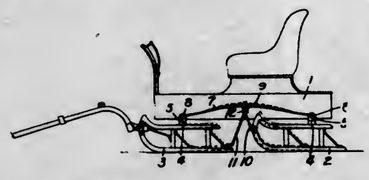
1. In a toy gun, a sounding diaphragm, a trigger having a spring return arm and a spring hammer arm, a hammer carried by the latter arm and yieldingly gripping means for engaging the hammer as the trigger reaches the limit of its pull and suddenly releasing the hammer whereby the spring hammer arm snaps the hammer against the diaphragm.

1,353,139. WEIGHING-MACHINE. RALPH R. BENNETT, San Jose, Calif. Filed July 30, 1919. Serial No. 314,340. 13 Claims. (Cl. 249—18.)



1. A weighing machine comprising, in combination with a scale, a hopper mounted on said scale, opposed coacting jaws forming the bottom of said hopper when closed, means for operating said jaws, a conveyer operatively

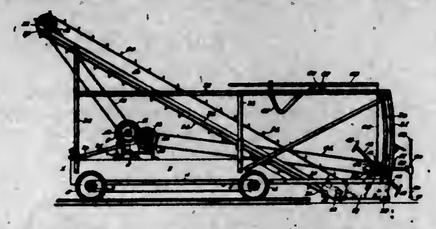
mounted over said scale and beneath said hopper, means for holding a receptacle in an operative position on said



conveyer beneath said hopper, and means actuated by the closing of said jaws for removing said holding means.

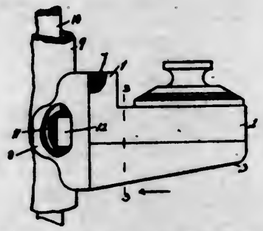
1,353,140. LACE-TIP. FRANK J. BENS, San Jose, Calif. Filed May 21, 1920. Serial No. 383,304. 2 Claims. (Cl. 24—148.)

1. A device of the character indicated comprising an oblong body member bendable inwardly from both sides thereof, having a pointed prong punched upwardly adjacent one end thereof and directed toward said end and said end tapering to form a narrow extension for said member, said extension being bendable backwardly over said body member to engage a lace end placed therein and said body member being so proportioned as to overlap and engage said extension when bent inwardly thereover.



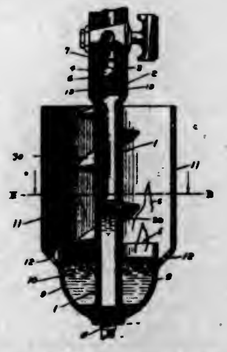
1,353,141. SLEIGH. LINDOR BERGERON, Macamic, Quebec, Canada. Filed Feb. 24, 1920. Serial No. 360,989. 3 Claims. (Cl. 280—15.)

3. In combination with the front and rear runners of a sleigh pivotally mounted on axles; two resilient members secured, in longitudinal arrangement in relation to said runners, to said axles; a downward depending lug secured intermediate of each of said resilient members; and connecting members pivotally secured to the fore ends of said rear runners and rigidly secured to the rear ends of said front runners, said connecting members being pivotally secured intermediate thereof to said lugs, substantially as described.



1,353,142. SHOVELING-MACHINE. MICHAEL M. BOHER, Casper, Wyo. Filed July 14, 1919. Serial No. 310,632. 9 Claims. (Cl. 193—8.)

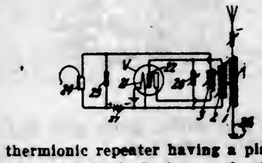
1. In a shoveling machine of the character described, the combination with a truck having a motor thereon, of an inclined frame supported on said truck, an endless conveyer mounted on said inclined frame and operated by said motor, upright frames adjacent the forward end of the conveyer, a rotatable shoveling device slidably mounted in the upright frames, and operated by the motor, for delivering material to the conveyer, rotatable means on each side of the shoveling means for supplying material to the said shoveling means and operated thereby, said latter



means turning in paths at right angles to that of the shoveling means, and being connected with the shoveling means to be raised or lowered therewith, and means for raising or lowering the same and a pawl and ratchet mechanism connected operated by the motor, for moving the truck forward.

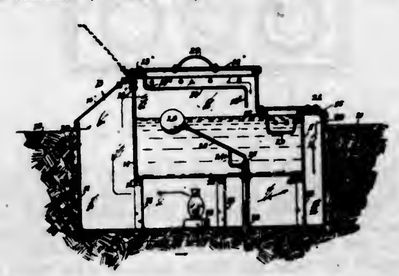
1,353,143. AUTOMOBILE-LOCK. FLETCHER O. BOSWELL, Philadelphia, Pa., assignor to F. O. B. Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 14, 1919. Serial No. 304,116. 3 Claims. (Cl. 70—90.)

2. In combination with the casing of the steering post of an automobile, an attaching member formed with said casing, and having a passage therethrough for the passage of the bolt of the lock, a threaded hub formed upon the attaching member, a two part lock casing said parts being dove tailed together and having a threaded recess therein for engagement with the threaded hub.



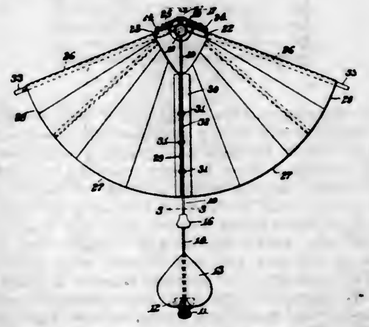
1,353,144. PRIMER FOR ENGINES. WALTER W. BROWN, Chico, Calif. Filed Jan. 29, 1919. Serial No. 273,900. 5 Claims. (Cl. 123—187.5.)

1. A primer for internal combustion engines comprising a tube closed at one end and provided at the opposite end with means for removable engagement with a valve or pipe connection; a bowl surrounding the said closed end



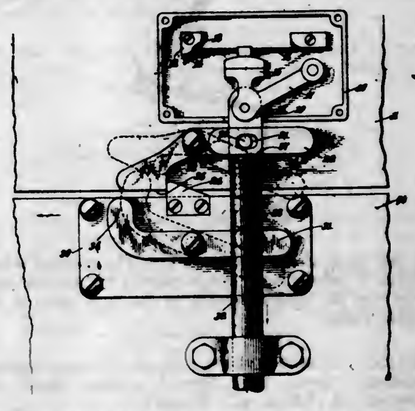
of said tube; both tube and bowl adapted to contain liquid fuel.

1,353,145. DEVICE FOR VARYING ELECTRICAL COUPLING. LEWIS M. CLEMENT, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1918. Serial No. 240,968. 19 Claims. (Cl. 179—171.)



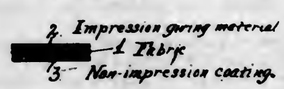
16. A thermionic repeater having a plate circuit and a grid circuit, a coil individual to each of said circuits, a signaling circuit, a coil individual to said signaling circuit, said grid and plate circuit coils being coupled, said signaling circuit and grid circuit coils being coupled, and means for varying the coupling between each of said pairs of coils while automatically maintaining the coupling between the other pair constant.

1,353,146. STOCK-WATERER. FAY A. CLEMONS, Clemons, Iowa. Filed July 8, 1919. Serial No. 309,398. 5 Claims. (Cl. 119—73.)



1. A stock waterer comprising a casing, a tank supported in the casing and adapted to be spaced from the walls of the casing for providing air spaces around the tank, a removable cover for said casing and tank having a false cover member spaced from the main body of the cover member, and terminating short of its forward edge, said tank having near its upper edges openings and said cover member having corresponding openings for permitting the circulation of air between the false cover and the main body of the cover.

1,353,147. TOY AEROPLANE. ATHERTON D. CONVERSE, Winchendon, Mass. Filed Dec. 9, 1919. Serial No. 343,595. 15 Claims. (Cl. 244—12.)

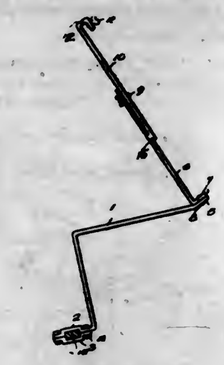


1. In a device of the class described, the combination of a metal rod having its forward end bent downwardly to form a hook; an expanding fan-shaped member secured to said rod and adapted to be folded against said rod; means whereby said fan-shaped member may be retained in folded position when about to be projected; and means for expanding said fan-shaped member when projected.

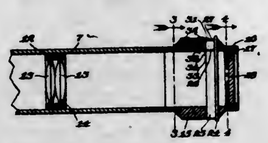
1,353,148. ELEVATOR SAFETY-CONTACT. JOHN MAXWELL COOTE, Elisabeth, N. J. Filed Dec. 24, 1918. Serial No. 268,190. 4 Claims. (Cl. 200—54.)

2. In a safety appliance for electrically controlled elevators and the like: a gate, a catch carried by the gate, a contact-making member, a hand rod for releasing the elevator gate, a pivoted latch member, one arm of same being designed to engage the said catch and the other arm connected with said contact-making member, a disengaging lever pivotally carried by the gate, adapted to engage with said latch member to free the latch from the catch, and having an arm engaged by a pin projecting from said hand rod whereby when the same is drawn in one direction, the disengaging lever is actuated, said rod being adapted to engage the contact operating arm of the latch member in the other direction of its movement to restore the locking engagement and to effect a closure of the contact by the contact-making member.

1,353,149. MANIFOLDING MEDIUM. MALCOLM L. COSSITT, Oakland, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed July 15, 1919. Serial No. 311,060. 1 Claim. (Cl. 91—68.)



As a new article of manufacture a manifolding medium comprising a foundation having on one side means for transferring visible impressions under pressure, and having on its other side a coating consisting of an aqueous solution of gelatin and an alkali silicate.

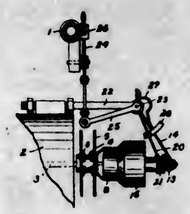


1,353,150. TYPEWRITER ATTACHMENT. FREDA L. DEDEN, Fort Smith, Ark. Filed May 13, 1918. Serial No. 234,163. 1 Claim. (Cl. 120—28.)

The combination with supporting brackets adapted to be secured to one of the supporting bars of a typewriter and having horizontal portions terminating with upturned angular free ends of a copy holder comprising stationary strips having lower right angular end portions secured to the angular ends of the bracket, the angular portions and ends constituting seats in the holder for an article when engaged therein, slotted strips, slid-

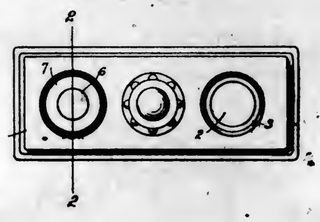
able upon the stationary strips and having upper hook ends to clamp an article in the holder upon the seats, fasteners passed through the slots in the slidable strips, and ears on the lower ends of said slidable strips and engaging the edges of the stationary strips to prevent lateral shifting of said slidable strips relative to the stationary strips and set screws engaged in the hook ends on the slidable strips.

1,353,151. RANGE-FINDER. EDWIN WILLARD DEMING, Redding, Conn. Filed Nov. 21, 1918. Serial No. 263,483. 4 Claims. (Cl. 33—64.)



1. The combination of a telescopic tube provided with an eye end and with an object end, mechanism controllable at the will of the operator for varying the cross diameter of the opening at said object end, indicating means connected with this mechanism and disposed exteriorly of said tubular member for facilitating readings when there is a good light, and other indicating means located inside of said tube and illuminated for the purpose of facilitating readings in the darkness within the tube.

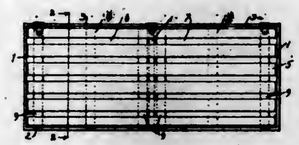
1,353,152. PRODUCTION OF MOLDED ARTICLES. WILLIAM W. DINWIDDIE, West Orange, N. J. Filed Aug. 22, 1917. Serial No. 187,579. 10 Claims. (Cl. 18—47.)



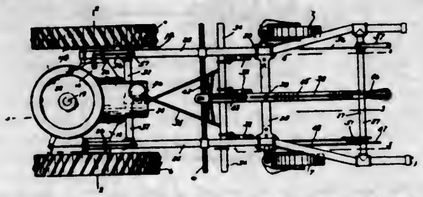
1. The process of producing molded articles which consists in applying chlorid of tin to a mold, then placing the material to be molded in the mold in direct contact with the chlorid of tin and molding the same, and removing the molded article from the mold, substantially as described.

1,353,153. MEANS TO CHANGE THE SPEED OF DRIVING-PULLEYS. WILFRID DORION, Charlesbourg, Quebec, Canada. Filed Jan. 16, 1919. Serial No. 271,420. 1 Claim. (Cl. 64—8.)

A device of the character described, comprising a driving pulley mounted on a driving shaft, said pulley having a plurality of slots therethrough, a medium pulley having a plurality of projections adapted to register with the slots in said driving pulley, said medium pulley being loosely mounted and slidable on said shaft adjacent said driving pulley, a large pulley loosely mounted and slidable on said shaft adjacent said medium pulley, said large pulley having a plurality of projections adapted to register with the slots in said driving pulley, a hand lever, rods connecting said medium and large pulleys to said lever, and means to cause said medium and large pulleys to saddle said driving pulley when said lever is operated substantially as described.

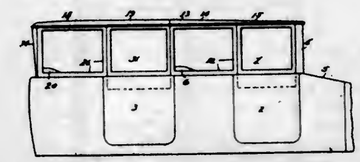


1,353,154. BATTERY-PLATE SUPPORT. EDWARD M. DUFFEY, Kansas City, Mo. Filed Apr. 12, 1920. Serial No. 373,379. 3 Claims. (Cl. 204—29.)



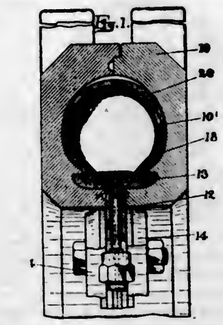
2. In a battery plate support of the type having a battery jar cover having a hole therethrough and a conical recess concentric with said hole, and having a plate supporting member having a screw-threaded portion extending through said hole and recess, and having a shoulder bearing against the under side of the cover, of a nut fitted on said threaded portion and having a conical periphery fitted in said recess and provided with a shoulder which bears against the top of said cover, substantially as set forth.

1,353,155. SHIPPING-PACKAGE. ORRIN O. EATON, Watsonville, Calif. Filed Sept. 29, 1919. Serial No. 327,182. 2 Claims. (Cl. 217—40.)



1. A shipping package comprising a chest divided into two compartments having substantially closed end and top and bottom members and having a ventilated back and a ventilated door hingedly mounted to close the front thereof, spacing means mounted in each compartment on the inner surfaces of said back and door, and a stack of trays fitting sidewise into each compartment and the full length thereof and engaging the spacing means on the back and door thereof, each tray having upwardly extending end members adapted to slidably engage the bottom of the tray superimposed thereon or the top of said chest, and having narrow side members whereby air may circulate freely around the top, bottom and both sides of each tray.

1,353,156. GARDEN-TRACTOR. PAUL B. FOAD, Minneapolis, Minn., assignor to Market Garden Tractor Co., Minneapolis, Minn., a Corporation. Filed Apr. 18, 1919. Serial No. 291,029. 7 Claims. (Cl. 180—54.)



1. In a tractor, the combination with a driving axle equipped with a worm gear, of a propelling engine for said tractor provided on its extended crank shaft with a worm that runs in direct mesh with said worm gear on said axle, the said crank shaft being vertically disposed in front of said worm gear and provided at its upper end with a fly wheel, the weight of which resists the upward thrust on said crank shaft in the forward driving action.

1,353,157. CONVERTIBLE VEHICLE-BODY. RUSSELL M. FREEMAN, Detroit, Mich. Filed Nov. 12, 1917. Serial No. 201,706. 9 Claims. (Cl. 296—45.)

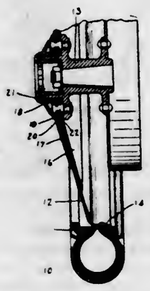
1. In combination with a vehicle body, a seat pivotally supported in spaced relation to the bottom and sides of said body, a top section pivotally mounted on said seat to swing in the space about said seat, and a deck extension hingedly connected to said top section to fold thereon.

1,353,158. TIRE-MANDREL AND METHOD OF PRODUCING THE SAME. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1916. Serial No. 130,161. 6 Claims. (Cl. 18—45.)

1. A fluid-tight, hollow, stretchable, metallic mandrel.

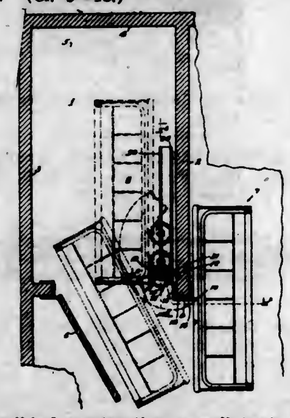
1,353,159. ANCHOR-BOLT. FRED HAMMERMANN, New York, N. Y. Filed Mar. 16, 1920. Serial No. 366,253. 2 Claims. (Cl. 85—3.)

1. An anchor bolt comprising a bar slotted at its inner end diagonally, a rhomboidal anchor plate pivoted between the forks formed by the slot, a threaded sleeve in which said bar is slidable, means in said sleeve, by which it may be rotated, a beveled edge on the inner end of said sleeve contactable with one of the ends of said anchor plate and by which it may be rotated upon its pivot, and means for drawing said bar outwardly with respect to said sleeve.



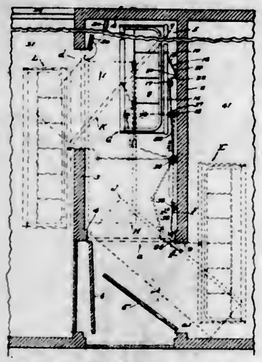
1,353,160. ROTARY SAFETY-RAZOR. ANDREW C. HANSON, Racine, Wis. Filed Nov. 12, 1919. Serial No. 337,514. 6 Claims. (Cl. 30—12.)

5. A razor comprising a handle, a revoluble tubular open ended member mounted thereon, means for revolving said member, a cutting blade carried by said revoluble member and having its cutting edge disposed adjacent an opening in the side wall of said member, a bodily removable clean-out member disposed within the revoluble member, a sleeve member engageable over the revoluble member and having an opening in line with the opening of said revoluble member, and a cover casing inclosing said members and having an opening therein for registration with the alined openings of said members, said cover casing being substantially rigid with the handle.



6. A razor comprising a handle, a revoluble tubular member having its inner end closed and its outer end open, a drive shaft projected from said closed end and journaled in the handle, means engageable with said shaft to revolve it and said tubular member, a cutting blade carried by said tubular member and having its cutting edge disposed adjacent an elongated opening in the side wall of said member, a guard casing inclosing the revoluble member and having an elongated opening therein for intermittent registration with the opening of said revoluble member, said casing being rigid with the handle, and a spool member removably positioned in said revoluble member with its ends outwardly of the ends of the elongated opening in said member, whereby the removal of the spool member will clean out the lather in said tubular member.

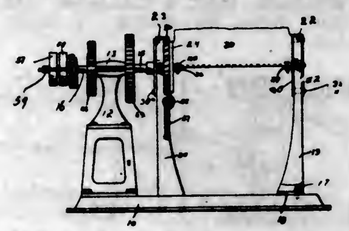
1,353,161. DISK WHEEL. ROSCOE C. HOFFMAN, Argos, Ind. Filed Aug. 30, 1919. Serial No. 320,773. 8 Claims. (Cl. 301—63.)



1. A disk type wheel for vehicles including a hub, a supporting disk secured on said hub composed of a single sheet of metal, a tire rim secured to the periphery of said disk, and yielding bracing means freely mounted adjacent each side of said disk for resiliently bracing said disk against any stress or strain.

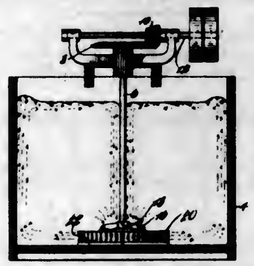
1,353,162. VERTICALLY-PIVOTED WALL-BED. WILLARD C. JAMES, Los Angeles, Calif., assignor to Frank L. Belknap, Chicago, Ill. Filed Oct. 13, 1913, Serial No. 795,029. Renewed Feb. 20, 1920. Serial No. 360,070. 9 Claims. (Cl. 5—18.)

1. In a wall-bed construction, a wall having sleeping space in front and storage space behind, upper and lower tracks rigidly mounted in the storage space parallel with and near to said wall, a post vertically between and adapted to be moved along the tracks and adapted to rotate, pinions fixed upon the ends of the post, gear tracks rigidly mounted in position to be engaged by the pinions, and an up-endable bedstead connected to the post so as to swing around the edge of the wall into the sleeping space, and so that when the bedstead is swung into the storage space it may be moved laterally beyond the edge of the wall.



1,353,163. SCREENED BED HAVING VERTICAL PIVOTS. WILLARD C. JAMES, Los Angeles, Calif., assignor to Frank L. Belknap, Chicago, Ill. Filed Nov. 20, 1913, Serial No. 802,169. Renewed Feb. 20, 1920. Serial No. 360,071. 13 Claims. (Cl. 5—18.)

3. The combination with the front and rear walls of a storage chamber, of a bedstead, and a carrier device pivotally supported within the storage chamber and designed to swing the bedstead from the outer face of one of said walls to the outer face of the other wall.



1,353,164. MACHINE FOR BURNING IN AND BURNISHING ENGINE-BEARINGS. THEODORE W. JANSEN, Des Moines, Iowa. Filed Oct. 22, 1918. Serial No. 259,264. 7 Claims. (Cl. 29—1.)

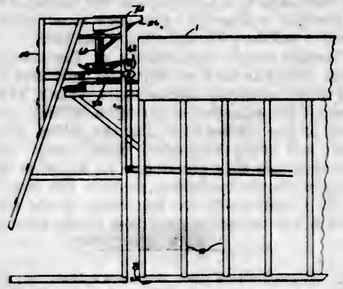
1. In a device of the class described, a frame, a shaft mounted on said frame, means for mounting an engine block adjacent to one end of said shaft, means for operatively connecting said shaft with the shaft in the engine block, and means including a yoke and a removable

bolt for fastening the other end of said shaft to the hand crank of an automobile.

1,353,165. MIXER. JOHN JOHNSON, Brooklyn, N. Y. Continuation of application Serial No. 102,110, filed June 7, 1916. Renewed Feb. 21, 1919. Serial No. 278,509. This application filed Feb. 21, 1919. Serial No. 278,467. 7 Claims. (Cl. 259—96.)

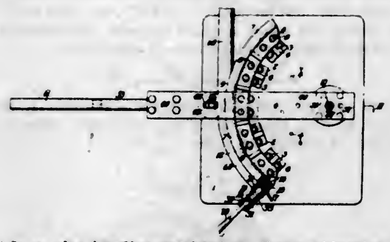
1. A rotary mixer comprising a rotary body having a central opening, means for establishing a centrifugal flow of material entering said opening, and means interposed in the stream to said opening action to impose upon said stream, as it enters said opening, a centripetal tendency.

1,353,166. RAPID DISSOLVER. JOHN JOHNSON, Brooklyn, N. Y. Filed Feb. 21, 1919. Serial No. 278,469. 18 Claims. (Cl. 259—96.)



1. In an apparatus for dissolving solids, the combination with a container having partitions in the bottom thereof forming pockets or sluiceways wherein the material to be dissolved is deposited and means for directing a dissolving fluid along said sluiceways.

1,353,167. DEHYDRATOR. WILLIAM M. LUTHER, Walla Walla, Wash. Filed Sept. 26, 1919. Serial No. 326,613. 11 Claims. (Cl. 34—12.)



6. In a dehydrator, the combination of a case, a controllable condenser attached to said case, a multiplicity of heating coils consisting of a series of L shaped pipes, with each series terminating at each end thereof in a header, one of said headers being the inlet header and the other one of said headers being the outlet header, the said inlet header being placed transversely of said dehydrator, and at one end thereof, and the said outlet header being placed longitudinally of said dehydrator, and at the other

end thereof, the said inlet headers terminating in a manifold, a supply pipe connected with said manifold, a reduction valve interposed in said supply pipe before the manifold, a multiplicity of conveyers, means whereby said conveyers are carried to travel horizontally and with a wave like motion, each conveyer supported by a drive shaft at one end and an idle shaft at the other end, sprocket wheels carried by said shafts to mesh with said conveyers, a centrally located drum on each of said shafts, a tightening means attached to each of said idler shafts and operable from the outside of said case, each drive shaft carrying spur gears, and each spur gear meshing with the adjacent spur gear, to drive said conveyers in an alternately opposite direction, the upper of said conveyers projected through the end of said dehydrator to

register with a slicer and spreader mechanism, and the lower of said conveyers extended outward through the opposite end of said dehydrator, a variable speed device operably connected with said conveyers, said variable speed device consisting of a driven gear, a yoke arm revolubly mounted on the hub of said driven gear, an idle gear revolubly journaled in said yoke arm, and positioned to remain in mesh with said driven gear, and to be placed in mesh with any one gear of a cone gear, a cone gear, a locking device, said yoke arm terminating in a handle, said handle extended to be engaged by and locked in place by said locking device, a slicer and spreader mechanism connected to and operated by and in synchronized relation with said variable speed device.

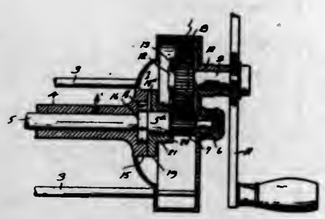
1,353,168. PIPE-BENDING MECHANISM. GEORGE P. MCARTHUR, Rockledge, Pa. Filed Nov. 2, 1918. Serial No. 260,774. 16 Claims. (Cl. 153—46.)

1. In a pipe bending mechanism, the combination with a base; of an arcual series of independently adjustable pedestals on said base; a die frame detachably mounted on said pedestals, and having a cylindrically curved face, with its axis extending vertically with respect to said base and with a toric die channel extending circumferentially in said face, adapted to receive substantially one-half of the diameter of the pipe to be bent; yoke lugs on said frame, at respectively opposite edges of said channel, near one end thereof; a pipe clamping device, including a yoke extending substantially radially with respect to said axis, including a pair of U-shaped plates having perforated ends respectively fitted to said frame lugs, and filling blocks between said plates, in the respective limbs of said yoke; each of said blocks having a rib extending radially with respect to said axis; said ribs extending inwardly with respect to said yoke, and in parallel relation; a clamping shoe fitted to slide in said yoke, radially with respect to said axis, having grooves fitted to said ribs, a channel complementary to the channel in said frame, a screw threaded socket extending radially in said shoe toward the bight in said yoke, a cap screw adjustably fitted in said socket, and a set screw in said shoe arranged to hold said cap screw in adjusted position; a clamping lever having an eccentric head extending between said plates, in opposition to said cap screw; a fulcrum bolt extending through said plates and lever; springs connecting said yoke and shoe respectively above and below the center of said shoe, the lower one of said springs having its end connected to said yoke above the level of its connection with said shoe, whereby said spring counterbalances part of the weight of said shoe, and both springs tend to withdraw said shoe from said die, in opposition to said lever head; a fulcrum bolt for a bending lever in said frame in coaxial relation with said die face; a bifurcated bending lever having one of its bifurcations fulcrumed on said bolt and having opposite pintle slots in its bifurcations with their axes parallel with said frame axis, the upper slot being wider than the lower slot, said lever having a radial screw threaded socket in its bight; a pintle extending in said slots with its axis parallel with the axis of said frame, the lower end of said pintle being of reduced diameter to fit the narrower slot; a die roller mounted to rotate on said pintle and having a toric channel in its circumference complementary to the toric channel in said die frame; a U-shaped roller housing fitted to slide between the bifurcations of said lever, parallel therewith, having perforations in its limbs to receive said pintle and having its limbs respectively interposed between said roller and the bifurcations of said lever, and having a cylindrical plunger bearing extending radially in its bight; a housing plunger having a screw thread fitted in the screw thread of said lever, having a wrench hold at its outer end, and having its inner end reduced and mounted to turn in the bearing in said housing bight; a nut on the reduced end of said plunger; and means preventing accidental displacement of said nut; whereby said roller may be adjusted toward and away from said die face, by rotation of said plunger in said bending lever; and a tubular handle, detachaby fitted over said plunger; whereby said roller may be caused to traverse said die face to bend a pipe held by said clamping shoe.

1,353,169. PROCESS OF EXTRACTING OILS FROM THE PEEL OF CITRUS FRUITS. FRANK ALEXANDER MCDERMOTT, Washington, D. C. Filed Jan. 13, 1916. Serial No. 71,883. 8 Claims. (Cl. 167—4.)

1. The herein described method of recovering the oily substances from the peels of citrus and other fruits, it consisting in abstracting from the said peels the native water therein at a temperature below that at which the oily substances therein are vaporized, then supplying from an external source a vapor capable of withdrawing oil and causing it to intimately commingle with and pass among and through the particles of the peels while in masses, collecting the vapors that pass away from the said masses, condensing said vapors into liquid forms, stratifying separately the oily liquids and the other liquids of condensation, and then separating the liquids.

2. The herein-described method of recovering the oily substances from the peels of citrus and other fruits, it consisting in removing the peels from the pulpy bodies of the fruit articles, evaporating the native water from the said peels while in a quiet atmosphere and at a temperature below that required for the vaporizing of the oil therein, then supplying from an external source a vapor capable of withdrawing oil, as vapor of water, and causing it to intimately commingle with and pass among and through the desiccated particles of the peels while in a mass condition, collecting the vapors of water and oil that pass away from the solid mass, condensing them into liquid forms, stratifying separately the oily liquids and



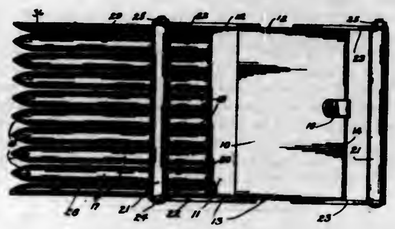
the other liquids of condensation, and then separating the liquids.

3. The herein described method of recovering the oily substances from the peels of citrus and other fruits, it consisting in reducing the peels to a comminuted mass of fine particles inclosing the said mass in a gas-tight receptacle, passing streams of oil-extracting vapor introduced from an external source through the mass while subjected to a pressure below that of the atmosphere, condensing the vapors that are taken from the mass, stratifying separately the oily liquids and the other liquids of condensation, and then separating the liquids.

4. The herein described method of recovering the oily substances from the peels of citrus and other fruits, it consisting in removing said peels from the pulpy bodies of the fruit articles, vaporizing the native water from the said peels in a quiet atmosphere and at a temperature below that of oil vaporization, then reducing the peels to a comminuted mass of fine particles, then causing a vapor supplied from an external source and capable of withdrawing oils to intimately commingle with and pass through said mass of desiccated particles, collecting the vapors that pass away from the mass, condensing said vapors into liquid forms, stratifying separately the oily liquids and the other liquids of condensation, and then separating the liquids.

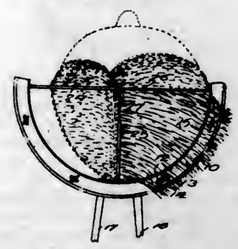
5. The herein described method of recovering the oily substances from the peels of citrus and other fruits, it consisting in removing the peels in relatively large sections from the pulp bodies of the fruit articles, then subjecting the said peel sections to water evaporating conditions at a temperature below that of oil vaporization, then reducing the peel sections to a comminuted mass of fine desiccated particles, then extracting the oily materials by means of currents of oil-extracting vapor supplemental to the normal vaporizable components of said mass and while under a pressure below that of the atmosphere, then condensing the vapors into liquid form, stratifying separately the oily liquids and the other liquids of condensation, and then separating the liquids.

1,353,170. FISHING-REEL. FRED MCKIMMY, Beaver Dam, Ohio. Filed Feb. 11, 1920. Serial No. 357,922. 2 Claims. (Cl. 242—84.7.)



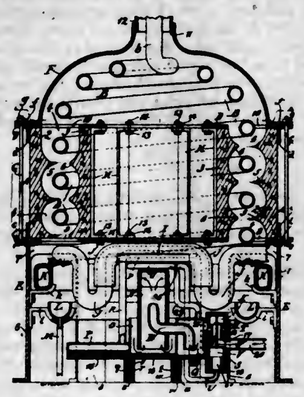
1. The combination in a fishing reel including a spool, end plates, shaft and gearing for driving the shaft, of a clutch comprising a clutch ring projecting from one end of the reel, a cam plate rigid with the shaft and loosely received within the clutch ring of the spool, a disk loose upon the shaft and arranged at one side of the clutch ring, means upon the shaft for holding the disk removably in position upon the shaft adjacent to the cam plate, the disk having recesses in one side thereof, dogs formed with shanks which are received within the recesses and pivotally connected to the disk, the swinging ends of the dogs having laterally projecting heads which are received between the cam plate and the clutch ring and are adapted to be projected into engagement with the clutch ring by the action of the cam plate, and drag means for the disk.

1,353,171. GREASE-CUP. JOHN FRANKLIN MACINDOE, Schuylkill Falls, Pa. Filed Sept. 22, 1919. Serial No. 325,352. 2 Claims. (Cl. 184—45.)



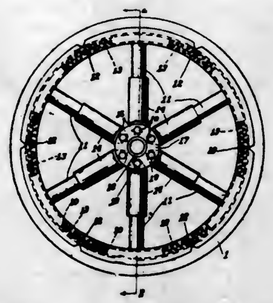
2. The combination of a lubricating cut having a spring actuated plunger, a tapering valve stem terminating in a tapering valve member, operatively secured thereto, adapted to fit loosely within the opening of the shank, said valve being provided with a horizontal port and a vertical port communicating therewith, a shank having a straight outlet for a portion of its depth to limit the area of the flow of the lubricant during the initial stroke of the plunger and after the control valve member has descended therein, and then tapering to its terminus thereby providing a gradually increasing area for the flow of the lubricant in proportion to the weakening of the pressure means and means to increase the flow of the lubricant.

1,353,172. BERRY-PICKER. ANTHONY MANTES, Dexterville, Wis., assignor of one-third to Jacob Maskoliunas and one-third to J. Skinder, Chicago, Ill. Filed Mar. 13, 1920. Serial No. 365,488. 3 Claims. (Cl. 56—330.)



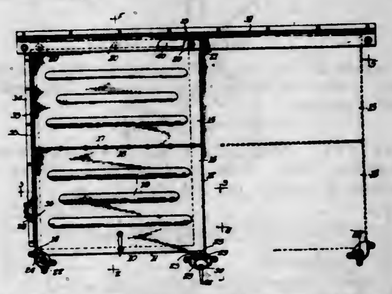
2. In a berry picker, the combination of a container having a hinged rear wall and an open side, and a plurality of picker-fingers projecting forwardly from the open side, the bottom wall to which the rear wall is hinged being located in a plane beneath the bottoms of the picker-troughs, substantially as described.

1,353,173. HAIR-CUTTING DEVICE. THOMAS A. MAXWELL, Chanute, Kans. Filed Apr. 17, 1919. Serial No. 290,774. 4 Claims. (Cl. 30—1.)



1. A hair cutting device comprising cutting means curved to substantially conform to the curvature of a portion of a head, means for operating the cutting means and means extending over the head for supporting the cutting means in position.

1,353,174. INSTANTANEOUS WATER-HEATER. JOSEPH ALEXANDER MAYERS, New York, N. Y. Filed June 5, 1915, Serial No. 32,270. Renewed June 3, 1920. Serial No. 386,326. 5 Claims. (Cl. 230—21.)



4. In an instantaneous water heater, the combination with the main burner and pilot burner, of a water container through which the water to be heated and used is passed, comprising a portion which is located above the immediately adjacent parts of the container through which water passes into and out of said portion, the latter being heated by the pilot burner and thereby raised to a temperature which is higher when no water is passing than when water is passing through the container, and a thermostatic valve mechanism controlling the operation of the main burner and responsive to the temperature of said portion and actuated by the changes in temperature of said portion to start and stop the operation of the main burner accordingly as water passes or ceases to pass through said container.

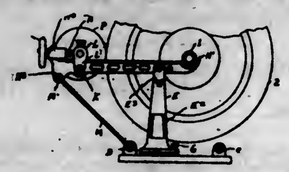
1,353,175. RESILIENT WHEEL. JOSEPH MELDG, Beaver Falls, Pa. Filed Jan. 13, 1920. Serial No. 351,213. 1 Claim. (Cl. 152—30.)

In a resilient wheel, a rim comprising a series of sections, each of said sections comprising a curved base, a radial spoke section integral with said base projecting inwardly therefrom, side walls for holding a tire therebetween outstanding approximately at right angles from said base, a curved partition for supporting the inner surface of said tire arranged concentrically with, and spaced from said base, between said side walls, a pair of ears at one end of said section formed from said side walls, continuous and in the same plane with said walls, a second pair of ears at the other end of said section bent from said side walls and spaced part a sufficient distance to receive a pair of ears similar to that first mentioned, of the adjacent section, between them, pins arranged between said partition and said base, and springs secured to the pins of adjacent sections for yieldingly joining said adjacent sections together.

1,353,176. DOOR. MODESTE A. METZGER, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,999. 11 Claims. (Cl. 20—22.)

9. A sliding door, means adjacent the upper edge of said door for supporting said door when said door is partly open, and means beneath said door for supporting it when it is in its closed or open position, and means for binding said door snugly in place when it is in closed position.

1,353,177. DEVICE FOR RECOVERING PUMP-CYLINDERS. HENRY NELSON, Northwood, Iowa, assignor of one-half to T. Sophus Hanson, Northwood, Iowa. Filed June 18, 1917. Serial No. 175,526. 1 Claim. (Cl. 294—99.)

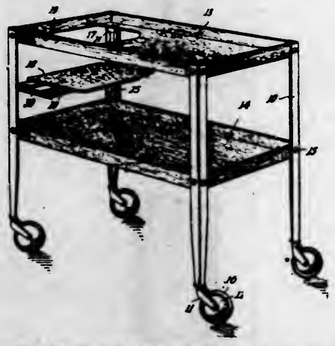


A tool for recovering cylinder casings comprising a body portion having spaced side plates, spaced pivot rods extending there-between, a pair of oppositely extending gripping jaws pivotally connected to each pivot member and having downwardly converging ratched edges, leaf springs mounted on the side plates and adapted to normally force the respective gripping jaws downwardly, lugs on the side plates for limiting the downward movement of the gripping jaws and means for adjusting said gripping jaws to take care of casings of different diameters.

1,353,178. POWER-TRANSMISSION DEVICE. HARRY E. OWEN, Muncie, Ind. Filed Oct. 28, 1919. Serial No. 334,041. 4 Claims. (Cl. 74—106.)

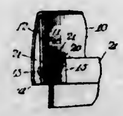
1. A power transmission device of the kind described, comprising standards retained at a spaced distance apart, a lift bar fulcrumed on each standard and having its inner end adapted to engage the automobile axle, frame

members trunnioned at the outer portions of said lift bars, a line shaft journaled in the frame members, fric-



tion pulleys on the line shaft to engage the automobile wheels, connecting members to retain the lift bars at operative position.

1,353,179. AIRPLANE-WING. JOHN PETROVITCH, Cleveland, Ohio. Filed Dec. 18, 1919. Serial No. 345,793. 6 Claims. (Cl. 244—12.)

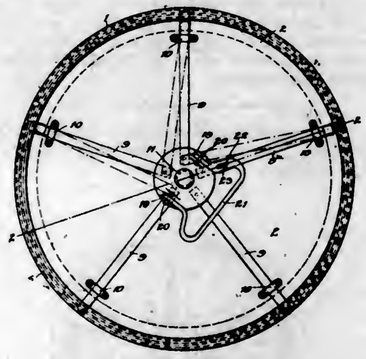


1. The combination with an air-plane body, of upper and lower wings pivotally connected thereto and to each other to fold flatly beside the sides of the body, the pivoted connection to the body being rotatable as a whole to swing the wings to ordinary horizontal position when in use.

1,353,180. NURSERY-SERVICE-WAGON. JOHN CHARLES PRESTON, Balmain, near Sydney, New South Wales, and JAMES MALCOLM, Lindfield, near Sydney, Australia. Filed July 2, 1919. Serial No. 308,194. 3 Claims. (Cl. 280—50.)

1. A nursery service wagon consisting of an upper and a lower tray on corner leg supports, a hatch opening in one end of the upper tray, and a movable plate carried on a vertically sliding bracket mounting, said plate adapted when raised to fill said hatch opening and when lowered to form an infant's seat below the same.

1,353,181. COLLAR. CHARLES M. RICHTER, Chicago, Ill. Filed May 3, 1919. Serial No. 294,530. 1 Claim. (Cl. 2—67.)



In a collar having normally overlapping front end portions and a button hole in each thereof, the combination therewith of a flap on the inner surface of that end portion of the collar which is first applied to the collar button in front, said flap normally overlying the button hole in that end of the collar and having material length and a width sufficient to reach substantially to the bottom of the neck-band of the shirt when the collar is in normal position thereon, said flap being secured to the collar along a line spaced from the button hole and normally above the neck-band of the shirt whereby the flap is free to be moved away from the button hole and will overlie the button and a portion of the neck-band of the wearer's shirt when normally positioned for use.

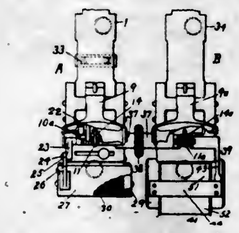
1,353,182. PROCESS OF MANUFACTURE OF DYE-SOAP. CLINTON S. ROBISON, Chicago, Ill., assignor to Aladdin Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,402. 1 Claim. (Cl. 87—16.)

The process of making a dye-soap which comprises saponifying a mixture of cocoanut oil, castor oil and tallow, in the proportion of 10, 10 and 8, respectively, with 38 degrees Baumé caustic soda in the proportion of 14 at 50 degrees centigrade, adding a solution of 8 kilos of granulated sugar in 8½ liters of water at 85 degrees centigrade, neutralizing the mixture with cocoanut oil and fatty acids, and then adding and mixing an alcoholic dye solution with the soap solution while the latter is at a temperature of about 60 degrees centigrade.

1,353,183. HEAD EQUIPMENT FOR BARRELS. HENRY ULRICH RUEDY, Toledo, Ohio. Filed Apr. 11, 1919. Serial No. 289,449. 7 Claims. (Cl. 220—57.)

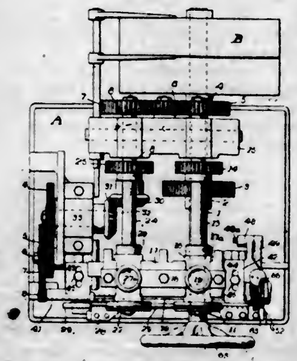
1. A means for locking a barrel head comprising a crank mounted on the center of said head, crank rods extending when substantially radial from said crank into apertures in the chime of said barrel, means for alining said crank rods, a handle pivotally mounted on said crank, the said handle performing the triple function of being a means for lifting said cover, of turning said crank, and of locking said crank from turning.

1,353,184. BRUSH. CHARLES SCHATTE, New York, N. Y. Filed Mar. 25, 1919. Serial No. 284,899. 1 Claim. (Cl. 15—38.)



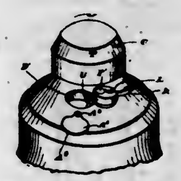
A brush, comprising a handle provided with a socket, a stationary thimble in said socket projecting beyond said handle, a knot projecting into said thimble, gripping jaws in the form of blade springs in said thimble having diverging outer ends contacting with said thimble and inwardly bent portions adapted to engage with said knot, a stationary nut in said handle, a member connecting said

gripping jaws provided with a screw-threaded stem meshing with said nut, whereby a relative movement between



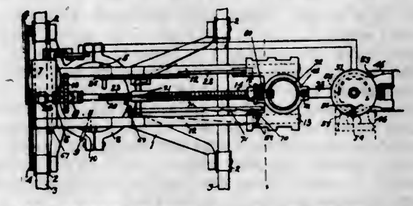
said gripping jaws and said handle causes said thimble to move said jaws into gripping position.

1,353,185. ELECTRICAL SWITCHING SYSTEM. WILLIAM M. SCOTT, Tredyffrin township, Chester county, Pa. Filed Sept. 6, 1918. Serial No. 252,817. 18 Claims. (Cl. 175—294.)



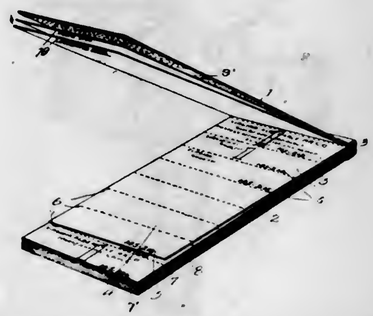
1. The combination with a source of current and a translating device, of circuit breaker mechanism intervening between them and comprising independently operable switches each having means for restraining the same in normal position, and means responsive to reversal of polarity or voltage for actuating said restraining means.

1,353,186. TUBE-COILING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed June 12, 1919. Serial No. 303,700. 11 Claims. (Cl. 113—35.)



1. In a tube coiling machine, the combination with means for forming and feeding a strip and means for coiling the strip in the form of a tube, the longitudinal axis of which is substantially parallel to the line of motion of the strip, of guiding means independent of said forming and coiling means for causing lateral deflection of the formed strip before being coiled.

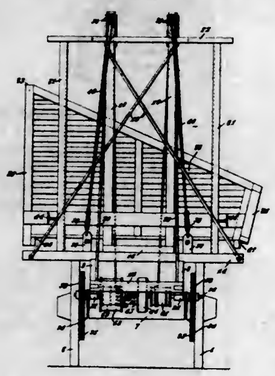
1,353,187. COMBINATION OF BOTTLE AND CLOSURE. THOMAS C. SPELLING, New York, N. Y. Filed Mar. 17, 1917. Serial No. 155,397. 14 Claims. (Cl. 120—57.)



1. The combination of a bottle formed with a side mouth therein through a slanted portion of its wall and a horizontally undercut shoulder below its mouth, with a cap formed and adjusted for rotary movement on and around the mouth, the shoulder, and slanted portion of the bottle, the cap carrying sealing means for the side mouth.

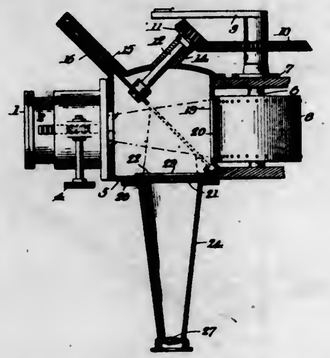
1,353,188. METHOD AND APPARATUS FOR CUTTING BRICKS OR BLOCKS FROM NATURAL DEPOSITS. EDWARD B. STARR and HOWARD E. MARSH, Lompoc, Calif., assignors to Celite Products Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 20, 1920. Serial No. 352,673. 14 Claims. (Cl. 262—19.)

1. An apparatus for cutting bricks or blocks from banks, comprising track means, a truck adapted to travel on said track means, and cutting devices movably mounted on said truck to move transversely to the track.



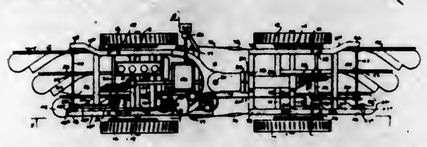
1,353,189. COMMUTATION-BOOK. JAMES E. C. SWANN, Virginia Beach, Va. Filed Mar. 8, 1917. Serial No. 153,344. 1 Claim. (Cl. 283—26.)

A commutation book comprising sheets of trip tickets detachably connected each with the others and each having printed thereon distinguishing indicia, identification sheets of heavier paper than the paper forming the trip ticket sheets disposed therebetween and detachable from the book only in their entirety, the portions of the identi-



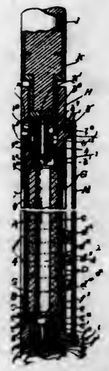
fication sheets subjacent to each of the trip tickets having identification indicia printed thereon identical with the identification indicia on the respective trip tickets and adapted to receive a conductor's punch mark at the same time the trip ticket is punched and detached, and each of the trip ticket sheets being detachably connected along one side edge to the subjacent identification sheet to prevent removal and use of the trip ticket without detection.

1,353,190. BARGE. JOSEPH THIES, Great Bend, Kans. Filed Oct. 25, 1919. Serial No. 333,414. 3 Claims. (Cl. 298—11.)



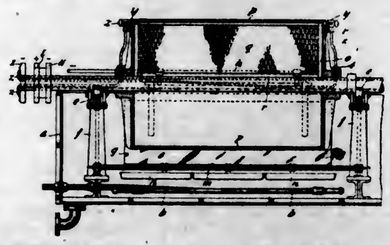
1. In a device of the class described, a vehicle; a ground wheel thereon; a shaft journaled on the vehicle; means under the control of an operator for coupling the wheel to the shaft; first drums fixed to the shaft; a second drum loose on the shaft and inclosing one fixed drum; a vertically movable cradle; flexible elements connected to the first drums and to opposite sides of the cradle and constituting means for raising the cradle, one flexible element passing slidably through the second drum; and means under the control of an operator for coupling the second drum to the shaft.

1,353,191. DIRECT-VISION VIEW-FINDER FOR MOTION-PICTURE CAMERAS. WILLIAM M. THOMAS, New York, N. Y., assignor to Thomas-Oberkirch Company, Limited, a Corporation of New York. Filed Apr. 19, 1917. Serial No. 163,267. 4 Claims. (Cl. 88—16.)



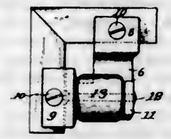
2. In a moving picture instrument, a lens, a light sensitive element in the focus of said lens, a shutter, a mirror mounted upon said shutter, optical means to view the image reflected upon said mirror when said shutter is operative, and means whereby said shutter is effective to prevent the light sensitive element from being light struck through said optical means when said light sensitive element is exposed to rays of light coming through said lens.

1,353,192. STEERING MEANS FOR TRACTORS AND OTHER VEHICLES. RALPH TINKER, Little York, Ill. Original application filed July 25, 1917, Serial No. 182,690. Divided and this application filed Feb. 18, 1919. Serial No. 277,726. 3 Claims. (Cl. 180—50.)



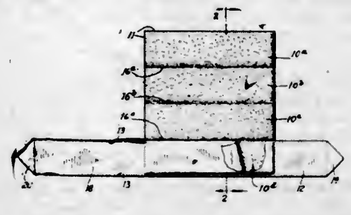
1. A tractor plow having a longitudinally extending shaft, two vertical steering shafts one spaced in front of the other, means by which the vertical shafts may rotate the longitudinal shaft, a vertical post journaled in bearings between the shafts, a seat on the post, and means by which the tractor plow may be steered by the longitudinal shaft.

1,353,193. LIQUID-GAGE. WILLIAM S. TOWNSEND, Washington, D. C., assignor to Guarantee Visible Measure Sales Company, Washington, D. C., a Corporation. Filed Oct. 31, 1919. Serial No. 334,754. 10 Claims. (Cl. 73—120.)



1. A liquid gage of the character described, provided at its upper end with an upwardly closing vent valve, a handle socket, and means operatively connecting said socket and valve for raising and lowering the valve as the socket is raised and lowered.

1,353,194. ELECTROLYTIC APPARATUS. CECIL MONTAGUE WALTER, Four Oaks, near Birmingham, England. Filed June 12, 1919. Serial No. 303,637. 6 Claims. (Cl. 204—5.)

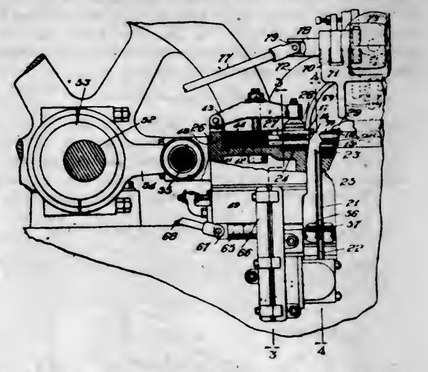


1. Electrolytic apparatus comprising a fixed vat for containing the electrolyte, a container drum for the material to be treated, said drum being rotatable in said vat, internally projecting cathode plates arranged in said drum, said plates being longitudinally disposed, and means for retaining the said material out of contact with said plates while permitting ready access for the electrolyte to the plates.

1,353,195. CASTER. JOHN B. WATLING, Chicago, Ill. Filed Sept. 27, 1919. Serial No. 326,971. 1 Claim. (Cl. 16—4.)

A caster comprising the combination with a roller and its pintle, of an integral body having members extending across the ends of said roller, said members having holes to receive the ends of the pintle and each member having an attaching lug projecting laterally therefrom, said attaching lugs being arranged at right angles to each other.

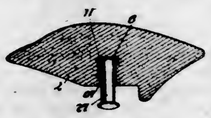
1,353,196. WASHABLE SANITARY NAPKIN. JOSEPH WEISSMAN, New York, N. Y. Filed Aug. 26, 1919. Serial No. 320,011. 1 Claim. (Cl. 128—290.)



A sanitary washable napkin, comprising in combination, a strap made of textile fabric in the form of a flat tube having obtuse angular, reinforced ends, a pocket in said strap open at one edge, said pocket being closer to one end of said strap than the other, a square sheet of absorbent fabric secured along one of its marginal edges within and to the bottom of said pocket, said sheet being foldable transversely into equal portions to entirely enter the pocket, and an integral, relatively firm border formed on the marginal edges of said absorbent sheet.

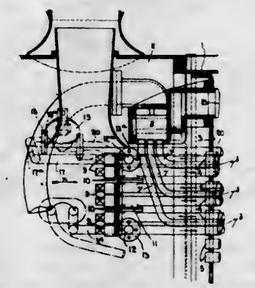
1,353,197. GRINDING COMPOUND. JOHN F. WERDER, Denver, Colo., assignor to Zip Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Aug. 8, 1918. Serial No. 248,960. 2 Claims. (Cl. 51—280.)

1. A metal grinding preparation free from oil comprising powdered carborundum, starch and water.



1,353,198. EXPANDED-METAL MACHINE. FRANK MURRAY WHETSTONE, Chicago, Ill., assignor to Milwaukee Corrugating Company, Greenfield, Wis., a Corporation of Wisconsin. Filed Feb. 19, 1917. Serial No. 149,645. 14 Claims. (Cl. 164—6.5.)

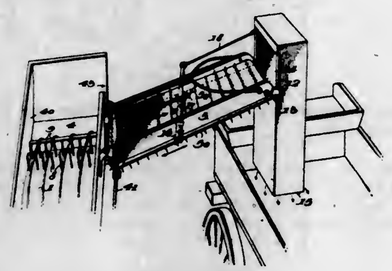
1. In a machine of the kind described, in combination, two pairs of slitting dies having relative endwise movement successively engageable with the work upon contiguous areas of contact whereby slits produced by the dies of the pair first engageable with the work are extended by the dies of the other pair, the dies of the pair first engageable with the work having square cutting ends and one of the dies of the other pair having an oblique cutting end whereby the dies of the pair first engageable with the work operate simultaneously at all points throughout their width and the dies of the other pair



operate progressively across the same from one side of the said dies.

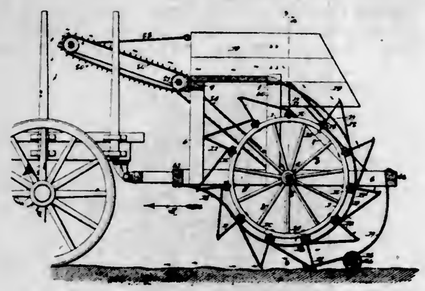
1,353,199. ARTIFICIAL TOOTH. GEORGE H. WHITELEY, Jr., York, Pa., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Apr. 18, 1916. Serial No. 91,870. 4 Claims. (Cl. 32—9.)

1. An artificial tooth having a porcelain body provided with a hole and an anchor of flat sheet metal in the bottom of the hole, said anchor having slightly upturned edges and the side walls of the hole curved outward at the bottom and terminating in the perimeter and upturned edges of the anchor and providing an annular undercut recess in the porcelain, the anchor secured in position by the contracting of the porcelain during the burning operation.



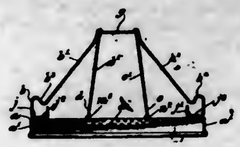
1,353,200. COMBINED FEED-WATER HEATER AND STEAM-SUPERHEATER FOR LOCOMOTIVE AND OTHER SMOKE OR FIRE TUBE BOILERS. GEORGE HERBERT WILLANS, Gloucester, England. Filed Oct. 15, 1918. Serial No. 258,274. 3 Claims. (Cl. 122—466.)

1. The combination, with a boiler provided with fire-tubes, of a superheater header secured out of line with the boiler fire-tubes, superheater pipes having main portions arranged in the fire-tubes and having end portions arranged at an angle to their main portions and connected to the said header, feed-water heater pipes having their main portions arranged in pairs and inserted in the said fire-tubes and having end portions arranged in line with



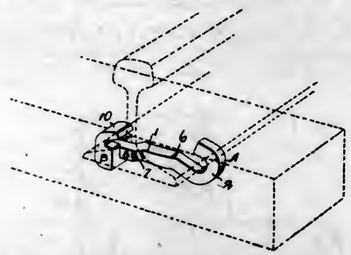
their main portions and projecting past the said end portions of the superheater pipes, and means for operatively connecting together the extreme end portions of the pairs of feed-water pipes, each pair of feed-water pipes being removable without removing the other pairs, and all the feed-water pipes being removable without removing or disconnecting the superheater pipes.

1,353,201. DISTRIBUTING MECHANISM FOR HAY-LOADERS FOR WAGONS. WILLIAM M. WILLIAMS, Reno, Nev., assignor of one-eighth to William Dawson, Reno, Nev. Substitute for application Serial No. 11,576, filed Mar. 2, 1915. This application filed June 28, 1919. Serial No. 307,303. 2 Claims. (Cl. 193—14.)



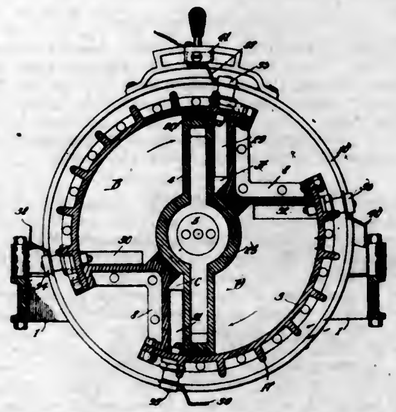
1. The combination with a support, a conveyer connected to the support, a tubular distributer chute pivoted intermediate its ends to the discharge end of the conveyer and having a throatway above the pivotal connection into which the conveyer discharges, a rod and lever connection between said conveyer and distributer for swinging said distributer upon its pivotal axis, and means for securing said connection to hold said distributer in its different positions.

1,353,202. ALFALFA-HAY LOADER. WILLIAM M. WILLIAMS, Reno, Nev., assignor of one-half to William Dawson, Reno, Nev. Filed Nov. 18, 1919. Serial No. 338,886. 6 Claims. (Cl. 56—359.)



1. A loading attachment for wagons, comprising a frame, a pick-up drum rotatably mounted on the frame and including radially extended lifter fingers that rake up the hay as the drum is dragged along, an open-ended receiving compartment that extends lengthwise of the frame across the drum and through the entrance end of which the lifter fingers travel as they carry the gathered hay up over the drum, and means connected with the frame and actuated from the drum axle for discharging the material as it gathers in the receiving compartment onto the wagon.

1,353,203. GAS-TOASTER. AARON H. WOLFF, New York, N. Y. Filed Jan. 21, 1919. Serial No. 272,239. 6 Claims. (Cl. 53—5.)



1. A gas toaster embodying therein a metallic base, the top of which has a depressed, concaved central portion adapted to have the flame from the burner impinge directly thereon, and a plurality of converging racks disposed about, and projecting from, the top of said base, whereby bread upon said racks will be inclined with relation to the top of said base, the space within the tops of said racks being free from obstruction, whereby a more uniform application of heat throughout the entire surface of said bread, is facilitated.

1,353,204. ADJUSTABLE RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed May 15, 1917. Serial No. 168,822. 4 Claims. (Cl. 238—322.)

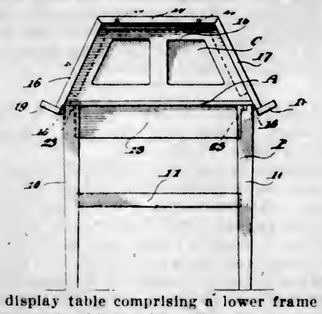
1. A rail anchor comprising a spring bar having at one end a fixed rail engaging clip and its opposite end portion standing free from the rail bottom, and a detachable clip transversely slidable upwardly on the inclined base of one rail flange and also having a slidable engagement with the free end of the bar to place the same under tension.

1,353,205. ROTARY INTERNAL-COMBUSTION ENGINE. WILLIAM H. WOODWARD, Cleveland, Ohio, assignor of two-fifths to Louis Sweningson and one-fifth to George M. Potter, Cleveland, Ohio. Filed Feb. 10, 1919. Serial No. 276,012. 6 Claims. (Cl. 123—43.)

1. In a rotary internal combustion engine, the combination of a frame, a gear fixed thereto, a rotary cylinder

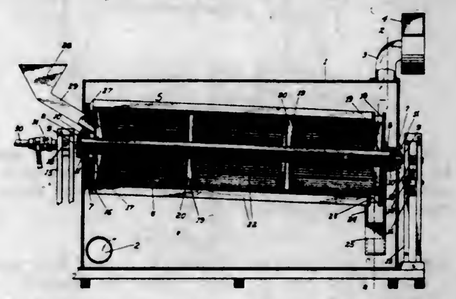
in the frame, having two opposite radial partitions therein, a rotary piston in the cylinder having two wings projecting oppositely between the partitions, and forming therewith four explosion chambers, a wrist plate rigid with the piston, planetary pinions carried by the cylinder in mesh with said gear, said pinions being half the diameter of the gear, a crank connected to the shaft of each pinion, and links connecting the wrist plate and the pinion cranks.

1,353,206. ANTICREEP DEVICE OR ANCHOR FOR RAILWAY-RAILS. HUBERT YATES, Cheam, England. Filed Feb. 17, 1920. Serial No. 359,338. 2 Claims. (Cl. 238—324.)



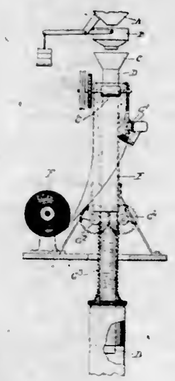
1. An anti-creep device for a rail, comprising a non-slidable fastening wedge-member adapted to bear against one side portion of a rail, and a clip having hook-shaped end portions for engaging with the rail and the wedge member, said wedge member having a recess extending downwardly from the top of its outer side whereby a clearance space is provided between the upper portion of the wedge member and the adjacent upstanding portion of the clip.

1,353,207. BUFFING AND POLISHING WHEEL. HENRY L. ZUCKER, East Orange, N. J., assignor to A. P. Munning & Co., New York, N. Y., a Corporation of New Jersey. Filed Nov. 22, 1918. Serial No. 263,651. 2 Claims. (Cl. 51—193.)



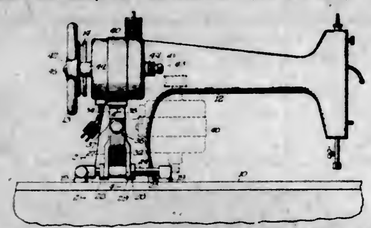
1. As a new article of manufacture, a buffing wheel section comprising pieces of cloth stitched together and of circular outline, the outer periphery only being impregnated with a substance which facilitates the adhesion of an abrasive.

1,353,208. DISPLAY-TABLE. EUGENE GRAHAM ANDERSON, Seattle, Wash. Filed Jan. 22, 1920. Serial No. 353,320. 7 Claims. (Cl. 45—31.)



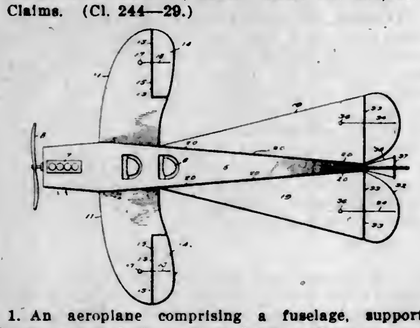
1. A display table comprising a lower frame and a top including a pair of leaves hingedly connected to the frame, a removable leaf carried by the hinged leaves, and removable end panels arranged to engage the frame and the leaves.

1,353,209. NUT-BLEACHING APPARATUS. HENRY B. Barkis, Sr., Lodi, Calif. Filed Sept. 22, 1919. Serial No. 325,434. 5 Claims. (Cl. 99—2.)



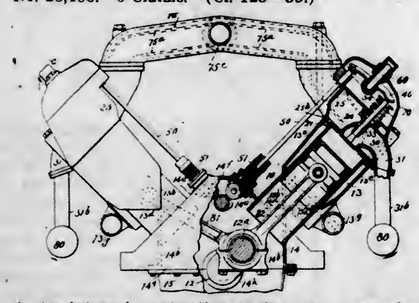
3. A device for bleaching nuts comprising a housing adapted to be filled with bleaching fumes, a drum turnable in the housing lengthwise thereof and open to the fumes, and adapted to receive the nuts at one end and discharge the same at the other, the drum having a downward slant from its receiving to its discharge end, a shaft extending lengthwise of the drum, bearings for said shaft outside the housing, means for vertically moving one of said bearings to alter the slant of the shaft and drum, and means between the shaft and the housing for retaining the fumes in the housing irrespective of the position of the shaft relative thereto.

1,353,210. PROCESS OF MAKING AND FILLING BAGS. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 27, 1919. Serial No. 285,695. 16 Claims. (Cl. 226—53.)



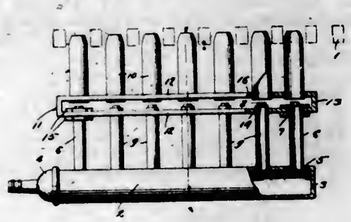
1. The method of producing and filling bag-like packages of material from a roll of fabric which consists in forming from said fabric a tube supporting it so as to leave a depending section, stretching it so as to flatten it, clamping the sides of said flattened section, discharging a measured quantity of material in such tube so that it falls into the portion of the tube above the clamped portion, sewing and severing the tube below the clamped portion so as to form the bottom of the bag, settling or packing the material in such filled section, clamping the material of the tube above the filled bag section and sewing and severing it so as to form a complete separated filled bag.

1,353,211. SUPPORT FOR SEWING-MACHINE MOTORS. CHESTER H. BEACH, Racine, Wis., assignor to Frederick J. Osius, Racine, Wis. Filed Nov. 6, 1916. Serial No. 129,850. 12 Claims. (Cl. 74—26.)



1. A sewing machine motor support comprising a base having projections fitting within the belt holes and having yielding means for holding the motor in frictional driving engagement with the hand wheel.

1,353,212. AEROPLANE. EDWARD V. BOILER, West Side, Iowa. Filed Jan. 29, 1920. Serial No. 354,919. 5 Claims. (Cl. 244—29.)



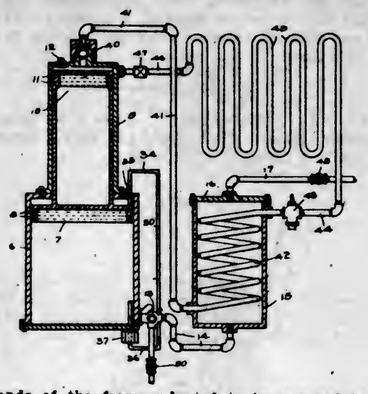
1. An aeroplane comprising a fuselage, supporting planes connected therewith and arranged upon opposite sides thereof, longitudinal stabilising planes arranged upon opposite sides of the fuselage in the rear of the supporting planes, and pivotally connected with the fuselage near its top, said stabilising planes tapering longitudinally and increasing in width rearwardly, a plurality of spaced elements secured to the stabilising planes near their outer edges and extending inwardly toward the fuselage, means to simultaneously move the elements upon each side of the fuselage and to move each succeeding rear element a greater distance than the next preceding forward element and propelling means carried by the fuselage.

1,353,213. INTERNAL-COMBUSTION ENGINE OF THE V-TYPE. ALANSON P. BRUSH, Detroit, Mich. Original application filed Nov. 30, 1914, Serial No. 874,607. Divided and this application filed May 15, 1915. Serial No. 28,455. 6 Claims. (Cl. 123—55.)

1. An internal combustion engine, two rows of water jacketed cylinders, each row containing a plural number of cylinders and having the upper half of the crank case formed integrally with said two rows of water jacketed cylinders—the water jacket for each row of cylinders having a substantially vertical lower inner end and a substantially horizontal lower outer end.

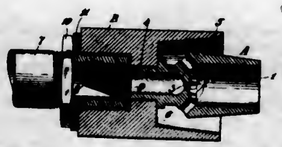
1,353,214. FIRE-KINDLER. EDWARD CALMER, St. Louis, Mo. Filed Apr. 12, 1919. Serial No. 289,753. 3 Claims. (Cl. 158—10.)

1. A fire kindler comprising a feed pipe, feed conduits carried thereby, a frame including a pair of spaced bars, said frame being mounted upon said conduits by one of its bars, and a burner associated with each conduit and supported by the other bar of said frame so that the burners are spaced from the conduits.



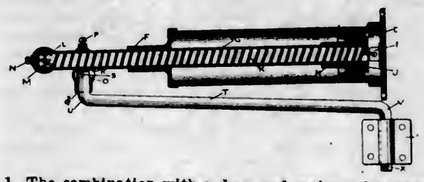
1,353,215. ERASER ATTACHMENT FOR PENCILS. WILLIAM J. CAMPBELL, Indianapolis, Ind. Filed Mar. 29, 1920. Serial No. 369,738. 3 Claims. (Cl. 120—38.)

1. As an article of manufacture, an eraser attachment for pencils, comprising a tubular body adapted to receive a section of eraser material, gripping fingers carried by the lower end of said body and forming part of the eraser receiving bore, and a clamping sleeve threaded upon said body, the clamping sleeve and fingers having coacting surfaces by which the fingers may be contracted upon the upper end of a pencil and upon the eraser material.



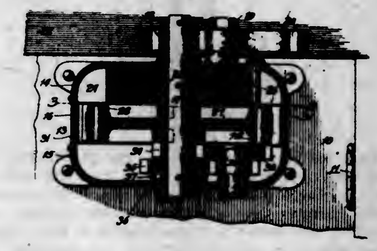
1,353,216. HYDRAULIC PUMP. EDWARD P. CARLSON, Seattle, Wash. Filed June 17, 1918. Serial No. 240,548. 2 Claims. Cl. 230—28.)

1. An apparatus of the class described comprising an ammonia compression cylinder, a hydraulic cylinder connected to the lower end thereof, a double piston having a head moving in the ammonia cylinder and a head moving in the hydraulic cylinder, a supply valve for the hydraulic cylinder, a radial lever carried by the valve, a runway at the outer end of the lever, a weight in the runway adapted to move the valve to its limit in opposite directions, a C-shaped frame having its ends slidable in the upper and lower ends of said hydraulic cylinder with the exterior portion associated with the supply valve, and with the



inner ends of the frame adapted to be engaged by the piston for operating the valve.

1,353,217. GAS-BURNER. CHARLES C. CHAPPELLE, New York, N. Y. Filed July 11, 1918. Serial No. 244,375. 11 Claims. (Cl. 158—115.)

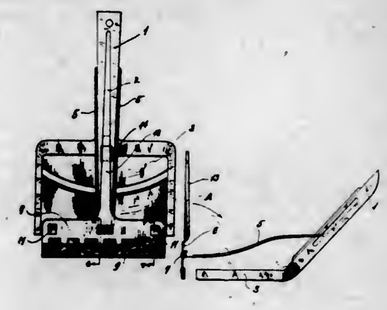


1. A gas burner comprising a burner tip provided with a minute gas orifice, a shield extending beyond said gas orifice and comprising a small cylindrical walled cup through which the gas from said gas orifice issues, said tip being provided with air inlet openings adjacent the said shield, and a main shield surrounding the base of said tip to comprise a large cup surrounding the base of said tip, the walls of said large cup being tapered inwardly in such manner that there is a tendency for gusts of wind to create a pressure in this cup in excess to pressure in the small cup whereby the flame is prevented from being extinguished.

1,353,218. DOOR-CONTROLLING DEVICE. EDWARD S. COFFMAN, Clifton Forge, Va., assignor to Frank E. Stebbins, Washington, D. C. Filed Nov. 6, 1909, Serial No. 526,602. Renewed Jan. 16, 1920. Serial No. 351,915. 27 Claims. (Cl. 16—87.)

1. The combination with a door and casing, of a retarding device and a single operating arm attached thereto; said retarding device comprising telescopic outer and inner members, the inner member having an extension beyond the end of the other, a substantially air-tight packing between said members, a contractile helical spring under tension its longitudinal axis in line with the axis of the outer member and its opposite ends connected one to the outer member and the other to the inner member, an air chamber of variable capacity in operative connection with the members, and a valve for allowing the gradual variation of the quantity of air in the chamber to secure a retarding effect; the retarding device and operating arm being attached respectively, and one of them pivotally, to the door and casing.

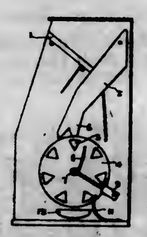
1,353,219. DOOR CHECK AND CLOSER. THOMAS E. COLLINS, Chicago, Ill. Filed Dec. 22, 1919. Serial No. 346,726. 6 Claims. (Cl. 16—46.)



1. In a door check and closer, the combination of a casing, comprising an upper and lower portion spaced apart, a driving shaft rotatably mounted in said portions, a brake band bridging said space and connecting said portions in a manner to provide an annular ring between said portions, a lining secured to said band within said annular ring, a friction brake mounted on said shaft and designed to engage said lining on a predetermined movement of said shaft and a motor for rotating said shaft.

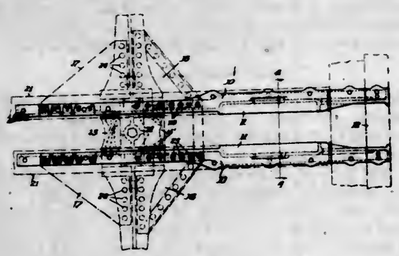
1,353,220. PROCESS OF PRODUCING ARTIFICIAL RESIN. HOWARD N. COPTHORNE, Chicago, Ill., and ARTHUR L. TANNEHILL, Gary, Ind. Filed June 5, 1919. Serial No. 301,971. 2 Claims. (Cl. 134—26.)

1. The process of producing artificial resin in solution, which consists in adding sulfuric acid to a solution of the lighter and heavier fractions of the light oil distillates of coal gas and coal tar in the absence of water or other acid solutions and in about the proportion of 1½ per cent. of the acid, and neutralizing the resultant solution.



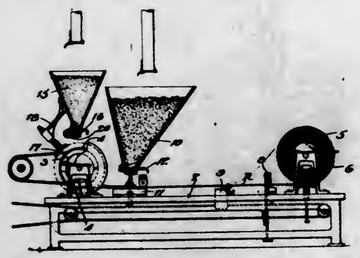
1,353,221. [WITHDRAWN.]

1,353,222. COMBINATION UTENSIL. WILLIAM DIETZEL, Merrick, N. Y. Filed Oct. 27, 1919. Serial No. 333,819. 4 Claims. (Cl. 65—62.)



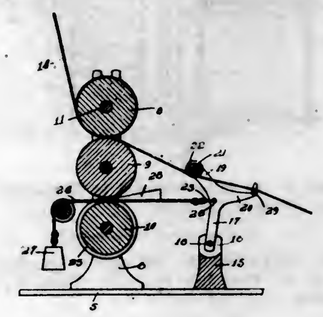
3. A combination brush and pan comprising said brush and pan and means for pivotally connecting said brush and pan together, and means for rigidly binding said brush and pan in a single unit comprising resilient clasps on said brush adapted to catch said pin.

1,353,223. COIN-CONTROLLED APPARATUS. CHARLES DIMMOCK, Toronto, Ontario, Canada. Filed Apr. 26, 1919. Serial No. 292,989. 4 Claims. (Cl. 194—84.)



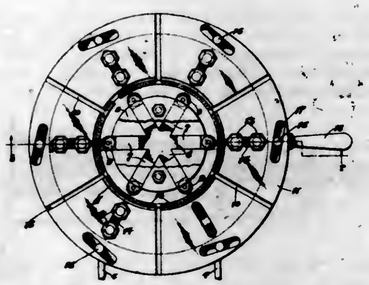
1. In a coin controlled machine, the combination with a coin delivering mechanism, a coin receiving rotatable member having a plurality of projecting fixed contacts, a sounding member, and a striker member adapted to be engaged by said contacts on the rotation of said rotatable member and to be operated to strike the sounding member.

1,353,224. DRAFT MECHANISM. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 31, 1919. Serial No. 286,273. 5 Claims. (Cl. 105—420.)



1. In draft mechanism, the combination of a bolster having openings therein, integrally formed draft arms extending through the said openings and being secured to said bolster, and gusset members connecting said draft arms and bolster.

1,353,225. APPARATUS AND METHOD FOR MAKING CONCRETE ELEMENTS. HUGH DONOGHUE, Munhall, Pa. Filed Oct. 29, 1917. Serial No. 199,126. 2 Claims. (Cl. 18—48.)

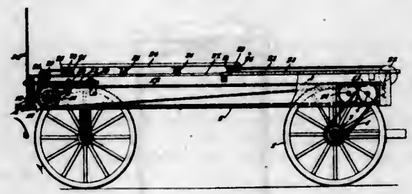


1. In a device of the type described a table, a rotatable reel carrying reinforcing material, a collapsible drum rotatably mounted on said table, means for securing the reinforcing material to said drum, means for rotating said drum, means for applying a layer of cement to said fabric intermediate said drum and reel, and means for severing said reinforcing fabric intermediate said drum and reel and means for applying a finishing coat of cement and sizing the element after the reinforce is wound upon said drum.

1,353,226. STOP-MOTION. JOHN A. FENTON, North Andover, Mass. Filed Jan. 15, 1920. Serial No. 351,727. 3 Claims. (Cl. 19—25.)

1. A stop motion mechanism comprising in combination, thread feeding rollers, a power roller supported under the thread feeding roller, bearings for supporting the rollers, said power roller having a groove formed therein, a pivoted thread guide over which the thread passes, a strip having connection with the thread guide, a weight on the opposite end of the strap, a wedge shaped block supported by the strap and adapted to move between the power roller and thread feeding rollers, for throwing the rollers out of operation, and said thread guide adapted to exert a tension on the strap for normally holding the block out of operation.

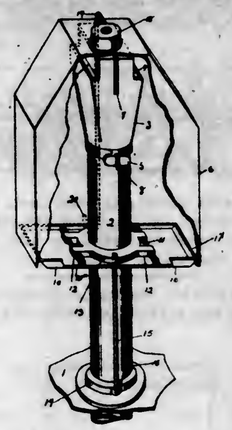
1,353,227. PROCESS OF MAKING PISTON-RINGS. HARRY S. FRANK, St. Louis, Mo. Filed Dec. 7, 1918. Serial No. 265,723. 4 Claims. (Cl. 29—156.1.)



1. The process of shaping a piston ring which comprises placing and holding the ring from rotating in a form of a size different from the size of the ring and of the shape which it is desired to give to the ring; and subjecting the ring to outward radial pressure applied successively, and at spaced distances apart to all circumferential points of the ring, until the molecular arrangement of the ring is changed and the material is set in the size and shape of the form.

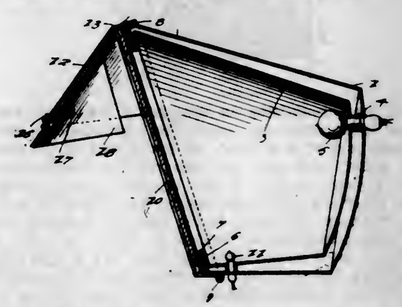
1,353,228. NAVAL, MILITARY, AND OTHER METALLIC BADGE. CHARLES F. GAUNT, Birmingham, England. Filed Dec. 4, 1919. Serial No. 342,522. 2 Claims. (Cl. 2—150.)

1. The combination with a backing, of a metallic badge adapted to be mounted upon said backing and means covering parts of said badge and harmonizing in color with said backing whereby the visible parts of the badge appear disassociated from one another.



1,353,229. HAYRACK. FRANK GEORGESON, Red Granite, Wis. Filed Feb. 24, 1919. Serial No. 278,876. 1 Claim. (Cl. 214—81.5.)

The combination with a wheel supported body and a stationary rack section at the delivery end of the body, of channeled rails secured to the sides of and extending throughout the length of the body, a movable rack section, wheels supporting the same and movable along the channeled rails, said wheels supporting the movable rack section above so as to move to position over the stationary rack section, the two rack sections constantly lapping, a flexible element secured at its ends to the respective ends of the movable rack section and extending longitudinally within the body, guides for said flexible element and adjacent the ends of the body, a transverse shaft, a member loosely mounted on the shaft and engaging and adapted to actuate said flexible element, clutch members at opposite sides of said loose member and separately shiftable into engagement therewith, means operated by the forward movement of the wheel supported body for actuating one of the clutch members in one direction, and means operated by the forward movement of the wheel supported body for actuating the other clutch member in the opposite direction, and means for shifting either of said clutch members into engagement with the loose member on the shaft whereby said member can be rotated in either direction to shift the movable rack section in either direction upon the rails.



1,353,230. TANK-SIPHON. EDWARD H. GOVE, Biddeford, Me. Filed Mar. 27, 1916, Serial No. 86,913. Renewed Mar. 22, 1920. Serial No. 367,892. 4 Claims. (Cl. 4—5.)

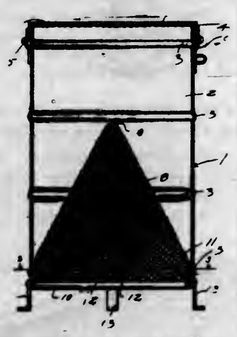
1. In a device of the character described, a tank, a bell siphon comprising a long leg and a short leg, the open top of the long leg flaring and the closed top of the short leg adjacent the open flaring top of the long leg tapering upwardly, a plunger mounted in said short leg comprising a carrying frame and plates pivotally attached thereto, said frame and plates being adapted to reciprocate

in said short leg and said plates to turn on their pivot points, and means for reciprocating said plunger.

1,353,231. AUTOMOBILE-LIGHT DIMMER. JOHN GRIESHAMER, Jacksonville, Fla. Filed Dec. 6, 1916. Serial No. 135,443. 1 Claim. (Cl. 240—41.)

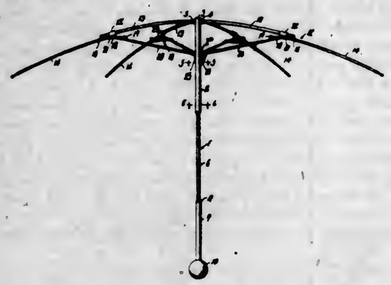
A headlight comprising a substantially tubular shaped body and reflector, one fitting within the other and each being tapered to provide large and small front and rear ends respectively, concaved rear walls closing the rear ends of the body and reflector, an electric lamp socket formed in the upper portion of the rear wall of the reflector to receive an electric lamp to support the same adjacent to the highest point of said reflector and said socket abutting the rear wall of the body to aid in supporting the reflector therein, said body and reflector having their large forward ends disposed on a downwardly inclined plane to provide the greatest reflected surface of the reflector uppermost and to permit the largest proportion of rays of light to escape in a downwardly and forwardly direction, means securing the reflector to the body so as to support said reflector within the body and in spaced relation thereto, and a hood carried by the body and extending to a point in a plane below the electric light.

1,353,232. CONVERTIBLE INTERIOR OF AUTOMOBILES. WILLIAM H. GRIFFIN and OLIVER C. HARTSOUGH, Canton, Ohio. Filed Dec. 20, 1919. Serial No. 346,280. 4 Claims. (Cl. 155—7.)



1. A convertible vehicle body including front and rear seats, aprons hingedly connected to the front faces of the rear seats and susceptible to movement outward from said seats, hinged brackets carried by the front members

of the seats and designed when swung outwardly to support the aprons when the latter are swung horizontally, an apertured lip on the outer end of the rear apron, the back members for the front seats being swingingly as-

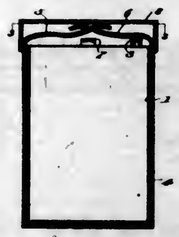


sociated therewith whereby the said backs may be swung rearwardly and rest on the lip of the rear apron, and swinging hook members carried by said backs for engaging in the apertures of the lip.

1,353,233. FLYTRAP. GEORGE J. GUENTLER, Cincinnati, Ohio. Filed Apr. 2, 1918. Serial No. 226,237. 1 Claim. (Cl. 43—118.)

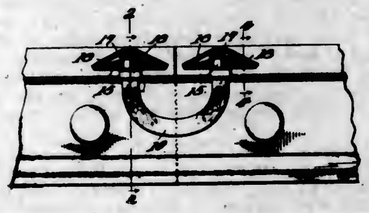
A fly trap comprising an upstanding cylindrical body open at its opposite ends, supporting legs depending from the lower end of said body, the lower edge of the body being turned inwardly and upwardly, a frusto-conical screen member resting in the inwardly and upwardly turned lower end of the body member and having its small upper end open, removable spring clamping means within said frusto-conical screen member to retain the latter in position, a cover hinged upon the upper end of said body and having an open central portion, and a removable upper screen member clamped on said upper end of the body by said cover when the latter is in closed position.

1,353,234. FOLDING UMBRELLA. ART GUSTAFSON, Moline, Ill. Filed Nov. 22, 1919. Serial No. 339,918. 2 Claims. (Cl. 135—25.)



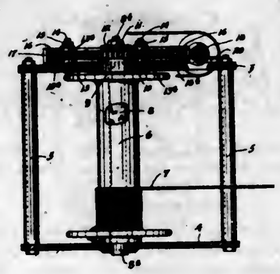
2. A folding umbrella comprising a stick, a sleeve slidable on said stick, ribs pivoted at one end to the upper end of said stick and each composed of two sections hingedly connected at their meeting ends, a spring for normally holding said sections in open position, sleeves slidable on the inner rib sections, brace rods connecting said sleeve on the stick with those on the rib sections, bifurcated arms carried by the outer rib sections at the rear of their pivotal connection, said arms straddling said brace rods and carrying rollers engaged with the inner edges thereof, whereby the raising and lowering of the sleeve on the stick will operate to open and close the outer and inner rib sections.

1,353,235. SHIP CONSTRUCTION. LARS J. HAGEN, Portland, Oreg. Filed Apr. 8, 1919. Serial No. 288,537. 1 Claim. (Cl. 114—84.)



In vessel construction of the character described, the combination therein of, single metal frames in series and secured to each other, a metal keel secured to the frames, wooden planking secured upon the outside of the frame skeleton thus arranged, by bolts extending through the frame and plank materials, and transverse wooden planking strakes secured to the inner surface of the first mentioned planking to a desired height between the said frames the sides of the inner strakes adjacent the frames abutting closely against the frames and engaging them with close joints, for the purposes indicated.

1,353,236. CAN-COVERING. JOSEPH M. HATFIELD, Independence, Kans. Filed July 18, 1919. Serial No. 311,723. 1 Claim. (Cl. 220—9.)

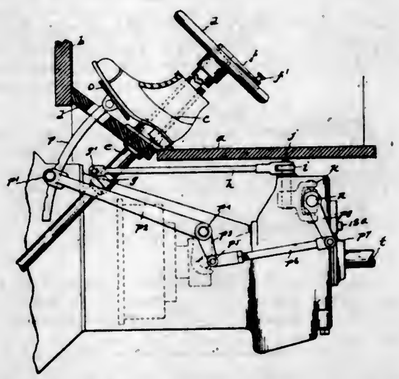


A protective device for cans holding explosives, comprising a casing of rubber of a size and shape to conformingly receive the can with the upper edges of the casing flush with the top of the can, the upper edges of opposite sides of the casing being formed with integral reduced strip-like extensions, one extension being provided with a transverse slot and being of greater width than the other extension and said other extension passing through said slot whereby to hold both extensions together, and a cap detachably engaged exteriorly upon said casing and covering the top of the can and said extensions.

1,353,237. RAIL-BOND FOR ELECTRIC RAILWAYS. EDWIN A. HOFFMAN and THOMAS P. HIM, Wilkes-Barre, Pa. Filed June 14, 1919. Serial No. 304,099. 6 Claims. (Cl. 173—278.)

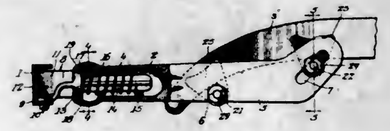
5. The method of forming a joint between a bond terminal and a rail which consists in providing the terminal with a surface which forms an obtuse angle with the rail when the terminal is applied thereto, and striking an arc between the welding electrode and the apex of the angle, so as to fill the latter with the welding metal.

1,353,238. WINCH. JOHN H. HOLMES, Anoka, Minn. Filed Oct. 13, 1919. Serial No. 330,322. 3 Claims. (Cl. 254—186.)



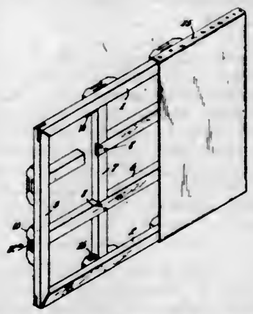
1. The combination with a winch including a framework and a drum mounted therein, of a central gear connected to said drum, pinions journaled on the winch frame and meshing with said central gear, an annular internal ring gear surrounding and meshing with said pinions and provided with external worm gear teeth, a shaft journaled on the winch frame and provided with a worm engaging the external worm gear teeth of said ring gear, said pinions having hubs on which said annular gear runs with rolling engagement.

1,353,239. DRESSING FOR AUTOMOBILE-TOPS AND THE LIKE. CHARLES A. HONIG, St. Louis, Mo. Filed Sept. 2, 1919. Serial No. 321,149. 2 Claims. (Cl. 134—17.)



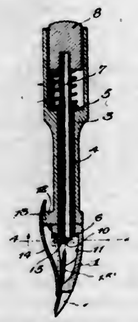
1. A composition of matter for automobile tops and the like, consisting of turpentine asphaltum, japan, boiled linseed oil, turpentine, rubber, neat's-foot oil and Prussian blue.

1,353,240. SELECTIVE CHANGE-SPEED GEARING AND CONTROL MECHANISM. GEORGE B. INGERSOLL, Detroit, Mich. Filed May 7, 1919. Serial No. 295,414. 10 Claims. (Cl. 74—59.)



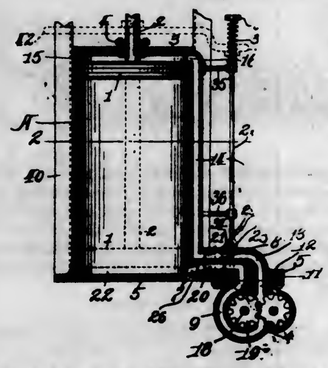
1. In a change speed gearing, a clutch, a main shaft, a driving shaft, a lay shaft, a series of telescopic gears mounted on the driving shaft, a series of telescopic gears mounted on the lay shaft constantly in mesh with the gears on the driving shaft, a series of telescopic collars mounted on the main shaft rotatable therewith corresponding with the gears mounted on the driving shaft, selective means for such gearing, and means for engaging individual collars on the main shaft with corresponding gears on the driving shaft coincident with the throwing in of the clutch.

1,353,241. AUTOMOBILE-BUMPER. WALTER V. ISGRIG, Milwaukee, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 12, 1919. Serial No. 282,095. 8 Claims. (Cl. 293—55.)



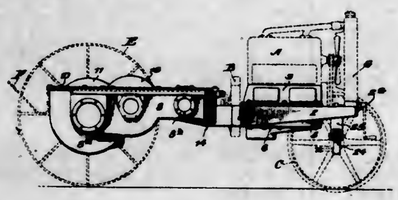
2. A bumper bracket comprising an arm for mounting upon an automobile frame, and having a beveled surface, a member slidably supported by said arm and having a beveled surface for coöperation with the beveled surface on said arm, and yieldable means for maintaining the beveled surfaces of said arm and said member in wedging engagement.

1,353,242. FRAME FOR MOVING-PICTURE SCREENS. AXEL THEODOR JACOBSSON, Cleveland, Ohio. Filed Apr. 17, 1920. Serial No. 374,585. 1 Claim. (Cl. 45—130.)



A screen comprising an outer frame having bars with loose joints in the corners of the frame, a fabric fixed to said bars, blocks fixed to all of said bars, an inner rigid frame having crossed bars the ends of which are loosely mortised into said blocks, and wedges in the mortises, between said ends and the blocks, to expand the bars of the outer frame.

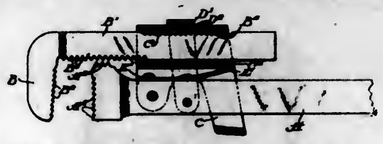
1,353,243. HAIR-CUTTER. WILLIAM A. JAMES, Providence, R. I. Filed Feb. 10, 1920. Serial No. 357,665. 8 Claims. (Cl. 30—12.)



1. In a hair cutter, a guard, a blade clamping plate borne by the guard, a movable handle connected to the guard, means borne by the handle to move the plate to clamping position and means extending through the handle to effect outward movement of the blade.

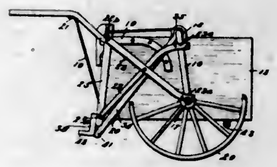
1,353,244. HYDRAULIC HOIST. FREDERICK JOERNS, St. Paul, Minn., assignor to Cora A. Joerns, St. Paul, Minn. Filed June 18, 1917. Serial No. 175,363. 3 Claims. (Cl. 138—9.)

1. In a device of the class described, a cylinder having a movable piston therein, a pump, passage-ways connecting said pump with either end of said cylinder, a three position valve in said passage-ways, said valve being formed with two separate passage-ways so that when said valve is in open position, said pump can draw oil from said cylinder to transfer it from one side of the piston to the other, the second position, of said valve locking the oil in said cylinder and forming a by-pass for the passage-ways of said pump and a third position of said valve forming a by-pass for the oil in said cylinder to pass from one side of piston to the other and closing the passage-ways connecting said pump with said cylinder.



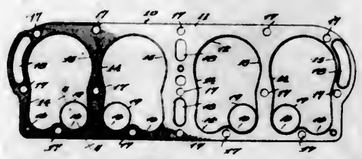
1,353,245. COMBINED ENGINE AND VEHICLE FRAME. CARL E. JOHNSON, St. Paul, Minn. Filed Oct. 10, 1918. Serial No. 257,568. 1 Claim. (Cl. 180—54.)

A combined engine, transmission and gear casing adapted to form also a tractor vehicle body and in two detachable units, one of said units being supported by one axle of the vehicle and the other by the other axle, lugs carried by one unit, a yoke carried by the other adapted to register with the lugs, alining sleeves carried respectively by the yoke and lugs, bushings in said sleeves of less length than the sleeves, bolts passing through the sleeves and bushings, and collars on the bolts bearing on the sleeves and out of contact with the bushings, as and for the purpose set forth.



1,353,246. PIPE-WRENCH. ARTHUR WELLINGTON KIEFER, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,366. 4 Claims. (Cl. 81—103.)

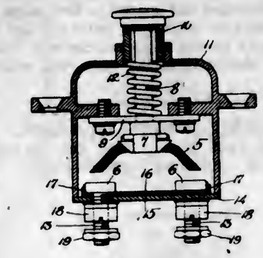
1. A pipe wrench comprising a handle portion having teeth at one end and constituting a jaw member, an opposing jaw member having a shank provided with teeth arranged to engage certain teeth on the handle member, a guiding and retaining member pivotally connected to said handle member and arranged to slidably receive said shank, a second guiding and retaining member pivotally connected to said handle member, said shank having teeth on the opposite side of the shank from the teeth which engage the teeth on the handle member, and



teeth carried by said second named retaining member and arranged to engage the last mentioned teeth on said shank.

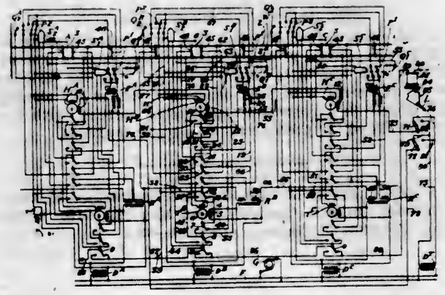
1,353,247. SELF-LOADING COAL AND GRAIN TRUCK. JOHN ANDREW KLOVSTAD, Hope, N. D. Filed Jan. 10, 1920. Serial No. 350,623. 7 Claims. (Cl. 298—2.)

5. A self loading truck including a scoop pan, an arched axle from which said pan is freely suspended, supporting wheels carried by said axle upon which said pan is adapted to be balanced, a wheel frame rigidly connected to said axle and comprising side sections rigidly secured to the axle arms and to a rear yoke, said yoke comprising top and bottom rear cross bars, and top side bars rigidly secured at one end to the arched axle, loading levers pivotally secured at one end to arch of said axle a pivoted latch mounted on the top cross bar of the wheel frame and adapted to automatically couple the said wheel frame and scoop pan, a cross beam connecting the said loading levers adjacent their lower ends, and a pivoted latch carried by the lower cross bar of the aforesaid yoke and adapted to automatically couple said loading levers with said yoke of the wheel frame.



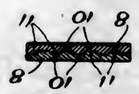
1,353,248. CARBURETING-SCREEN. FRANK W. LAPHAM, Cicero, Ill. Filed Sept. 18, 1919. Serial No. 324,674. 5 Claims. (Cl. 123—141.)

1. A gasket for the cylinder head of an internal combustion engine, and a screen secured to the gasket and adapted to be arranged near the intake valve of the engine.



1,353,249. ELECTRIC SWITCH. THOMAS L. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 10, 1916. Serial No. 90,204. 1 Claim. (Cl. 200—166.)

An electric switch comprising: a first contact-member; a support; a second contact-member mounted on the support and having a stem and a flat contact-surface normal to the axis of the stem, said surface being substantially greater than that of the first contact-member and eccentrically disposed with relation thereto; and means on the support, normally preventing rotation of the second contact-member, said member being disengageable from said means and rotatable, when so disengaged, about the axis

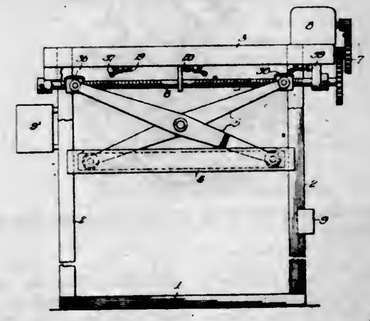


of its stem to bring a fresh portion of its contact-surface into coöperative relation with the first contact-member.

1,353,250. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 9, 1920. Serial No. 350,323. 19 Claims. (Cl. 246—33.)

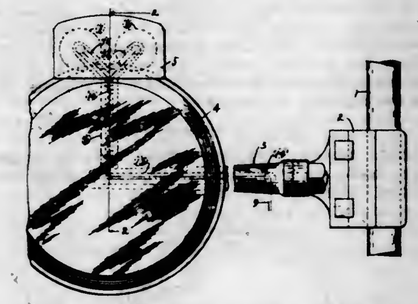
6. In combination, a stretch of railway track over which traffic moves in both directions, said stretch being divided into a plurality of successive sections, a source of alternating current at the junction of each two sections, and means for connecting each source across the rails of one adjacent section or the other.

1,353,251. JOINTED WELTING. CHESTER D. LIBBY, Malden, Mass., assignor to A. C. Lawrence Leather Company, Boston, Mass., a Corporation of Maine. Filed Mar. 26, 1919. Serial No. 285,349. 4 Claims. (Cl. 36—78.)



2. An article of manufacture consisting of a strip of welting formed of a plurality of shorter strips with their ends overlapping and secured together and provided on their opposed overlapping contacting surface portions with interlocking longitudinal ridges and grooves.

1,353,252. SAFETY DEVICE FOR BALING-PRESSES. CHARLES ROSS LITTIG, Chicago, Ill. Filed Oct. 12, 1917. Serial No. 196,127. 3 Claims. (Cl. 100—11.)

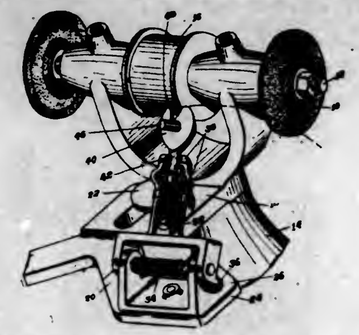


1. In combination, a motor, an overload switch, a reversing switch having two circuit closing positions, a limit switch arranged to operate only when said reversing switch is in one position, a second limit switch arranged to operate only when said reversing switch is in the other position and an additional limit switch controlling the operation of said overload switch.

3. In combination, a three phase electric motor having an armature, a source of three phase current therefor, an electromagnetic switch controlling the current supplied to said armature from said source, a reversing switch connected in circuit with said armature, a starting switch

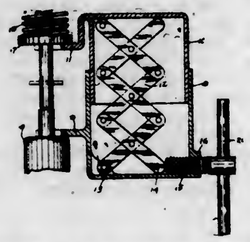
and an overload switch in the armature circuit between said electromagnetic switch and said reversing switch, an overload limit switch short circuiting said overload switch during the period when the motor is starting, and means for preventing intermittent operation of said magnetic switch after said overload switch operates.

1,353,253. AUTOMOBILE-SIGNAL. CHARLES F. LIVINGSTON and EDWARD E. LORDGE, San Jose, Calif. Filed Nov. 11, 1919. Serial No. 337,247. 1 Claim. (Cl. 240—7.)



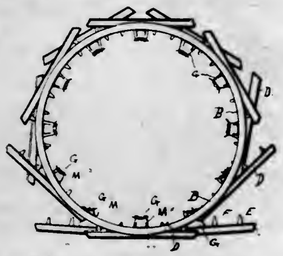
The combination with a look-back mirror for automobiles, of a hood mounted upon the edge thereof and extending a distance over the front thereof, a pair of illuminating units of different colors mounted in an electric circuit and positioned under said hood whereby the light emitted therefrom is concentrated on said mirror, and means for rendering either unit operative or inoperative.

1,353,254. GRINDING DEVICE FOR ROTARY CUTTERS. HENRY M. LOOMER, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 17, 1917. Serial No. 162,758. 8 Claims. (Cl. 51—7.)



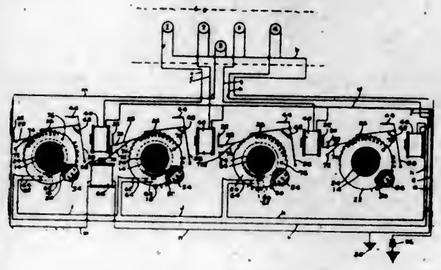
1. In a machine for grinding rotary cutters, a grinding wheel, a support, an arm pivotally mounted upon said support for movement about an axis substantially parallel to the axis of the grinding wheel, a table carried by said

arm and having means for rotatively supporting a cutter, and means for adjusting said table on said arm to vary



the angle between the plane of said table and the plane of oscillation.

1,353,255. VALVE-SPRING LIFTER. NILS H. LUNDQVIST, New Haven, Conn., assignor of one-half to Carl Park, New Haven, Conn. Filed Apr. 19, 1920. Serial No. 374,853. 2 Claims. (Cl. 29—86.3.)



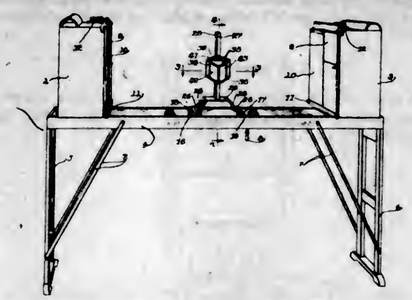
2. A valve-spring lifter comprising a cup member, a telescopic cap member, each formed with an outwardly projecting fork, a lazy-tongs arranged between the two members, and a screw bearing against one end of the tongs and adapted when turned inward to elongate the tongs and separate the members.

1,353,256. TRACK-LAYING WHEEL. OTIS G. MALSBARY, Parlier, Calif. Filed May 20, 1918. Serial No. 235,504. 2 Claims. (Cl. 305—13.)

1. In a track laying wheel, the combination of duplicate rims attached to a common hub, each of said rims having an outwardly projecting flange on each side, a plurality of uniform sized units of track each of said units being of such width that it will fit loosely between the flanges on either rim, a projection at the approximate center of each unit adapted to pass through a hole in the rim, the shape of the projection and the shape of the hole being adapted to permit the unit of track to have a rocking lateral motion, means at the top of the projection adapted to keep it from falling through the hole in the rim, a plurality of upwardly projecting conical guides on each of said units, and holes in the rim adapted to register with and receive said conical projections, the units on each rim being arranged and spaced so that when lying on the ground the ends of contiguous units on each rim will meet, and the units on the duplicate rim will overlap the meeting place of the units on the other rim, substantially as described.

1,353,257. ELECTRIC COMBINATION-LOCK. ADOLPH Z. MAMPLE, St. Paul, Minn. Filed Aug. 29, 1919. Serial No. 320,616. 8 Claims. (Cl. 70—63.)

4. An electrical combination lock comprising a series of combination wheels provided with notches, means tending to hold said wheels in initial position with the notches out of alinement with each other, and means for placing said wheels in succession in unlocking position with the notches alined, by predetermined electric impulses.

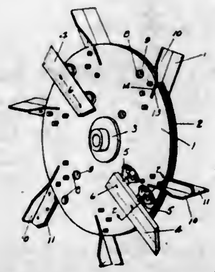


1,353,258. PERFUMIER. LOUIS LINNEAUS MARTIN, Toronto, Ontario, Canada. Filed May 17, 1919. Serial No. 297,933. 3 Claims. (Cl. 230—33.)

1. A perfumier, comprising, a hollow fan-shaped member formed of thin sheet material having a container portion adapted to contain a supply of perfume, the faces of the fan-shaped member having longitudinal grooves leading to pocket-shaped openings directing the air inwardly and the outer edge of the fan-shaped member having perforations therethrough.

1,353,259. OPTICAL APPARATUS. WILLIAM MEYER, Chicago, Ill. Filed Jan. 31, 1919. Serial No. 274,166. 10 Claims. (Cl. 88—29.)

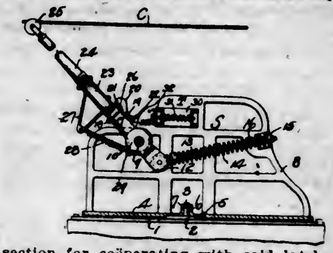
1. In combination, a pair of pictures to be observed, a viewing device arranged therebetween and adapted for portraying the images of said pictures to the observer, said viewing device comprising a pair of viewing mirrors pivotally mounted upon a common vertical axis and means for swinging said viewing mirrors in unison about said common vertical axis to increase or decrease the angle



therebetween, whereby faulty alinement of the images is readily overcome.

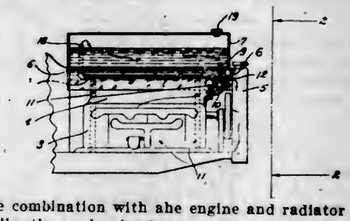
1,353,260. MATTRESS-SUPPORT. FREDERICK I. MONKS, Houston, Tex. Filed Nov. 3, 1919. Serial No. 353,394. 1 Claim. (Cl. 5—1.)

A mattress support including a frame-work formed with a bottom, side and end members, lengthwise ribs extending transversely between the side members and spaced apart, forming parallel compartments, said side and end members extending up above the partitions and forming a mattress retainer, a series of inflatable units arranged in each compartment, said units being formed of elastic material, fluid conducting tubes connecting the units of each series, a fluid inlet and a fluid outlet connected to each series of units and valves controlling said inlet and said outlet.



1,353,261. CUTTING AND DISTRIBUTING DEVICE FOR SILO-FILLERS. JOHN F. MORGAL, Springfield, Ohio, assignor to The E. W. Ross Company, Springfield, Ohio, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,742. 12 Claims. (Cl. 146—26.)

1. In a device of the character described, a rotary supporting member, and a fan blade comprising two angle irons having two of their flanges arranged face to face and rigidly connected directly one to the other, one of said angle irons extending beyond the other and rigidly secured to said supporting member.



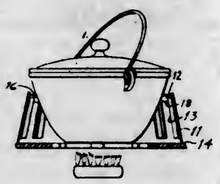
1,353,262. TROLLEY-RETRIEVER. ELBY A. MORRIS, Leetonia, Ohio. Filed June 25, 1917. Serial No. 176,796. 1 Claim. (Cl. 191—88.)

A trolley retriever including a rotatably supported frame having opposite side walls, a pole supporting unit consisting of a pivot section including an enlarged body portion journaled in the side walls of the frame and having oppositely disposed portions one of which constitutes a spring abutment while the other carries hinge knuckles, and a pole receiving socket section also having hinge knuckles for coöperating with the knuckles on the pivot section to constitute a hinged connection therebetween, a pivoted latch carried by the pivot section, a keeper on the

socket section for coöperating with said latch, an offset bracket arm also on the socket section on the side opposite the keeper, a spring connecting the extremity of the bracket arm with the enlarged portion of the pivot section, a yielding abutment located in the path of movement of the pivoted latch, and a compression spring arranged between the walls of the frame and exerting pressure on the abutment end of the pivot section.

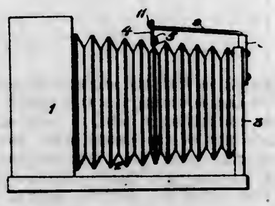
1,353,263. AUXILIARY RADIATOR FOR AUTOMOBILES. WILLIAM NASH, Denver, Colo., assignor to The Nash Tractor Company, Denver, Colo., a Corporation of Colorado. Filed Nov. 13, 1917. Serial No. 201,733. 4 Claims. (Cl. 123—174.)

1. The combination with ahe engine and radiator of an automobile, the engine having a water jacket, of an auxiliary radiator comprising a tank, a coupling connected with the upper part of the water jacket and connected with the automobile radiator, said coupling having a partition therein, forming a chamber on each side of said partition, a pipe connection between each of said chambers and the tank, one chamber being in communication with the water jacket and the other in communication with the automobile radiator, said partition having a small opening therethrough.



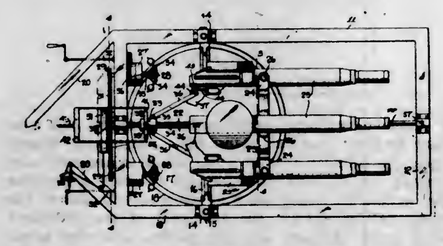
1,353,264. FLUME. WILLIAM E. NEWMAN and DAVID K. STUART, Ogden, Utah. Filed June 22, 1920. Serial No. 390,879. 1 Claim. (Cl. 61—15.)

A flume comprising trough-shaped primary and secondary sections provided along their edges with lateral flanges, the primary section being folded rearwardly and forwardly upon itself to form an exterior transverse socket across the upper edges of which the flanges of the primary section extend, the extremity of the secondary section being inserted into the socket, and the upper edges of the secondary section being beveled to permit the same to pass beneath the flanges of the primary section,



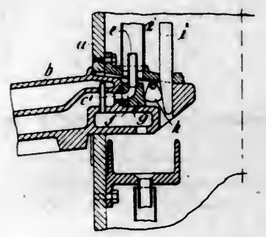
the flanges of both sections being set back from the ends of the respective sections to permit the beveled extremity of the secondary section to enter the socket; a brace extended transversely of the sections; and a binder uniting the ends of the brace, the flanges of the sections being cut away close to the body portions of the sections to define openings which receive the binder, and to define at the ends of the flanges of the sections, abutting fingers which overlap the outer edge of the binder and serve at once as supports for the ends of the brace and to prevent an undue telescoping of the sections and a subsequent closing of the openings.

1,353,265. GAS-SAVING AND HEAT-RETAINING DEVICE. HEIKICHI OSHIDE, Santa Barbara, Calif. Filed Mar. 25, 1920. Serial No. 368,699. 4 Claims. (Cl. 126—215.)



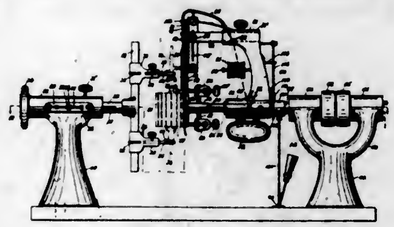
1. A heat retaining device comprising a substantially frusto-conoidal body, a series of inwardly projecting and horizontally disposed ribs extending therefrom, inwardly projecting and substantially vertical ribs disposed beneath the horizontal ribs, and a detachable utensil-supporting ring seated upon the first-named ribs.

1,353,266. CAMERA. ROBERT H. PEARMAN, Boston, Mass., assignor to Thomas E. Steere, Providence, R. I. Filed July 31, 1919. Serial No. 314,496. 7 Claims. (Cl. 95—39.)



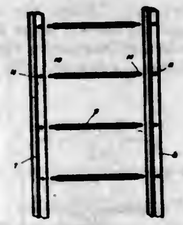
3. In combination with a camera having a bellow and a front board, laterally foldable means carried by the front board for supporting the bellows intermediate its ends by suspension.

1,353,267. RAPID-FIRE GUN. VINTON ULRIC DAHLGREN PIERCE, Washington, D. C. Filed Apr. 3, 1917. Serial No. 159,411. 39 Claims. (Cl. 89—9.)



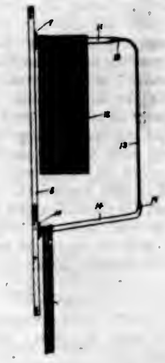
1. A machine gun comprising a plurality of barrels extending in the same direction, means for rotating the barrels around a central axis extending longitudinally of the barrels, and manually controlled means for shifting the barrels from a parallel relation into or out of a divergent or convergent relation while the barrels are being rotated.

1,353,268. MECHANICAL FURNACE. ARTHUR RAMÉN, Helsingborg, Sweden. Filed May 1, 1918. Serial No. 231,862. 6 Claims. (Cl. 257—119.)



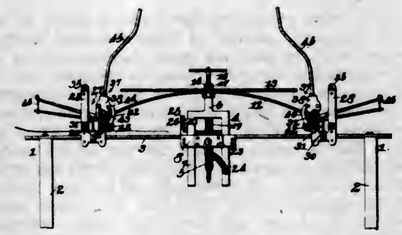
2. A stirring device for a mechanical roasting furnace, comprising a hollow shaft and stirring arms, a circulation channel, and a detachable water supply pipe for each arm, said pipe at its outlet end having tightening body, a correspondingly formed seat surrounding the water inlet of the circulation channel of the arm and against which said body is adapted to be tightly pressed, means located inside the shaft of the furnace for pressing said body against said seat, and means operable from outside the shaft for operating said first means.

1,353,269. WINDING-MACHINE. PHILIP F. RHOADES, New York, N. Y., assignor of one-third to William M. Welling, Long Valley, N. J. Filed May 3, 1919. Serial No. 294,598. 14 Claims. (Cl. 242—13.)



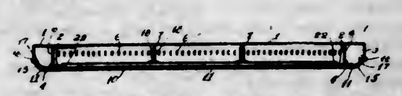
4. In a machine for coil-winding a drum having peripheral slots, the combination of means for supporting and positioning the drum, a main frame and means for rotating it as about an axis, a rigid frame adjustably supported at the outer end of said main frame, a pivotally connected frame hingedly engaged with said rigid frame, and a tubular wire-drawing needle supported by the said pivotally connected frame and having a hooked-shaped end adapted to enter said drum slots, adjustable means for guiding said needle in a path about the drum and in a manner to enable said hooked-shaped needle end to pass during each revolution of the main frame through two slots therof, whereby the needle when the main frame is rotated will lead or draw a wire through both of said slots and across as well the opposite ends of the drum.

1,353,270. LADDER. CHESTER A. RICH, Cincinnati, Ohio, assignor to The Rich Pump Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1919. Serial No. 284,088. 2 Claims. (Cl. 228—58.)



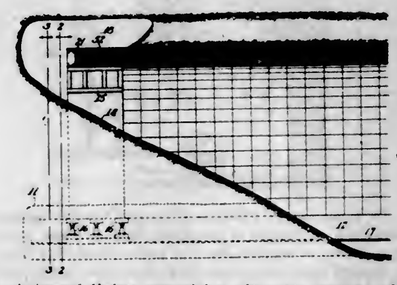
1. A ladder comprising rails and rounds located between the rails, the ends of the rounds having an impregnation of material adapted to prevent shrinkage thereof within the rails.

1,353,271. TOWEL-RACK. BRAYTON G. RICHARDS, Chicago, Ill., assignor to Jacques Rousso, Los Angeles, Calif. Filed Mar. 1, 1920. Serial No. 362,428. 7 Claims. (Cl. 45—32.)



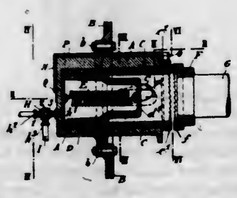
3. A towel rack comprising a towel guide member twisted at one point and adapted to hold towels provided with securing members having openings therein to slide on said guide member, substantially as described.

1,353,272. DEVICE FOR ARCHING AND FITTING SEMI-ELLIPTIC SPRINGS. JOSEPH ISAAC ROBERTS, Prescott, Ariz. Filed Feb. 28, 1919. Serial No. 279,764. 10 Claims. (Cl. 153—51.)



1. A portable spring-leaf forming device, comprising a trestle, a form, clamp frames movable on the trestle and having means for gripping the ends of the form, and including means for supporting the ends of the form when the latter is elevated for the spring leaf finishing operation and when the clamp frames are moved inwardly, central supporting means for the form comprising an arching frame, adjustable means embodied in the arching frame for clamping the form and a leaf bar in position prior to the forming operation, and manually operable pressers associated with the clamp frames, including a presser frame with a presser roller for engaging the leaf bar, a loosely hung clamp roller for engaging the form to obtain the clamping action, an operating handle attached to each presser frame, and a handle for turning the presser roller to accomplish the forming operation.

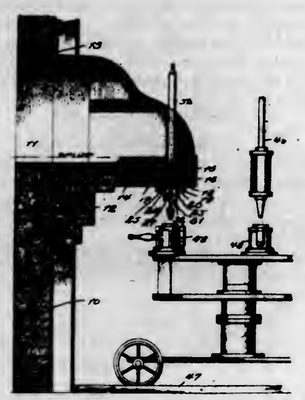
1,353,273. TRAY. CAMILLE E. ROY, Chicago, Ill. Filed Apr. 3, 1920. Serial No. 371,019. 5 Claims. (Cl. 211—28.)



4. A tray including a stamped frame presenting an inverted U-shape in cross-section, the outer wall of said frame being of less vertical extent than the inner wall thereof, and a bottom for said frame terminating at said outer wall and having a groove for the reception of the said outer wall.

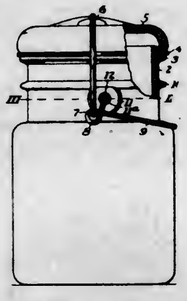
1,353,274. TUNNEL CONSTRUCTION. HENRY W. SCHLUETER, Los Angeles, Calif. Filed May 12, 1917. Serial No. 168,231. 3 Claims. (Cl. 61—45.)

1. A tunnel lining comprising alternate courses of preformed members and cast monolithic ribs, each of said courses being continuous and self supporting throughout the arch; said cast monolithic ribs being interlocked with the adjacent courses in such a manner as to tie said courses together; a series of rods placed parallel with the axis of the tunnel and passing through said preformed and cast members; and fastening means on each rod for securing either end of said rod to one of said preformed members.



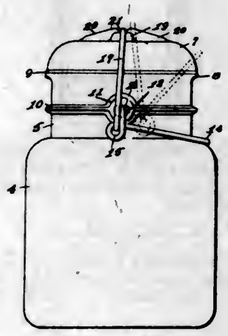
1,353,275. POWER-BARRING APPARATUS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,500. 5 Claims. (Cl. 121—37.)

1. In barring apparatus, a shaft having a ratchet member fixed thereon, a cylindrical casing having a restricted port at one end to admit fluid-pressure to the interior of the same, a piston reciprocative in the casing and constituting with the same a telescopic chamber of large ca-



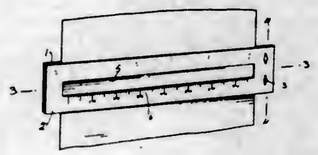
pacity, as compared with the admission port, for the expansion of the fluid-pressure therein to effect a slow advance of the piston, a sleeve reciprocative between the casing and the piston and having a ratchet member complementary to and normally separated from the ratchet member fixed on the shaft, and a tenon on the piston having sliding engagements with a helical slot in the sleeve and a longitudinal slot in the cylindrical casing so that the advance of the piston will impart a slowly rotative advance to the sleeve to engage the complementary ratchet members to turn slowly the shaft through a partial revolution.

1,353,276. DROP-FEEDING DEVICE FOR GLASS-MACHINES. ALEXANDER L. SCHRAM, Hillsboro, Ill., assignor, by mesne assignments, to Drey Automatic Glass Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 28, 1915. Serial No. 47,719. 8 Claims. (Cl. 49—55.)



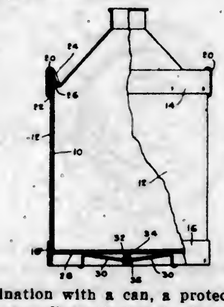
4. In combination with partible cup shaped gathering devices, one of which is provided with a glass severing edge, a knife, a support for the knife permitting vertical play thereof when moved and an adjustable weight acting on the knife to cause its cutting edge to bear against the cutting edge of one of the gathering devices.

1,353,277. JAR. ALEXANDER L. SCHRAM, Hillsboro, Ill. Filed Apr. 17, 1918. Serial No. 229,089. 2 Claims (Cl. 215—88.)



1. A jar having a body portion and a reduced neck portion, a lid receiving flange formed around the upper end of the neck portion and slightly below the top edge thereof, a second flange surrounding the neck portion and spaced apart from the lid receiving flange and the body portion, a boss located on each side of the neck portion below the second flange and formed integral with said flange and neck portion and spaced apart from the body portion, said bosses being provided with central recesses, a bail lever having inturned ends seated in the recesses formed in the bosses, loops formed in said bail lever, and a bail provided with inturned ends seated in said loops.

1,353,278. FRUIT-JAR. ALEXANDER L. SCHRAM, Hillsboro, Ill., assignor to Schram Glass Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed June 14, 1919. Serial No. 304,168. 4 Claims. (Cl. 215—90.)



1. A fruit jar comprising a body and a reduced neck portion, the neck portion being provided with a lid receiving shoulder and a gasket retaining recess, a rib formed integral with the neck portion substantially midway between the body of the jar and the lid receiving flange, bosses formed on the opposite sides of the neck portion and integral with the rib surrounding the neck portion, recesses formed in the bosses provided on their top with substantially flat horizontal upper walls, a lid clamping wire having its ends inturned and seated in said recesses, so as to provide shifting pivot points for said wire, a lever wire, and an eccentric connection between the lid clamping wire and the lever wire.

1,353,279. COPY-GUIDE. JACOB SCHULTHESS, Salt Lake City, Utah. Filed Mar. 5, 1919. Serial No. 280,785. 1 Claim. (Cl. 120—33.)

A copy guide comprising base and top strips of light pliable cardboard material of lengths greater relatively than the width of legal cap paper, the top strip of thin pliable cardboard material having an elongated slot of a length greater relatively than the maximum typewritten line and being of a height greater relatively to the height of a single typewritten line, whereby but a single typewritten line is visible through the slot as the guide is adjusted down the page, the upper face of the top strip of cardboard adjacent the lower edge of the slot having a scale of graduations for indicating the proper spacing of words on the line, and detachable means clenchingly penetrating the top and base strips for clamping the two strips at one end of the guide, whereby the adjacent faces of the strips, particularly adjacent the clenching means, may grip the page with friction greater relatively than the weight of the free unattached ends of the two strips, whereby the guide may remain placed relatively to the page.

1,353,280. DEVICE FOR SECURING PROTECTING-JACKETS UPON CANS. WILLIAM H. SEMON, Minneapolis, Minn. Filed Nov. 24, 1919. Serial No. 340,171. 2 Claims. (Cl. 220—11.)

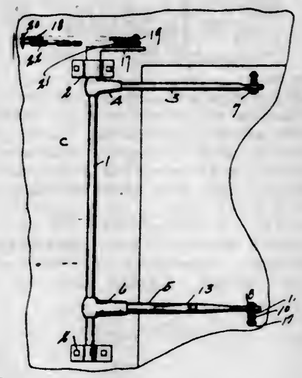
1. In combination with a can, a protecting jacket surrounding the can, clips attached to the top of the jacket and engaging the customary flange on the upper portion of the can, clips attached to the bottom of the jacket and extending to the center of the bottom of the can whereby a protecting bottom member is held in place, and a sleeve for holding said last-mentioned clips together at the center of the bottom.

2. In combination with a can, a protecting jacket surrounding the can, top and bottom hoops secured to said jacket, clips secured over the top hoop and engaging the customary flange on the upper portion of the can, clips secured over the bottom hoop and having arms extending to the center of the bottom of the can whereby a protecting bottom member is held in place, and a sleeve surrounding the inner portions of said arms for holding said last-mentioned clips together at the center of the bottom.

1,353,281. VANITY-CASE. ROBERT H. SHARP, Chicago, Ill. Filed June 14, 1920. Serial No. 388,950. 3 Claims. (Cl. 132—34.)

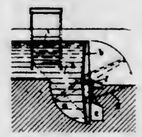
3. In a toilet article container, the combination with a cylindrical open bottom member and a cup shaped closure member adapted for operative engagement with each other, of means for securing a toilet article within the latter, a mirror within the former and visible through said open bottom, and a toilet preparation cup removably positioned within said lower member and adapted to hold the mirror in place.

1,353,282. JAR-LIFTER. ADELIA G. SHRAUGER, Odanah, Wis. Filed Sept. 25, 1919. Serial No. 326,341. 5 Claims. (Cl. 53—1.)



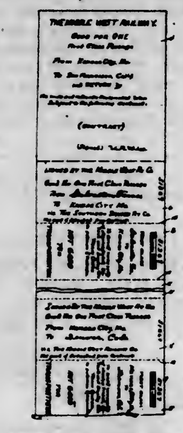
1. A jar lifter comprising a plate, a bail pivotally connected to the plate, and a ring pivotally carried by the bail above the plate.

1,353,283. METHOD OF RECOVERING POTASSIUM CHLORID FROM BRINE. JOSEPH L. SILSBEE, Salt Lake City, Utah. Filed Oct. 22, 1919. Serial No. 332,441. 8 Claims. (Cl. 23—22.)



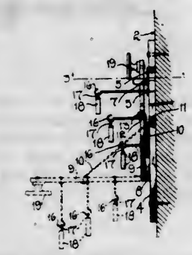
8. The method of recovering crude potassium-bearing material from brines of the character described, containing chlorids of sodium, potassium and magnesium, which consists in evaporating the brine at atmospheric temperatures until it is nearly saturated with respect to potassium chlorid, freeing the concentrated solution from the precipitated sodium chlorid, further evaporating the concentrated solution at atmospheric temperatures to precipitate mixed chlorids of sodium and potassium, without precipitation of salts containing magnesium, and freeing the precipitated potassium-sodium salts from the residual liquor.

1,353,284. RAILWAY MAIL-DELIVERY. HERBERT E. SMITH, Spokane, Wash., assignor to Spokane Mail Equipment Company, Spokane, Wash. Filed July 28, 1919. Serial No. 313,936. 3 Claims. (Cl. 258—23.)



1. The combination with the rotary delivery device having a lever arm and a tension spring urging the device to projected position, means for retracting the device, and an auxiliary spring co-acting with the first spring near the end of the movement of the device to absorb the movement of impact.

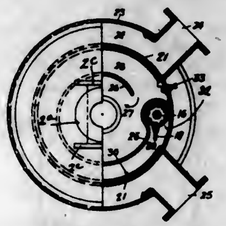
1,353,285. REVERSIBLE WEIR. OTTO SOMMER, Zurich, Switzerland, assignor to Stauwerke A.-G., Zurich, Switzerland. Filed May 4, 1918. Serial No. 232,494. 3 Claims. (Cl. 61—26.)



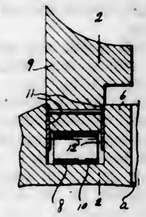
1. A storage dam comprising a pivoted damming element having a crest portion above the pivot line and a pressure portion below the pivot line, a pressure chamber on the up-stream side of said pressure portion at all times under the pressure of the head on the up-stream side of said element, a counter pressure chamber on the down-stream side of said pressure portion and means to automatically supply water, under the head of the up-stream water, to said counter pressure chamber at the high water level of the up-stream water at which the dam is intended to operate.

1,353,286. TRAIN-CHECK RAILWAY-TICKET. GEORGE S. SOWERS, Spring Hill, Kans. Filed Nov. 2, 1918. Serial No. 260,912. 5 Claims. (Cl. 283—23.)

1. A sectional railway ticket comprising a body portion bearing indicia rendering it good for passage, and a train check in the form of a coupon detachably connected with said body portion and bearing indicia identifying it as a part of the railway ticket and authorizing the holder thereof to detach and display said coupon in lieu of the remainder of the ticket on boarding the train.



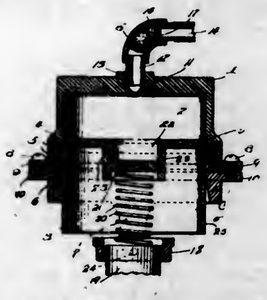
1,353,287. SUPPORT FOR GARMENT-HANGERS. JOSEPH STEIN, Philadelphia, Pa. Filed Apr. 5, 1919. Serial No. 287,679. 1 Claim. (Cl. 45—13.)



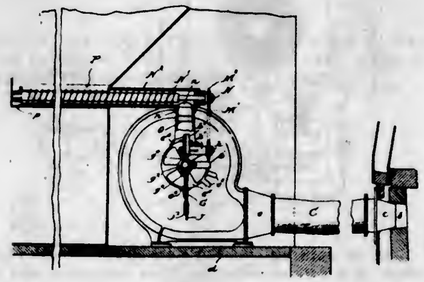
In a device as set forth, a supporting cleat to be supported in a vertical position on a support, an arm operatively hingedly connected to the lower end of said cleat and adapted to assume either a horizontal position at right angles to the cleat, or a vertical position in parallelism with the cleat, means connecting the free and unattached end of the arm and the cleat to support the arm in a horizontal position, means carried by the cleat and being engaged by the arm to support the arm in a vertical position in parallelism with the cleat, and a plurality of hooks extending from the under surface of the arm, said hooks increasing in length from the hinged end of the arm to the free unattached end of the arm, whereby the style of any one of the garments to the rear may be seen whether the arm is in a horizontal position or in a vertical position.

1,353,288. CARBURETER. CHARLES LAWRENCE STOKES, Milong, via Young, New South Wales, Australia. Filed Aug. 5, 1915. Serial No. 43,761. 4 Claims. (Cl. 261—12.)

3. The combination with an internal combustion engine inlet pipe having a section of curved form for conducting fuel-laden air to said engine, of means for bringing exhaust gases into contact with the exterior of the concave wall of said pipe section to heat the same, and a mat of absorbent material lining the interior surface of said concave wall and heated thereby to vaporize the heavier fuel particles centrifugally deposited thereon from said fuel-laden air.

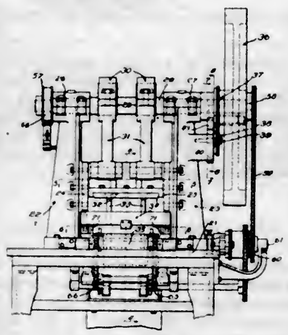


1,353,289. INTERNAL-COMBUSTION ENGINE. FREMONT STOKES, Little Rock, Ark. Filed Apr. 10, 1920. Serial No. 372,867. 3 Claims. (Cl. 123—190.)



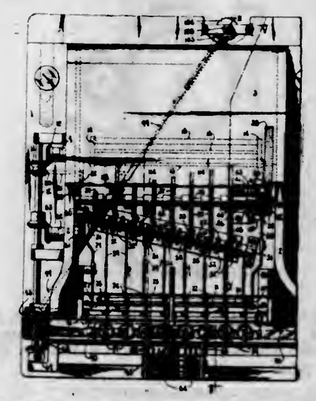
1. An engine of the character described comprising, in combination, a cylinder, a casing provided with a port in communication with the cylinder, said casing being provided with an inwardly directed lip substantially defining the port, a rotary valve mounted within the casing, the outer face of the lip being provided with a channel, a packing member arranged within the channel, yieldable means for constantly urging the packing member toward the valve for contact therewith, and means coacting with the opposed side faces of the channel and the packing member to effect a seal therebetween, said means comprising spring plates carried by certain of said faces and contacting with the remainder of the faces.

1,353,290. COMPRESSED-AIR-VALVE DIAPHRAGM. IVER STOKKE, Sioux Falls, S. D. Filed May 7, 1917. Serial No. 167,111. 4 Claims. (Cl. 137—139.)



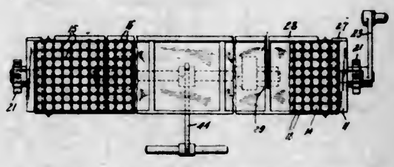
4. A fluid operated valve control comprising a casing, a reversible cup-shaped piston slidable therein and provided in the opposite sides of the bottom of said cup-shaped piston with bearings, and resilient means engaging in the outer bearing for connection at its opposite end to the stem of a valve.

1,353,291. APPARATUS FOR SUPPLYING POWDERED FUEL TO FURNACES. EDMUND H. STROUD, Chicago, Ill. Filed Feb. 26, 1917. Serial No. 150,911. 6 Claims. (Cl. 110—104.)



1. An apparatus of the character described, comprising a receptacle for powdered fuel, a plurality of conveyers for leading the powdered fuel from said receptacle, a pair of fans, a motor arranged between and in axial alinement with said fans for imparting revolution thereto, a common shaft for said motor and said fans, connections for delivering the powdered fuel from said conveyers to the casings of said fans, and valve mechanism for delivering air in regulated quantity to said fan casings.

1,353,292. PUNCHING-MACHINE. HJALMAR SWANSON, Chicago, Ill., assignor to Cummins Perforator Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1920. Serial No. 350,627. 16 Claims. (Cl. 164—88.)

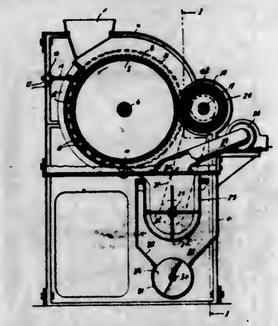


1. In a machine of the character described, in combination: a driven member; a reciprocatory punching mechanism operated by said driven member; a driving member; means for intermittently clutching said driving member with said driven member for effecting an intermittent operation of the punching mechanism; a feed chain for advancing material toward and from said punching mechanism; a driven member for operating said feed chain; means for clutching said last named driven member with the aforesaid driving member, during the periods of rest of the punching mechanism and for disconnecting such driven member therefrom during the operation of the punching mechanism; braking means constantly operative with respect to both driven members; and spring means engageable with the material fed to the punching mechanism for holding such material in punching position; substantially as specified.

1,353,293. CALCULATING-MACHINE. FERDINAND J. TILLMAN, St. Louis, Mo., assignor to Typewriting Calculating Attachment Company, St. Louis, Mo., a Corporation of Missouri. Filed May 21, 1913, Serial No. 769,033. Renewed Feb. 5, 1920. Serial No. 356,425. 14 Claims. (Cl. 235—62.)

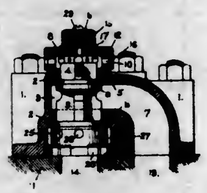
1. In a calculating machine, multiplying mechanism and registering mechanism operable by said multiplying mechanism, the said multiplying mechanism including a multiplying shaft provided with a series of multiplying wheels, a transmission shaft, a series of pinions loosely mounted on said transmission shaft adapted to be driven by said multiplying wheels, a series of clutch members, multiplying keys, and means operable by said multiplying keys for engaging any one of said pinions with one of said clutch members.

1,353,294. APPARATUS FOR MANUFACTURING TOILET-PINS. MAXWELL VIDAVER, New York, N. Y. Filed Aug. 1, 1919. Serial No. 314,603. 11 Claims. (Cl. 49—16.)



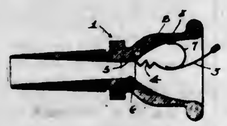
1. In an apparatus of the character described, the combination with a hopper into which the pins are placed divided into a plurality of compartments each of which is provided with apertures in its bottom portion, of a frame supported by said hopper in a plane below the same, a stationary set of jaws carried by said frame, a movable set of jaws adapted to contact with said stationary set of jaws substantially in the plane of rows of apertures in the hopper bottom, means for shifting said movable set of jaws relative to said stationary set of jaws, and means for imparting a vibrating motion to said hopper and the frame carried thereby.

1,353,295. COTTON-SEED-LINTING MACHINE. FELIX E. VOORHIES, Dallas, Tex. Filed Feb. 20, 1919. Serial No. 278,172. 7 Claims. (Cl. 13—10.)



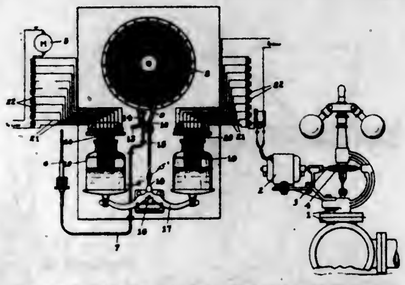
4. A cotton-seed linting machine comprising; a casing, a carder drum mounted in the casing having points to card against the seed, a stationary device mounted adjacent the carder drum to resist the movement of the seed to effect the stripping of the lint therefrom, a plate horizontally disposed underneath the drum dividing the casing, said plate provided with an opening through which the cotton seed and lint fall, a receiving hopper

placed beneath the plate and under the opening to catch the seed and lint, an agitator within the receiving hopper to agitate the seed and lint, said plate having an opening directly above the receiving hopper and agitator, a lint-



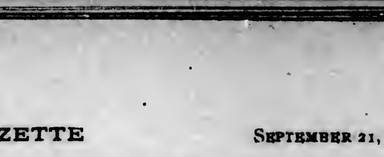
carrying conduit connected with the opening above the receiving hopper and agitator, and a suction fan connected with the conduit to create a draft to draw away the lint from the receiving hopper.

1,353,296. COMBINED BY-PASS AND RELIEF VALVE. EUGENE B. WHELAN, Omaha, Nebr. Filed Aug. 6, 1918. Serial No. 248,521. 2 Claims. (Cl. 121—134.)



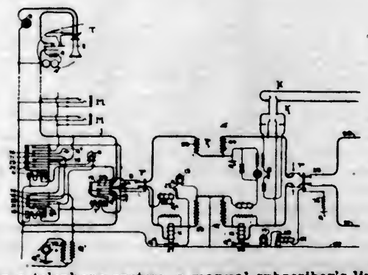
1. In a valve of the type described, a casing having vertically spaced valve seats and adapted to be secured upon the flat top of a steam chest, a vertically movable valve member having portions coöperating with said seat and having guides slidably coöperating with portions of the casing, said casing having steam passages below the valve member and between the valve seats, and a plate interposed in the steam passage below the valve member, having a central cavity and apertures around the cavity, the said valve member having a lower extension movable into the cavity of the said plate when the valve is in lowermost position.

1,353,297. MOUTHPIECE FOR WIND MUSICAL INSTRUMENTS. CHARLES O. WIDMAYER, Syracuse, N. Y. Filed May 16, 1919. Serial No. 297,662. 7 Claims. (Cl. 84—79.)



1. In a mouth piece for wind instruments, the combination of a cup-shaped member, and a flexible leaf secured at one end in the cup-shaped member and extending lengthwise of the mouth piece beyond the entrance thereof, the leaf dividing the cavity of the mouth piece into upper and lower sections, substantially as and for the purpose described.

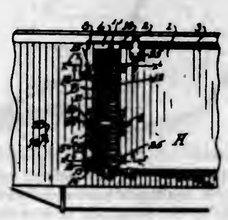
1,353,298. REGULATOR. JOHN A. WIENER, Rothschild, Wis. Filed Mar. 27, 1920. Serial No. 369,886. 8 Claims. (Cl. 234—11.)



1. In an apparatus of the class described, the combination of a pair of motors, control means for said motors each comprising a series of resistance units, groups of contact point of graduated length connected to said series of resistance units, a recording thermometer comprising a pen arm pivot, an arm adjustably attached to the pivot, a beam having a central arm operatively associated with said arm on said pen arm pivot, and receptacles carried by said beam and containing mercury coacting with the said groups of contact points, for the purpose specified.

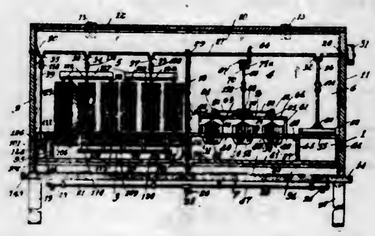
1,353,299. COUPLING. CHARLES WILSON, Coventry, England. Filed July 15, 1919. Serial No. 310,925. 2 Claims. (Cl. 279—75.)

1. The combination of an inner member, a circumferential groove upon the outside thereof, an outer member which can rotate upon and move endwise in relation to said inner member, a circumferential groove upon the inside of said outer member, and balls of a diameter less than the width of said grooves engaging both of said grooves, substantially as set forth.



1,353,300. SEMI-AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., and HARRY E. HERSHEY, Whitewater, Kans., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 25, 1914, Serial No. 874,054. Patent No. 1,317,190. Divided and this application filed July 25, 1917, Serial No. 182,663. Renewed Jan. 28, 1920. Serial No. 355,584. 16 Claims. (Cl. 179—73.)

4. In a telephone system, a manual subscriber's line and a trunk connected in circuit, means for separating the



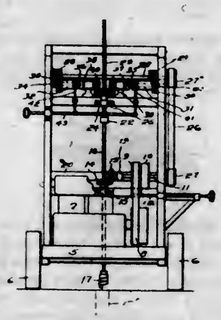
two, and means responsive when the connection is broken for applying a signal to the line until cut off by the subscriber, and automatic means responsive to the cutting off by the subscriber to remove the signal from the subscriber's control.

1,353,301. CAR-DOOR VENTILATOR. GEORGE F. ZAUN, San Bernardino, Calif. Filed Mar. 25, 1920. Serial No. 368,767. 9 Claims. (Cl. 20—19.)

5. The combination with a box car having a slidable door and stop for the door of a ventilating member mounted to swing into or out of position between the door and stop and means for maintaining the ventilating member either in the latter position or against the side of the car.

1,353,302. WASHING-MACHINE. JOHN J. ZOFSAK, Greensburg, Pa. Filed Nov. 18, 1916, Serial No. 132,182. Renewed Feb. 10, 1920. Serial No. 357,748. 12 Claims. (Cl. 141—9.)

3. In a washing machine, an inclosing receptacle; means for holding and supporting a number of dishes in an upright position comprising a removable frame, a plurality of transverse dish holders pivotally and slidably arranged on the top of the removable frame, a pair of supporting rollers revolubly mounted in the said frame; a series of vertical brushes adapted to reciprocate in contact with the dishes; and means for operating the vertical brushes from a source of power.

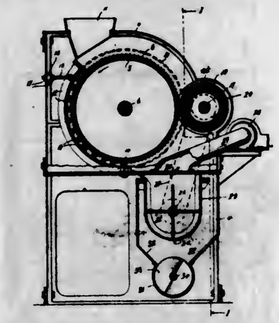


1,353,303. STANDING VALVE. THOMAS M. ADAMS, Houston, Tex. Filed July 7, 1917. Serial No. 179,140. 1 Claim. (Cl. 103—66.)

In a device of the character described, the combination with a pipe, of a collar threaded on the upper end thereof, having an internal annular shoulder, a nipple therein having an outwardly threaded rib which is screwed into the nipple and fits against the said shoulder, forming a water tight joint, a polygonal extension carried by said nipple and provided to receive a wrench, a valve seat carried by the upper end of the nipple, a valve co-acting with said seat, a valve cage protecting the valve and whose upper end has a tapped hole, a pipe threaded into the upper end of the collar and surrounding the cage, and a perforated disk-like protector fitting within said last

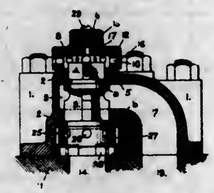
mentioned pipe, and having a threaded nipple which is adapted to be screwed into said hole.

1,353,304. FENCING-MACHINE. FRITZ ANTONIUS AHLSTROM, Absaraka, N. D. Filed Apr. 27, 1920. Serial No. 377,003. 1 Claim. (Cl. 255—22.)



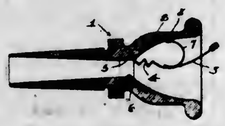
A device of the character described comprising a supporting frame, a vertical shaft, an auger carried by the shaft, a threaded extension of said shaft, a gear wheel threaded upon said threaded extension, a gear wheel splined upon the shaft and held against vertical movement, a horizontal shaft, a gear wheel carried by the horizontal shaft and meshing with the gear wheel that is splined upon the vertical shaft, a second horizontal shaft, means for driving the last named horizontal shaft from first named horizontal shaft and means for driving the first named horizontal shaft from the motor, bevel gear wheels meshing with the gear wheel that is threaded upon the extension of the vertical shaft, clutch elements carried thereby, shiftable clutch sleeves co-acting with said clutch elements and gear wheels carried by said sleeves and meshing with gear wheels upon the second named horizontal shaft.

1,353,305. HEAT-INSULATED VESSEL AND CASING THEREFOR. GEORGE P. ALTENBERG, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Jan. 31, 1919. Serial No. 274,305. 5 Claims. (Cl. 65—66.)



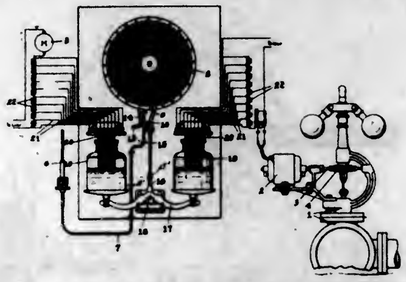
1. In a heat-insulated vessel, the combination of an inner vessel and a casing therefor, said inner vessel comprising a mouth, said casing comprising a downwardly inwardly sloping closed pouring wall provided with an inwardly extending closed lip, a compressible cushion between said mouth of said inner vessel and said casing provided with a compressible lip and said mouth of said

placed beneath the plate and under the opening to catch the seed and lint, an agitator within the receiving hopper to agitate the seed and lint, said plate having an opening directly above the receiving hopper and agitator, a lint-



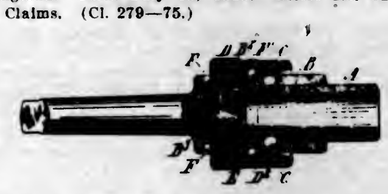
carrying conduit connected with the opening above the receiving hopper and agitator, and a suction fan connected with the conduit to create a draft to draw away the lint from the receiving hopper.

1,353,296. COMBINED BY-PASS AND RELIEF VALVE. EUGENE B. WHELAN, Omaha, Nebr. Filed Aug. 6, 1918. Serial No. 248,521. 2 Claims. (Cl. 121—134.)



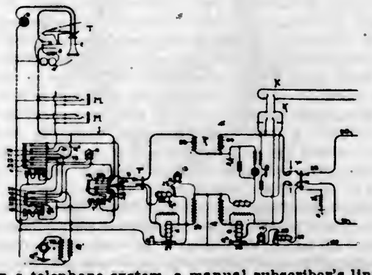
1. In a valve of the type described, a casing having vertically spaced valve seats and adapted to be secured upon the flat top of a steam chest, a vertically movable valve member having portions coöperating with said seat and having guides slidably coöperating with portions of the casing, said casing having steam passages below the valve member and between the valve seats, and a plate interposed in the steam passage below the valve member, having a central cavity and apertures around the cavity, the said valve member having a lower extension movable into the cavity of the said plate when the valve is in lowermost position.

1,353,297. MOUTHPIECE FOR WIND MUSICAL INSTRUMENTS. CHARLES O. WIDMAYER, Syracuse, N. Y. Filed May 16, 1919. Serial No. 297,662. 7 Claims. (Cl. 84—79.)



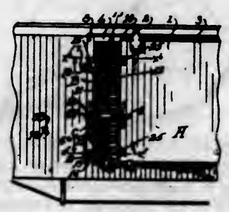
1. In a mouth piece for wind instruments, the combination of a cup-shaped member, and a flexible leaf secured at one end in the cup-shaped member and extending lengthwise of the mouth piece beyond the entrance thereof, the leaf dividing the cavity of the mouth piece into upper and lower sections, substantially as and for the purpose described.

1,353,298. REGULATOR. JOHN A. WIENER, Rothschild, Wis. Filed Mar. 27, 1920. Serial No. 369,886. 8 Claims. (Cl. 234—11.)



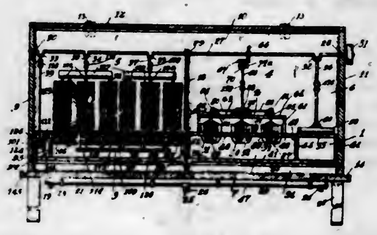
1. In an apparatus of the class described, the combination of a pair of motors, control means for said motors each comprising a series of resistance units, groups of contact point of graduated length connected to said series of resistance units, a recording thermometer comprising a pen arm pivot, an arm adjustably attached to the pivot, a beam having a central arm operatively associated with said arm on said pen arm pivot, and receptacles carried by said beam and containing mercury coacting with the said groups of contact points, for the purpose specified.

1,353,299. COUPLING. CHARLES WILSON, Coventry, England. Filed July 15, 1919. Serial No. 310,925. 2 Claims. (Cl. 279—75.)



1. The combination of an inner member, a circumferential groove upon the outside thereof, an outer member which can rotate upon and move endwise in relation to said inner member, a circumferential groove upon the inside of said outer member, and balls of a diameter less than the width of said grooves engaging both of said grooves, substantially as set forth.

1,353,300. SEMI-AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., and HARRY E. HERSHEY, Whitewater, Kans., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 25, 1914, Serial No. 874,054. Patent No. 1,317,190. Divided and this application filed July 25, 1917, Serial No. 182,663. Renewed Jan. 28, 1920. Serial No. 355,584. 16 Claims. (Cl. 179—73.)



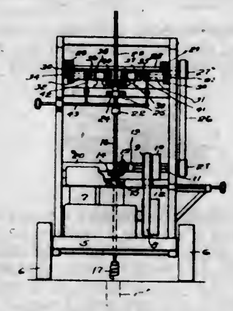
4. In a telephone system, a manual subscriber's line and a trunk connected in circuit, means for separating the two, and means responsive when the connection is broken for applying a signal to the line until cut off by the subscriber, and automatic means responsive to the cutting off by the subscriber to remove the signal from the subscriber's control.

1,353,301. CAR-DOOR VENTILATOR. GEORGE F. ZAUN, San Bernardino, Calif. Filed Mar. 25, 1920. Serial No. 368,767. 9 Claims. (Cl. 20—19.)

5. The combination with a box car having a slidable door and stop for the door of a ventilating member mounted to swing into or out of position between the door and stop and means for maintaining the ventilating member either in the latter position or against the side of the car.

1,353,302. WASHING-MACHINE. JOHN J. ZOFSAK, Greensburg, Pa. Filed Nov. 18, 1916, Serial No. 132,182. Renewed Feb. 10, 1920. Serial No. 357,748. 12 Claims. (Cl. 141—9.)

3. In a washing machine, an inclosing receptacle; means for holding and supporting a number of dishes in an upright position comprising a removable frame, a plurality of transverse dish holders pivotally and slidably arranged on the top of the removable frame, a pair of supporting rollers revolubly mounted in the said frame; a series of vertical brushes adapted to reciprocate in contact with the dishes; and means for operating the vertical brushes from a source of power.



1,353,303. STANDING VALVE. THOMAS M. ADAMS, Houston, Tex. Filed July 7, 1917. Serial No. 179,140. 1 Claim. (Cl. 103—66.)

In a device of the character described, the combination with a pipe, of a collar threaded on the upper end thereof, having an internal annular shoulder, a nipple therein having an outwardly threaded rib which is screwed into the nipple and fits against the said shoulder, forming a water tight joint, a polygonal extension carried by said nipple and provided to receive a wrench, a valve seat carried by the upper end of the nipple, a valve co-acting with said seat, a valve cage protecting the valve and whose upper end has a tapped hole, a pipe threaded into the upper end of the collar and surrounding the cage, and a perforated disk-like protector fitting within said last

mentioned pipe, and having a threaded nipple which is adapted to be screwed into said hole.

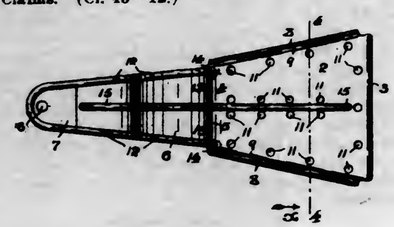
1,353,304. FENCING-MACHINE. FRITZ ANTONIUS AHLSTROM, Absaraka, N. D. Filed Apr. 27, 1920. Serial No. 377,003. 1 Claim. (Cl. 255—22.)

A device of the character described comprising a supporting frame, a vertical shaft, an auger carried by the shaft, a threaded extension of said shaft, a gear wheel threaded upon said threaded extension, a gear wheel splined upon the shaft and held against vertical movement, a horizontal shaft, a gear wheel carried by the horizontal shaft and meshing with the gear wheel that is splined upon the vertical shaft, a second horiozntal shaft, means for driving the last named horizontal shaft from first named horizontal shaft and means for driving the first named horizontal shaft from the motor, bevel gear wheels meshing with the gear wheel that is threaded upon the extension of the vertical shaft, clutch elements carried thereby, shiftable clutch sleeves co-acting with said clutch elements and gear wheels carried by said sleeves and meshing with gear wheels upon the second named horizontal shaft.

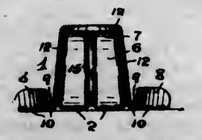
1,353,305. HEAT-INSULATED VESSEL AND CASING THEREFOR. GEORGE P. ALTENBERG, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Jan. 31, 1919. Serial No. 274,305. 5 Claims. (Cl. 65—66.)

1. In a heat-insulated vessel, the combination of an inner vessel and a casing therefor, said inner vessel comprising a mouth, said casing comprising a downwardly inwardly sloping closed pouring wall provided with an inwardly extending closed lip, a compressible cushion between said mouth of said inner vessel and said casing provided with a compressible lip and said mouth of said

inner vessel, and means whereby to pinch said compressible lip between said first-named lip and said mouth of said inner vessel, the inner edege of said first-named lip ex-



tending inwardly beyond the inner edge of said compressible lip, and said first-named lip spaced from said mouth of said inner vessel to form a slight inner groove between said first-named lip and said mouth.



1,353,306. WINDOW FOR AUTOMOBILE-CURTAINS. GEORGE I. BAIR, Detroit, Mich. Filed Oct. 6, 1919. Serial No. 328,805. 1 Claim. (Cl. 296—145.)

An automobile window comprising a frame having transverse openings and a seat for a transparent plate, fabric attached to said frame, casings inclosing said frame, said casings being provided with sockets extending into the frame openings, and screws and nuts in the sockets of said casings and the openings of said frame to retain said casings on said frame.

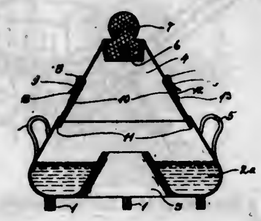
1,353,307. SINK SCOOP OR SHOVEL. SAMUEL BERGER, Newark, N. J. Filed Dec. 11, 1919. Serial No. 344,090. 6 Claims. (Cl. 45—12.)

3. A scoop or shovel of the character specified, comprising a main body having longitudinally extending and upwardly projecting marginal side-flanges, a handle connected with and extending from said body, said body being further provided in its upper surface with drainage-channels contiguous to said side-flanges said channels having rearwardly extending discharge-ends.

1,353,308. MANUFACTURE OF WELT-SHOES. GEORGE H. BLACK, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 28, 1918. Serial No. 268,638. 3 Claims. (Cl. 12—142.)

1. That improvement in the art of making welt shoes which consists in bending a welt strip edgewise around the toe of the shoe in the operation of attaching the welt and trimming the inseam to prepare the shoe for the reception of the outsole; preparing the outsole to present with the welt a substantially uniform thickness of edge around the forepart of the shoe by removing from the flesh side of the toe portion of the outsole sufficient stock to compensate for the thickening of the welt which occurred in bending it around the toe; and applying the sole with the reduced portion thereof in proper relation to the thickened portion of the welt to produce an edge which is of substantially the same thickness at the toe that it is at the sides of the shoe.

1,353,309. CONCRETE POLE. EDMUND B. BLINN, Pasadena, Calif., assignor of one-third to Henry Barkschat, Los Angeles, Calif. Filed Oct. 27, 1919. Serial No. 333,546. 3 Claims. (Cl. 72—82.)

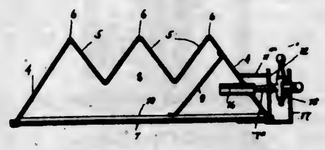


1. A concrete pole having a plurality of integral laterally projecting flanges formed thereon, and a plurality of ribs extending longitudinally thereof between said flanges, for the purpose described.

1,353,310. INSECT-TRAP. GOTTLIEB BONNET, Lincoln Valley, N. D. Filed Apr. 17, 1920. Serial No. 374,548. 1 Claim. (Cl. 43—122.)

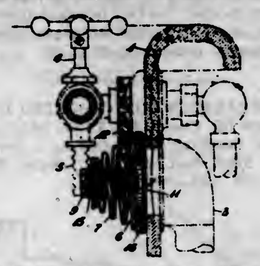
A device of the class described comprising a lower body portion substantially annular in form, a central entrance thereinto from the underside thereof, a chamber provided in said body for holding liquid therein, an upper body portion adapted to rest upon said lower body portion so as

to inclose a single chamber, an opening in the top of said second body portion, a transparent stopper adapted to fit into said opening, and means for releasably holding said upper body portion upon said lower body portion comprising latches pivotally mounted on the outside of said



upper body portion, springs normally urging said latches outward, slots in the inside walls of said lower body portion, members rigid to said handles on the inside of said single chamber, pins near the extremities of said members, said pins adapted to engage said slots.

1,353,311. OPHTHALMIC MOUNTING. WILLIAM H. BOUTELLE, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 29, 1919. Serial No. 314,077. 5 Claims. (Cl. 88—50.)

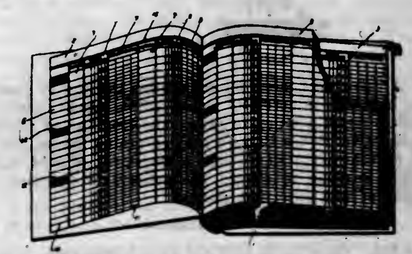


1. In a device of the character described, the combination with a post having an elongated head, of a locking washer having an elongated slot to receive the head, and adapted to be secured in position by relative rotation of the post and washer, and means for resiliently securing the washer in desired relatively rotated position.

1,353,312. HEATER. CHARLES F. BOWLUS, Dallas, Tex. Filed Dec. 2, 1919. Serial No. 341,938. 2 Claims. (Cl. 158—99.)

1. A heater for bath tubs and the like preferably oblong in shape and adapted to be placed underneath a bath tub and having its sides slanted obliquely inward and its ends vertical, the top of the heater forming a plurality of upwardly extending V-shaped protuberances with perforations and constituting burners for the heater, a panel within the heater attached to the front wall of the heater with a space between each end of the panel and the ends of the heater, said panel supported upon strips connected to the bottom of the heater and forming a space between the bottom of the panel and the bottom of the heater for the circulation of gas.

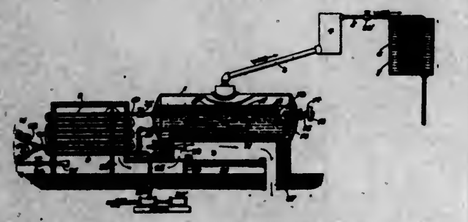
1,353,313. ATTACHMENT FOR BATHTUBS. CHARLES HERMANN WAECHTER, New York, N. Y. Filed Mar. 3, 1920. Serial No. 362,900. 6 Claims. (Cl. 4—24.)



1. In a device for permitting the raising of the water level in a bathtub above the overflow discharge opening thereof, which comprises a substantially cup-shaped member for covering said opening, a washer associated therewith for rendering said covering substantially watertight, a tube extending upward from said member for permitting flow of water into said discharge pipe when the level thereof reaches the top of said tube, a member for engaging the water inlet pipe of the tub, said member having a semi-cylindrical surface substantially conforming to the surface of said pipe, a coiled spring having its end attached to said above-mentioned members, and arranged to press the same into their respective positions, and flanges on the said members whereby the said spring may be compressed and the said device placed into and out of operative position.

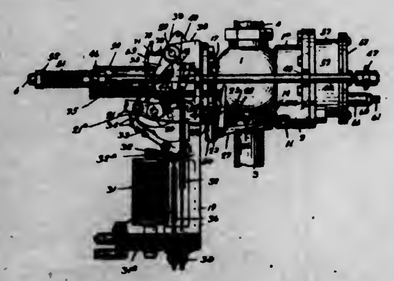
1,353,314. PORTABLE STOVE. FRANK CHAPMAN, Providence, R. I. Filed Aug. 25, 1919. Serial No. 319,672. 1 Claim. (Cl. 158—96.)

A portable stove comprising a body having a filler of absorbent material, such body having an annular shoulder near its upper edge, a cover having a flange embracing the body near its upper edge, the edge of the flange engaging the said annular shoulder, the said cover having an aperture, a wick comprising an absorbent material and an upper and lower layer of wire gauze, the said wick projecting through the opening in the cover and being secured to the under side of the said cover.



1,353,315. RECORD-BOOK. ERNEST H. CLARK, Birmingham, Ala. Filed Nov. 19, 1918. Serial No. 263,218. 5 Claims. (Cl. 283—38.)

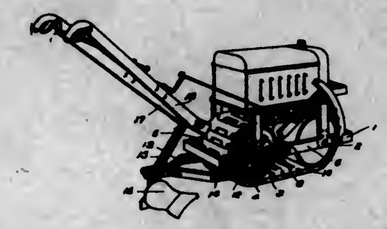
1. An improved record book comprising 100 groups of four entry pages, each page being subdivided by vertical and horizontal lines into entry spaces, each entry space of a group of pages being headed by an indexing numeral having two like terminal digits, the entry spaces of the first three pages and part of the fourth page of each



group of pages being divided into like sub-groups which are respectively distinguished by a different initial index digit, which initial digit progresses by groups in numerical order from zero to nine, the two terminal digits characterising each of the 100 groups of pages progressing by groups in numerical order from 00 to 99.

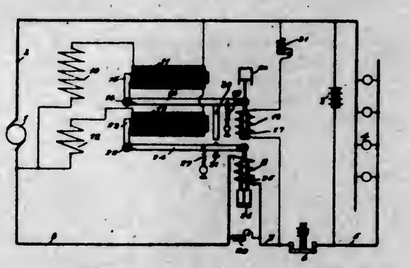
1,353,316. APPARATUS FOR CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,457. 2 Claims. (Cl. 196—25.)

1. In an apparatus for cracking petroleum hydrocarbons, two cracking elements comprising a pipe and a relatively large still, conductors permitting the oil to circulate back and forth from one of said cracking elements to the other, a pump whereby the oil is circulated through said conductors, a vapor line leading from one of said cracking elements, a pressure regulating valve for regulating the pressure in the last mentioned cracking element, and a pressure regulating valve arranged in the course of the circulating liquid to regulate the pressure in the other cracking element.



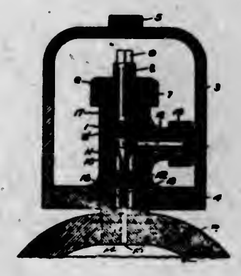
1,353,317. ELECTROMECHANICAL VALVE MECHANISM FOR TIMING AND CONTROLLING BLASTS ON FIRE-ALARM WHISTLES AND THE LIKE. FREDERICK W. COLE, Newton Highlands, Mass., assignor to The Gamewell Fire Alarm Telegraph Company, Newton Upper Falls, Mass., a Corporation of New York. Filed May 28, 1917. Serial No. 171,375. 20 Claims. (Cl. 137—139.)

1. A valve mechanism for controlling the flow of elastic fluid, including a normally closed valve, means normally biased to closed position to govern the opening and closing of said valve, means to open said governing means, and a time element actuated through a movement of said valve to open position to govern the subsequent duration of opening of said governing means.



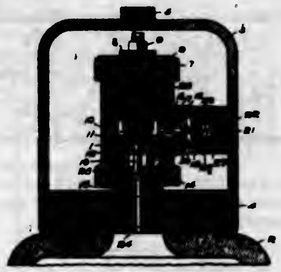
1,353,318. TRACTION DEVICE FOR VEHICLES. JOHN A. COWAN, Kansas City, Mo. Original application filed Mar. 29, 1918, Serial No. 225,158. Divided and this application filed Mar. 14, 1919. Serial No. 282,653. 6 Claims. (Cl. 97—30.)

5. In a vehicle, a frame, wheels supporting said frame, an elbow lever pivoted to the rear of the frame and having a horizontal arm exerting downward pressure upon the frame at a point a substantial distance in front of the



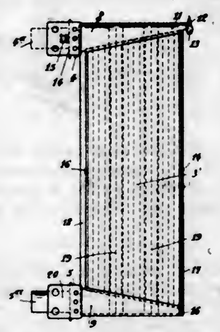
wheels and a depending arm for engagement by a ground working tool.

1,353,319. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Nov. 1, 1916. Serial No. 128,827. 33 Claims. (Cl. 171—229.)



1. The combination with a generator provided with a plurality of field exciting means, of automatic means for regulating the generator by separately and also collectively affecting a plurality of exciting means.

1,353,320. CONTAINING APPARATUS AND VALVE SYSTEM THEREFOR. CHARLES F. CROMMETT, Chelsea, Mass. Filed May 26, 1916. Serial No. 100,121. 8 Claims. (Cl. 221—73.5.)

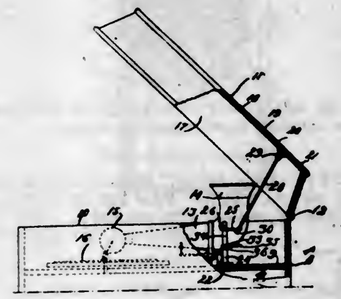


1. In combination with a container for use in shipping gas under pressure, valve means providing a main closure, means for manually opening and closing said main closure, a supplemental closure normally opened by pressure of the gas when said main closure is open and gas is being discharged under pressure, and yielding means normally exerting closing pressure on said supplemental closure and automatically effective to close the supplemental closure when the pressure of the gaseous contents of the container has been reduced to a predetermined pressure, whereby air is excluded from entrance into said container.

1,353,321. VALVE. CHARLES F. CROMMETT, Chelsea, Mass. Filed July 25, 1916. Serial No. 111,283. 2 Claims. (Cl. 277—65.)

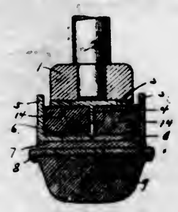
2. In a gas or fluid-controlling valve, main valve means and auxiliary valve means comprising an auxiliary valve and a seat therefor, said valve and seat being resiliently pressed together, one being movable in one direction by pressure in one direction and the other being movable in the opposite direction by pressure in another direction, and limiting means opposing movement of both said valve and seat beyond predetermined points, whereby either pressure-actuated movement of said valve or pressure-actuated movement of said seat may effect separation of valve and seat.

1,353,322. CONSTRUCTION OF RADIATORS FOR COOLING THE CIRCULATING WATER IN EXPLOSION-MOTORS. CHARLES CUAU, Paris, France. Filed Mar. 12, 1918. Serial No. 221,907. 2 Claims. (Cl. 257—125.)



1. A radiator element comprising radiating walls of extremely thin sheet metal, a corrugated metal sheet fastened thereto, preferably by solder, forming an internal stay-sheet, and borders holding the said walls and sheet together.

1,353,323. PAPER-BOARD. FRANK B. DAVIDSON, Marseilles, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1919. Serial No. 316,303. 6 Claims. (Cl. 154—50.)

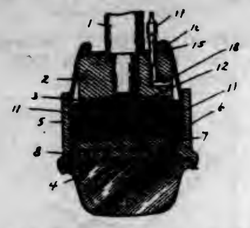


1. A built-up sheet of paper-board, comprising a plurality of plies of paper material, at least two of which are secured together by an interposed layer of asphaltum or its equivalent, and another of said plies of paper material being secured to the adjacent ply by an interposed film of silicate of soda.

1,353,324. TALKING-MACHINE. DONATO DI CARLO, Philadelphia, Pa. Filed Mar. 6, 1920. Serial No. 363,888. 4 Claims. (Cl. 274—2.)

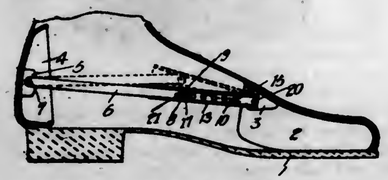
2. A talking machine including a cabinet having a movably connected lid provided with a hole; means within the cabinet for directing the reproduced sounds outwardly through said hole; a door for closing said hole; a member connected to said door; and means for abutment with said latter member during the closing movement of said lid whereby the door will be prevented from following the movement of said lid and will thereby effect the opening of said hole; substantially as described.

1,353,325. CUSHIONED WHEEL. ALFRED S. DUFFIES, Markesan, Wis., and FRANCIS MEAD, Chicago, Ill. Filed Jan. 18, 1917. Serial No. 143,047. 2 Claims. (Cl. 152—36.)



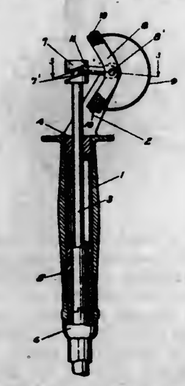
2. In a wheel, a tread member including an annular band; an inner rim spaced from the annular band and having a web extending toward said band, cushioning means between the inner rim and said annular band and laterally engaging the said web; and a pair of angle rings having lateral webs respectively in continuous lateral engagement with the cushioning means, and having peripheral webs disposed between the peripheral faces of the cushions and the said annular band, in contact with each, the said band being shrunk upon the said peripheral webs of the angle rings, whereby the cushions coöperate with the band on the peripheral webs of the angle rings to retain the latter in position.

1,353,326. CUSHIONED WHEEL-RIM. ALFRED S. DUFFIES, Markesan, Wis. Filed Feb. 5, 1917. Serial No. 146,598. 2 Claims. (Cl. 152—36.)



1. In a wheel, an inner and an outer rim, a cushion therebetween, and a single-piece fabric member including

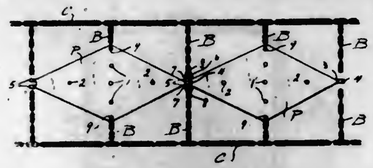
side portions disposed at opposite sides of the cushion, and a central portion clamped between the cushion and one of



the rims, the said member coöperating with the other rim to form an inflatable housing for the cushion.

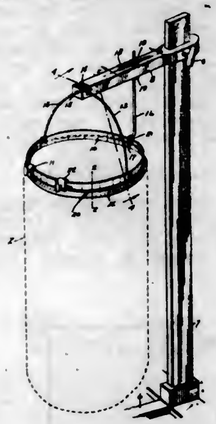
1,353,327. SHOE-TREE. JOHN DANIEL DUNFIELD, Petrolia, Ontario, Canada. Filed July 28, 1919. Serial No. 313,856. 2 Claims. (Cl. 12—128.)

1. In a shoe tree, the combination with a toe piece and heel piece, of a bar member pivotally connected to the toe piece having inturned edges providing spaced track, surfaces within the member, a second bar member pivotally connected to the heel piece sliding within said first member and provided with projections supported on said track surfaces, and means for pivotally connecting the bar members together.



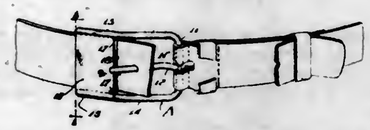
1,353,328. PITTING-KNIFE. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,592. 2 Claims. (Cl. 146—6.)

2. In a peach pitter, the combination of a suitable handle, with a bifurcated arm on the end, a rocker pivoted between the said arms, a curved blade carried by said rocker, and means for oscillating the said rocker, coacting as specified.



1,353,329. ANTISKIDDING DEVICE. JOHN C. DUPLER, Marietta, Pa. Filed Mar. 29, 1920. Serial No. 369,632. 3 Claims. (Cl. 152—16.)

1. A device of the character described comprising, in combination, a series of plates, adjacent end portions of the plates being provided with interfitting knuckles, a connecting member disposed through the interfitting knuckles whereby adjacent plates are hingedly connected,

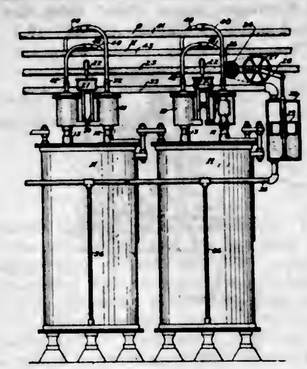


side chains, and branch chains operatively engaged with the side chains and with the opposite end portions of the connecting members.

1,353,330. BAG-HOLDER. ERICK ERICKSON, Minneapolis, Minn. Filed Mar. 25, 1920. Serial No. 368,637. 2 Claims. (Cl. 83—26.)

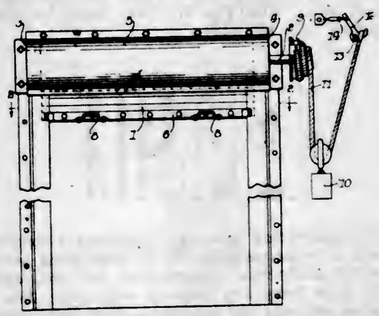
1. In a bag holder, the combination with a supporting arm, of a horizontally disposed circumferentially adjustable and contractible rim having a flange on its lower edge, and a binding cord adapted to be secured around the rim.

1,353,331. BUCKLE. THEODORE C. ERPENBECK, Chicago, Ill. Filed Sept. 15, 1919. Serial No. 323,702. 3 Claims. (Cl. 24—163.)



1. In a buckle, the combination with a frame-part having a closed end and an open end, said closed end being formed with an external annular groove and a tongue in operative relation with said groove, of a separate cross member having a surface for decoration and in fixed relation to said open end.

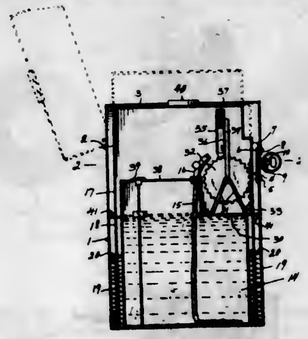
1,353,332. FILLING APPARATUS FOR ELECTROLYTIC CELLS. JOSEPH H. FISCHER, Milwaukee, Wis. Filed Dec. 8, 1919. Serial No. 343,419. 5 Claims. (Cl. 204—5.)



2. A filling apparatus for electrolytic cells comprising an equalizing tank; a float in said tank; a liquid supply pipe; a valve in said liquid supply pipe; means by which said float opens said valve whenever the supply of liquid in said equalizing tank falls below a predetermined value;

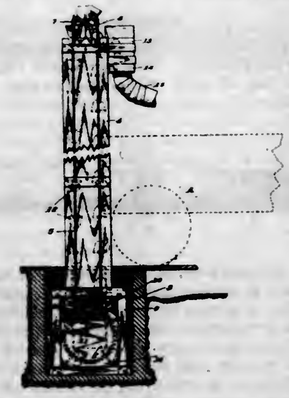
a plurality of electrolytic cells each in open communication with said equalizing tank; a purger for each of said cells through which the gases generated must pass; means

for passing liquid from said liquid supply pipe to each of said purgers; and overflow means by which any excess of liquid in any of said purgers is delivered to said equalizing tank.



1,353,333. COUNTERBALANCED FIRE-SHUTTER. WAINWRIGHT B. GERVAIS, Chicago, Ill., assignor to Variety Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1917. Serial No. 187,130. 5 Claims. (Cl. 189—58.)

1. In combination, a rolling shutter normally unbalanced by the unrolled portion of the shutter, a shaft operatively secured to said shutter, a spiral pulley connected to said shaft, a cable or the like secured to the spiral pulley and wrapped thereupon, a weight slidably resting in a bight of said cable and fusible means anchoring the free end of the cable.

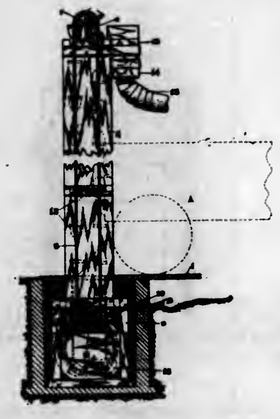


1,353,334. AUTOMATIC LIGHTER. TELESFORO C. GESLANI, Olongapo, Zamb, Philippine Islands. Filed Dec. 29, 1919. Serial No. 348,015. 5 Claims. (Cl. 67—7.1.)

5. In an automatic lighter, the combination with a casing having a hinged cover and retaining means therefor, of a coal-oil container mounted in the casing and spaced therefrom, of a sparking device mounted on the container and lighting the wick and including a sparking stone in close position to the wick, a spring tensioned hood or shield guided between the container and the casing and having coöperative connections with the sparking device, whereby as the cover is released, the sparking device is actuated for lighting the wick, said sparking device comprising a rotatable toothed wheel, supporting brackets to hold the wheel on the container, a holder for the sparking stone, spring means in the holder for maintaining the end of the stone in contact with the teeth of the wheel, and toothed connections between the wheel and the hood or shield, whereby as the shield moves upwardly under the action of its spring, the wheel is rotated, one side of the

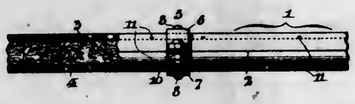
hood or shield having an opening through which a member to be lighted may be inserted.

1,353,335. GRAIN-ELEVATOR. BENJAMIN E. GETZ, Morton, Ill., assignor to A. F. Meyer Mfg. Co., Morton, Ill., a Corporation of Illinois. Filed Oct. 18, 1918. Serial No. 258,726. 5 Claims. (Cl. 193—6.)



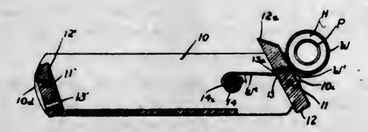
1. An elevator for the inside of a crib and adapted to be placed on one side of the drive-way through the crib, comprising a single leg, a boot for said leg including a receiving receptacle, elevating chains adapted to travel up one side of said leg and down the other side thereof, buckets attached to said chains and suspended therebetween, the lower runs of the chains being spread within the boot so as to extend laterally outwardly beyond each of the respective opposite sides of the flights of the chains in the leg and to provide an enlarged open space, and a chute leading into the boot and adapted to discharge material thereinto between the spread portions of said chains.

1,353,336. ELEVATOR. BENJAMIN E. GETZ, Morton, Ill., assignor to A. F. Meyer Mfg. Co., Morton, Ill., a Corporation of Illinois. Original application filed Oct. 18, 1918, Serial No. 258,726. Divided and this application filed Feb. 13, 1919. Serial No. 276,702. 2 Claims. (Cl. 193—6.)



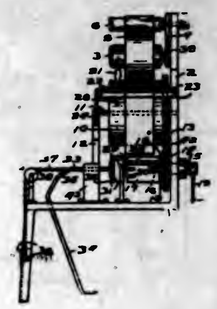
1. A crib elevator including a leg, a boot for the leg, an elevating chain in the leg having buckets thereon, a floating sprocket wheel in the boot and around which the chain passes, said sprocket wheel being formed and arranged to spread the chain laterally and outwardly beyond each of the respective opposite sides of the flights of the chain to provide an enlarged open space, idler sprockets above the floating sprocket and arranged adjacent thereto to

restrict upward movement of the idler sprocket, and means to discharge material into the boot between said



spread portions of the chain and in the said enlarged open space provided thereby.

1,353,337. PROCESS OF CURLING HAIR OR SIMILAR FIBROUS MATERIAL. THOMAS GORDON, Philadelphia, Pa. Filed Aug. 28, 1919. Serial No. 320,430. 5 Claims. (Cl. 13—5.)

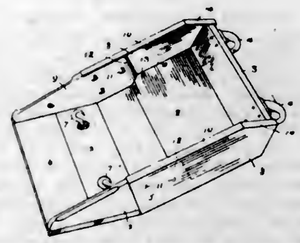


3. The hereinbefore described improvement in the art of curling hair or similar material, which consists in applying pressure to a mass of the material, confined within a receptacle of relatively small cross sectional area in comparison with the length of staple, and of substantially curved contour, and therby impressing a curved or kinked form upon a preponderant percentage of such material; and then heating the mass while still thus compressed and confined in said receptacle whereby the impressed curvature is set, substantially as set forth.

1,353,338. HOSE-CLAMPING TOOL. FRED WILLIS GUNN, Dedham, Mass. Filed Mar. 16, 1920. Serial No. 366,270. 5 Claims. (Cl. 81—9.3.)

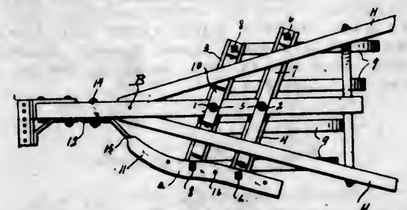
1. A hose clamping tool, comprising a holder having a member pivoted transversely at one end thereof, said member having a wire receiving hole therethrough at one side of said pivot and transversely thereof for receiving the wire ends therethrough, and a pin mounted in said holder in substantial parallelism with the pivotal axis of said member spaced from the operative end thereof and adapted to engage the extremities of the wire for drawing the same taut.

1,353,339. BATTERY-BOX-FORMING MACHINE. STEWART E. HALL, Akron, Ohio, assignor of one-third to E. R. Sloan, Maumee, Ohio, and one-third to Earl Howard Workinger, Akron, Ohio. Filed Nov. 6, 1919. Serial No. 336,202. 3 Claims. (Cl. 18—19.)



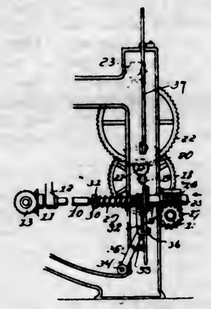
1. In a battery box forming machine, a spool for supporting a sheet rubber composition, a drum, means for permitting the sheet rubber composition located on the spool to ride on the drum, means for skiving and cutting portions of the sheet rubber composition, means for guiding the movements of the skiving means across the face of the drum, a mold for receiving the sheet rubber composition from the drum, and means for rotating the mold and the drum.

1,353,340. UPHOLSTERING. JACOB HEITZENREDER, Jr., Detroit, Mich. Filed Feb. 27, 1920. Serial No. 361,839. 3 Claims. (Cl. 155—184.)



1. An upholstering covering, comprising a foundation cloth and a facing material, one of these being provided with stitch guide lines manufactured into the material and the other being also provided with guide lines, the said facing material and foundation cloth being matched together along these guide lines and sewed together to form plaits or straight pipes.

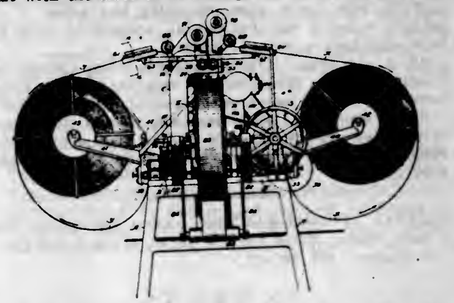
1,353,341. GRAIN-SCRAPER. EDWARD A. T. HOLDEN, Duluth, Minn. Filed Dec. 30, 1919. Serial No. 348,279. 3 Claims. (Cl. 37—40.)



1. The combination with a scraper of the character described made principally of wood, of holding side pieces made of flanged metal and wooden side nose pieces fitted into the lower ends of the metal holding pieces and to which latter the bottom nose boards are attached.

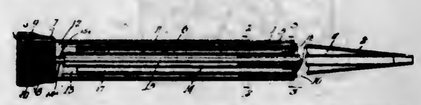
1,353,342. CULTIVATOR. WILLIAM H. HOLLMANN, Loretto, Tenn. Filed Apr. 19, 1920. Serial No. 375,068. 1 Claim. (Cl. 97—10.)

A cultivator comprising, in combination, a beam, a pair of cross members carried by the beam at spaced points longitudinally thereof, said cross members being pivotally connected with the beam, ground working members embodying forwardly extending shanks having the forward ends thereof secured to the foremost of said cross members, and the rearmost of said cross members embodying spaced members adapted to receive the shanks of said ground working members therebetween, spacing or clamping bolts extending through said last named spaced members intermediate said shanks and spaced therefrom, whereby said shanks are shiftable transversely within said last named cross members, an arm connecting the adjacent ends of the cross members and secured to the beam at a point in advance thereof, the outer margin of the arm extending beyond the outer ends of the cross members whereby said arm constitutes a fender.



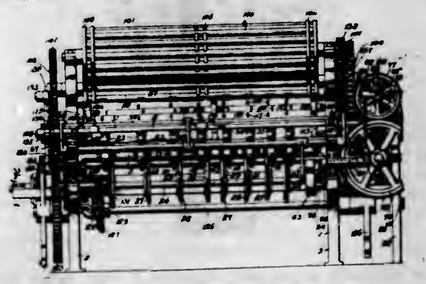
1,353,343. KNOCK-OFF MECHANISM FOR LOOMS. SAMUEL CLAUDE JOHNSTON, Lancaster, S. C. Filed Mar. 8, 1920. Serial No. 363,948. 6 Claims. (Cl. 139—52.)

3. In a loom, a take-up roller, mechanism for driving the take-up roller including a worm gear wheel operatively connected to the take-up roller, and a driving shaft, a worm slidingly mounted upon the driving shaft and engaging said worm gear wheel, a spring normally holding said worm from longitudinal movement on the driving shaft and holding it in engagement with the worm gear wheel, a knock-off arm having a yoke, a shipper lever passing through the yoke, and means operatively connecting the worm to the knock-off arm to cause the operation of the knock-off arm upon a sliding movement of the worm due to undue resistance of the worm wheel to rotation.



1,353,344. MACHINE FOR MAKING PARTITIONS FOR BOXES. FRANK M. JOSLIN, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,487. 10 Claims. (Cl. 93—37.)

1. In a machine of the class described, means for feeding strips of material, means for punching slots in said strips, one of said means including mechanism whereby certain of said slots are punched at a greater distance apart than the others, means for preparing and feeding portions of material edgewise into interlocking engagement with the slots of said strips and crosswise thereof,



and means for cutting off said strips intermediate the slots having the greater spaces therebetween.

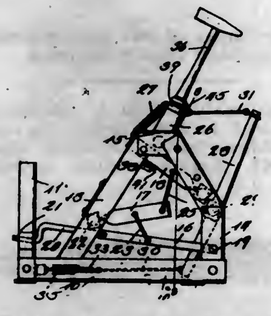
1,353,345. MECHANICAL PENCIL. MICHAEL M. KAUFMANN and JOHN P. LYNN, Chicago, Ill., assignors to Philip P. Thomas, trustee, Minneapolis, Minn. Filed Feb. 11, 1920. Serial No. 358,005. 3 Claims. (Cl. 120—18.)

1. A mechanical pencil comprising a barrel open at one end and terminating at its other end in a tapered tip adapted for resisting the passage of leads from said barrel, a lead tube mounted concentrically within said barrel and extending from a point within the tapered tip portion thereof to the open end of the same, a cap member for said barrel comprising a sleeve adapted to telescopically receive the open end of the barrel, an externally threaded tube rigid and concentric with said sleeve and extending from the outer end portion to substantially the mouth thereof, the cylindrical portion of the barrel being internally threaded to engage said externally threaded tube of said cap member, a lead projecting plunger rigid with and mounted axially of the cap member and projecting from the inner end thereof and adapted to enter the inner end portion of the lead tube for effecting projection of leads from the barrel as said cap member is rotated relatively to said barrel in one direction.

1,353,346. WIRE-FABRIC MACHINE. ALVA L. KITSELMAN, Muncie, Ind. Filed Sept. 17, 1906. Serial No. 334,947. 88 Claims. (Cl. 140—12.)

1. A wire fabric loom, including means for connecting a stay to a series of line wires beginning with a wire located at an intermediate point of the series and ending with the outer wires thereof.

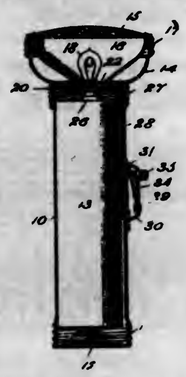
13. A wire fabric loom, including two series of twisters arranged to twist the same stay around a series of wires,



corresponding twisters of said series operating successively and in pairs.

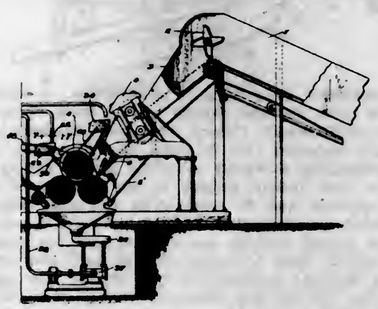
36. A wire fabric loom, including two series of oppositely rotating stay twisters all aranged to twist the same stay upon a series of wires.

43. A wire fabric loom, including a rotary twister and a loop depressing cam associated with the twister and arranged to urge the loop into engagement with the latter.



67. A wire fabric loom, including a laterally reciprocatory stay guide, means for feeding a stay wire longitudinally to said guide, and a stay wire cutter movable with the guide.

1,353,347. POWER-HAMMER. ADAM KLINGBACK, Emmett, Idaho. Filed Apr. 25, 1917. Serial No. 164,471. 8 Claims. (Cl. 78—33.)



1. In a power hammer, the combination of a main frame, a hammer support pivoted therein, a hammer carried thereby, a pedal also pivoted in said main frame, a plurality of rocking frames supported by said main frame and connected to each other and to the pedal and support to transmit a power stroke to the hammer, means connected to said support for returning the same to normal position after the conclusion of said power stroke, and a normally contracted spring between said support and one of said rocking frames yielding at the conclusion of one stroke and then contracting to increase the efficiency of the next.

1,353,348. PORTABLE HAND-LAMP. HARRY M. KORETZKY, Brooklyn, N. Y. Filed June 18, 1919. Serial No. 304,990. 1 Claim. (Cl. 240—8.5.)

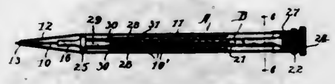
In apparatus of the class described, a lamp socket having a central screw-threaded socket neck and an external upturned flange, a reflector support comprising a flat portion and a cylindrical portion surrounding but out of contact with the socket neck, a flat washer under said reflector-support, a second washer over the flat portion of the reflector-support and adapted to center the neck thereof within the flange around the lamp socket, and a reflector attached to the neck of the reflector-support.

1,353,349. DIRECT MACERATING AND JUICE-STRAINING SYSTEM. ALFRED KRAFFT, Honolulu, Hawaii. Filed Apr. 15, 1919. Serial No. 290,348. 7 Claims. (Cl. 100—47.)

1. In a system of the class described, the combination with a train of mills, of means for conducting the cush-cush laden juice from succeeding mills to the intake and discharge sides of a preceding mill, means for conducting the juice from the last mentioned mill, and a juice strainer interpolated in said means and arranged to discharge the solid matter into the cane leaving one of the mills.

7. In a system of the class described, the combination with a train of mills, of conveyers extending between the same, a strainer arranged above one of the conveyers, means for conveying the cush-cush laden juice from one of the succeeding mills to the first mill of the train, and means for forcing the juice from the first mill to the strainer, said last mentioned means including a pump which consists of a casing having continuously open inlet and outlet openings, and a rotary pumping flange.

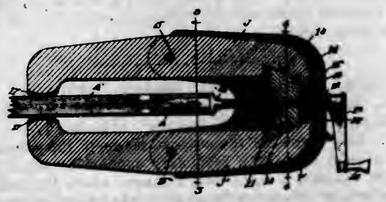
1,353,350. HAIRPIN. LOUIS HART KNICKEL, Monroe, La. Filed Apr. 8, 1920. Serial No. 372,213. 1 Claim. (Cl. 132—22.)



A hair pin composed of two strands lapped together near one end of each strand and twisted together intermediate the ends of the lap to form at each side of the twist a relatively long and a relatively short arm, said pin being bent at the twist to cause the arms to lie alongside each other in the same plane, with a relatively short arm adjacent to each relatively long arm, said arms being corrugated or roughened, and each relatively short arm having at its free end a portion bent in the opposite direction from the relatively long arm.

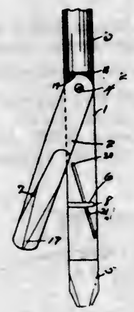
1,353,351. WAGON-BODY. ALEXANDER F. KUHNEN, Dixon, Ill., assignor to American Wagon Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1918. Serial No. 261,986. 2 Claims. (Cl. 296—13.)

1. In a wagon bed or body, the combination of a stationary bed portion and a side portion hinged or pivoted thereto, and a bracket connecting the hinged or pivoted portions to the stationary portion, said bracket comprising in combination a pair of channel bars placed back to back with their adjacent end portions overlapping each other, and with their other end portions connected respectively to the stationary and the hinged or pivoted portions of the wagon, and means for locking the two channel sections against relative sliding movement comprising a lever pivoted to the end portion of one channel and having its sides overlying the flanges of the other channel, said sides being segmentally mutilated, and there being suitable recesses in the flanges of the channel, whereby when the lever registers with the said recesses it may be fully turned to engage its side portions with the recesses in locking fashion, and whereby when the lever is turned into another position, its mutilated portions register with the recesses and permit sliding movement between the parts, substantially as described.



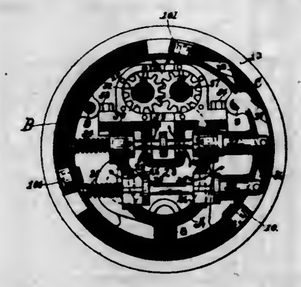
1,353,352. PENCIL. FRANK J. KRISTOFEK and HOWARD L. FISCHER, St. Paul, Minn., assignors to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 11, 1919. Serial No. 337,160. 17 Claims. (Cl. 120—18.)

11. A pencil having a barrel, a lead propelling means and means adapted to hold one end of a series of extra marking leads collectively to said propelling means with the free ends of the extra leads extending toward the rear end of said propelling means to cause the collectively held ends of the leads to enter said barrel first when said propelling means is inserted in said barrel.



13. A pencil, comprising a barrel, a lead propelling means within the barrel and spaced therefrom to form a lead receiving magazine between the lead propelling means and the barrel and a closure on said lead propelling means for said magazine removably secured to said barrel to remove said propelling means in its operative entirety and open said magazine.

1,353,353. WORK-HOLDING CLAMP. HARRY INGRAHAM LAVERS, West Somerville, Mass. Filed Nov. 26, 1919. Serial No. 340,856. 1 Claim. (Cl. 144—297.)

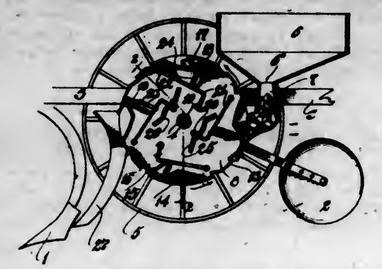


A clamp comprising a pair of U-shaped plates, a pair of jaws fulcrumed between said plates, one of the ends of said jaws having their confronting faces recessed to provide oppositely inclined surfaces, a block interposed between said ends and having sliding engagement with said surfaces, a nut carried by said block, a screw threaded shaft extending through said block and threadedly engaging said nut, a foot carried by said shaft, and a crank for actuating the shaft.

1,353,354. UNDERREAMER FOR REAMING OUT PRODUCING-SANDS. ACEY L. LAMBETH, Mineral Wells, Tex., assignor, by direct and mesne assignments, of one-half to Cullen B. Cooper and one-half to Albert L. Houston, Dallas, Tex. Filed Nov. 22, 1918. Serial No. 263,669. 7 Claims. (Cl. 255—76.)

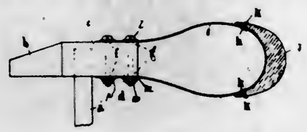
1. An extension drill bit having a guide member rigid with a drill rod and an underreaming member pivotally mounted on said guide member, means for making said underreaming member rigid with said guide member after the underreaming member has been set at the required angle, and means for projecting water between the meeting faces.

1,353,355. CHANGE-SPEED TRANSMISSION. ABRAHAM B. LANDIS, Enfield, Pa. Filed Dec. 6, 1915. Serial No. 65,417. 33 Claims. (Cl. 60—53.)



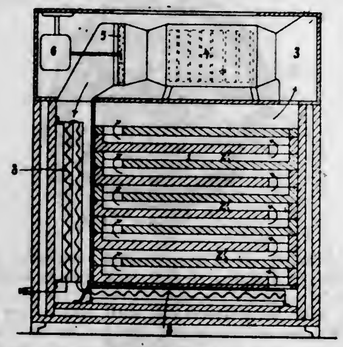
1. A change speed transmission comprising a driving element and a driven element, said driving element comprising a revoluble casing, said casing containing a fluid pump, said pump connected with said driven element, one or more motors within said casing and valves between said pump and motors by which the speed of said driven element is controlled, substantially as specified.

1,353,356. POTATO-PLANTER. FRANK WILLIAM LEE, Spokane, Wash. Filed Nov. 15, 1919. Serial No. 338,262. 5 Claims. (Cl. 221—127.)



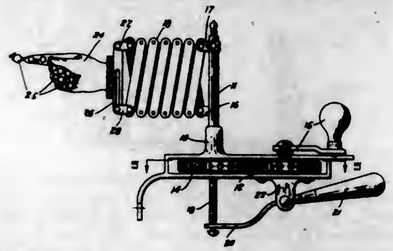
1. The combination with the driving axle and drum fixed thereon and seed gripping devices carried by said

drum, of a non-rotatable closure plate for the drum having means for actuating said devices for selecting and



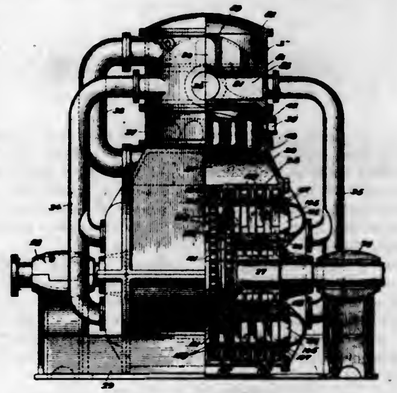
releasing a seed, a hopper with a seed supply, and the planter tube for receiving the released seed.

1,353,357. HAMMER FOR PIANOS AND SIMILAR INSTRUMENTS. ATHOL ERNEST NEVILLE LAWRANCE, Rustenburg, Transvaal, South Africa. Filed Oct. 16, 1919. Serial No. 331,239. 3 Claims. (Cl. 84—103.)



1. A hammer for pianos comprising a shank, a block connected to the upper end thereof, a spring formed from a single strip of metal bent into a loop shape and having its end portions rigidly secured to one end portion of the block so that the side portions will be free to yield from the intermediate portion to the point of attachment of the end portions, and a cushion detachably secured to the outer surface of the curved intermediate portion of the spring.

1,353,358. DRYING OR COOLING APPARATUS. PETER STEENFELDT-LINDHOLM, Christiania, Norway. Filed Mar. 11, 1919. Serial No. 281,993. 2 Claims. (Cl. 34—39.)

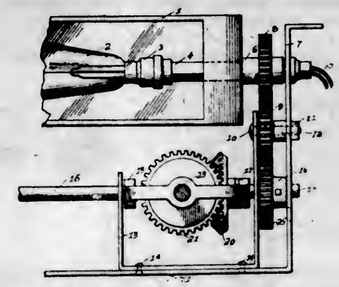


1. In a drying apparatus or cupboard, the combination with a storing room provided with shelves for the drying goods, said shelves being arranged so as to form between them a zig-zag channel, of a drying room arranged above said storing room and containing hygroscopic material, and a room containing devices for bringing the air to the desired temperature, located on one side and below the storing room.

1,353,359. SIGNAL DEVICE FOR VEHICLES. PIOTR NIEWIAROWSKI, Omaha, Nebr. Filed Sept. 25, 1919. Serial No. 326,165. 1 Claim. (Cl. 116—40.)

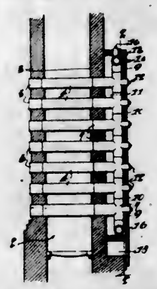
In a signal device for vehicles, the combination with a hollow frame adapted to be engaged with the front part of the vehicle, of a hollow, longitudinally slotted, vertical tube rotatable in said frame, a lug fixed on said tube, a second lug in said tube extending through the mentioned slot, a spring disposed between said lugs adapted to maintain them in a separated position, lazy-tong elements secured respectively to said lugs at one end, a visible signal mounted on the opposite end of said lazy-tong elements, a gear fixed to said tube within said frame, a second gear in mesh therewith, a crank for manually rotating the last named gear, whereby said signal may be turned angularly, a handled lever fulcrumed below said frame, and operative connections between said lever and said sliding lug whereby it may be raised and said signal extended.

1,353,360. MARINE STEAM-TURBINE. ANDERS MATHIAS RODBERG, Tampa, Fla. Filed June 7, 1919. Serial No. 302,375. 18 Claims. (Cl. 253—47.)



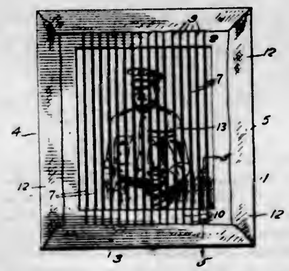
1. In a marine turbine, a stator, a rotor therein having a hub, peripheral blades and radial fins connecting the hub and blades, and means forming steam passages for successively feeding steam peripherally of the rotor to the said blades and through, and parallel to the axis of the rotor against said fins.

1,353,361. SIGNAL FOR MOTOR-VEHICLES. JESSE G. ROSEBOOM, Cincinnati, Ohio. Filed Nov. 25, 1919. Serial No. 340,498. 2 Claims. (Cl. 40—77.)



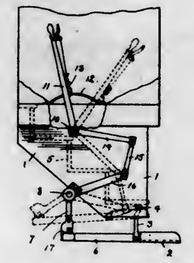
2. In a device for the purpose set forth the combination of a main support, a secondary support arranged in the main support, a signal box arranged above the secondary support, a journal arranged in the main support and box, a toothed wheel mounted on the journal, a journal arranged below the first-named journal, a toothed wheel

secured on the second journal and engaging the first toothed wheel, a shaft passing through the main support and secondary support, a toothed wheel arranged on the shaft directly below and engaging the second toothed



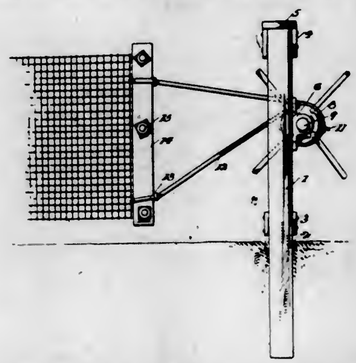
wheel and means secured on the shaft for operating the several wheels; said means comprising a yoke, a beveled gear arranged in the yoke and a bevel gear actuable by the first gear and mounted on the shaft and a handle mounted on the yoke.

1,353,362. ZINC-REDUCTION FURNACE. JAMES D. SHIPTON, Vancouver, British Columbia, Canada. Filed June 10, 1919. Serial No. 303,056. 7 Claims. (Cl. 266—19.)



1. A zinc reduction furnace, comprising the combination with a series of retort tubes extending across the furnace and a corresponding series of condensers, said tubes having closable provision at one end through which they may be charged, and at the other end connected to one of the condensers, said condensers being connected together to form a common condensing surface with provision for withdrawing the metal condensed.

1,353,363. FRAME FOR A PLURALITY OF PICTURES. HENRY SIMON, Filer, Idaho. Filed May 12, 1920. Serial No. 380,903. 4 Claims. (Cl. 40—137.)

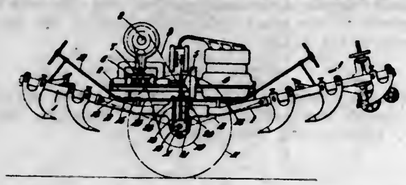


1. In a device for framing a plurality of pictures or photographs, a frame including opposed pieces provided with slits, the slits of one piece being in alinement with an opposite piece of the frame, a pair of photographs or pictures cut in equal number of strips, the consecutive strips of one picture beginning from the left being pasted to the backs of the consecutive strips of the other picture beginning from the right thereof, tapes carries by the pasted together strips and engaging said slits and being secured to the upper and lower edges of the opposite pieces of the frame.

1,353,364. AUXILIARY CAR-STEP. PETER SWANSON, Soudan, Minn. Filed Feb. 2, 1920. Serial No. 355,882. 2 Claims. (Cl. 105—448.)

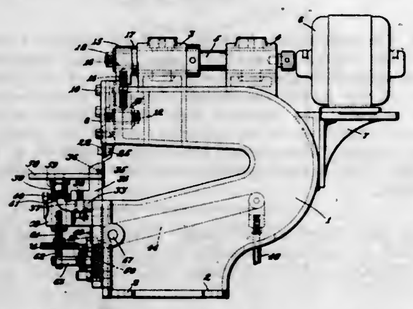
1. The combination with the platform steps of a railway car having an auxiliary step pivotally suspended upon depending straps below the lowermost stationary step, of the pivotal connection of the lowermost end of the straps to the auxiliary step being inwardly of the pivotal connection of the uppermost end of the straps to the stationary steps when the auxiliary step is in extended position substantially as and for the purpose described.

1,353,365. WIRE-STRETCHER. BARLEY WEBB and WILLIAM A. GARDNER, Pinetops, N. C. Filed Oct. 2, 1919. Serial No. 327,862. 1 Claim. (Cl. 254—186.)



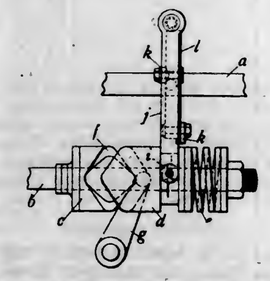
A wire stretcher comprising a frame having standards the lower portions of which are unobstructed to permit of entrance into the ground, cross beams connecting the ssid standards between their ends, a cap beam connecting the upper ends of the standards and providing a driving head, and stretching means mounted upon and between the standards between the cross beams and the cap beam.

1,353,366. BALANCE AGRICULTURAL IMPLEMENT. DANIEL YELD WHEATLEY, Aldington, Hythe, England. Filed Sept. 14, 1918. Serial No. 254,095. 4 Claims. (Cl. 180—29.)



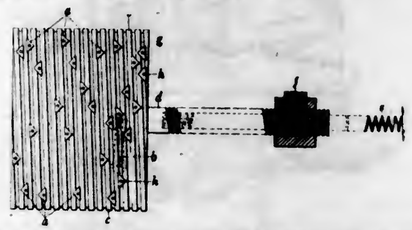
1. A self-propelled agricultural implement comprising, in combination, a supplemental frame; an engine frame movable relatively to the supplemental frame in a sub-

stantially horizontal plane; two traveling wheels floatingly supporting the engine frame; guiding means for holding the engine frame against floating movement about a horizontal axis while permitting movement in a horizontal plane comprising transverse guide bars on the en-



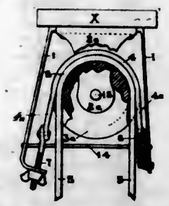
gine frame, rollers for engaging said guide bars and plates anchored to the supplemental frame for carrying said rollers; and means for moving the engine frame horizontally relatively to the supplemental frame for the purpose of steering.

1,353,367. SHEET-METAL SHEARS. LELAND B. WHIPPLE, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Feb. 21, 1919. Serial No. 278,430. 21 Claims. (Cl. 164—47.)



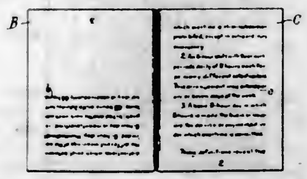
1. In a machine for cutting sheet metal, the combination of opposed cutting members having relatively inclined cutting edges, each having a straight and a curved portion, means for relatively reciprocating the cutting members so that the curved portions thereof pass each other at each reciprocation to cut by the curved portions of the cutting edges and means for changing the relation between the cutting members whereby the relative reciprocation causes only the straight portions thereof to pass each other to cut by the said straight portions only.

1,353,368. CONTROLLING MECHANISM. EDWARD WILLIAMS, Birmingham, England. Filed Oct. 24, 1919. Serial No. 333,098. 2 Claims. (Cl. 74—14.)



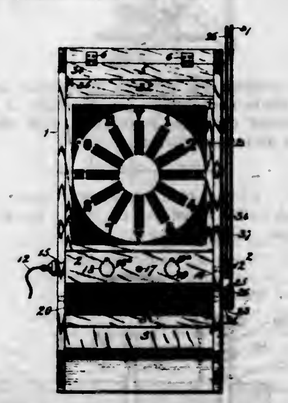
1. In a mechanical relay or controlling mechanism, the combination comprising an operator, a clutch driving shaft, a two-part friction clutch one part of which is connected to the driving shaft, a cam on the other clutch part for actuating the operator, a stop in conjunction with the second named clutch part, and a lever for arresting and releasing the stop, substantially as described.

1,353,369. CONTROL MECHANISM. EDWARD WILLIAMS, Birmingham, England. Filed Jan. 28, 1920. Serial No. 354,756. 1 Claim. (Cl. 74—1.)



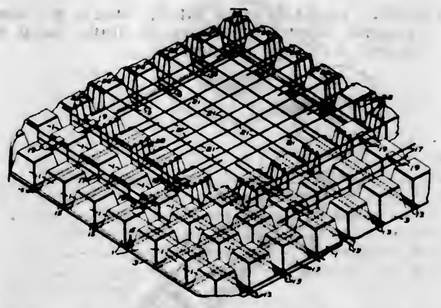
In controlling mechanisms, the combination comprising a rotatable and axially movable drum, striking pieces disposed spirally around the drum, a screw threaded driving shaft for the drum, stationary means detachably engaging the threaded shaft for producing the axial movement in one direction during rotation of the drum, means actuated by the striking pieces, and means for imparting a reverse axial movement to the drum and shaft after disengagement of the latter by the said engaging means, substantially as described.

1,353,370. FRICTION BAND-BRAKE. FRANK E. WILLIAMS, Alhambra, Calif. Filed Mar. 6, 1917. Serial No. 152,835. 1 Claim. (Cl. 74—13.)



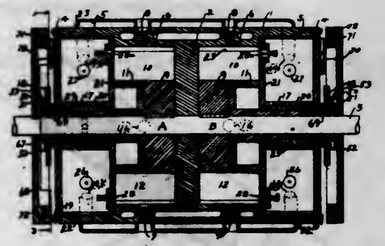
In a constant friction band brake a combination of a revolving drum and brake pulley attached thereto, all properly journaled; a band brake holder partially encircling said brake pulley; a flexible brake band bearing on said pulley and permanently attached to said holder at one end by means of an interposed coil spring, said coil spring being placed on the side of said pulley corresponding to the side of said drum where suspended load would tend to unwind the same, the other end of said brake band being attached to said holder by means of an interposed threaded shaft which passes through a perforation in said holder and provided with a winged nut at the extremity thereof to operate thereon; and a flat traction belt riding said pulley between said flexible brake band and said pulley, all substantially as set forth.

1,353,371. PAGE ARRANGEMENT FOR BOOKS. DION I. WINSLOW, Boston, Mass. Filed Mar. 10, 1919. Serial No. 281,590. 1 Claim. (Cl. 283—63.)



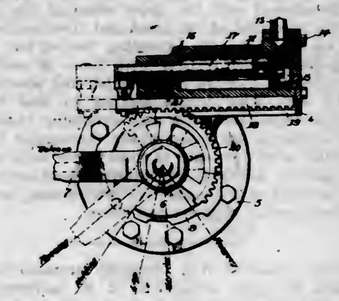
A page arrangement for a printed book, comprising a plurality of leaves bound together at the sides and having printed matter reading continuously on the front page of each leaf and the said pages being numbered successively from the front to the back of the book whereby the page being read is always next to the right hand of the reader holding the book, the said leaves having on the backs thereof printed matter in inverted position reading continuously from the back to the front of the book whereby when the book is inverted the page being read is always at the right hand of the reader as aforesaid.

1,353,372. OPTICAL CABINET. SERENO W. WOODHULL, Newport, R. I. Filed June 9, 1919. Serial No. 302,835. 8 Claims. (Cl. 40—130.)



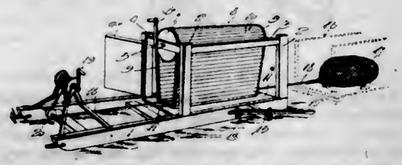
8. In a device of the character described, a cabinet having a light; testing devices for the eyes in front of said light and above the same rearwardly thereof; means for directing the light toward either one of said testing devices as may be desired; and an adjustable mirror for cooperating with the light when the same is directed upwardly and rearwardly toward said upper testing device to evenly distribute the light over the same, said mirror being above said testing device.

1,353,373. CONCRETE CONSTRUCTION. EDWIN F. ALLBRIGHT, Atlantic, Mass., assignor to Adams-Pond Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 30, 1919. Serial No. 314,347. 6 Claims. (Cl. 72—15.)



3. In concrete construction, the combination of columns, a concrete slab having solid panels resting on said columns, and bays between said solid panels having at their under sides domes or recesses distributed therein to the margins of the solid panels with transversely extending ribs between said domes or recesses, crossing series of reinforcing members located in the lower portions of the ribs in the bays, series of short rods located in the upper surface portions of the margins surrounding said bays between the solid panels and offset upwardly from the reinforcing members in said bays, and reinforcing members located in the upper surface portions of said panels.

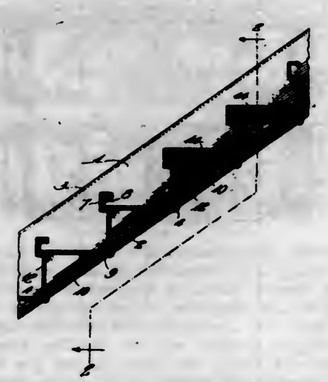
1,353,374. ROTARY ENGINE. PIETRO ARRIGHI, San Francisco, Calif. Filed Oct. 16, 1919. Serial No. 331,101. 8 Claims. (Cl. 128—11.)



1. A rotary engine including a casing having circular, axially alined and independent primary and secondary chambers formed therein, a shaft axially and revolubly mounted in said chambers, devices operatively mounted on said shaft for compressing and exploding fuel gas in said secondary chamber and for expelling burnt gases therefrom, and devices for inducting fuel gas into said primary chamber and compressing the same therein, and for permitting the passage of said compressed gas from said primary chamber to said secondary chamber at predetermined periods.

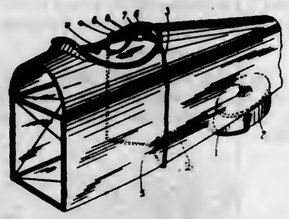
1,353,375. ENGINEER'S BRAKE-VALVE. JOHN W. BINGLEY, Watertown, N. Y. Filed Nov. 22, 1916. Serial No. 132,873. 6 Claims. (Cl. 188—18.)

1. The combination of an engineer's brake valve; a pressure cylinder; means for conducting and releasing pressure to and from said cylinder; a free piston in said cylinder; and a rod connected with said valve and capable of being moved by said piston in one direction only.



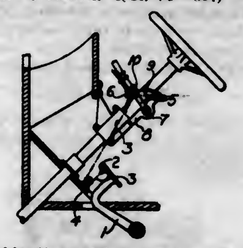
1,353,376. DEVICE FOR CATCHING AND HOLDING HOGS. WILLIAM L. BARLOW, Clear Lake, Iowa. Filed Mar. 25, 1920. Serial No. 368,578. 7 Claims. (Cl. 119—102.)

1. A device of the class described comprising a supporting frame, a rotary depending apron thereon, a retractable platform arranged beneath and normally engaging and supporting the lower portion of the apron, and



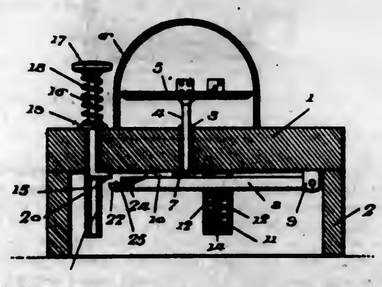
means to move the platform away from engagement with the apron to permit the latter to assume effective position.

1,353,377. STAIR STRUCTURE. NATHANIEL BOIS, San Francisco, Calif. Filed Apr. 12, 1920. Serial No. 373,214. 2 Claims. (Cl. 72—96.)



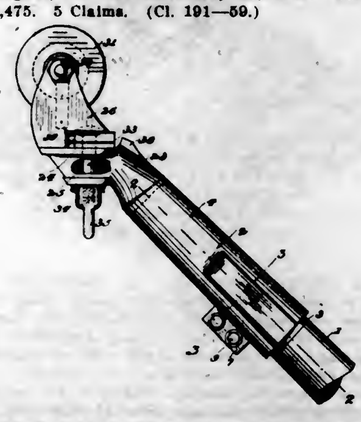
1. In a stair structure, a pair of stringers each provided with an inwardly extending apertured flange adjacent to its lower edge, a plurality of stair steps each formed of a single piece of sheet metal and comprising a horisontal tread-carrying portion and a vertical riser portion, the front edges of the upper tread-carrying portions being interlocked with the upper edges of the riser portions, the junctions of the tread and riser portions being seated on said inwardly extending flanges and provided with apertures that register with those of said flanges, bolts extending through these registering apertures and provided with nuts, treads secured on said tread-supporting portions, and bolts each extending through both of said stringers and substantially throughout the width of the stair structure, each of these latter bolts being disposed directly under the respective tread-carrying portions rearward of the respective interlocking portions of the tread-carrying portions and risers.

1,353,378. PARACHUTE. EVERARD RICHARD CALTHROP, London, England, assignor to E. R. Calthrop's Aerial Patents Limited, London, England. Filed July 15, 1919. Serial No. 311,101. 2 Claims. (Cl. 244—21.)



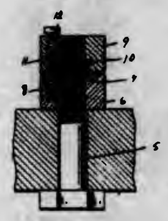
1. A device for connecting an aviator with a parachute comprising a bifurcated sling adapted for attachment to a parachute, means for holding the bifurcated ends of said sling in operative relation with the end of the rope attached to the load, and means whereby upon application of the load said load is automatically connected with one of the bifurcated ends of said sling while the other end thereof is freed.

1,353,379. MOTOR-VEHICLE. GERALDINE MARGUERITE CAULFEILD and HARRY FROWD ST. GEORGE CAULFEILD, Lee-on-the-Solent, England. Filed Aug. 28, 1917. Serial No. 188,686. 6 Claims. (Cl. 74—39.)



5. The combination with an automobile including foot actuated brake and clutch control pedals, of hand control means having operative connection with the pedals for imparting movement thereto.

1,353,380. DICE-GAME DEVICE. JOHN L. CHURCH, Oakland, Calif. Filed Oct. 20, 1919. Serial No. 331,760. 4 Claims. (Cl. 46—56.)



1. A dice game device comprising a vertically movable member, a dice tray movable vertically with said member, spring means for raising said member, and a plunger for depressing said member, said plunger and member having coöperating means including a finger carried by one of them and a spring-returned pivoted trip carried by the other for the contact of the finger in depressing said member and permitting the finger to pass when the plunger is raised.

1,353,381. TROLLEY-POLE HEAD. SAMUEL S. COOPER, Landgraff, W. Va. Filed May 16, 1919. Serial No. 297,475. 5 Claims. (Cl. 191—59.)

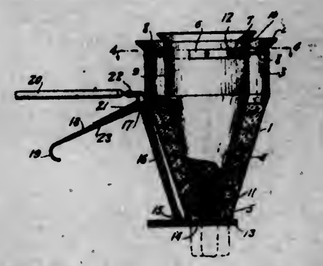
1. A trolley pole head comprising a pole section, a harp section slidably fitted on the end of the pole section and having a longitudinal notch in its lower end, a connection for an electrical conductor carried by the pole section and engaging in said notch to prevent turning of the harp section with relation to the pole section, and means yieldably resisting sliding movement of the harp section.

1,353,382. NUT-LOCK. JOSEPH J. CRISSINGER, Greensburg, Pa. Filed Sept. 24, 1919. Serial No. 325,930. 1 Claim. (Cl. 151—19.)

A nut lock of the character described comprising a bolt, a nut operable thereon and including a split cone having a threaded opening which extends into the nut, a locking device having a conical recess, said locking device being arranged to engage the split cone without binding said cone on the bolt, and a locking screw connecting the nut and the locking device for simultaneous rotation on the bolt, the head of the locking screw being screwed into engagement with the locking device to simultaneously cant the locking device on the bolt and force a portion of the split cone into binding engagement with the bolt, the end of the locking screw being disposed in spaced relation to the end wall of the threaded opening in the nut.

1,353,383. VULCANIZING-PAD. JULIUS N. DIESSE, San Francisco, Calif., assignor of one-half to Albert L. Silverstein, San Francisco, Calif. Filed Mar. 30, 1920. Serial No. 370,288. 7 Claims. (Cl. 18—45.)

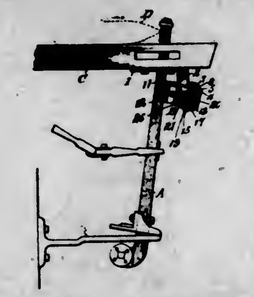
1. A vulcanising pad comprising a flexible casing formed of a plurality of fabric layers embedded in a lining of vulcanized rubber, said casing being closed at one end thereof and provided with a flattened pressure receiving surface on the upper portion thereof; a granular filling within said casing; and means for retaining said filling within the casing.



1,353,384. MANUFACTURE OF COMPOSITIONS, PREPARATIONS, OR ARTICLES HAVING A BASIS OF CELLULOSE ACETATE. HENRY DREYFUS, London, England. Filed Apr. 15, 1919. Serial No. 290,316. 3 Claims. (Cl. 106—40.)

1. A composition of matter containing cellulose acetate, and containing a high-boiling mixture of isomeric xylene low-carbonalkyl sulfonamids which mixture is liquid at ordinary temperature.

1,353,385. MANUFACTURE OF COMPOSITIONS, PREPARATIONS, OR ARTICLES HAVING A BASIS OF CELLULOSE ACETATE. HENRY DREYFUS, London, England. Filed Apr. 15, 1919. Serial No. 290,317. 2 Claims. (Cl. 106—40.)



1. A composition of matter containing cellulose acetate and, containing a high-boiling mixture comprising ortho- and para- toluene low-carbon-alkyl sulfonamids, which mixture is liquid at ordinary temperature.

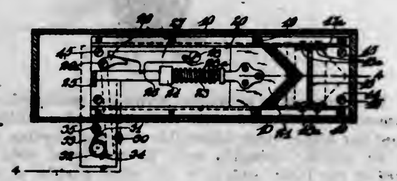
1,353,386. HOUSEHOLD ARTICLE. EMIL ERB, New York, N. Y. Filed June 4, 1920. Serial No. 386,502. 6 Claims. (Cl. 107—52.)

3. In a dough-filler or similar device the combination of a generally cone shaped outer receptacle and a similarly shaped but higher inner adjustable receptacle having outlets, an annular clamping strip having lipped ends attached at the inner surface of the upper portion of said outer receptacle, means adapted to engage said lipped ends thus facilitating said inner vessel being held in fixed position when vertically adjusted, a cut-off valve adapted to normally close said outlets, and means for operating said cut-off valve.

1,353,387. CHECK FOR PICKER-STICKS FOR LOOMS. SAYERS D. EURANKS, Hillsboro, N. C. Filed Aug. 29, 1919. Serial No. 320,599. 8 Claims. (Cl. 139—22.)

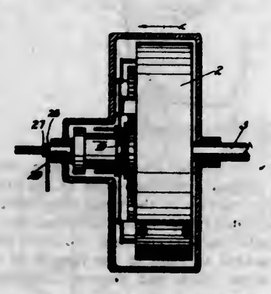
1. A check for picker sticks for looms comprising a flexible strap, supports for both ends of the strap holding the intermediate portion of the strap tight with both ends of the strap movable in the same direction about a common axis, and elastic means common to both ends of the strap and arranged to yield to the impact of the shuttle against the picker stick and through the latter to the check.

1,353,388. DOOR-LATCH AND BURGLAR-ALARM. ALFRED A. FISK, Pomona, Calif., assignor of one-half to A. B. Davis, Pomona, Calif. Filed Sept. 23, 1918. Serial No. 255,305. 1 Claim. (Cl. 116—86.)



The combination with an elongated metal plate having a bowed end portion for insertion between a door and a jamb, and a jamb engaging spur extending from said end portion, of a tongue pivotally mounted upon the other end portion of the plate and having its free end folded and

constituting an angular stop movable to position in the path of the door, an alarm mounted on the tongue, a plunger slidably mounted in and guided by the stop for actuating the alarm, one end of the plunger being mov-

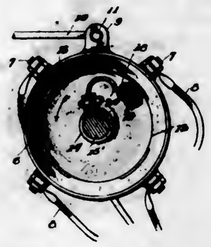


able to position in contact with the door to sound the alarm when the door is shifted against the stop, and co-operating means upon the plate and tongue for holding said tongue with the stop in door fastening position.

1,353,389. FIRE-PREVENTION DEVICE FOR MOTION-PICTURE APPARATUS. HALL GOODWIN, Chicago, Ill. Filed Dec. 30, 1919. Serial No. 348,352. 3 Claims. (Cl. 88—17.)

1. In a motion picture apparatus, a film severing knife, a detent for holding the knife retracted, means for operating the knife when released, a rock shaft, means operated by the rock-shaft for disengaging the detent, a spring for operating the rock shaft, and means for locking the rock-shaft against actuation, said locking means comprising a shaft having a crank and an abutment, an arm extending from the rock shaft and engageable by the abutment, a fusible element connected to the crank for locking its shaft, and means for turning said shaft to disengage the abutment from the arm when the fusible element is ruptured.

1,353,390. TRANSMISSION MECHANISM. CHARLES A. GROTZ, Chicago, Ill. Filed June 25, 1919. Serial No. 306,757. 6 Claims. (Cl. 74—34.)

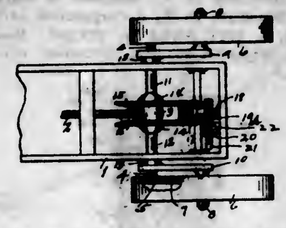


1. A transmission mechanism, comprising a casing containing a fluid medium, a fly wheel disposed within the casing and having a plurality of cylinders adapted to communicate with the fluid-containing portion of the casing, a piston in each cylinder, a driving shaft secured to said fly wheel, a gear carried by the fly wheel and adapted to rotate about the central axis of the fly wheel, relatively to the latter, a driven shaft secured to said gear, a plurality of auxiliary gears arranged externally of and meshing with said first named gear, and means for transmitting the movement of said auxiliary gears to said pistons.

1,353,391. PUMP. HARRY MELVIN HALL, Willcox, Ariz. Filed Jan. 9, 1920. Serial No. 350,266. 8 Claims. (Cl. 103—80.)

1. A pump comprising a barrel and a hollow plunger movable therein, said barrel having at one end a stuffing box through which the plunger slides, the stuffing box having a packing nut connected with the end of the barrel, said barrel having check valves at its lower end and the hollow plunger having check valves at its lower end, a ball connected with the top of the plunger, the ball and the packing nut having interengaging means for permitting the ball to turn said nut and plunger to unthread it from a suction pipe.

1,353,392. COMMUTATOR. THOMAS P. HARBOUR and BURLEIGH B. BRINNON, Bellefontaine, Ohio. Filed Sept. 19, 1919. Serial No. 324,762. 3 Claims. (Cl. 200—26.)



3. A commutator including a shaft, a split collar arranged upon the shaft and having its ends provided with spaced apertured ears, a plurality of leaf springs having their rear end portions apertured and arranged between said apertured ears, a fastening device extending through said apertured ears and said leaf springs for connecting the springs and for securing the collar rigidly to the shaft, and a contact element carried by the outer portions of said leaf springs and having means for connecting the same.

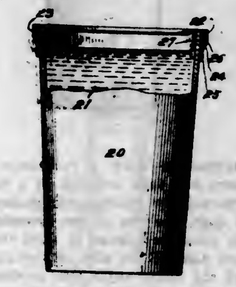
1,353,393. MOTOR-VEHICLE. MATHIAS HAUPT, Spokane, Wash. Filed Aug. 25, 1919. Serial No. 319,614. 4 Claims. (Cl. 180—41.)

1. The combination with the vehicle frame, the engine shaft, and sectional countershaft with driving pinions thereon, of a pair of oppositely movable hollow crank

shafts on the countershaft and means for moving said crank shafts, a pair of drive wheels on the crank shafts,

and a gearing on each wheel engaged by said driving pinions.

1,353,394. WIRE WHEEL. HENRY A. HOUSE, Jr., Springfield, Mass., assignor to Wire Wheel Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Mar. 22, 1918. Serial No. 224,070. 4 Claims. (Cl. 21—69.)



1. A wheel having in combination, a hub, a rim, spokes connecting the hub with the rim, said rim having round pockets peripherally spaced therein, each of said pockets having an angularly depressioned seat and a hole in said seat, and nipples in threaded engagement with said spokes, having heads with their under sides adapted to co-fit with the said angular depressions, to prevent the accidental unturning of the nipples on their respective spokes.

1,353,395. METHOD OF FORMING WIRE-SPOKE NIPPLES. HENRY A. HOUSE, Jr., Springfield, Mass., assignor to Wire Wheel Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Sept. 4, 1918. Serial No. 252,671. 2 Claims. (Cl. 29—148.)

1. The method of forming wire spoke nipples, which consists of taking a blank nipple as formed by the usual devices, of concentrically boring a hole therethrough, of a diameter, practically equal to that of the outside diameter of the thread of wire spoke, which it is intended to engage, then compressing circumferentially, a part of the shank of the nipple, until part of the bore of the metal inside of the nipple, has been reduced to a diameter of practically that of the root of the thread of the said spoke and of subsequently threading this reduced section of the nipple, to fit the said spoke.

1,353,396. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed July 5, 1917. Serial No. 178,595. 13 Claims. (Cl. 215—81.)

1. In combination with a receptacle, a closure therefor comprising a cap having a top-portion and a depending edge flange, and a gasket within said flange adapted to engage the side surface of the receptacle about the mouth thereof, said cap and receptacle having such relative proportions that when the cap is applied on the receptacle its top will seat against the lip thereof and the receptacle will crowd the gasket against said flange, said flange having downwardly converging portions and the gasket having at least one straight side which before application of the closure to the receptacle lies facing outward and a beveled lower edge, and the edge portions of the cap being adapted on application of said cap to contract about said gasket.

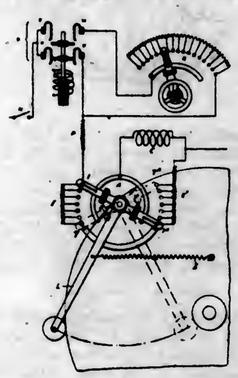
1,353,397. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 24, 1918. Serial No. 230,386. 1 Claim. (Cl. 215—81.)

In a receptacle closure, the combination of a cup having a depending skirt portion formed with a seat for a gasket below the level of the mouth of the receptacle, and a gasket on said seat and extending to the top of the cap, said gasket having at its inner face a downwardly and outwardly extending beveled portion, the internal diameter of the gasket at its lower portion being greater than the external diameter of the receptacle to which the closure is to be applied, and the said internal diameter above such lower portion being less than the external diameter of said receptacle, said gasket normally prior to application of the cap standing at an angle to its seat in the depending skirt of the cap, and said receptacle at its mouth portion being adapted to pass through said gasket on the application of the cap carrying the gasket.

1,353,398. CLOSURE FOR TUMBLERS, JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 10, 1916, Serial No. 114,091. Renewed Jan. 27, 1920. Serial No. 354,514. 9 Claims. (Cl. 215—82.)

1. The combination with a receptacle within which the air pressure has been reduced, of a hermetic closure maintained thereon by atmospheric pressure, comprising a cap seated upon the rim of the receptacle and having a downwardly extending flange or skirt the lower portion of which bears against the side of the receptacle, and a gasket around the upper outer side portion of the receptacle above the lower portion of the flange and extending to said rim between said side portion and said flange, the upper portion of the flange and the top of the cap being of yieldable material, said cap by reason of the atmospheric pressure thereon closely binding against said rim and binding said gasket against the receptacle at and below said rim.

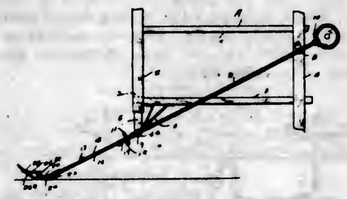
1,353,399. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed July 5, 1917, Serial No. 178,596. Renewed Jan. 27, 1920. Serial No. 354,517. 3 Claims. (Cl. 215—13.)



1. A cap closure adapted for repeated use and to be applied and removed by hand and comprising a barrel or skirt portion to pass downwardly upon the neck of a receptacle and having within its upper inner peripheral portion an annular side recess, a top and a gasket within said recess having flat sides and a downwardly and outwardly tapered lower edge standing normally in the path of the upper outer edges of the mouth of the receptacle, said top being of such proportions that when the closure is applied to the receptacle it will engage the top edge or rim thereof and confine the gasket to the surfaces of the receptacle exterior to said edge.

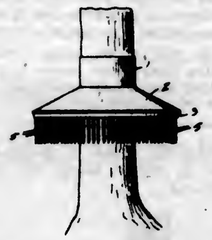
1,353,400. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed July 5, 1917, Serial No. 178,597. Renewed Jan. 27, 1920. Serial No. 354,518. 4 Claims. (Cl. 215—13.)

1. A closure comprising an exterior barrel or skirt portion to pass downwardly over the neck of a receptacle, a top comprising a lateral portion extending annularly over the rim of the receptacle to said barrel portion and a depending central part adapted to pass downwardly into the mouth of the receptacle, and a sealing gasket closely encircling the side of said depending portion and having a downwardly and inwardly beveled lower edge.



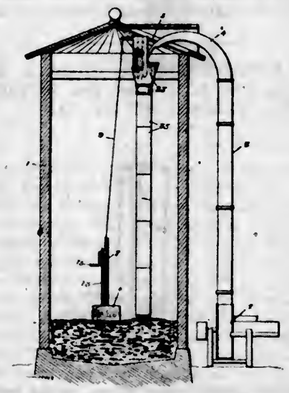
1,353,401. CONTROLLING MEANS FOR ELECTRO-MAGNECTIC FEED-REEL BRAKES. HENRY VINCENT JAMES, Radlett, England. Filed Aug. 13, 1918. Serial No. 249,606. 5 Claims. (Cl. 171—229.)

1. Means for the automatic regulation of a controlling electro-magnet or solenoid in varying degree comprising in combination variable ohmic resistance elements,—a controlling electro-magnet coil electrically connected in parallel with a part of same, and electric switch means by which the coil may be variably connected across various sections of the resistance elements, and means for operating the switch means to simultaneously vairy the ohmic values of the resistances to mainatin a constant ohmic value of the control combination formed by the ohmic resistance and controlling coil, whereby the same percentage variation of the electro-motive-force applied to the coil will occur within given limits of operation regardless of the value of the electro-motive-force applied to the complete combination.



1,353,402. [WITHDRAWN.]

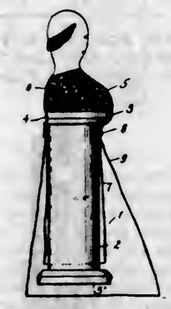
1,353,403. BEET-TOPPING MEANS. CHARLES L. LEONARD and ALLEN F. HOWARD, Ionia, Mich. Filed Dec. 17, 1918. Serial No. 267,198. 6 Claims. (Cl. 55—107.)



1. The combination with a beet harvesting machine including a supporting frame, of a supporting plate hingedly secured to said frame for rocking movement about horizontal axis and projecting downwardly and forwardly therefrom, a cutting head mounted on said plate at the lower arm thereof for reciprocation transversely thereof, and means for engaging the ground surface so as to support the lower end of said supporting frame above the ground, said means also constituting means for guiding the cutting head during reciprocation thereof.

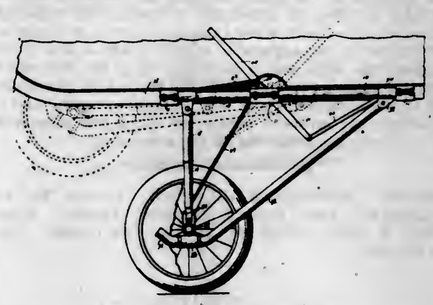
1,353,404. TREE-PROTECTOR. PEARL A. LIBBY, Waldoboro, Me. Filed Mar. 25, 1920. Serial No. 368,592. 1 Claim. (Cl. 47—35.)

A protector comprising a section, means for applying the section to a tree, spaced flanges carried by the section and being downwardly inclined toward each other, a rod adapted to slip between the flanges and spaced pins carried by the rod.



1,353,405. MACHINE FOR HANDLING ENSILAGE. GEORGE A. LONG, Mooresville, Ind. Filed Aug. 20, 1919. Serial No. 318,731. 8 Claims. (Cl. 100—57.)

4. In combination a tamper and means for operating said tamper and controlled by the feeding of cut ensilage to the silo, said operating means comprising a shaft having radial blades, a lever pivoted to the casing and connected to the tamper, a connection between the shaft and the lever for vibrating said lever, the connection between the tamper and the lever being flexible, and means at the tamper for winding up said connection or unwinding the same to raise and lower the tamper.

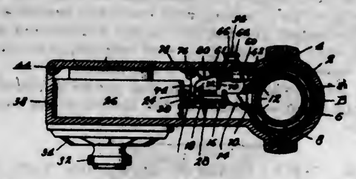


6. In combination a tamper, and means for operating said tamper and controlled by the feeding of cut ensilage to a silo.

1,353,406. DOLL. EDITH L. LOPEZ, New York, N. Y. Filed Apr. 2, 1920. Serial No. 370,640. 6 Claims. (Cl. 46—40)

1. A doll, comprising a spool having an upper flange, and a bust provided with a head, arms and shoulders, the bust being supported by the said spool flange; substantially as described.

1,353,407. FOLDABLE LANDING-GEAR FOR AEROPLANES. FRANK MCCARROLL, Dallas, Tex. Filed July 19, 1919. Serial No. 311,948. 13 Claims. (Cl. 244—2)

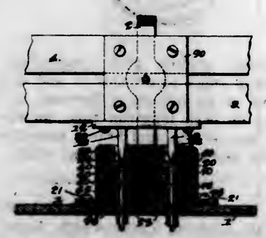


1. A foldable landing gear comprising; a pair of spaced longeron tubes attachable to and detachable from the longerons of an aeroplane fuselage, a landing gear strut pivoted on each longeron tube, an axle carried by the landing gear struts, and braces associated with each longeron tube and each landing gear strut.

1,353,408. AUTOMOBILE-STEERING-POST LOCK. LOYD S. MCCORMICK, Leavenworth, Kans. Filed Dec. 27, 1919. Serial No. 347,729. 3 Claims. (Cl. 70—90.)

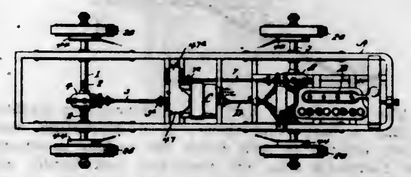
1. In combination with the steering post and the steering column of an automobile, mechanism for locking said steering post from rotation, a case surrounding the steering column and inclosing the main portion of the lock mechanism, a door to said case to permit access thereto, a bolt to lock said door in closed position, spring means to

throw said bolt to inactive position, so that the door may be opened, and means controlled by the lock mechanism



for moving said bolt to active position at the time the steering post is locked.

1,353,409. VALVE STRUCTURE FOR OIL-WELLS. JOHN PHILIP MCEVOY, Sour Lake, Tex. Filed Sept. 19, 1919. Serial No. 324,908. 1 Claim. (Cl. 251—127.)

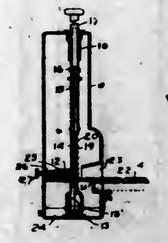


A valve structure of the character described, comprising a barrel provided at its upper end with a tapered valve seat, a cage secured to the upper end of the barrel and provided at its upper end with an internally screw-threaded portion, an adjustable tubular guide engaging within the internally screw-threaded portion, a clamping nut carried by the adjustable tubular guide, a disk valve engaging the valve seat, a stem secured to the disk valve and extending above and below the same with the upper end of the stem projecting into the tubular guide, and a transverse bar arranged within the barrel and apertured for receiving the lower end of the stem.

1,353,410. SUBMARINE-DETECTOR. GEORGE MILLER MARSHALL, Lake Francis, Manitoba, Canada. Filed Jan. 3, 1918. Serial No. 210,194. 13 Claims. (Cl. 175—265.)

1. In a sub-marine detector, a float, a hanger frame attached thereto, a pair of magnet members, means for fixedly holding them in parallel relation, other means for pivotally suspending the said magnet members on the hanger frame, a pair of terminals on the magnet members, one at each side of the pivotal axis thereof, electric circuit terminals attached to the hanger frame for being engaged by either of the terminals on the magnets as the latter are caused to swing on their axis under the magnetic influence of a passing sub-marine.

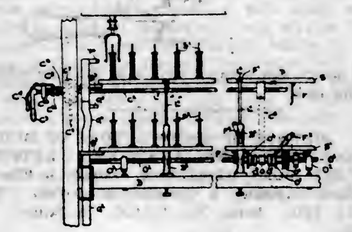
1,353,411. FOUR-WHEEL DRIVE FOR AUTOMOBILES AND SIMILAR VEHICLES. HERMAN A. MIESKE, Fall Creek, Wis. Filed Apr. 19, 1919. Serial No. 291,315. 2 Claims. (Cl. 180—46.)



1. In a four wheel drive for vehicles, an axle housing, an axle shaft rotatably mounted therein and adapted to be rotated by the engine of a self propelled vehicle, said housing being provided at its end with diametrically opposite arched arms, a hollow wheel spindle provided at its inner end with an annular flange, pivot bolts inserted through said flange and the arms of the axle housing and serving to pivotally secure the spindle to the housing for rocking movement about a vertical axis, a flared flange outwardly of the first mentioned flange and carried by the inner end of the hollow wheel spindle, a stub shaft extending through said spindle and having a cap mounted thereon, a wheel having a hollow hub fitting rotatably mounted on the spindle, a brake carrying flange carried by said wheel, brake bands mounted on said brake carrying flange, and means to prevent longitudinal movement of the wheel hub fitting upon said spindle.

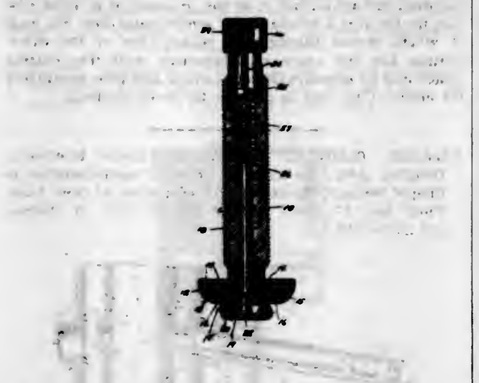
1,353,412. RAIL-BRACE. JOHN G. MUELLER, Dayton, Ohio. Filed Nov. 1, 1918. Serial No. 260,648. 13 Claims. (Cl. 238—53.)

3. In a rail brace, the combination, with a tie rod, of a clamping device operable therewith adjacent each rail flange and comprising a clamping member, a binding member, said members being adapted to engage the top and bottom sides respectively of the rail flange and means whereby said members may be adjusted relative to the tie rod and to each other to clamp a portion of said rail.



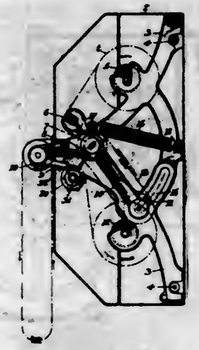
1,353,413. ENVELOP-OPENER. JOHN A. MULLIGAN, Narragansett Pier, R. I. Filed Dec. 26, 1918. Serial No. 268,261. 4 Claims. (Cl. 164—44.)

1. An envelop opener comprising a casing having a bed provided with slots having cutting edges, a knife passed through each slot and pivoted therebelow, a plunger above



the bed operatively connected with the knives and having means for holding it normally and yieldably with the knives retracted, a yieldable stop slidably mounted upon the bed and extending part way across the slots in the direction of their cutting edges, the stop being movable from such position under the influence of operative movement of the knives and means for guiding envelops into positions against the stop.

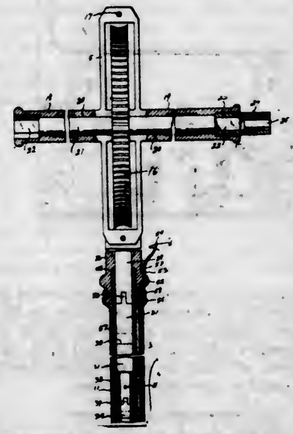
1,353,414. DOFFING MECHANISM FOR SPINNING-FRAMES. NORMAN ROBERT NEWSHOLME, Keighley, England. Filed Oct. 30, 1918. Serial No. 260,385. 5 Claims. (Cl. 118—18.)



1. Doffing mechanism for spinning frames comprising, in combination duplicate spindle carrying rails, with fixed guides for each rail, said guides being inclined one to the other to allow the rising and falling rails to pass.

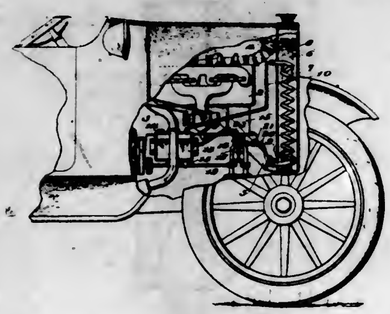
1,353,415. PNEUMATIC VALVE. JOSEPH N. NEWSOM, HARRY E. HARDEE, and WILLIAM F. LESCHEN, St. Louis, Mo., assignors to Newsom Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 18, 1919. Serial No. 271,796. 2 Claims. (Cl. 152—12.)

2. In a pneumatic valve, a tubular body, the lower end of which is provided with an annular recess that is concentric with the opening through the valve body, an annular rib formed on the bottom of said recess, which rib is substantially V-shaped in cross section, ribs projecting from the side walls of the recess, an elastic gasket set in said recess so that the outer face of the opening is beyond the outer face of the gasket and in which the ribs in said recess are embedded, lips on the lower end of the tubular body for retaining the gasket in said recess, a stem passing through the tubular body, a disk on the lower end of said stem, and a rib formed on said disk adjacent to its edge, which rib is substantially of inverted V-shape in cross section and is greater in diameter than the diameter of the rib on the bottom of the recess.



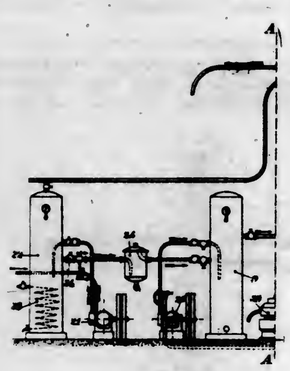
1,353,416. ROLLER-TOWEL CABINET. C BLAKE OSCUTT, New York, N. Y. Filed Nov. 22, 1918. Serial No. 263,654. 10 Claims. (Cl. 45—32.)

1. The combination with a roller towel cabinet, of a supply roller, a take-up roller, means adapted to be operated by the towel as it is drawn from the supply roller and impart movement to the take-up roller, braking means engaging the towel in advance of the take-up roller and causing it to feed to the latter under tension, and means for locking said braking means against reverse movement.



6. The combination with a roller towel cabinet, of a supply roller, a pair of take-up rollers, a pair of pivoted links carrying one of said take-up rollers whereby it may be movable in a radial direction toward and from the other, means operative to yieldingly hold the link supported take-up roller toward the other, and means adapted to be operated by the towel as it is drawn from the supply roller and impart movement to one of said take-up rollers.

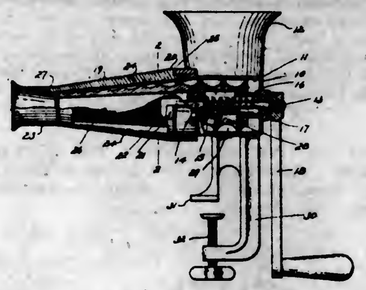
1,353,417. DOUBLE-ACTING POWER-WRENCH. CHARLES E. PENDLETON, Enid, Okla. Filed Nov. 22, 1919. Serial No. 339,888. 8 Claims. (Cl. 81—57.)



1. In a wrench mechanism including a wrench element, the combination with a casing for said element, a source of operating means remote from the wrench element including a clutch mechanism, a flexible connection between the operating means and the wrench element and being operatively controlled by the clutch mechanism, and means carried by the casing and having operative connection with the clutch mechanism for moving an element of said clutch mechanism into and out of engagement with the operating means.

1,353,418. SELECTIVE COOLING AND HEATING SYSTEM FOR AUTOMOBILE-RADIATORS. HORACE J. PETERSON, Montpelier, Idaho. Filed Feb. 19, 1918. Serial No. 218,007. 8 Claims. (Cl. 123—170.)

1. In a cooling system for engines, a radiator water tank, a cooling conduit therein, a tank for a liquid refrigerant, and means for creating a circulation of the refrigerant from the refrigerant tank and through the cooling conduit.



1,353,419. METHOD OF AND APPARATUS FOR HYDROGENATING FATTY ACIDS AND THEIR GLYCERIDS. AUGUSTIN RADISSON and PAUL BERTHON, Lyon, France; said Radisson assignor to Societe de Stearinerie et Savonnerie de Lyon, Lyon, France. Filed June 21, 1917. Serial No. 176,181. 4 Claims. (Cl. 87—12.)

1. In the process of saturating unsaturated fatty acids or their glycerids by means of hydrogen in the presence of a catalyzer, maintaining a constant speed of reaction by the progressive addition of external heat, and increasing the amount of catalyzer as the proportion of unsaturated fatty acids or glycerids decreases.

1,353,420. CRUSHING-MACHINE. MICHAEL J. RENO and ALBERT SCARAMELLA, New Haven, Conn. Filed Apr. 15, 1920. Serial No. 374,092. 2 Claims. (Cl. 100—48.)

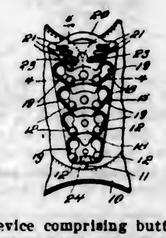
1. In a crushing device, a body, a rotary and longitudinally movable screw therein, said body having opposite dogs extending outwardly therefrom, a sieve frame including a head rotatably engaged with the body and having ears engageable with the dogs, a mouth, spaced longitudinal tie bars having flat uninterrupted inner faces connected at their ends to the mouth and head, and a sieve in the frame arranged between the bars and between the

head and mouth and engaged with said flat uninterrupted faces of the bars.

1,353,421. METHOD OF MANUFACTURE OF RUBBER BATHING-CAPS AND ANALOGOUS ARTICLES. RALPH EARL RILEY, Akron, Ohio, assignor to The Miller Rubber Company, a Corporation of Ohio. Filed Sept. 11, 1919. Serial No. 323,005. 8 Claims. (Cl. 154—42.)

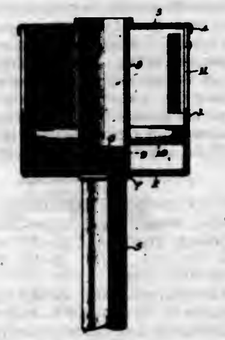
1. The herein described method of making rubber bathing caps and analogous articles which comprises folding a rubber sheet upon itself, supporting it upon a suitable mandrel and subjecting it to the pressure of a blunt cutting device over a substantially semicircular line, the ends of which extend through the folded edge of the sheet, uniting the cut edges simultaneously with the cutting action and by pressure from the cutter and then separating the sheet at its fold to provide the head opening.

1,353,422. RABBLE. EUGENE CLAYBORNE ROBINSON, Douglas, Ariz., assignor of fifty-five one-hundreths to Phelps Dodge Corporation, a Corporation of New York. Filed Jan. 17, 1919. Serial No. 271,746. 7 Claims. (Cl. 257—119.)



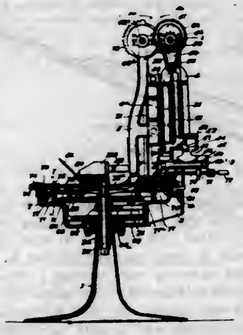
1. In apparatus of the class described, a cooling-fluid supply shaft, an inclosing exhaust-fluid conducting shaft, the first mentioned shaft having a seat and an opening surrounded thereby and in communication with its interior and the second mentioned shaft having an opening opposite the seat, and a rabble arm comprising inner and outer tubular members, the inner member being supported within and by the outer member and the inner end of the outer member of the arm being fitted through the said opening in the second-mentioned shaft and into the said seat.

1,353,423. RAILWAY SYSTEM. GEORGE BERTHOLD SAMUELSON, Isleworth, and WILLIAM HENRY GLASER, Tunbridge Wells, England. Filed May 12, 1920. Serial No. 380,949. 22 Claims. (Cl. 104—20.)



1. In a railway-system, the combination of a track, stations disposed along it, an aggregation of vehicles constituting a train adapted to travel along the track past a station, means for establishing communication for passengers between the vehicles of said train, a vehicle adapted to stand on the track at said station to receive passengers in it, means directing said vehicle to leave the station in advance of the said train when said train approaches within a pre-determined distance of said station and means permitting the said train to overtake said vehicle at a pre-determined distance from said station.

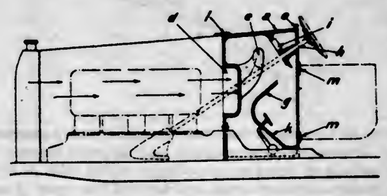
1,353,424. SHOE-FASTENER. VICENTE C. SANTOS, Singalong, Manila, Philippine Islands. Filed Oct. 4, 1919. Serial No. 328,370. 7 Claims. (Cl. 24—205.)



1. A fastening device comprising buttons or studs arranged in spaced rows along the adjacent edges of an opening and means removably engageable with the buttons and movable longitudinally of the rows, whereby the edges of the opening will be brought together or separated.

1,353,425. EMULSIFYING-MACHINE. JOHN FREDERICK SCHLAPPI, Sioux City, Iowa. Filed Apr. 2, 1920. Serial No. 370,833. 2 Claims. (Cl. 259—96.)

1. A device of the character specified, comprising a closed casing, means for rotating the casing, said casing having discharge ports near its outer end, a feed tube at the axis of the casing, said tube having discharge ports at its inner end and at the inner end of the casing, and the casing having an internal annular rib between the discharge ports of the casing and the discharge ports of the feed tube for constraining the material to move inwardly toward the center of the casing before passing through the discharge ports, the casing having radial tongues adjacent to the discharge ports, and said feed tube being imperforate between the annular rib and the outer end of the casing to constrain all the material to feed at the inner side of the rib.



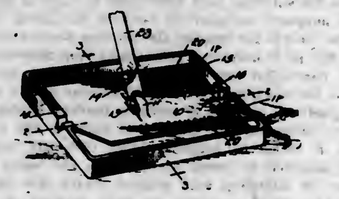
1,353,426. MACHINE FOR SHAPING ARTIFICIAL-FLOWER PETALS. ALWIN J. SCHWARZENBACH, Hasbrouck Heights, and BENJAMIN W. TUCKER, South Orange, N. J.; said Tucker assignor, by mesne assignments, of his right to Michael Gold, New York, N. Y. Filed May 10, 1919. Serial No. 296,210. 21 Claims. (Cl. 41—2.)

2. In a machine of the class described, the combination of a rotary feed table, a series of blank supports mounted on said table, a group of scoring devices arranged in juxtaposition at one side of the table and above said table, means for rotating said table step by step to present the blank supports successively beneath the group of scoring devices, means for moving the scoring devices toward and from the table between each step-by-step movement of the table, means for moving the scoring devices horizontally over a blank support while said devices are in their lowered position, a series of radially movable slides mounted on the table adjacent the inner ends of the blank supports, a series of gripper plates pivotally held to the slides adapted to clamp blanks upon the blank supports, means for swinging said gripper plates into engagement with the blank supports as each support is advanced toward the scoring devices, means for retracting the slides as the scoring devices move over the blank supports to slide the gripper plates over the blanks in advance of the scoring devices, and means for swinging the plates upwardly at the conclusion of the inward movement of the slides.

5. In a machine of the class set forth, the combination of a blank support, a vertically reciprocable support, a plurality of slides mounted on said vertically reciprocable support to move horizontally relatively thereto, scoring devices carried by said slides, means for shifting said slide support toward and from the blank support, and means for reciprocating said slides relatively to the slide support.

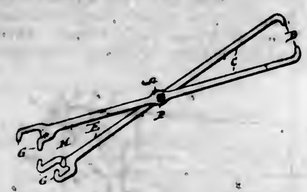
1,353,427. DASHBOARD FOR MOTOR-VEHICLES. LAURENT SEGUIN, Paris, France, assignor to Societe Des Moteurs Gnome Et Rhone, Paris, France. Filed Mar. 5, 1920. Serial No. 363,603. 4 Claims. (Cl. 180—90.)

1. A dash-board constituted by a casing having a front wall, a rear wall, a top wall and two side walls, said



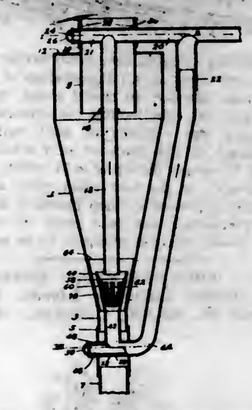
casing conforming externally to the outer shape of the carriage body, the front wall being depressed rearwardly in its center portion to form a chamber open at the front and conduits in said casing to provide a communication between said chamber and the outside of the vehicle, said conduits opening laterally through said side walls.

1,353,428. CLINKER-EXTRACTOR. GUSTAF SELANDER, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,287. 2 Claims. (Cl. 294—10.)



1. A clinker extractor comprising, a poker rod having a handle at one end and a clinker engaging formation at the other end, a radius link pivoted to said rod near the handle end thereof, a carrying rail pivoted at one end to said link, the said carrying rail having a concavo-convex form in cross section adapting the same for straddling engagement with the poker rod, and a clinker engaging claw attached to the free end of said carrying rail.

1,353,429. POLISHING APPARATUS. WILLIAM SEVERNS, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,109. 1 Claim. (Cl. 15—13.)



In polishing apparatus, a body portion provided upon its upper surface with a continuous upstanding flange on its periphery, means for connecting an operating handle to said body, a pair of U-shaped clamping members having the ends of the arms of the U out turned, and bearings formed on said body portion adapted to receive said out turned ends, the portions of said clamping members forming the base of the U being disposed adjacent the interior of the flange when the clamping members are in clamping position.

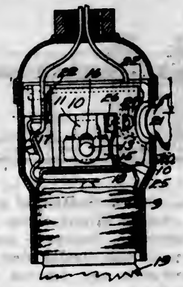
1,353,430. SURGICAL FORCEPS. CHARLES J. SIGLER, Honey Creek, Iowa. Filed July 24, 1918. Serial No. 246,510. 1 Claim. (Cl. 128—324.)

A pair of forceps of the character described, comprising a pair of pivoted members, one end of each member at the same end of the forceps being provided with a bifurcation forming spaced arms, the ends of the arms of each bifurcation being bent in toward each other thereby forming opposite registering lugs, a bent in lug in the bottom of each bifurcation, said lugs being in substantial registration with each other and in alinement with a longitudinal line centrally disposed at the ends of each bifurcation.

1,353,431. DUST-COLLECTOR. JAMES F. SIMS, Kansas City, Mo. Filed Sept. 23, 1919. Serial No. 325,686. 9 Claims. (Cl. 183—83.)

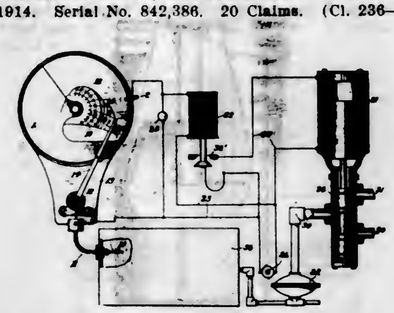
1. In a device of the character described, a conical shell having inlet and outlet openings, a tubular guard at the upper portion of said shell, a suction tube extending upwardly from the lower portion of the shell, branches extending from the upper portion of said suction tube and out through openings in the guard, and means to effect vertical adjustment of said branches in the guard.

1,353,432. MEANS FOR PROMOTING COMBUSTION. JOHN BUDD SMITH, South Orange, N. J. Filed Jan. 15, 1919. Serial No. 271,271. 4 Claims. (Cl. 110—58.)



1. As an article of manufacture, a pipe section adapted to form a part of a duct for leading away the products of combustion from a combustion chamber, and a narrow tubular element extending circumferentially along the inner surface of the pipe section and defining therewith an air chamber, the walls of said air chamber being perforated at points remote from each other for admitting air to the chamber and for connecting the chamber with the interior of the pipe section, respectively.

1,353,433. MULTISOCKET SWITCH. RAYMOND D. SMITH, Boston, Mass., assignor to Tremont Products Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1916. Serial No. 128,131. 8 Claims. (Cl. 173—336.)



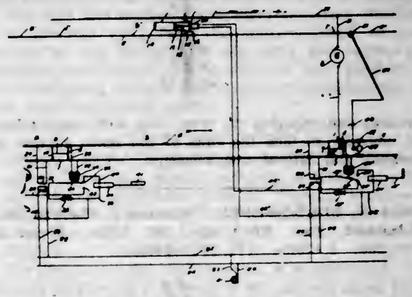
7. A socket-switch structure embodying, in combination; an insulating block recessed to form a switch chamber with a portion of said block laterally adjacent said chamber; means for inclosing and supporting said block including a cylindrical casing shell closely surrounding and adapted for telescopic assemblage with same; a main lamp receptacle depending from said block concentrically with said casing; an auxiliary plug receptacle embedded in the portion of said insulating block adjacent said switch chamber, the inner end of said auxiliary receptacle opening into the said switch chamber and the outer plug-receiving end falling interior the cylindrical walls of said casing shell to permit said telescopic assemblage thereof; and switch mechanism mounted in the said recessed

portion of the insulating block, and including a conductive current distributer adapted in different positions

to engage with respectively different stationary contacts for supplying current to each of said receptacles.

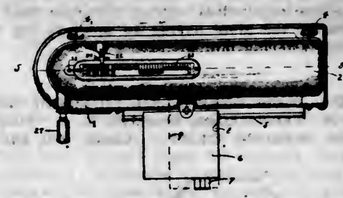
1,353,434. AUTOMATIC CONTROLLING DEVICE. CHARLES J. STUART, Somerville, Mass. Filed June 2, 1914. Serial No. 842,386. 20 Claims. (Cl. 236—46.)

20. The combination with a device to be regulated, a measuring instrument operatively connected to the device and means for regulating the device, of a templet having a predetermined contour for coöperating directly with the measuring instrument to so control the means for regulating the device to be regulated that it is regulated in accordance with predetermined conditions.



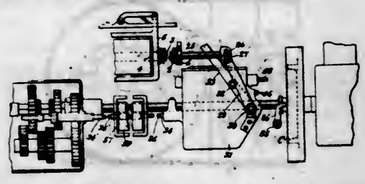
1,353,435. GIN OR LINTER SAW. PARKER H. SWEET, Boonton, N. J., assignor to The Barker-Sweet Manufacturing Company, Jamaica, N. Y., a Corporation of New York. Original application filed June 10, 1918, Serial No. 239,124. Divided and this application filed Feb. 18, 1919. Serial No. 277,730. 4 Claims. (Cl. 13—14.)

1. In gin or linter saws, the combination of a disk having circumferentially disposed openings adjacent the periphery; a band of circular form having teeth on the outer edge; clips stamped from the band to extend laterally therefrom and in a direction transversely of the band, and between which clips and the body of the band the peripheral portion of the disk is adapted to engage; and nibs formed on the clips to engage in the disk openings for the purpose specified.



1,353,436. SIGNALING SYSTEM. GUY W. THAXTON, Fairfield, Ala. Filed Apr. 22, 1919. Serial No. 291,914. 3 Claims. (Cl. 246—31.)

1. In a signaling system for electric railways, a railway track divided into a plurality of blocks electrically insulated from each other, a trolley wire divided into blocks corresponding to the blocks of said track, means for supplying electrical energy to the respective blocks of said trolley wire and to the rails of said track, and



means controlled by a train traveling upon said track for reducing the available electrical energy in the trolley circuit of the block behind that occupied by the train so as to reduce the speed of a second train entering said block behind.

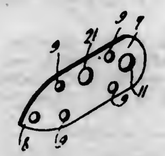
1,353,437. CHECK-WRITER. CHARLES G. TIEFEL, Rochester, N. Y., assignor to Todd Protectograph Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 17, 1917, Serial No. 207,503. Renewed July 26, 1920. Serial No. 399,158. 13 Claims. (Cl. 197—6.2.)

1. In a machine of the class described, the combination with a type carrier provided with lines of type to print words of different lengths, of means whereby all or a part of any desired word may be printed, and a manipulative device controlling said means.

1,353,438. GEAR-SHIFTING MECHANISM. CHARLES R. UNDERHILL, New Haven, Conn. Filed Mar. 12, 1917. Serial No. 154,298. 30 Claims. (Cl. 74—58.)

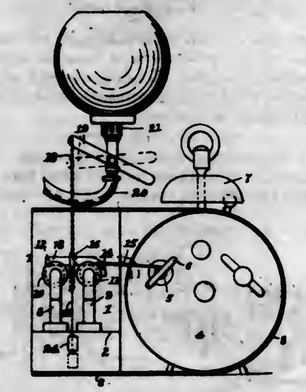
1. In a gear shifting mechanism, the combination with a pair of coöperative gears to be brought into mesh, and a normally energized power device for shifting one of said gears into mesh, of means for holding said power device under restraint which includes a two-stage let-off device effective for releasing the power device.

1,353,439. TOGGLE-BUTTON. PERCY DE F. WARNER and FRANK E. WARNER, Waterbury, Conn., assignors to Scovill Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 23, 1920. Serial No. 353,478. 3 Claims. (Cl. 24—100.5.)



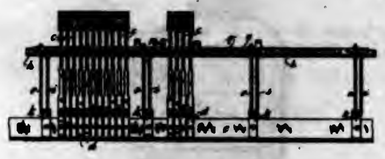
1. A button, having a permanently applied toggle composed of a piece of metal bent upon itself to form a but-

ton-eye engaging loop and its limbs at the farther end brought together, the outer portion of one limb being



expanded and engaging the other limb both longitudinally and laterally to lock the ends of the limbs against longitudinal and lateral displacement.

1,353,440. BOLT-KEEPER. WILLIAM F. WAGNER, North Braddock, Pa. Filed Apr. 24, 1919. Serial No. 292,255. 1 Claim. (Cl. 292—340.)

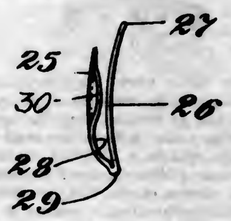


A bolt-keeper in the form of a thin, elongated, flat plate pointed at one end, the plate being provided adjacent to its other end with a first bolt-receiving opening, the plate being provided intermediate its ends with a second bolt-receiving opening, the second opening being located closer to one longitudinal edge of the plate than is the first opening, the plate having an aperture for the reception of fastening means.

1,353,441. TIME-CONTROLLED LIGHTING DEVICE. JOHN M. WEISENREIDER, Brooklyn, N. Y. Filed Sept. 3, 1919. Serial No. 321,397. 1 Claim. (Cl. 161—9.5.)

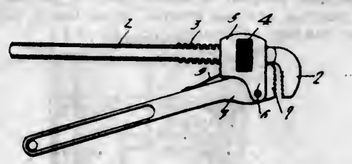
The combination with the alarm spindle of an alarm clock, of a pair of spaced rotatably supported wheels having grooved peripheries, a bar fitting loosely in the grooves in said wheels and supported thereby across the space between them, a lighting device, a flexible member operatively attached to said lighting device, a rigid loop carried by said flexible member, a weight attached to the loop, said loop fitting loosely on said bar between said wheels and supporting the weight out of operative position, and means of connection between said bar and the alarm spindle of the clock, whereby said bar will be withdrawn from said wheels, the loop released from said bar and the weight dropped for actuating the lighting device when the alarm spindle is rotated.

1,353,442. HAMMER REST-RAIL FOR GRAND-PIANO ACTIONS. FERNANDO A. WESSELL, New York, N. Y. Filed Mar. 4, 1920. Serial No. 363,212. 1 Claim. (Cl. 84—221.)



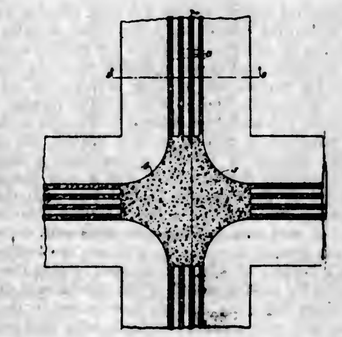
In a piano action, the combination of a main rest-rail, a divided rest-rail resting directly upon the main rest-rail and moved therewith, hammers arranged to rest directly and only upon the divided rest-rail, and arms supporting said rest-rails and pivoted co-axially with each other and with the hammers.

1,353,443. EGG-MIXER. ROBERT GROUT WILSON, Davis, W. Va. Filed Feb. 5, 1920. Serial No. 356,535. 1 Claim. (Cl. 259—72.)



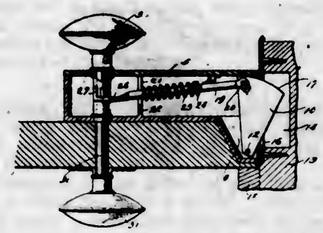
An egg mixer consisting of a container, a removable cover therefor having means to position the same in immovable relation with the container, and an axial stem projecting from the cover within the container having a pair of side wings integral therewith adjacent to its free end and positioned approximately in the center of the container, said side wings having their inner and outer portions separated from the stem by slits and being positioned at oppositely inclined angles with respect to the longitudinal axis of the stem and with their inner and outer portions projecting upon relatively opposite sides of the stem.

1,353,444. COLLAR-BUTTON. ALEXANDER YADUCK, Kansas City, Mo. Filed Mar. 4, 1920. Serial No. 363,290. 2 Claims. (Cl. 24—101.)



1. A button of the class described comprising a vertical strip adapted to be wholly embedded in a neck band, an oval head formed with said strip, said head being bent convexly and disposed approximately parallel to said strip, and resilient integral connecting means extending between said strip and head, said head being adapted to pass through the button-hole of a collar.

1,353,445. COMBINATION-TOOL. JACOB ZIEGLER, Coffeyville, Kans. Filed Nov. 15, 1918. Serial No. 262,677. 1 Claim. (Cl. 81—78.)



In a device of the class described, a shank provided at one end with a laterally projecting fixed jaw and having threads at the rear of the jaw; a collar inclosing the shank and having laterally extended ears; a nut journaled in the collar and engaging the threads; and a handle substantially equal in length to the shank and pivotally supported close to its outer edge on the ears independently of the nut at a point close to the outer ends of the ears, the handle terminating in a movable jaw coacting with the fixed jaw when the handle and the shank move toward each other.

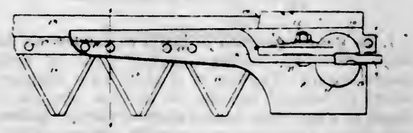
1,353,446. ROADWAY. ANTON ANFINSON, Wakonda, S. D. Filed May 8, 1919. Serial No. 295,580. 1 Claim. (Cl. 94—4.)

In combination, a plurality of trackways arranged in intersecting relation and terminating short of actual intersection, each trackway being formed of a plurality of spaced parallel bodies of plastic material embedded within the ground and each concaved at its upper face in cross section, and a smooth pavement connecting the ends of the trackways.

1,353,447. DOOR-LATCH. EDWARD B. BARR, Newton, Kans. Filed Oct. 4, 1919. Serial No. 328,387. 1 Claim. (Cl. 292—222.)

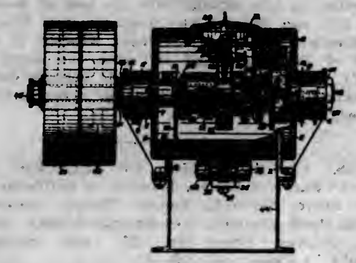
The combination with a door jamb having a door stop and a keeper plate having a retaining edge in parallel spaced relation to the stop, of a door disposed to rest with a side face against the stop and its opposite side face between the stop and said retaining edge, and a segmental bolt having its curved end disposed against the keeper edge and its minor end pivotally connected with the door with its axis in a line between the outer edge of said stop and the keeper edge, whereby to swing the bolt laterally toward the keeper edge upon movement of the door away from the stop, the curvature of the segmental bolt having its axis parallel with the axis of movement of the bolt and disposed and displaced from the latter in a direction away from the jamb, whereby to insure contact of the curved bolt end with the keeper edge normally, and means for holding the bolt yieldably in such contacting position and means for swinging the bolt from such contacting position.

1,353,448. CONCENTRATION OF SULFURIC ACID. ANTON CHRISTIAN BOHRE, deceased, by Katharina Charlotte Bohre, executrix, Bergen, Norway, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Mar. 27, 1919. Serial No. 285,674. 1 Claim. (Cl. 23—1.)



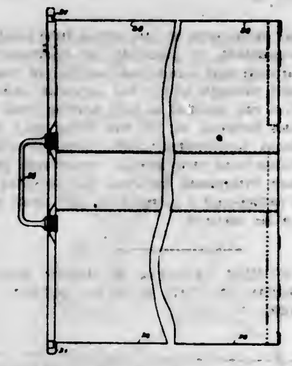
The process for the concentration of sulfuric acid which consists in passing a current of hot nitrous gases having a temperature of above 600° C. in contact with the acid to be concentrated, and mixing a portion of the resulting moist gas with the current of hot nitrous gases.

1,353,449. HEAT-EXCHANGER. CARL F. BRAUN, San Francisco, Calif. Filed Sept. 12, 1918. Serial No. 253,811. 3 Claims. (Cl. 257—236.)



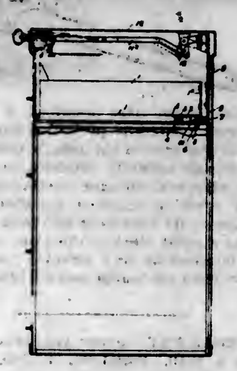
1. In a heat exchanger, an end cap, a tube head adapted to rest thereagainst, a plurality of open-ended tubes extending through said head and parallel to each other, a bolting head through which the opposite ends of said tubes extend, a cap secured to said bolting head whereby communication between all of the tubes may be established, sectional longitudinal baffle members adapted to divide the tubes into two groups, transverse perforated baffle members interposed between the sections of said longitudinal baffles and a connecting bolt upon which all of said baffles are secured.

1,353,450. SICKLE. VINCENT B. BROWN, Plattsmouth, Nebr. Filed May 15, 1919. Serial No. 297,311. 1 Claim. (Cl. 56—299.)



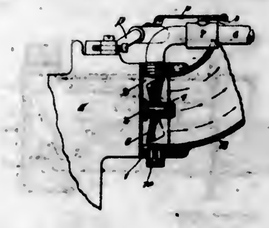
A sickle including a base, a portion extending therefrom, an upstanding rib arranged upon the base and said extended portion, a socket integral with one end portion of the rib, and overhanging the base, a socket member detachably connected to the rib and coöperating with the first mentioned socket for engagement with a pitman ball, there being a longitudinally extending rabbet in the lower face of the extended portion of the base, a main bar arranged under the extended portion of the base, an auxiliary bar integral therewith and seated in the rabbet, cutting blades extending between the main bar and the extended portion of the base and abutting against the auxiliary bar, fastening means extending to the main bar, blades and extended portions for fastening them together.

1,353,451. DRIVING MECHANISM FOR ORE-CONCENTRATORS. WALTER G. BURNS, Fort Wayne, Ind. Filed Sept. 26, 1919. Serial No. 326,593. 7 Claims. (Cl. 74—14.)



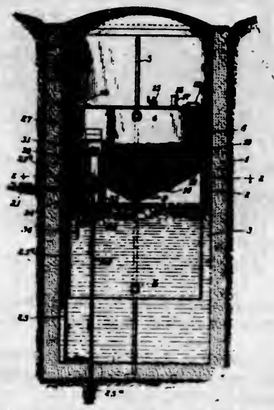
1. In mechanism of the class described having a main stand and rocking member, a drive-shaft; a drive-crank fixed thereon; a bearing eccentrically positioned relative to the drive-shaft; a drag-ring on the bearing; an eccentric having a radial arm, loosely mounted on the drive-shaft; a pair of toggles carried by the drag-ring, having connections respectively with the drive-crank and radial arm and being adapted to impart oscillating movement to the eccentric as it is revolved; and a roller on the eccentric for actuating the rocking member.

1,353,452. METAL FILING-CABINET. WALTER CHIPPERFIELD, Homechurch, England, assignor to Roneo Limited, London, England, a Company of Great Britain. Filed Nov. 13, 1919. Serial No. 337,831. 5 Claims. (Cl. 45—7.)



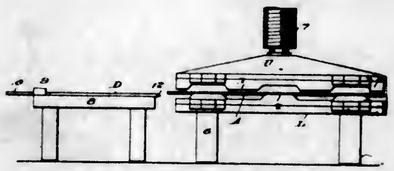
1. In the construction of metal cases, drawers and the like; connecting the edges of two plates of metal employed in such structures at or about right angles to each other, by bending the edge of the first plate to form a flange at about right angles thereto, forming or providing said flange with tongues or inward projections extending in a plane parallel with the surface of said first plate, and forming slots through the main wall of said first plate, forming the second plate with projecting tongues on its edge to take into said slots in the main wall of the first plate, such engagement being effected when said two plates are at a proper relative angle, and forming slots or holes through the wall of the second plate in such positions that when said second plate is brought to the required angle with said first plate, said tongues or inward projections on the edge of the flange of the first plate will enter the slots or holes in the main wall of the second plate, whereby the said plates will be firmly connected together when maintained at a proper relative angle to each other and can be with equal readiness disconnected when such relative angle is changed.

1,353,453. MEANS FOR SIMULTANEOUSLY LOCKING SLIDING DRAWERS, SHELVES, OR OTHER SLIDING STRUCTURES. WALTER CHIPPERFIELD, Romford, England, assignor to Roneo Limited, London, England, a Company of Great Britain. Filed Jan. 5, 1920. Serial No. 349,589. 2 Claims. (Cl. 45—9.4.)



1. Means for locking sliding drawers, shelves, and other sliding structures comprising a vertically movable locking rod, a roller or equivalent thereon for each drawer or the like to be locked, and means operable from the exterior of the case for raising and holding said rod in its locking position, in combination with a pivoted locking arm on each drawer extending rearwardly and about horisontally in the direction of motion of said drawer, its free rear end being capable of motion in one (say a downward) direction against spring action, and a cam shaped member carried on the rear end of said arm such that when said locking arm is raised a roller carried thereby passes in front of said cam member and locks said drawer, and when said drawer is very nearly closed the locking roller acts on a surface of said cam member, closes the drawer, and effects its locking action, while should said drawer be pushed home after the rod has been raised to the locking position, said cam member contacts with said roller, the locking arm is raised, and said cam member passes beneath and behind the roller and effects the locking action.

1,353,454. MEANS FOR SUPPLYING EXPLOSIVE MIXTURES TO ENGINES. JOHN J. COCHRAN, St. Louis, Mo., assignor to Martin-Lumaghi Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 13, 1918. Serial No. 266,638. 1 Claim. (Cl. 123—119.)

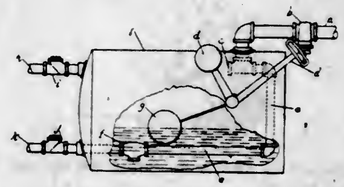


The combination with an internal combustion engine having a crank case, an intake pipe for explosive mixture, and a carbureter provided with a throttle, of a connecting pipe leading from said crank case to said intake pipe, a valve in said connecting pipe, and means connecting said valve to said throttle whereby said valve may be operated upon operation of said throttle.

1,353,455. ACETYLENE-GAS GENERATOR. CLAYTON T. COOK and CHARLES B. COOK, Owosso, Mich. Filed Aug. 8, 1916. Serial No. 113,739. 3 Claims. (Cl. 48—41.)

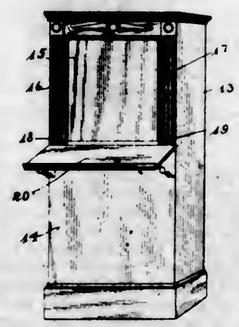
1. In an acetylene gas generator, wherein a main gas bell carrying a perforated carbid receptacle is movable vertically within a well or tank adapted to contain a supply of water and dipping into the water, and an outlet main or pipe extends into said bell the combination with said outlet main of a pressure regulator inclosing the mouth of said pipe within said main bell and comprising a vertically movable regulator bell, a support therefor below the level of the water in the main bell, an inlet pipe carried by said regulator bell and connecting the interior thereof with that of the main bell, and a closure adapted to close the outer end of said inlet pipe when the regulator bell is lifted by the contained gas pressure.

1,353,456. MACHINE FOR MAKING BUILDING FABRIC. WILLIAM CLAYTON CORYELL, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed July 9, 1919. Serial No. 309,630. 16 Claims. (Cl. 154—1.)



1. A machine for making building fabric including a device having means for upsetting portions of a body sheet, and means for inserting a reinforcement through said upset portions of the sheet.

1,353,457. APPARATUS FOR RETURNING WATER TO BOILERS. DAVID NELSON CROSTHWAIT, Jr., Marshalltown, Iowa. Filed Dec. 4, 1916. Serial No. 134,931. 3 Claims. (Cl. 137—101.)



1. In an apparatus of the character described, a receiver having a water inlet and a delivery outlet to the boiler, a steam supply pipe, a steam inlet from said steam supply pipe to above the water level of said receiver, a pipe connecting said steam supply pipe and said delivery outlet having a portion submerged in the water of said receiver, an ejector arranged in said submerged portion whereby the water from said receiver is injected into the boiler through said delivery outlet.

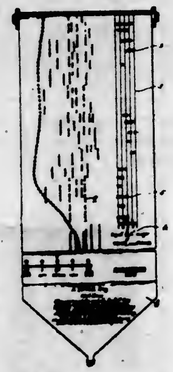
2. In an apparatus of the character described, a receiver having a water inlet and a delivery outlet to the boiler, a steam supply pipe, a steam inlet from said steam supply pipe to above the water level of said receiver, a pipe connecting said steam supply pipe and said delivery outlet and having a portion submerged in the water of said receiver, an ejector arranged in said submerged portion and means automatically controlling the admission of steam from said steam supply pipe to said steam inlet and said ejector whereby the water from said receiver is periodically injected into the boiler through said delivery outlet.

3. In an apparatus of the character described, a receiver having a water inlet and a delivery outlet to the boiler, a steam supply pipe, a steam inlet from said steam supply pipe to above the water level in said receiver, a pipe connecting said steam supply pipe and said delivery outlet and having a portion submerged in the water of said receiver, an ejector arranged in said submerged portion, and a float-controlled valve mechanism for regulating the admission of steam to said steam inlet and said injector whereby the water from said receiver is periodically injected into the boiler through said delivery outlet.

1,353,458. DIRECTORY-MACHINE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Jan. 9, 1920. Serial No. 350,420. 8 Claims. (Cl. 40—86.)

8. In a directory device of the class described, a series of cards, setting means, lifting means, traveling members having means normally engaging with the setting means and having means adapted to be lifted from the setting means when set in a selective position in relation to one of the cards, and locking means for locking the setting means when the lifting means is operated and having means to lock the lifted means when the setting means is operated.

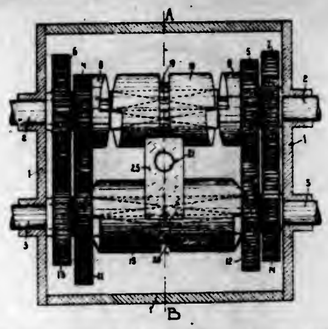
1,353,459. SPADE AND LIKE DIGGING-TOOL. FREDERICK JAMES DANN, Countesthorpe, England, assignor to Wallace James Bartholomew, London, England. Filed May 27, 1919. Serial No. 300,148. 4 Claims. (Cl. 254—131.5.)



1. An attachment for a digging tool comprising a stand, a clip movably mounted on the stand and adapted to

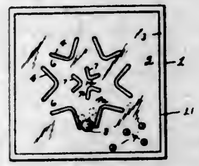
loosely embrace the shaft of the tool, means for retaining said clip in position on said shaft, and an anti-friction

device adapted to provide a bearing for the tool in the vicinity of the clip.



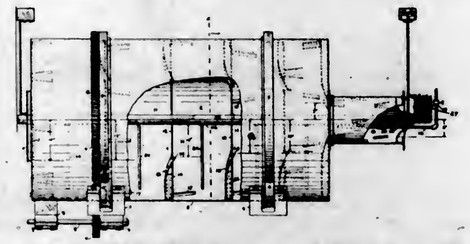
1,353,460. PERFORATED MUSIC-SHEET FOR AUTOMATIC MUSICAL INSTRUMENTS. GEORGE HOWLETT DAVIS, West Orange, N. J. Filed Nov. 21, 1916. Serial No. 132,537. 2 Claims. (Cl. 84—162.)

1. A song roll for automatic musical instruments including a sheet having note perforations therein adapted to control the instrumental rendition, and syllables forming song words arranged in succession in a zone extending longitudinally of the sheet and spaced from the perforations, the successively arranged syllables having their initial letters located at different distances from the sides of the zone in accordance with the pitch at which the syllables are to be rendered, those having a high pitch being located near one side of the zone, those having a low pitch near the other side thereof and those having intermediate pitches being located at such distances from the high and low pitch positions as to indicate their relative respective pitches, the construction being such that the singer is guided in pitch by the location of the initial letters of successive syllables transversely in the zone.



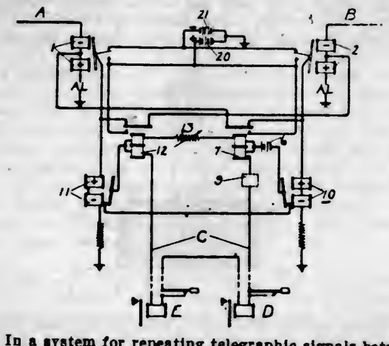
1,353,461. CHANGE-SPEED GEAR. CORNELIS DOMINICUS, Baarn, Netherlands, assignor to Pieter Gerard Tideman, Apeldoorn, Netherlands. Filed Feb. 4, 1920. Serial No. 356,293. 3 Claims. (Cl. 74—59.)

1. In a change speed gear, a driving shaft, a driven shaft parallel therewith, two pairs of gears on each shaft, one gear of each pair of gears being fast and the other being loose, and each fixed gear of one shaft being engaged with a loose gear of the other shaft; a clutch on each shaft, revoluble therewith and shiftable thereon into engagement with either of the loose gears, and common operating means for the clutches, arranged to move either



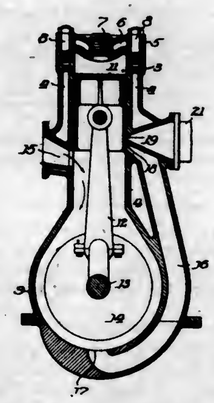
of them into clutching position and to disengage the other and lock the same against clutching movement.

1,353,462. GAME. JOSEPH L. DUGGAN, Chester, Pa. Filed Nov. 14, 1919. Serial No. 337,929. 4 Claims. (Cl. 46—41.)



1. In a game, a container, a series of longitudinally bent staples arranged on a field to form a substantially circular inclosure, a relatively large ball in said inclosure, said staples being spaced apart and forming inclined openings into said inclosure and a series of small balls to be brought into said inclosure.

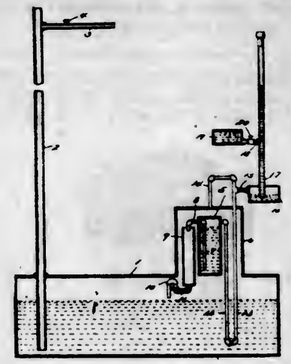
1,353,463. LEACHING-MACHINE. GUY S. DYER, Layton, Utah. Filed Aug. 27, 1919. Serial No. 320,085. 2 Claims. (Cl. 23—31.)



1. In an apparatus of the character described, a rotatable cylindrical leaching chamber, having an opening at one end to feed thereinto material to be leached, means for rotating said chamber, a longitudinal series of transverse annular partitions in said chamber, spaced apart to form compartments therein, diametrically opposite perforated shifter plates adjacent to each partition and oblique thereto, spaced at their outer edges from said partitions and extending at their inner edges through the central openings in said partitions, a pipe for supplying water into the other end of said cylinder, a pipe for supplying steam to each compartment, and extending transversely of the cylinder to a distance outside the peripheries of the openings in the adjacent partitions, means for individually controlling the flow of steam through said steam pipes, and a washing chamber secured at said other end around said pipes.

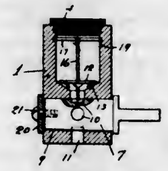
1,353,464. TELEGRAPH REPEATING SYSTEM. AUGUSTUS J. EAVES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1919. Serial No. 337,447. 2 Claims. (Cl. 178—71.)

1. In a system for repeating telegraphic signals between a main line and a branch loop, an artificial balancing impedance for said branch loop, a pair of differential relays each having a winding in series with said branch loop and a winding in series with said balancing impedance, a battery circuit connecting the mid points of said relays, and means acting in response to current reversals in said main line to open and close said battery circuit.



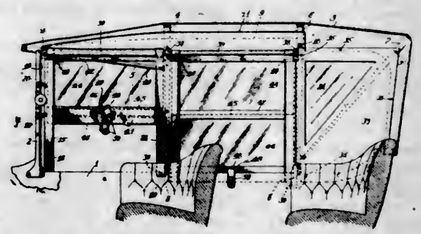
1,353,465. TWO-CYCLE ENGINE. WILLIAM A. EDWARDS, Chicago, Ill. Filed July 8, 1916. Serial No. 108,103. 8 Claims. (Cl. 123—73.)

1. A two-cycle engine, comprising a cylinder provided with inlet and exhaust ports, a piston devoid of gas deflecting provisions on its upper face arranged to reciprocate in said cylinder so as to open and close said ports, a crank case, and means including a passage having an upwardly inclined delivery end for delivering an explosive charge from said crank case through said inlet port directly against the opposite side wall of the cylinder and in an upwardly inclined direction below the longitudinal center of said cylinder.



1,353,466. STATIONARY CHEMICAL-MIXING FIRE-EXTINGUISHER SYSTEM. JOHN W. ENRIGHT, New Orleans, La. Filed Mar. 10, 1919. Serial No. 281,691. 6 Claims. (Cl. 169—8.)

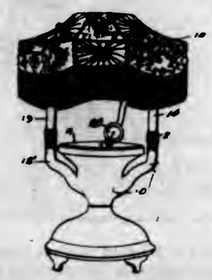
1. In a chemical mixing fire extinguisher system, a tank for an alkaline solution, an acid receptacle, a discharge pipe inclosed within said receptacle and discharging at its upper end into said tank, said discharge pipe also transmitting the developed high pressure from said tank to said receptacle, a pair of pipes forming a U and one of which is connected at its upper end to said receptacle, a distributing system adapted to normally contain an elastic fluid medium, a mercury vessel, a tube projecting there-



from, a receptacle for a liquid medium connected to said tube and an outlet connection between said mercury vessel and the other pipe of said pair, the fluid medium in the distributing system normally maintaining a mercury column in said tube which prevents the flow of the liquid medium from the receptacle therefor.

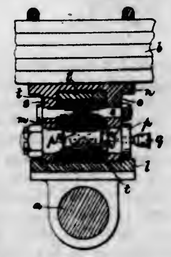
1,353,467. DEVICE FOR MEASURING MATERIAL FOR TOOTH-FILLINGS. JOHN F. FIETSCH, Forest Park, Ill. Filed June 25, 1916. Serial No. 104,830. 5 Claims. (Cl. 221—107.)

1. A device for mensuring materials for tooth fillings, comprising a body portion, a receptacle therein adapted to receive powdered material, a rotatable part mounted in an opening in the body portion and located beneath said receptacle, said rotatable part provided with a measuring opening adapted to communicate with the receptacle when the rotatable part is in a predetermined position, an agitating piece in the bottom of said receptacle, adapted to be moved back and forth there-across, an agitating spring projecting through said agitating piece, the end thereof engaged by said rotatable part, the upper end of said spring bent into the form of a loop engaging the wall of said receptacle so as to be held in place.



1,353,468. AUTOMOBILE-CURTAIN. SYLVESTER A. GATES, Detroit, Mich. Filed Dec. 7, 1918. Serial No. 265,699. 6 Claims. (Cl. 296—138.)

1. The combination of top rails adapted to be detachably carried by the top of an automobile and extending approximately from the windshield to the rear bow of said

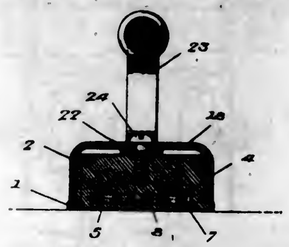


top; front, intermediate and rear rails or uprights adapted to be connected to said top rail and provided with guideways, curtain rollers carried by said top rails, curtains on said rollers and slidable in said guideways and means for holding said curtains when lowered.

1,353,469. COMBINATION PHONOGRAPH AND LAMP. PETER R. GONSKY, Chicago, Ill. Filed June 17, 1919. Serial No. 304,927. 2 Claims. (Cl. 240—2.)

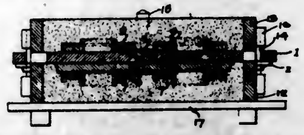
1. In a machine and lamp of the character described, a base, a bracket arm mounted thereon and extending upwardly into a central position over the base, lamp appliances carried thereby, a sound arm having a form similar to that of the bracket arm, said sound arm movable at times into an opposing position corresponding symmetrically with that of said bracket arm, and means to releasably hold the sound arm in the last named position.

1,353,470. SPRING-FITTING FOR VEHICLE-AXLES. JOSCELINE C. H. GRANT, Chania Bridge, British East Africa. Filed Apr. 23, 1919. Serial No. 292,034. 5 Claims. (Cl. 280—112.)



1. A spring fitting for vehicle axles, comprising interengaging members secured to the spring and the axle respectively, a cylindrical socket upon one of said members, lugs upon the other of said members, said lugs covering open ends of said socket, a revoluble bush mounted in said socket, means for securing said bush to said lugs, and means for limiting the relative rotation between said socket and bush.

1,353,471. ELECTRIC IRON. JOSEPH A. GUYER, Marion, Ind. Filed Mar. 24, 1919. Serial No. 284,698. 2 Claims. (Cl. 219—25.)

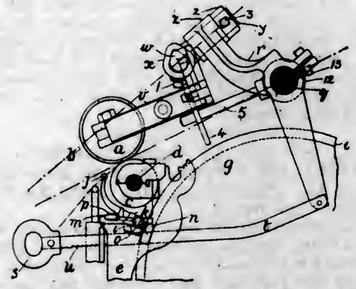


1. An electric iron comprising a base plate having an upstanding block of smaller outline, said block having a tunnel therethrough adjacent to said plate, a plate of insulating material extending through said tunnel and having bores extending therethrough, a resistance wire extending back and forth through said bores and extending from each bore to the next beyond the ends of the bores and being removable from said bores, and a cover surrounding said block and plate of insulating material and seated on the base plate.

2. An electric iron embodying a metallic block having a tunnel, an insulating plate extending within said tunnel and having bores, a resistant wire extending back and forth through said bores, an insulating bracket secured on said block at one end of the tunnel and having an offset portion overhanging said end of the tunnel, the corresponding end of the block having a recess, and said bracket having ears below said offset portion disposed in

said recess, binding posts extending through said ears for the connection of the terminals of said wire at the outer sides of the ears, binding posts carried by said offset portion and having upwardly extending contact fingers at right angles with the first named binding posts, and electrical connections between the first named and second named binding posts between said ears and under said offset portion.

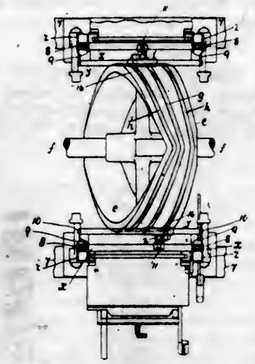
1,353,472. FOUNDRY PRACTICE. ARNOLD HAASE, San Francisco, Calif. Filed Nov. 3, 1919. Serial No. 335,449. 6 Claims. (Cl. 22—193.)



1. The combination of a plurality of complete patterns; and a match board and a core print interposed between said complete patterns.

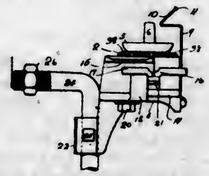
1,353,473. WALL-PAPER FINISH. CHRISTOPHER J. HEIDORF, Hudson Falls, N. Y. Filed Oct. 23, 1918. Serial No. 259,411. 1 Claim. (Cl. 134—50.)

A coating composition comprising casein, shellac, and ground mica.



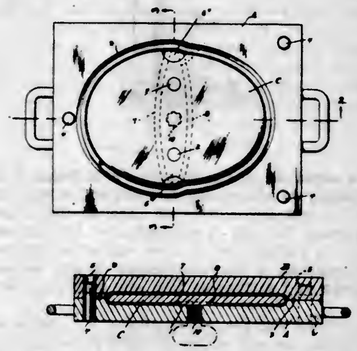
1,353,474. WINDING-MACHINE. FRANK ASHWORTH HOLT, Rochdale, and GRINDROD KERSHAW, Whitworth, England, assignors, by mesne assignments, to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1916. Serial No. 116,635. 3 Claims. (Cl. 242—43.)

1. In a winding machine, a driving roll and means for supporting it, a revoluble holder for having material



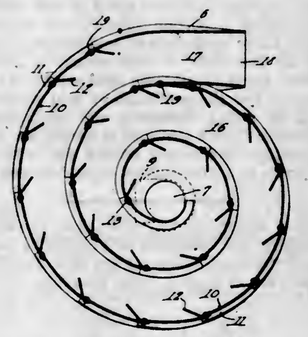
wound around it by contact with such driving roll, a carrier carrying the revoluble holder, a support providing a stationary axis parallel to the axial line of the driving roll, a bearer for said carrier carried by such support to swing about said axis and having a part offset in a direction transverse to said axis and affording bearing for carrying and allowing swinging of said carrier and presenting the axis of swinging of said carrier crossing over the axial line of the driving roll at right angles, and, when the revoluble holder is nearest the driving roll, inclined toward the radial direction from the said stationary axis to the place of contact between a revoluble holder and the driving roll at an acute angle not less than the angle through which the bearer swings in any period of winding in which precision of disposition of yarn in a yarn package is necessary, a turning means connected to such carrier having an oblique contact face and a stationary part to receive contact of the contact face of said turning means.

1,353,475. WINDING-MACHINE. FRANK ASHWORTH HOLT, Rochdale, and GRINDROD KERSHAW, Whitworth, England, assignors, by mesne assignments, to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Original application filed Aug. 24, 1915, Serial No. 47,182. Divided and this application filed Nov. 10, 1916. Serial No. 130,552. 6 Claims. (Cl. 242—43.)



1. In a winding machine, a holder whereon material may be wound, means for supporting the holder, a cam having a plurality of cam tracks for moving a thread guide for guiding material to a holder, a thread guide having a plurality of places for receiving a connecting device for connecting it with the cam, a connecting device applicable to any of such plurality of places and in one or another of the cam tracks of the cam, and a guide carrier for supporting and guiding the thread guide, whereby the thread guide can be used at different times in winding material into different forms.

1,353,476. YARN-TENSION DEVICE. FRANK ASHWORTH HOLT, Rochdale, and GRINDROD KERSHAW, Whitworth, England, assignors, by mesne assignments, to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1917. Serial No. 200,570. 8 Claims. (Cl. 28—20.)

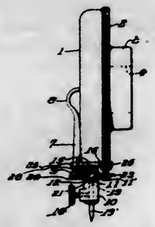


1. In a tension device of the character described, a revoluble disk arranged to present to yarn led through the tension device a marginal part to deflect and to be subject to pressure of yarn, and having yarn engaging means of unsymmetrical form in that marginal part.

1,353,477. APPARATUS FOR MAKING TOBACCO-POUCHES. FRANK FRASER JAMIESON, Montreal, Quebec, Canada, assignor to Mechanical Rubber Company, a Corporation of New Jersey. Filed Jan. 9, 1919. Serial No. 270,299. 4 Claims. (Cl. 18—42.)

1. A mold for making pouches, comprising two separable mold members and an intermediate core member, there being a seating surface between the core member and one of the mold members for forming the opening in the pouch and forming a support for the core member, guiding means on said last mentioned members for guiding them in their movement toward each other to prevent displacement of the rubber when seating the core, and other means for centering one mold member with relation to the other mold member.

1,353,478. MUFFLER. OSCAR S. JEFFRIES, Sr., Philadelphia, Pa., assignor of one-half to George W. Kirk, Philadelphia, Pa. Filed Sept. 9, 1919. Serial No. 322,712. 4 Claims. (Cl. 137—160.)

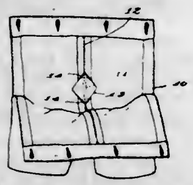


1. A muffler having side walls and a plurality of sectional units arranged in a circular row to provide a tortuous passage, said sectional units being provided with tongues extending into said tortuous passage.

1,353,479. SOUND BOX FOR SOUND RECORDING AND REPRODUCING MACHINES. ELDRIDGE R. JOHNSON, Merion, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Nov. 12, 1917. Serial No. 201,627. 10 Claims. (Cl. 274—35.)

1. In a sound box, the combination of a stylus bar, a support therefor, pivot connections intermediate of the stylus bar and support, for mounting the stylus bar to

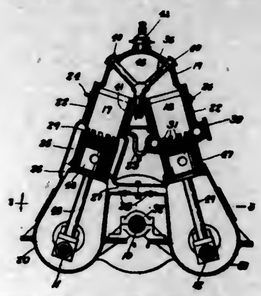
oscillate about a fixed pivotal axis, and arc-shaped springs each secured to the stylus bar and the support, the springs being arranged transversely to and being respectively curved oppositely around the said pivotal axis of the stylus bar.



2. In a sound box, the combination of a casing, a stylus bar, a bearing on said casing for said stylus bar, springs attached to said stylus bar and each having a portion curved around the axis of oscillation of said stylus bar, and means to fixedly hold the free ends of said springs in different positions to vary the tension of said stylus bar, and through said springs to hold said stylus bar on said bearing.

3. In a sound box, the combination of a casing, a stylus bar, a bearing on said casing for said stylus bar, a pair of springs attached to said stylus bar and each having a portion spirally curved around the axis of oscillation of said stylus bar in opposite directions respectively, and means to fixedly hold the free ends of said springs in different positions to vary the tension of said springs and said stylus bar, and through said springs to hold said stylus bar on said bearing.

4. In a sound box, the combination of a casing, a diaphragm, a stylus bar, open sided bearings in which said stylus bar is mounted, a pair of oppositely disposed spiral springs each being attached to said stylus bar and being curved around the axis of oscillation of said stylus bar in opposite directions respectively, means for securing said springs to said casing to impose a tension on said stylus bar and to hold said stylus bar in said bearings.



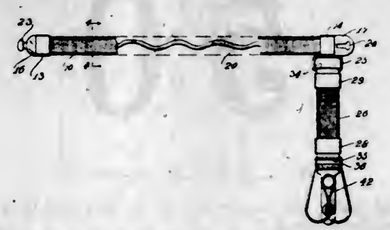
5. In a sound box, the combination of a casing, a stylus bar, a bearing on said casing for said stylus bar, a pair of oppositely disposed springs secured to said stylus bar and each comprising a portion substantially spirally curved about the axis of oscillation of said stylus bar, and means to hold the free ends of said springs in different relatively fixed positions whereby said stylus bar is held on said bearing, and the oscillation of said stylus bar effects substantially radial distention and contraction of said curved portions about said axis of oscillation, and changes in form and position of said springs, due to the oscillation of said stylus bar, are confined to said curved portions.

1,353,480. BOY'S PANTS. GLADYS L. KIRKPATRICK, Greensburg, Ind., assignor of one-half to John E. Robbins, of Greensburg, Ind. Filed Mar. 19, 1920. Serial No. 367,172. 4 Claims. (Cl. 2—122.)

1. In boys' pants, the combination with the pants having the usual front opening, of a separate closing piece of fabric located behind such opening and stitched to the pants body above and below the opening only and unattached between such stitches.

1,353,481. INTERNAL-COMBUSTION ENGINE. CARL H. KNUDSEN, Brooklyn, N. Y. Filed May 7, 1919. Serial No. 295,385. 10 Claims. (Cl. 123—53.)

1. An engine of the class described comprising oppositely arranged cylinders, a cylinder head connected with the tops of said cylinders and placing the same in communication through a combustion chamber, crank cases at the bottom of each of said cylinders, a main shaft mounted centrally of and between the crank cases, crank shafts at the opposite sides of said main shaft and adapted to pass through and operate in said crank cases and geared in connection with the main shaft, and a Y-shaped hot tube construction mounted in the combustion chamber of the cylinder head.



1,353,482. MERCURIAL BAROMETER. ARNDT M. KRAUSE, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1918. Serial No. 236,078. 3 Claims. (Cl. 73—4.)

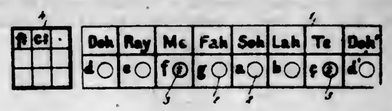
1. A mercurial barometer comprising a column, a collar on the column adjacent the lower end thereof and having a threaded portion, a shield on the collar surrounding said threaded portion, a cistern inclosing the lower end of the column, an annular member supporting said cistern and adjustably mounted on the threaded portion of the collar within said shield, and a protecting shell on the lower portion of the cistern coöperating with the shield to inclose and protect the cistern.

1,353,483. GARTER. KARL LEINS, New York, N. Y., assignor of one-third to Arthur Leins and one-third to Frank Reuther, New York, N. Y. Filed Apr. 3, 1920. Serial No. 370,932. 7 Claims. (Cl. 241—6.)

1. A garter comprising in combination, a longitudinal spring member made of an oval-shaped helical spring, box-like receivers housing the ends of said springs, a female and a male locking plate projecting with their reduced ends into said receivers, a stop-tape connecting said locking plates, a buckle secured to the one receiver housing the female locking plate, a depending shorter spring member attached to said buckle and comprising an oval-shaped helical spring, a pair of receivers engaging its ends, looped end plates passing into the receivers and having apertures, a stop-tape fastened with its ends in said apertures, one

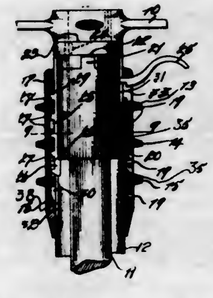
of the looped end plates engaging said buckle, a wire link, engaged by the other looped end plate, extending downward, a fabric engaging member attached to said link and comprising a plate member having a broadened looped end, a button at its other end, a compressible wire spring member adapted to engage said button and hinged at the looped end housing the link portion not engaged by said other looped end plates.

1,353,484. VEGETABLE-CUTTER. JOHN LOEFFLER, St. Louis, Mo. Filed June 28, 1920. Serial No. 392,404. 1 Claim. (Cl. 146—7.)



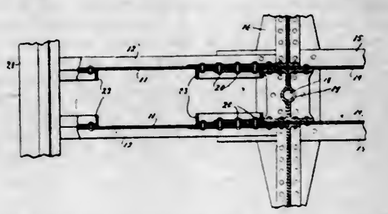
In a vegetable-cutter, a cutting-knife; a movable bottom-member, a fixed bottom member which carries said cutting-knife; a cross-bar fixed beneath said movable bottom member's inner end; rectangular comb-seat brackets fixed to the inner end of said movable bottom member, with their vertical arms arranged to form comb-seats thereat; a slitting-comb adapted to be supported in said comb-seats and thumb-screws threaded through said cross-bar, and provided with heads and reduced journals at their upper ends, which permit said thumb-screws to rotate, and at the same time connect said comb-seat brackets to said cross-bar, to positively move said brackets and said cutting-knife up and down.

1,353,485. SAFETY-RAZOR-BLADE SHARPENER. ALBERT MCGALL, New York, N. Y., assignor to Tubal Corporation, New York, N. Y., a Corporation of New York. Filed July 19, 1918. Serial No. 245,648. Renewed Feb. 9, 1920. Serial No. 357,347. 4 Claims. (Cl. 29—83.)



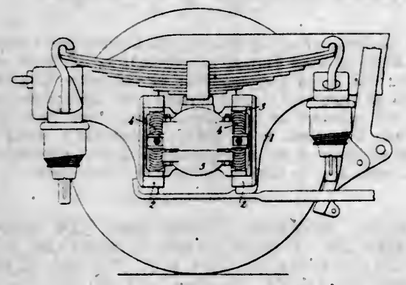
1. A blade sharpener comprising sharpening elements having opposed curved surfaces and spring means for normally holding said sharpening elements in engagement with each other and adapted to permit said sharpening elements to be forced away from each other during the sharpening operation.

1,353,486. MUSIC-CHART. ELIZABETH MCOUAT, New York, N. Y. Filed July 17, 1919. Serial No. 311,445. 1 Claim. (Cl. 84—85.)



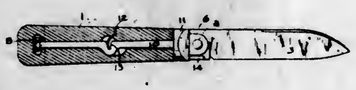
A plurality of music charts, each bearing two registering series of fixed characters representing the notes of a scale; one series corresponding to the white keys of a piano up from any desired keynote; the other series giving the syllables of the diatonic scale from Doh; and, markers attachable to the charts to indicate a change of pitch of notes of the first-mentioned series; whereby the two series may be made to indicate the same scale.

1,353,487. STEERING-WHEEL LOCK FOR MOTOR-VEHICLES. PETER D. MASSOLINE, Jersey City, N. J., and LOUIS RONCA, New York, N. Y. Filed Dec. 16, 1919. Serial No. 345,304. 3 Claims. (Cl. 70—53.)



1. In a vehicle lock, a steering post, an annular locking bolt slidable upon said post, tumblers surrounding said bolt to control the movement of said bolt, means mounted upon said bolt for abutting said tumblers adapted to resist the movement of said bolt, passages in said tumblers for said abutting means at a predetermined position of said tumblers, a housing, said housing and bolt provided with clutch faces whereby upon a predetermined movement of said bolt said steering post is locked from rotation.

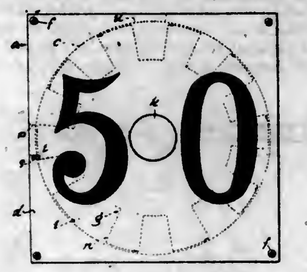
1,353,488. DRAFT-ARM. WILLIAM N. OEHM, Michigan City, Ind. Filed Aug. 12, 1919. Serial No. 317,003. 1 Claim. (Cl. 105—420.)



In a railway car, in combination, a center sill projecting beyond the bolster, bolster filler blocks between said sills and bolster members having side and end flanges exterior of said sills, a draft arm nesting with the projecting end of the sill and abutting against one of said members, a buffing block interior of said projecting end and abutting against one of said filler blocks, and rivets securing said sill, draft arm and buffing blocks together, the web of the draft arm being thickened at its area of attachment.

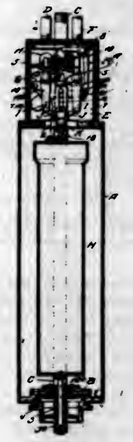
1,353,489. JOURNAL-BOX FOR RAILWAY-CARRIAGES AND THE LIKE. NILS ARVID PALMGREN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed May 23, 1919. Serial No. 299,343. 6 Claims. (Cl. 105—222.)

1. The combination with a journal box for railway carriages and the like, of springs attached to the sides of the box, and slides attached to said springs and bearing against the frame of the carriage.



1,353,490. SAFETY POCKET-KNIFE. JOHN PANTALEK, Modesto, Calif. Filed Aug. 19, 1915. Serial No. 46,241. 1 Claim. (Cl. 30—10.)

In a knife, handle sections each having projecting lining plates, a blade having a shank, a pivot extending through the propecting portions of the lining plates and through the shank of the blade whereby the blade and handle sections are independently pivoted, one of said handle sections having a longitudinally extending groove on its face back of its lining plate, a block having a bolt slidable in the slot, and the said slotted handle having a recess with which the slot merges and into which the bolt projects, a stationary staple carried by the other handle section and projecting into the recess when the handle sections are together to be engaged by the bolt, the body section having the slot also having recesses between the ends of the slot at opposite sides of the slot, a spring having an end anchored in the slotted handle section projecting into one of the recesses and engaging the bolt to retract it, the said spring being held seated by the lining plate, the locking bolt having a shoulder portion slidable in the other recess to prevent dislodgment of the bolt from the handle section, and a lug on each edge of the blade shank, said lugs projecting oppositely and adapted to have their ends bear against the ends of the handle sections when the blade is open or closed.

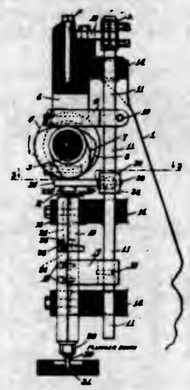


1,353,491. EDUCATIONAL GAME. JOHN F. PATTERSON, Los Angeles, Calif. Filed Feb. 4, 1919. Serial No. 275,027. 2 Claims. (Cl. 46—56.)

1. A game apparatus comprising a rectangular casing; a circular recess within said casing; an aperture in the edge of said casing and communicating with said recess; a spring button in the casing at the edge of the aperture; a revoluble disk in said recess; radial abutments on the periphery of said disk; characters on the peripheral faces of said abutments; means on the abutments to engage the spring button on the casing adapted to check the revolution of the disk when under slow motion; removable sides for the casing; and a handle on the outside

of said casing and connected with the said disk by which it may be revolved.

1,353,492. PUMP. THEODORE PETERS, Ferdinand, Ind., assignor to The Pet-Son Pump Company, Ferdinand, Ind., a Corporation of Indiana. Filed Oct. 20, 1919. Serial No. 331,789. 11 Claims. (Cl. 103—8.)



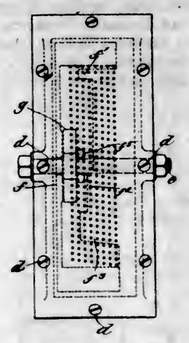
1. A pump, comprising a cylinder that is adapted to be submerged in a body of liquid, a valve that opens when said cylinder is submerged and thus permits liquid to enter said cylinder, an air inlet valve for admitting air to said cylinder so as to close the liquid valve and force the liquid out of said cylinder, an air exhaust valve for permitting the air to escape from said cylinder, an operating mechanism for said air valves comprising an oscillating member that carries said valves, a buoyant actuating member in the cylinder, and a connection between said actuating member and said oscillating valve operating member comprising a spring arranged so that the energy of same is exerted on said valve operating member to move it so as to close one air valve and open the other air valve.

1,353,493. EYELET-MACHINE. WILLIAM D. PIERSON, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 17, 1919. Serial No. 311,514. 8 Claims. (Cl. 74—1.)

1. In a machine of the character described, the combination with the pushdown cam and the relatively longitudinally adjustable plunger and bumper, the bumper having a head located above the plunger and below the cam; of a buffer interposed between the cam and the

bumper head; a support for the buffer; a lifter rod connected to move with the plunger; a lifting member and a lifting cam therefor, the lifting member and buffer being fixed to the lifter rod and whereby the buffer may

engage on the top of the bumper head without being attached thereto; the buffer and its support having a loose joint to permit automatic compensation for adjustment of plunger and bumper.

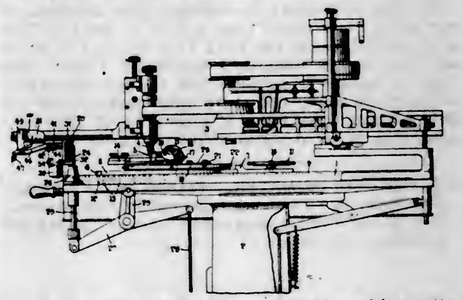


1,353,494. ATTACHMENT FOR DIGGING IMPLEMENTS. ROBERT RISCH, Milwaukee, Wis. Filed Aug. 16, 1919. Serial No. 317,972. 1 Claim. (Cl. 254—131.5.)

An attachment for digging implements comprising a bracket consisting of a strip of metal having a horizontal portion and an upwardly and inwardly inclined portion, reinforced ends on said bracket, means securing the upper end of said bracket to the handle of the digging implement, a plate having a top channel portion engageable over the top of the digging implement and having a cutaway portion for the handle of said implement, and common means for securing said plate and the lower end of said bracket to the implement.

1,353,495. SPRAY-NOZZLE. EUGENE ROBERTS, Salt Lake City, Utah, assignor to Sugar Centrifugal Discharger Company, Salt Lake City, Utah, a Corporation of Utah. Filed Sept. 29, 1917. Serial No. 193,879. 6 Claims. (Cl. 299—144.)

5. A spray nozzle for washing sugar or the like embracing in its construction a hollow casing having an elongated convexly curved exterior wall provided with longitudinal rows of diverging orifices forming a spray plate for delivering a fan-shaped spray, an elongated cut off plate formed to fit snugly against the inside face of said spray plate and shiftable transversely of its length to cut off successive longitudinal rows of orifices and

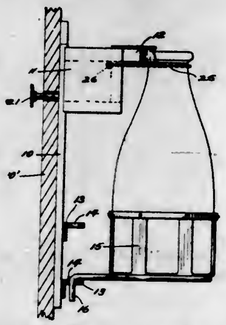


thereby narrow the width of the spray delivered while preserving its fan shape, substantially as described.

1,353,496. AUTOMOBILE-WRENCH COMBINATION. HEYMAN ROSENBERG, New York, N. Y. Filed Aug. 14, 1919. Serial No. 317,417. 3 Claims. (Cl. 7—15.)

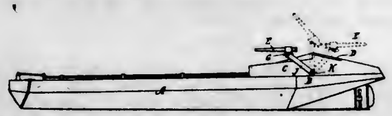
1. The combination of a casing having an opening in the side thereof, a plurality of slidably mounted tools within the casing, each tool being provided with a notch located in line with said opening, for the insertion of the fingers to extend said tools.

1,353,497. ATTACHMENT FOR ROUTING-MACHINES. VERNON ROYLE, Paterson, N. J. Filed Dec. 13, 1916. Serial No. 136,706. 9 Claims. (Cl. 90—15.)



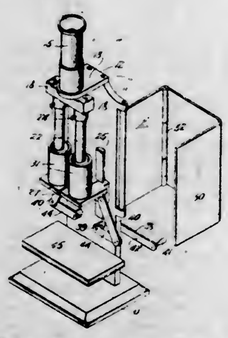
1. In a routing machine, the combination with a cutter supporting bar, a cutter carried thereby and a vertically movable guide rail, of a device having a slidable engagement with said rail and adapted to be clamped thereto, and means coöperating with said device and arranged to engage said bar for freely moving it a limited distance in the device to enable the cutter to operate in predetermined places on the work presented to it.

1,353,498. MILK-BOTTLE HOLDER. GEORGE R. SCHLEGEL, New Berlinville, Pa. Filed Feb. 17, 1920. Serial No. 359,335. 1 Claim. (Cl. 232—41.)



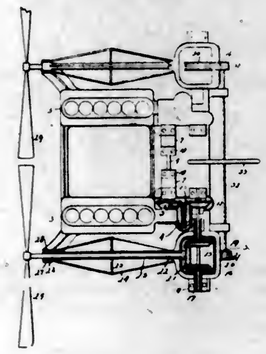
In a device of the character stated a supporting structure mounted upon the exterior of the building, means for supporting a bottle carried by said structure, a horizontally disposed open-ended barrel located within said casing, said barrel having a vertical slot in the wall

thereof, a cushioned button carried by said casing and disposed in alinement with said barrel, a notched bolt normally engaging with said button, a detent extended through said slot and normally engaging the notch of said bolt, a push-rod extended into the building interior, a bell-crank lever connecting said detent and push rod, means carried by said casing to receive the rim of a



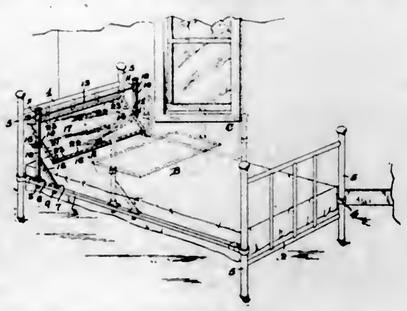
bottle and flexible means for engaging around a bottle neck said means being fixed at one end to said casing in a plane below the rim receiving means and adapted for detachable connection at its other end with said bolt whereby upon withdrawal of said detent said cushioned button serves to eject said bolt.

1,353,499. GUN-MOUNT FOR BOATS. WILLIAM P. SHEARER, New York, N. Y., assignor to International Torpedo Boat Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 29, 1919. Serial No. 273,852. 1 Claim. (Cl. 89—37.)



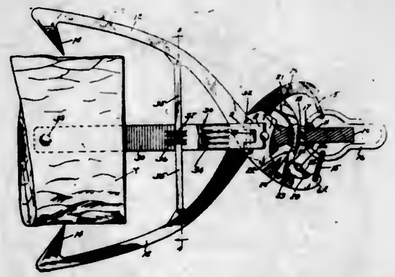
In combination with a boat having a cabin with a hatchway in the top a gun, a cross arm G on which the gun is vertically pivoted, and arms J on the ends of which said cross-bar is trunnioned and which extend down along the outside of the cabin and a transverse shaft K carrying said arms, said shaft being located below the deck and said arms being of such a length that their ends swing in an arc close to the top of the deck.

1,353,500. COLORIMETER. FERDINAND G. SPINDLER, New York, N. Y., assignor to Alfred Traeger, Weehawken, N. J. Filed Aug. 4, 1919. Serial No. 315,260. 3 Claims. (Cl. 88—14.)



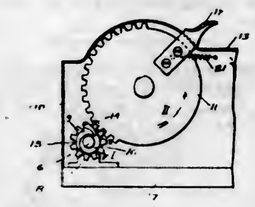
3. In a colorimeter, the combination with a base, of a standard mounted thereupon, dovetailed guideways on the front side of the standard, platforms having dovetail sockets that slidably receive the guideways, rock shafts journaled in the lower portion of the standard and having crank arms linked to the platforms, optical mechanism mounted on the upper end of the standard for observing materials carried by the platforms, and a hood for partly or wholly inclosing the platforms and comprising hingedly connected walls, one of which is hinged to one side of the standard.

1,353,501. FLYING-MACHINE. FRANK VOGELZANG, Rock Valley, Iowa. Filed June 1, 1920. Serial No. 385,524. 8 Claims. (Cl. 244—14.)



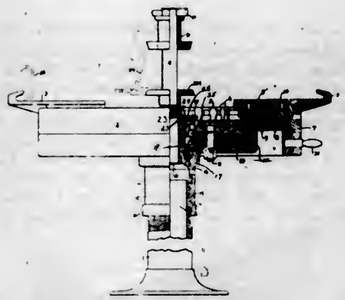
2. In a flying machine, a body, a pair of engines mounted upon the forward portion of said body, swinging gear boxes, counter-shafts passing through the axis of said gear boxes, means for transmitting power from the engines to the countershafts, casings projecting from the gear boxes, propeller shafts journaled in said casings, means for transmitting power from the countershafts to the propeller shafts, and means for swinging the casing and propeller shafts carried thereby to different angles relative to the body of the machine.

1,353,502. COMBINATION BED ATTACHMENT. JOSEPH W. WEISMANTEL, Newark, N. J. Filed July 10, 1919. Serial No. 309,908. 2 Claims. (Cl. 5—41.)



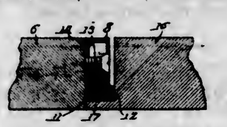
1. In a bed-attachment of the character set forth, in combination with the side-rails of a bedstead, slides mounted upon said rails, means for securing said slides in fixed positions to said rails, upright posts extending from said slides, sleeves movably mounted upon said posts, means for securing said sleeves in their adjusted positions upon said posts, a covered frame connected with and pivotally mounted between said sleeves, a second set of slides mounted upon said rails, means for securing said last-mentioned slides to said rails, and stay-rods between said posts and said last-mentioned slides.

1,353,503. LOG-SKIDDING GRAPPLE. HANS ANDERSEN, Nymore, Minn. Filed June 9, 1919. Serial No. 302,789. 10 Claims. (Cl. 294—82.)



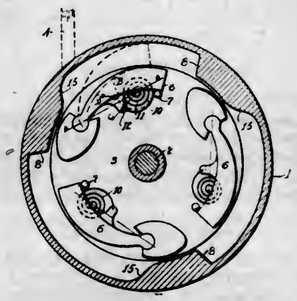
1. A log skidding device comprising a rigid head, a pair of cooperating grapple levers intermediately pivoted to said head, and a relatively wide skid bar pivoted at its forward end to the head for vertical swinging movement in respect to the grapple levers.

1,353,504. CALCULATING-MACHINE. WICTOR OSKAR JULIUS ANDERSSON, Malmö, Sweden. Filed Aug. 16, 1918. Serial No. 250,158. 8 Claims. (Cl. 235—144.)



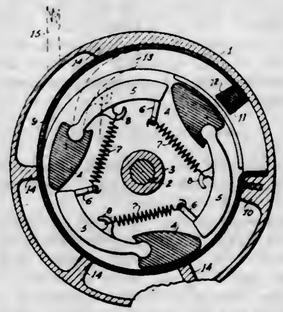
1. In a calculating machine, a setting mechanism comprising a plurality of setting disks, a plurality of disks for adjusting said setting disks to indicate certain values, and means for simultaneously returning all of said disks to normal position after they have been adjusted.

1,353,505. TRUING-STAND. CHARLES S. ASH, Geneva, N. Y. Filed Aug. 10, 1918. Serial No. 249,281. 9 Claims. (Cl. 29—87.)



1. In a device for concentrically holding a wheel hub and rim, in combination, a rotatable support having a plurality of symmetrically arranged clamping jaws to grip a wheel rim, and an axial support rotatable independently of said first mentioned support and having means to grip the wheel hub.

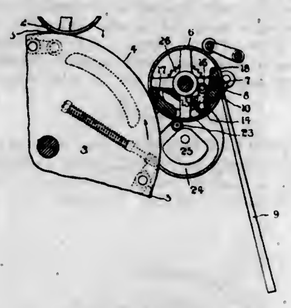
1,353,506. DOOR-BUMPER. SETH B. ATWOOD, Rockford, Ill. Filed June 19, 1920. Serial No. 390,205. 3 Claims. (Cl. 16—77.)



1. A door bumper, comprising a channel shaped member having one flange cut and bent inwardly on opposite sides of said cut to provide a pair of transversely extending guides within the channel, a resilient bumper block positioned between said guides and projecting outwardly between the plane of said flange, a plate disposed against the inner face of said block, and means for clamping said block between said plate and the transverse web of said member.

1,353,507. TROLLEY-TENDER. REX G. AVERILL, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,323. 7 Claims. (Cl. 191—95.)

1. In a trolley tender the combination with a case, a reel rotatably mounted therein, a dog pivotally supported by the reel and normally out of engagement with the case but movable into operative engagement therewith, of a single operating means to maintain the dog in one position when normally out of engagement with the case and to maintain the dog in another position when in operative engagement with the case, and means to move the dog into normal position after engaging the case.



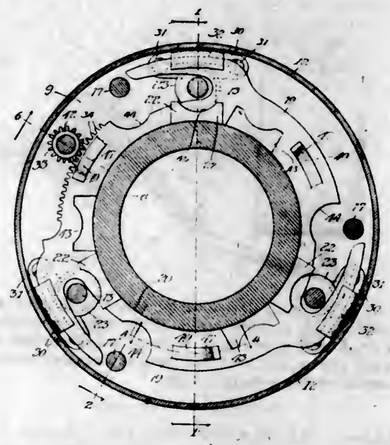
1,353,508. TROLLEY-TENDER. REX G. AVERILL, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,324. 11 Claims. (Cl. 191—95.)

10. A trolley tender comprising in combination a casing, a drum in the casing, a spring normally operating to

automatically turn the drum to wind a rope thereon and to be automatically wound when the rope unwinds from the drum, and frictional means directly engaging the rotating parts to retard the rotation thereof.

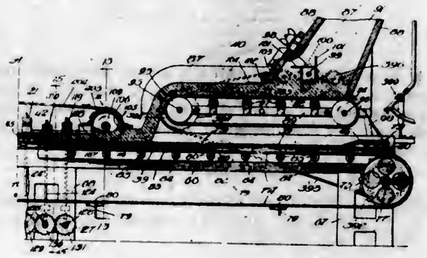
1,353,509. SHEET-DELIVERY MECHANISM FOR PRINTING-PRESSES. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1918. Serial No. 260,361. 4 Claims. (Cl. 270—19.)

1. An impression cylinder having a plurality of impression surfaces, a rotary delivery carrier arranged to take successive sheets directly from the impression cylinder surfaces, to collect said sheets, and a fly for taking the so collected sheets directly from the rotary carrier and deliver them.



1,353,510. ART OF MANUFACTURING SLABS OR THE LIKE OF CEMENT OR LIKE MATERIAL. LEROY BAUMGARTL, Chicago, Ill. Original application filed July 29, 1916, Serial No. 112,007. Divided and this application filed Nov. 7, 1916. Serial No. 129,981. 9 Claims. (Cl. 154—2.)

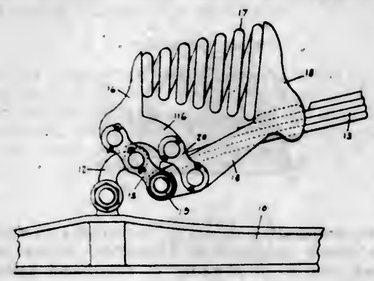
4. The method of manufacturing slabs, or the like, of cement, or the like material, which consists in feeding to a movable support, a layer of cement, or the like material, compressing the material on said support by a series of operations and cutting upwardly into said layer as the process of compressing the material progresses when the same is being compressed.



1,353,511. DEMOUNTABLE WHEEL. LEROY BAUMGARTL, Chicago, Ill. Filed Mar. 27, 1917. Serial No. 157,781. 8 Claims. (Cl. 21—31.)

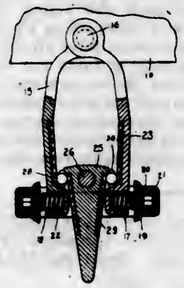
1. In a structure of the character set forth, the combination of an inner hub-member and an outer hub-member, a pin carried by one of said members and extending lengthwise of said hub, the other of said members containing a socket, said pin having a shouldered portion and extending at its end into said socket for locking said hub-members against relative rotation, and cam means adjustably supported on the one of said hub-members containing said socket, for coöperation with said shouldered portion and operating to draw said hub-members together

and hold them against longitudinal separation, said socket and shouldered portion being located at the same side of said cam means.



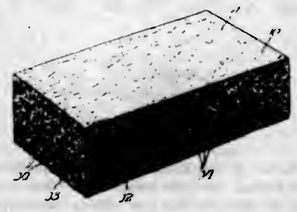
1,353,512. ART OF MANUFACTURING SLABS OR THE LIKE OF CEMENT OR LIKE MATERIAL. LEROY BAUMGARTL, Chicago, Ill. Filed Dec. 30, 1918. Serial No. 268,851. 73 Claims. (Cl. 154—1.)

8. In a machine of the character set forth, the combination of means for advancing a support upon which the slab is to be formed, means for supplying cement, or the like, to said support, means for compacting the material on said support, roller means for pressing into said material reinforcement applied to the upper surface thereof, means for kneading the upper surface of said material to embed said reinforcement, a roller beyond said kneading means for preventing displacement of the reinforcement in said material, and means for applying a second layer of cement, or the like, to the first layer thereof with the reinforcement therein.



1,353,513. SHOCK-ABSORBER. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed July 21, 1919. Serial No. 312,283. 7 Claims. (Cl. 267—17.)

1. A shock absorber including a main spring, an auxiliary spring, means in fixed relation to the main spring for furnishing a seat for one end of the auxiliary spring, a lever having a seat for the other end of the auxiliary spring, means for furnishing a movable fulcrum for the lever, and means controlled by the movement of the main spring for simultaneously changing the position of the

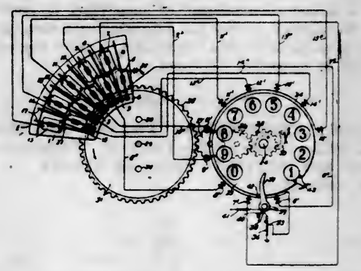


fulcrum and moving said lever on its fulcrum in order to maintain the seats for the auxiliary spring parallel with each other.

1,353,514. SHOCK-ABSORBER. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed Aug. 16, 1919. Serial No. 317,909. 5 Claims. (Cl. 267—9.)

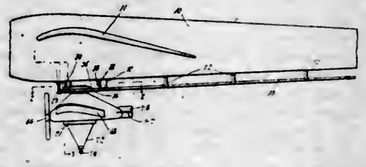
1. The combination with part of a frame of an automobile, and a spring for supporting the same of a shock absorber having an upper member mounted on the frame of the automobile and the lower member secured to the spring, said two shock absorber members being arranged so as to reciprocate with relation to each other, the adjacent faces of said upper and lower shock absorber members being provided with a series of notches, and friction rollers operating between said members and having radial projections for engaging said notches.

1,353,515. BRICK. FRANK W. BUTTERWORTH, Danville, Ill., assignor to Western Brick Company, Danville, Ill., a Limited Copartnership. Original application filed Aug. 19, 1915, Serial No. 46,236. Divided and this application filed Mar. 11, 1916. Serial No. 83,531. 4 Claims. (Cl. 72—37.)



1. A brick or the like having an entire surface provided with closely spaced, short and narrow indentations disposed in substantially parallel lines and all extending in one and the same direction, whereby the appearance of the said surface is the same in whatever position the brick may be laid.

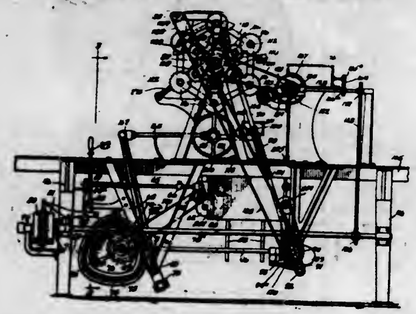
1,353,516. ILLUMINATED SIGN. EDWARD P. CHERRY, Dayton, Ohio, assignor of one-half to Norman N. Cherry, Springfield, Ohio. Filed Apr. 23, 1920. Serial No. 375,920. 2 Claims. (Cl. 40—133.)



1. An illuminable sign comprising a casing having a countersunk portion in its face following the outline of a letter or character, the side walls of said countersunk portion being at approximately right angles to the background portion of the latter, and a lighting medium within said casing, whose rays shine through a series of openings circumferentially disposed in the side walls of the countersunk portion for the purpose specified.

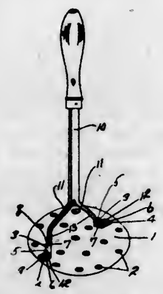
1,353,517. IMPULSE-CONTROLLING SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1918. Serial No. 250,510. 8 Claims. (Cl. 179—90.)

1. An impulse transmitting mechanism including a rotatable perforated record, a contact element movable into and out of the perforations in said record, a second contact element interposed between said record and the first named contact element, and an impulse circuit controlled by said contact elements when the first named element moves into and out of the perforations in said record.



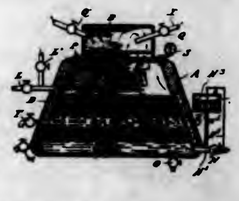
1,353,518. BOMB-DROPPER. WALTER CHMIELARSKI, Gary, Ind. Filed Apr. 17, 1918. Serial No. 229,023. 3 Claims. (Cl. 244—1.)

1. In a bomb carrier, the combination with a flying machine of rigid bars secured to the machine, a pair of



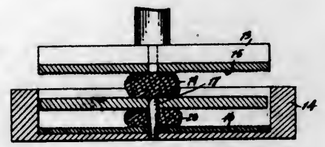
parallel spaced sectional rails extended from the lower side of said flying machine, the front sections of said rails being hingedly engaged by said bars, means for normally holding said front sections of rails in alinement with the stationary sections, and for releasing said hinged sections, bombs slidable on said rails, and a handle on said means for releasing said bombs at any desired interval.

1,353,519. LABELING-MACHINE. ARTHUR S. COLVER and HENRY E. BELLM, Chicago, Ill., assignors of one-third to Charles C. Colver, Chicago, Ill. Filed Nov. 6, 1916. Serial No. 125,879. 28 Claims. (Cl. 271—28.)



4. A labeling machine embodying means for holding a supply of tempered labels, a disk like separator having a laterally deflected hornlike portion adapted to pass between the outermost label and the next adjacent label to separate the former from the latter, and means embodying a heater adapted to contact the outermost label and form a blister of a portion of such label to receive said horn like portion, means for actuating said disk separator, and means for actuating the heater to move the same into and out of operative positions.

1,353,520. COMBINATION POTATO MASHER AND BEATER. CARL C. DEFENBAUGH, Winnemucca, Nev. Filed Mar. 31, 1920. Serial No. 370,118. 2 Claims. (Cl. 146—15.)



1. A potato masher and beater comprising a perforate base plate; two lock lugs permanently mounted at diametrically opposite points on the top of the base plate; a transverse hole and connected longitudinal groove and transverse groove formed on the inner face of each lock lug, as handle engaging means; and a spring forked handle and an outstanding finger on each prong thereof, said fingers being adapted to engage the transverse holes, and the prongs to engage the longitudinal and transverse grooves, of the lock lugs, as means for connecting the handle to the base plate and for holding said elements in perpendicular or horizontal relation to one another.

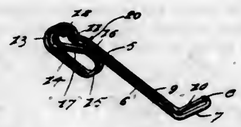
1,353,521. EVAPORATING AND DISTILLING APPARATUS. ARTURO DUODO, Genoa, Italy. Filed Nov. 16, 1917. Serial No. 202,406. 2 Claims. (Cl. 203—5.)

1. An evaporating apparatus, comprising in combination a closed receptacle of trapezoidal section having rounded corners; a plurality of superposed groups of heating tubes within said receptacle; headers to which the ends of all the tubes are connected, at least one header having the adjacent ends of two groups of tubes opening into it, so as to provide communication between said groups and thereby enable a forward and backward flow of steam through the groups; a source of steam supply connected to one header for passage therefrom directly into the uppermost group of tubes, another of the headers being provided with a steam outlet; supply means for the liquid to be evaporated communicating with the interior of the receptacle and acting to maintain the level of the liquid at a point where all of the tubes excepting those of the topmost layer are submerged, whereby the said topmost layer of tubes will be surrounded by the steam arising from the evaporating liquid and so as to cause superheating of the steam passing through that layer; a steam dome mounted on the top of the box and provided with a steam outlet; and a filter in said dome to separate out the entrained liquid from the steam.

1,353,522. METHOD OF MANUFACTURING SOUND-RECORDS. VICTOR H. EMERSON, New York, N. Y. Filed Jan. 21, 1920. Serial No. 352,942. 4 Claims. (Cl. 18—48.4.)

4. The method of forming a sound record disk, consisting in compressing against a relatively hardened cool core or backing member, by means of a heated die and matrix, a ball of heated plastic material adapted to be spread over and evenly resisted by the hardened disk.

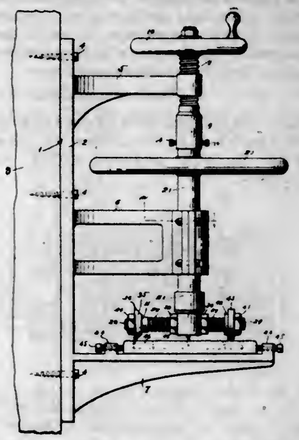
1,353,523. DOOR-RETAINER. THOMAS PETER EUSTEGE, Wellington, New Zealand. Filed Mar. 26, 1920. Serial No. 369,032. 4 Claims. (Cl. 292—275.)



1. In a device of the kind described, a member pivoted to the door casing, another member pivoted to the door, one member slidable within the other, means within one member to retain an operating pin in position therein and means co-acting with said pin and said members whereby upon the pin being operated in one direction varying degrees of spring tension will be exerted between the two members, but when the pin is turned in the opposite direction the two members will be locked together at any desired position, substantially as described.

1,353,524. MACHINE FOR CUTTING VENTS IN AUTOMOBILE-HOODS. ISAAC FLEMING and HUGH S. HILL, Los Angeles, Calif., assignors, by mesne assignments, to Joseph J. Mathe, Los Angeles, Calif. Filed Aug. 6, 1919. Serial No. 315,666. 9 Claims. (Cl. 113—42.)

1. A machine of the character described, including a bed plate, a swinging arm arranged over the bed plate and pivotally connected at one end thereto, an operating lever pivotally connected to the bed plate and having an operative connection with the swinging arm, a coöperating cutting bar upon the bed plate, and a separate die block arranged upon the bed plate and fitted against the cutting bar, the edge portion of the die block adjacent the cutting bar being recessed to receive the cutting and shaping element and coöperate therewith to form a louver at one side of the slit.

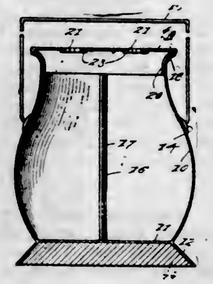


1,353,525. SAFETY-CATCH FOR CUFF-LINKS. CLARENCE E. FORSYTHE, Milwaukee, Wis. Filed May 11, 1917. Serial No. 167,959. Renewed Aug. 9, 1919. Serial No. 316,488. 3 Claims. (Cl. 24—90.5.)

1. A safety catch for cuff buttons composed of a single piece of material including a straight portion, said piece of material bent to form a substantially semi-circular portion at one end of said straight portion, and further bent to form second and third semi-circular portions, said third semi-circular portion adapted for engagement with the bar of a cuff button, and being connected to said second semi-circular portion by an angled and straight portion, said last named straight portion adapted to engage said first named straight portion for forming a closure for the mouth of the space between the angled portion and the body portion for preventing the accidental removal of the catch from the bar of a cuff button.

1,353,526. ROTARY SHEET-METAL CUTTER. FRED FRENGLE, Cotati, Calif. Filed Feb. 17, 1920. Serial No. 359,321. 2 Claims. (Cl. 164—71.)

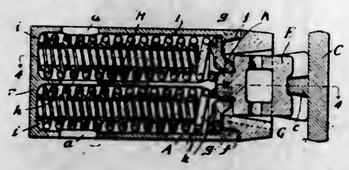
1. A rotary sheet metal cutter, comprising a frame having a pair of spaced apart outstanding brackets disposed in the same vertical plane, a vertically disposed screw carried by the upper one of said brackets, a vertically disposed shaft rotatably and slidably carried by the other of said brackets, said screw and shaft being disposed in axial alinement with each other and having one end pivotally connected together, a screw-threaded cross-bar carried by the free end of said shaft and having its ends extending at substantially right angles from opposite sides of the shaft, said cross-bar movable longitudinally in either direction by rotating it relative to the shaft, nuts on said cross-bar engageable with opposite sides of the shaft for normally preventing movement thereof relative to said shaft, a rotary cutting disk on one end of the cross-bar, a roller on the other end



thereof, a die underlying said cross-bar and coöperating therewith for cutting circular openings in sheet metal, and means for supporting said die.

1,353,527. MOTION-PICTURE SHUTTER. MCCLELLAN C. FULLENLOVE, Louisville, Ky., assignor to Perfect Projection Shutter Company, Inc., Louisville, Ky., a Corporation of Kentucky. Filed Jan. 21, 1920. Serial No. 352,930. 3 Claims. (Cl. 88—19.3.)

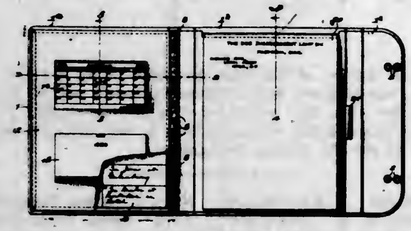
1. A shutter of the class described having a series of three interrupters and intervening spaces all of equal effective area, and means for rotating the shutter at a speed of two-thirds of a revolution to each cycle of operation of the film feeding mechanism.



1,353,528. YARN-HOLDER. ANNA E. GAENG, Bloomingdale, N. Y. Filed June 17, 1916. Serial No. 104,200. 1 Claim. (Cl. 242—146.)

As an article of manufacture, a yarn holder comprising a receptacle having an open upper end, a weighted bottom

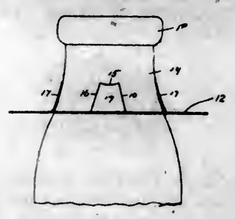
and vertical interior guide strips arranged in pairs, a removable partition strip engaged in said pairs of guide strips to divide said receptacle into separate compartments, a removable flanged cover for said receptacle provided with a key hole slot above each compartment from the center thereof to one edge, the large end of said slot being located above the center of the compartment, and a transporting handle for said receptacle.



1,353,529. FRICTION DRAFT-GEAR FOR RAILWAY-CARS. RICHARD D. GALLAGHER, Jr., New York, N. Y. Filed Nov. 20, 1915. Serial No. 62,551. 6 Claims. (Cl. 213—64.)

1. A draft gear embodying a spring barrel having a plurality of longitudinally arranged partitions therein forming a series of independent spring cells, said partitions having their central portions at the forward ends cut away to form a working space for the spring plate, independent springs located in said cells, a spring plate against which the forward ends of the springs abut, a follower, and friction elements intermediate the follower and spring plate.

5. In a device of the character described, the combination with a casing of a separate friction shell, said casing and shell having coöperable slots adapted to be longitudinally alined when the casing and shell are assembled, and keys disposed within said slots, said keys being placed under shear throughout their length upon tendency of the shell and casing to shift longitudinally relatively to each other.

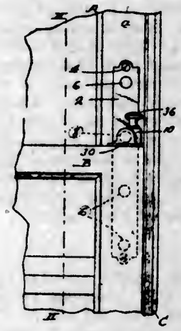


1,353,530. SALESMAN'S PORTABLE OFFICE. HENRY H. GEARY, Fostoria, Ohio. Filed Nov. 8, 1919. Serial No. 336,760. 4 Claims. (Cl. 129—15.)

1. In appliances of the kind specified, the combination of a reminder form comprising a leaf or series of leaves having spaces numbered serially for recording brief data of a project or names and addresses or other indexable data, a calendar having spaces for each day upon which reference characters may be placed corresponding to the desired number or numbers designating the spaces of said reminder which contain data regarding future engagements, projects, etc., and a pocket-file or portfolio comprising a series of pockets to receive correspondence and information briefly referred to in said reminder spaces.

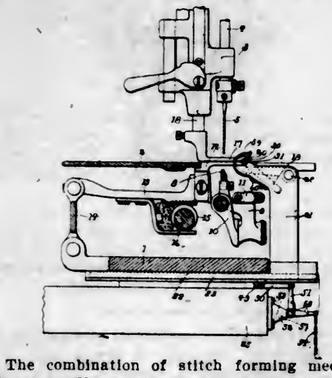
1,353,531. MARKING-CARD FOR MILK-BOTTLES. RALPH G. HEARD, Boston, Mass., assignor to Tolman Print, Inc., Brockton, Mass., a Corporation of Massachusetts. Filed June 24, 1920. Serial No. 391,423. 1 Claim. (Cl. 40—2.)

An annular marking card of flexible resilient sheet material having a central opening formed to receive the beaded neck and a portion of the flaring body of a milk bottle, the margin of said opening including outer portions adapted to be seated simultaneously on the flaring body of the bottle and cause the latter to support the card in a plane substantially at right angles to the longitudinal axis of the bottle, and prevent edgewise movement of the card in any direction, substantially radial portions extending inwardly from said outer portions, and forming the opposite edges of radial tongues, and inner portions forming the free ends of said tongues, the tongues being



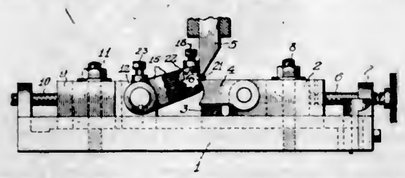
displaceable by the operation of applying the card to the bottle, and adapted to spring inward against the neck and engage the neck bead, to prevent accidental removal of the card from the bottle, the radial edges of each tongue converging, so that the tongues are wider at their junction with the body of the card than at their free ends, whereby the resistance of the sheet material to flexure at the junction of the tongues and body, and the pressure of said free ends against the neck, are increased.

1,353,532. PRODUCING COMPOUNDS OF RADIUM. HERMAN OSKAR HEDSTRÖM, Djursholm, Sweden. Filed June 21, 1919. Serial No. 305,848. 4 Claims. (Cl. 23—13.)



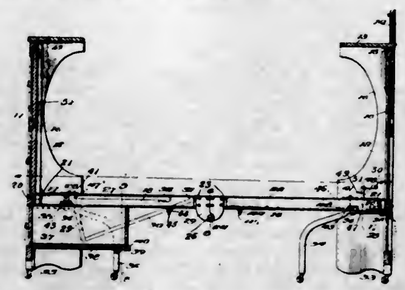
1. A method of extracting radium compounds from substances containing radium, which consists in subjecting such substances to the action of liquid sulfur dioxid.

1,353,533. BURGLAR-PROOF SASH-LOCK. LOYD L. HUDDLESTON, Kansas City, Mo. Filed Dec. 19, 1919. Serial No. 346,116. 1 Claim. (Cl. 292—142.)



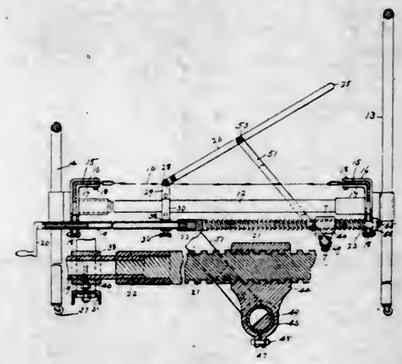
In a sash lock, a barrel having a separate bottom portion and flanges to rest on top of a window sash to which said flanges may be secured by suitable means such as screws, a pinion, journals at the ends of said pinion and rotatably mounted in the barrel, a bolt having a longitudinal recess with rack teeth to intermesh with the pinion, a circular shoulder on one of the journals and overlapping the barrel to coact with the other journal in holding the pinion in position, a knob on said circular flange to rotate the same and cause the pinion to throw the bolt in and out, and a shoulder on the bolt to engage the pinion and limit the outward movement of said bolt.

1,353,534. TRIMMING MECHANISM FOR SEWING-MACHINES. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1916. Serial No. 118,192. 11 Claims. (Cl. 112—122.)



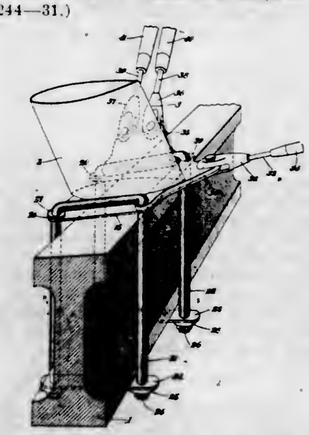
1. The combination of stitch forming mechanism including a needle, a trimming mechanism including trimming blades, and treadle controlled devices for moving both of said trimming blades bodily and horizontally toward and from the needle at the will of the operator whereby said trimming blades may be moved to inoperative position and out of range of the fabric so that the fabric may be fed to the stitching mechanism without being trimmed.

1,353,535. DEVICE FOR EXPANDING REAMERS. HARLEY H. LA VERCOMBE, Detroit, Mich. Filed Feb. 24, 1919. Serial No. 278,857. 7 Claims. (Cl. 76—1.)



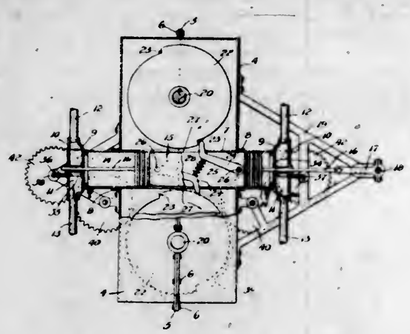
1. A reamer reforming device comprising a bed adapted to be secured on a press bed and provided with an adjustably secured anvil and with means for supporting a reamer in operative relation to the anvil so that the reamer flutes may be brought successively into operative position on the anvil, said means being adjustable to hold any sized reamer, and a punch arranged to coöperate with the anvil in treating the flutes of a positioned reamer.

1,353,536. CONVERTIBLE WARDROBE-BED. JESSE M. MCGHEE, Estancia, N. Mex. Filed Oct. 30, 1919. Serial No. 334,391. 5 Claims. (Cl. 5—52.)



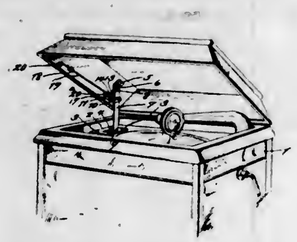
2. A convertible wardrobe bed having end sections provided with horizontal supporting frames projecting inwardly from the end sections, a pair of hingedly connected sections pivoted at their free ends to the respective end sections in position to fold down upon the horizontal frames and adapted to be supported thereby, and a manually operable device carried by one of the end sections and adapted to engage an adjacent hinge section for swinging the sections upwardly into folded position.

1,353,537. HEADREST ATTACHMENT FOR BEDS. ANGUS MACDONALD, Melrose, Mass. Filed Apr. 1, 1920. Serial No. 370,400. 5 Claims. (Cl. 5—43.)



1. A head rest attachment, comprising a pair of brackets adapted to be fixed to the end bars of a spring frame, and provided with downwardly projecting portions having crank shaft bearings, a head rest composed of a frame having a transverse portion, and arms, and a resilient filling supported by said frame, ears having means for engagement with the side bars of a bed frame, and hinged to the arms of the head rest frame, a sectional crank shaft journaled in said bearings, and including a threaded section, a nut engaged with said threaded section and provided with a transverse sleeve, a rock shaft adapted to turn in said sleeve, and struts attached to said rock shaft and pivoted to the arms of the head rest frame.

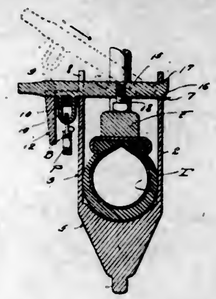
1,353,538. STRUT CONSTRUCTION. GLENN D. MITCHELL, College Point, N. Y., assignor, by mesne assignments, to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,289. 4 Claims. (Cl. 244—31.)



1. In combination, a hollow strut, a fitting lining one end thereof, a base member extending within said end, and a connection between said fitting and said base member, said connection being within the interior of said strut.

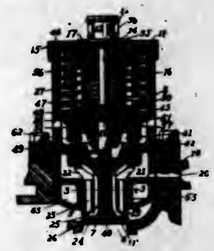
1,353,539. RECIPROCATING ENGINE. EDWARD P. PALMER, Minneapolis, Minn. Filed Sept. 21, 1917. Serial No. 192,479. 4 Claims. (Cl. 121—117.)

1. The combination with two cylinders of a reciprocating engine, of a duplex piston mounted in each of said cylinders, means for alternately rendering the driving medium effective in the ends of said two cylinders, a rotary driven member, a pair of shafts on opposite sides of said cylinders, a pair of ratchet wheels secured to each of said shafts, a pair of reversely acting pawls carried by each of said pistons for imparting steps of movement to the ratchet wheels, said ratchet wheels being set the one in advance of the other, and driving connections from said two shafts to the driven member.



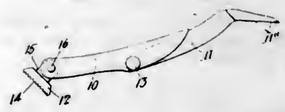
1,353,540. TALKING-MACHINE-TOP SUPPORT AND RELEASE THEREFOR. GEORGE L. PARRISH, Ricketts, Pa. Filed May 29, 1920. Serial No. 385,351. 3 Claims. (Cl. 217—60.)

1. In a cabinet, the combination with a body, of a hinged cover therefor, a pivoted supporting latch carried by the cover, a keeper secured to the body to be engaged by the supporting latch, a clevis adjustably and detachably connected to the supporting latch, a coupling block operatively and pivotally mounted on the clevis, and a longitudinally movable member mounted in guides of the cover and being in turn adjustably connected to the coupling block, whereby upon imparting a movement to the longitudinal movable member, the supporting latch may be disengaged from its keeper.



1,353,541. AUTOMOBILE-CHOCK. FRED RETTERER, Harpster, Ohio. Filed Dec. 24, 1919. Serial No. 347,174. 5 Claims. (Cl. 70—90.)

3. In a chock for auto wheels, the combination with a shackle having an aperture in one arm, a lip on its other arm provided with a slot, and a guard on the lip; of a bar having one end adapted to engage said aperture, and a staple in the bar near its other end adapted to pass



through said slot and project beyond the lip and receive a padlock, the latter underlying said guard.

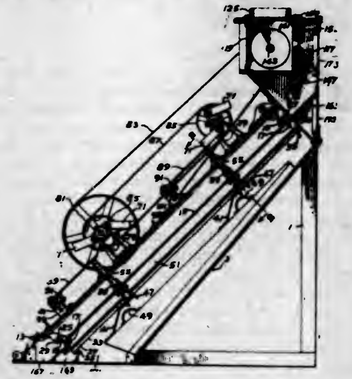
1,353,542. MULTIPLE-EXPANSION INTERNAL-COMBUSTION ENGINE. HERMAN J. SCHARNAGEL, Tompkinsville, N. Y., assignor to Elmer A. Sperry, Brooklyn, N. Y. Filed Nov. 28, 1917. Serial No. 204,349. 28 Claims. (Cl. 60—15.)

1. In an internal combustion engine, the combination with a cylinder, of a unitary intake and exhaust valve mechanism therefor comprising an outwardly opening exhaust valve, a stem therefor, a port normally closed by said valve, a sleeve surrounding said stem and normally seated upon said other valve forming an intake valve and means for raising each valve from its seat.

1,353,543. PORTABLE DOOR AND WINDOW FASTENER. CHRISTIAN P. SCHOELKOPF, St. Paul, Minn. Filed Mar. 5, 1919. Serial No. 280,842. 2 Claims. (Cl. 292—339.)

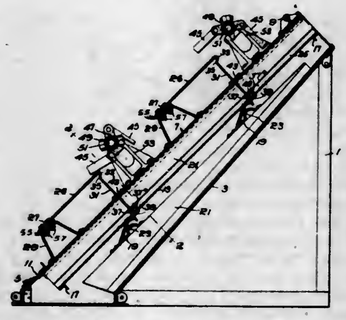
1. In a door or window fastener, the combination with a channel-shaped arm provided at one end with a pivoted head having a frictional face, of a second arm having a pointed outer end and having an inner end that works between and is pivotally connected to the intermediate portions of the flanges of said first noted arm.

1,353,544. TWIN-PROPELLER AEROPLANE. LAWRENCE B. SPERRY, Brooklyn, N. Y., assignor to The Lawrence Sperry Aircraft Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 19, 1917. Serial No. 197,388. 9 Claims. (Cl. 244—14.)



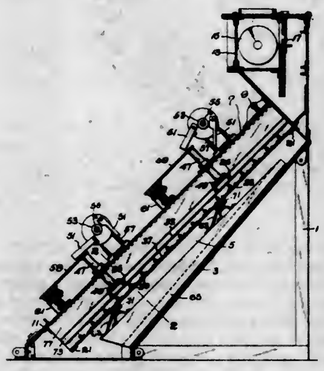
1. In an aeroplane, a sustaining plane, a tail plane supported in the rear thereof and a pair of propellers

positioned forward of said sustaining plane and on opposite sides of the fore and aft center-line of the aeroplane, said propellers being adapted to rotate in opposite directions with their inner tips moving upwardly, said



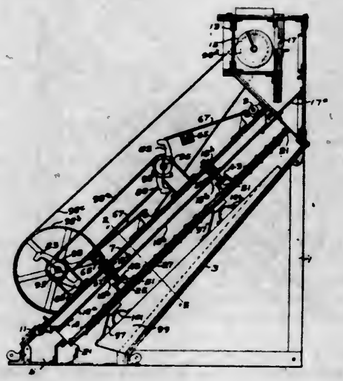
propellers being so positioned that the upward whirl of the slip streams produced thereby will impinge the depressing currents produced by said sustaining plane adjacent said tail plane.

1,353,545. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 9, 1917. Serial No. 173,784. 19 Claims. (Cl. 83—56.)



1. In a separator, the combination with a frame having screen material stretched thereon, of means to yieldingly support said frame including fixed leaf springs each having a free end extending into supporting engagement with the frame, said frame and springs having means for limiting lateral and longitudinal movement of the frame relative to the springs, and said frame being removably supported by the springs and free from fastening means between the frame and springs.

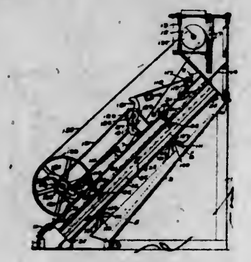
1,353,546. SEPARATOR. THOMAS J. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1917. Serial No. 192,478. 6 Claims. (Cl. 83—56.)



1. In a separator, the combination of a casing, a screen for grading materials mounted in said casing, and means for vibrating said screen comprising a bracket mounted on said casing, a resilient arm having one end secured to said bracket and a portion extending a substantial distance from said bracket along said casing, and a portion extending thence transversely to said first named portion through the casing and having an end for engagement with the screen, and rotary swing hammer means mounted on said casing for imparting blows to said arm at the juncture of said transverse portions.

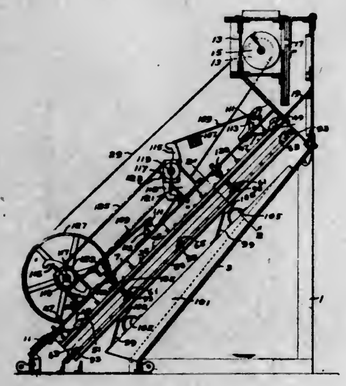
1,353,547. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor, by mesne assignments, to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1917. Serial No. 197,330. 12 Claims. (Cl. 83—56.)

1. A screen for separators, comprising a frame having side and end members, screen clothing secured to said side members, a member extending along said clothing intermediate and substantially parallel to the side members of said frame and secured to the end members of said frame, and means coöperating with said intermediate member to stretch the clothing, said intermediate member and stretching means coöperating therewith located in their entirety above said clothing.



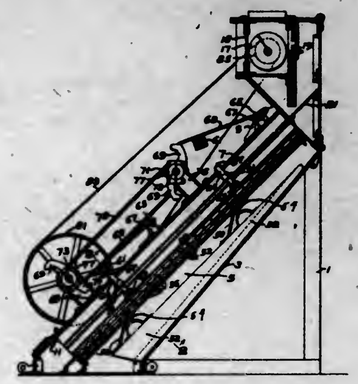
1,353,548. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 23, 1918. Serial No. 218,649. 23 Claims. (Cl. 83—56.)

1. In a separator, the combination with screen clothing for grading materials, of a frame for said clothing, a vibratory bridge member spaced from said clothing and connected to the sides of said frame, relatively adjustable



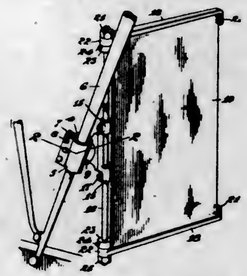
stretching members for tensioning said clothing, and means connecting said bridge member with said stretching members that vibrations of the former may be transmitted through the latter to the clothing.

1,353,549. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 11, 1918. Serial No. 239,481. 27 Claims. (Cl. 83—56.)



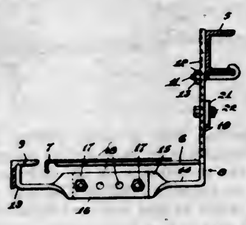
1. In a separator, the combination of a casing, a removable inclined master frame mounted in, but separate from said casing and comprising metal side plates, upper and lower transverse bars secured to said plates to hold the latter in spaced relation, a plurality of screens carried by, but separable from said master frame and each comprising side bars and screen clothing for grading materials secured to said side bars with free ends between said side bars, spring means yieldingly to sustain said master frame in said casing, and means acting on said upper transverse bars to vibrate all of said screens through the master frame.

1,353,550. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 11, 1918. Serial No. 239,482. 24 Claims. (Cl. 83—56.)



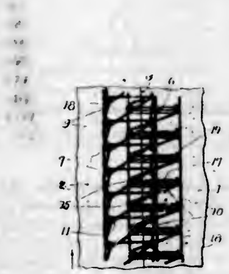
1. In a separator, the combination of a casing having a cover, hangers rigidly secured to and depending from said cover, a screen for grading materials, means to connect said screen with said hangers, and means to stretch said screen after connection thereof with said hangers to secure the screen to said hangers.

1,353,551. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1918. Serial No. 261,347. 11 Claims. (Cl. 83—56.)



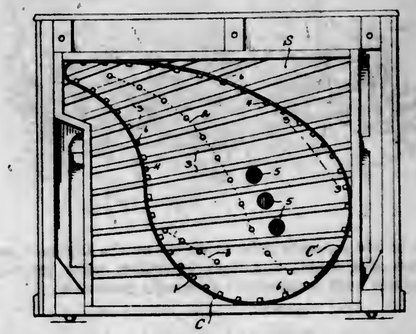
1. In a separator, the combination of a casing, a master frame removably mounted therein having opposite sides and constructed to receive a plurality of screens for grading materials, screens removably mounted on said master frame each comprising screen clothing having free flexible ends and opposed edges adjacent opposed sides of said master frame; and stretching means connecting the opposed edges of said clothing with the opposed sides of said frame for positively stretching said clothing between the sides of the master frame, said master frame and screens removable from the casing as a unit.

1,353,552. WINDSHIELD ATTACHMENT FOR AUTOVEHICLES. ALVIN H. SWEET, Los Angeles, Calif. Filed Sept. 18, 1919. Serial No. 324,377. 2 Claims. (Cl. 296—85.)



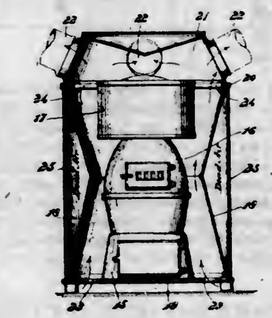
1. The combination of the bow of the vehicle top, a pair of clamping members engageable with said bow, a boss formed on one of said members, a bracket pivoted for rotary movement on said boss, means for clamping said bracket against movement on said boss, a pair of alined spaced sleeves on said bracket, a rod extending through said sleeves, means for engaging said rod for holding it in various adjusted positions relative to said sleeves, said rod extending in a direction at right angles to the pivotal mounting of said bracket, and a windshield plate carried by said rod.

1,353,553. SIDE BUMPER FOR VEHICLES. ALVIN H. SWEET, Los Angeles, Calif. Filed May 4, 1920. Serial No. 378,823. 5 Claims. (Cl. 293—57.)



1. In a vehicle, the combination with a side frame of a vehicle, and a running board thereon; of a pair of dependent hangers secured to said frame member and extending beneath the running board, and a bumper bar carried by said hangers arranged to extend lengthwise of said running board adjacent the outer edge thereof.

1,353,554. SEAM. SAMUEL GEORGE TATE, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1916. Serial No. 107,959. 2 Claims. (Cl. 112—266.)

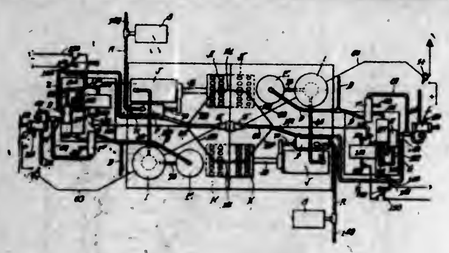


1. A seam for sewed articles comprising fabric sections having their edges abutted, a series of stitches connecting said sections and comprising spaced rows of opposed needle thread loops respectively extending through the fabric sections on opposite sides of the abutted edges, a looper thread concatenated with said needle thread loops and forming a line of single chain loops on one side of the meeting edges of the fabric sections, and a separate series of stitches connecting and anchoring said fabric sections against being separated by a strain transverse of the meeting edges of the fabric sections, said separate series of stitches including spaced rows of opposed needle thread loops and a looper thread concatenated therewith, said last-mentioned looper thread being formed into a series of loops respectively concatenated with each pair of the last-mentioned needle thread loops after passing through the needle thread loops of a previous pair and extending over and covering the chain loops of the first-mentioned looper thread.

1,353,555. SOUNDBOARD. GEORGE C. WISMER, Santa Barbara, Calif. Filed Aug. 21, 1918. Serial No. 250,837. 2 Claims. (Cl. 84—194.)

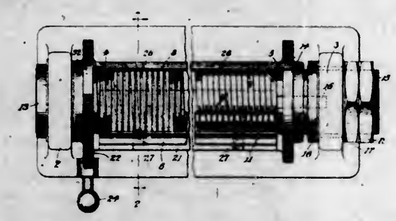
1. The combination with a sound board of a piano, of a sound box formed substantially semi pear-shaped and having one side thereof open, said box being secured to the sound board with the open side thereof closely adjacent the sound board.

1,353,556. HEATER. CHARLES A. XARDELL, Utica, N. Y. Filed July 11, 1917. Serial No. 179,790. 3 Claims. (Cl. 126—99.)



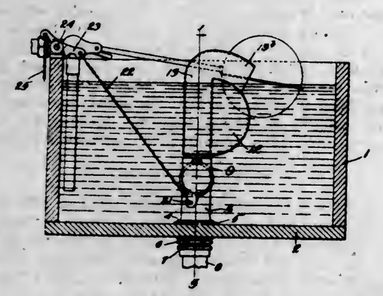
1. In a furnace or heater, the combination with a combustion chamber, of a distributing chamber, a fluid chamber or conduit freely opening into said distributing chamber, said fluid chamber or conduit surrounding said combustion chamber and having an inlet at its bottom, an outlet at its top, and unbroken walls extending from said inlet to said outlet, said conduit tapering upward from its bottom to a point adjacent the zone of greatest heat of said combustion chamber, and thereafter increasing in diameter upward to said outlet, thus forming an unobstructed Venturi tube around said combustion chamber.

1,353,557. MULTIPLE ELECTRIC AIR AND CAR COUPLING. REX G. AVERILL and CHARLES H. TOMLINSON, Mansfield, Ohio; said Averill assignor of all his right to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 7, 1917. Serial No. 179,141. 78 Claims. (Cl. 173—332.)



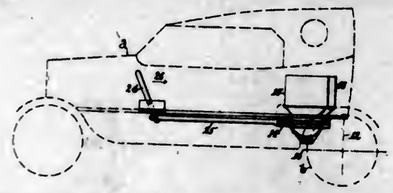
30. A pair of counterpart couplers each comprising a projectable contactor having one face parallel with the opposite face inclined to the plane of movement of the contactor, a plurality of electrical connectors mounted in the inclined face of the contactor, each one making a separate electrical connection between the counterpart

couplers, a single bus line connector mounted on the parallel face of each contactor, and electrical connections in each coupler for making double electrical connections for



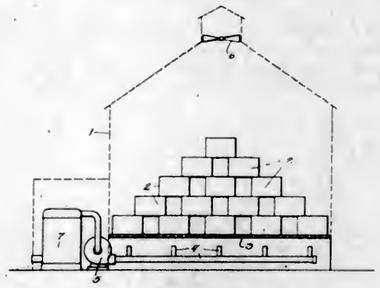
each of the separate circuits served by the separate connectors and double bus line connection, when the contactors of both couplers are forwardly projected.

1,353,558. MACHINE FOR SLOTTING PISTON-RINGS AND SIMILAR OBJECTS. MANUEL D. AVILLAR, New York, N. Y. Filed Nov. 22, 1919. Serial No. 339,811. 11 Claims. (Cl. 29—70.)



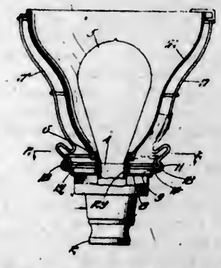
1. A chuck for holding a series of articles such as rings designed to be slotted diagonally, which chuck comprises, in combination, a frame, two jaws oppositely mounted on said frame so as to be capable of motion toward and from one another along a line parallel to the longitudinal axis of the chuck, and means for producing such motion, each of said jaws having the portions of its face adapted to engage the rings arranged in a plane slightly inclined to the longitudinal axis of the chuck and parallel to the corresponding plane of the face of the other jaw.

1,353,559. DISCHARGE-VALVE FOR FLUSH-TANKS. CHARLES WILLIAM BEATTIE, Parsonsfield, Me., assignor of one-half to John C. Nicholson, Peabody, Mass. Filed Aug. 21, 1919. Serial No. 318,903. 9 Claims. (Cl. 4—5.)



1. A flush valve comprising an outlet conduit, a siphon conduit swiveled thereto and adapted to have its suction end raised or lowered, a water-excluding float associated with said siphon conduit and being external thereto, normally holding said suction end raised, and control means for lowering said suction end.

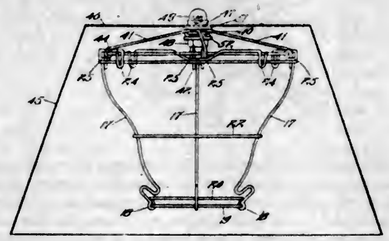
1,353,560. ANTISKID DEVICE FOR MOTOR-VEHICLES. HUGO BEIL, Lawrence, Mass. Filed June 16, 1920. Serial No. 389,481. 1 Claim. (Cl. 294—34.)



The combination with a motor vehicle provided with wheels, of a receptacle for sand or like material carried by said vehicle and provided with an outlet pipe having its outlet mouth arranged in front of a vertical plane through the axis of a wheel of said vehicle and above a horizontal plane through said axis, a valve casing interposed between said receptacle and said outlet pipe and open at its rear end, a valve slidable in said casing to control the flow of material from the receptacle onto the circumference of said wheel, and means under control of the operator of said vehicle for operating said valve.

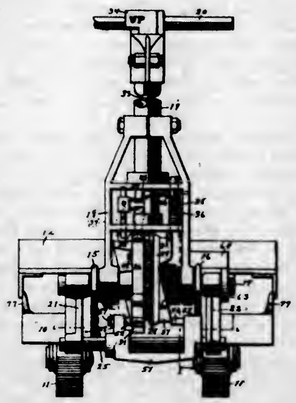
1,353,561. CURING SWEET POTATOES OR YAMS. WALTON E. BOBO, Hattiesburg, Miss., assignor to The Magnolia Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 17, 1920. Serial No. 374,594. 5 Claims. (Cl. 99—11.)

3. In the curing of sweet potatoes or the like, the successive steps of initially subjecting the sweet potatoes to air currents at substantially atmospheric temperature for approximately two or three days; gradually raising the temperature to 76° F. and maintaining an air circulation at this latter temperature for approximately a week or ten days, and finally reducing the temperature to about 55°.



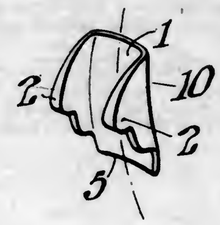
1,353,562. ELECTRIC-LAMP BODY, REFLECTOR, AND SHADE-HOLDER. HENRY D. CAHILL, Boston, Mass. Filed Jan. 26, 1920. Serial No. 354,171. 12 Claims. (Cl. 240—111.)

1. A lamp body having in combination therewith an inverted reflector member, a reflector supporting plate seated



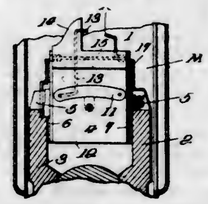
on the lamp body and means for locking the reflector supporting plate to the lamp body, said locking means being operable to lock and unlock at will the supporting plate.

1,353,563. ELECTRIC-CLUSTER-LAMP BODY AND SHADE-HOLDER. HARRY D. CAHILL, Boston, Mass. Filed Jan. 26, 1920. Serial No. 354,172. 6 Claims. (Cl. 240—111.)



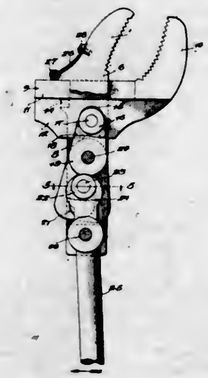
1. An electric lamp body having in combination therewith a shade holder, said shade holder and lamp body having interlocking connections, whereby the shade holder may be locked to the lamp body, and an auxiliary shade holder adapted to be seated upon the top of said first shade holder, one of said shade holders being formed with a plurality of fingers and the other of said shade holders being formed with a plurality of coöperating finger holes with which said fingers are adapted to engage to hold the two shades together.

1,353,564. OPERATING MECHANISM FOR ELEVATING-TRUCKS. JOHN LOUCIEN CHESNUTT, Kansas City, Mo., assignor to The Service Caster & Truck Company, Kansas City, Mo., a Corporation of Missouri. Filed Aug. 18, 1919. Serial No. 318,130. 24 Claims. (Cl. 254—5.)



1. An elevating truck, comprising a wheeled truck frame formed with inclined ways, an elevating frame formed with rollers adapted to travel on said ways, a rotary lifting member carried by said truck frame, a flexible member secured to said elevating frame and also secured to and adapted to be wound on said lifting member, said lifting member being formed with a wedge-shaped cam on one of its faces, a brake member slidably carried by said truck frame and adapted for engagement with said cam, and means for normally maintaining said brake member in frictional engagement with said cam, to prevent reverse rotation of said lifting member.

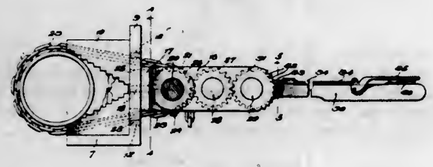
1,353,565. PROCESS OF MAKING METALLIC DENTURE-BACKINGS. ROBERT M. CRAIG, Wilkinsburg, Pa. Filed June 19, 1919. Serial No. 305,421. 17 Claims. (Cl. 29—148.)



17. In a process of making a metallic denture structure; punching a concave bar to form a blank; and bending the thicker portions of said bar transversely to its thinnest portion, to form a recess between them.

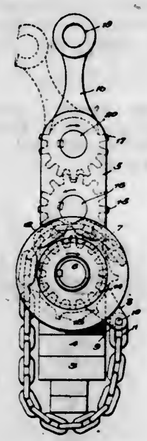
1,353,566. SAFETY SPARK-GAP FOR MAGNETOS. ALFRED CHINA DE LORME, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 1, 1916. Serial No. 134,379. 8 Claims. (Cl. 171—209.)

1. In a magneto, the combination with a stationary current generating coil, of a safety spark gap including spaced members, and devices for supporting said spark gap members on said coil structure whereby said members may be removed from the magneto with the coil structure.



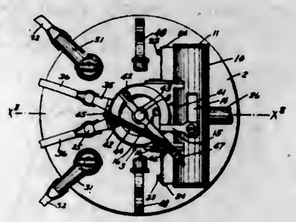
1,353,567. WRENCH. JAMES L. DILLON, Leavenworth, Kans., assignor of one-half to Frederick L. Wendler, St. Louis, Mo. Filed Nov. 25, 1919. Serial No. 340,616. 5 Claims. (Cl. 81—126.)

1. A wrench comprising a relatively fixed jaw member having a guideway therein, another jaw member includ-



ing a slide movable in said guideway and having a seat, a member pivoted on said relatively fixed member, a roller on one end portion of said pivoted member disposed in said seat, there being an opening in the other end portion of said pivoted member, a handle member pivoted on said relatively fixed member, and a roller on an end portion of said handle member disposed in said opening.

1,353,568. PIPE-VISE. JAMES L. DILLON, Leavenworth, Kans., assignor of one-half to Frederick L. Wendler, St. Louis, Mo. Filed Nov. 25, 1919. Serial No. 340,617. 6 Claims. (Cl. 81—19.)



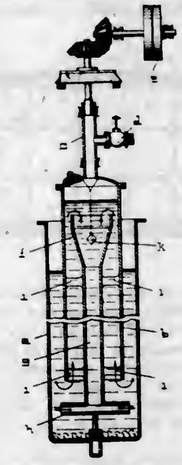
5. A vise comprising a standard, a pair of jaws on one side thereof, spaced plates extending from the other side of said standard, a shaft rotatable in said plates, a winding member fast on said shaft, a flexible binding member fixed in one portion and arranged in another portion to be engaged with said winding member and to pull an article against said jaws, a gear fast on said shaft between said plates, an intermediate gear in mesh therewith rotatably mounted between said plates, a lever pivoted between said plates and having a toothed segment in mesh with said intermediate gear, and means for holding said lever against movement in one direction.

1,353,569. LIFTING-SLING. JAMES L. DILLON, Leavenworth, Kans., assignor of one-half to Frederick L. Wendler, St. Louis, Mo. Filed Nov. 25, 1919. Serial No. 340,618. 5 Claims. (Cl. 254—161.)

1. A lifting-sling comprising a frame having means of connection for a flexible load-binder, a rotatable shaft, a winding member fast on said shaft arranged to have such a load-binder engaged therewith, an operating member on said shaft, an arm swingable on said frame arranged for connection with a pulling element, and means interposed between said arm and operating member whereby said winding member is rotated when said arm is swung.

1,353,570. MILKING APPARATUS. LAURITS DINESEN, Minneapolis, Minn., assignor to Perfection Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 15, 1917. Serial No. 191,609. 7 Claims. (Cl. 31—101.)

1. In a milking apparatus, the combination with a milk receptacle, of a coöperating cylinder and piston, a teat cup milk connection leading to said receptacle, a teat cup air connection, a vacuum tube, a valve seat having three atmospheric ports, two ports connected one to each end of said cylinder, two ports connected to said vacuum tube and a port in communication with said teat cup air connection, a controller valve having ports coöperating with the seat ports enumerated to alternately connect the opposite ends of said cylinder to the atmosphere and to said vacuum tube and to alternately connect the port of said teat cup air connection to the atmosphere and to said vacuum tube, and connections whereby said piston will move said controller valve alternately from one position to another.

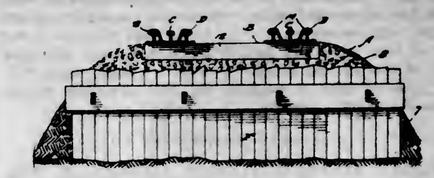


3. In a milking apparatus, the combination with a milk receptacle, of a coöperating cylinder and piston, a teat cup milk connection leading to said receptacle, a teat cup air connection, a vacuum tube, a valve seat having three atmospheric ports, two ports connected one to each end of said cylinder, two ports connected to said vacuum tube and a port in communication with said teat cup air connection, a controller valve having ports coöperating with the seat ports enumerated to alternately connect the opposite ends of said cylinder to the atmosphere and to said vacuum tube and to alternately connect the port of said teat cup air connection to the atmosphere and to said vacuum tube, which controller valve is pivotally mounted and which ports are circumferentially spaced around its pivotal axis, and connections whereby said piston will move said controller valve alternately from one position to another.

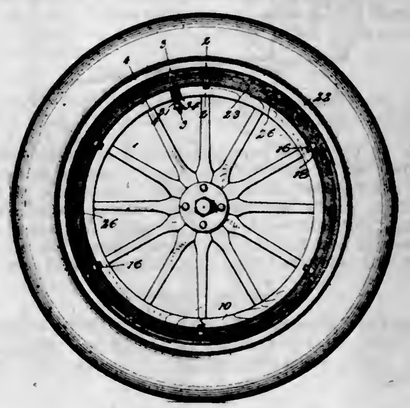
4. In a milking apparatus, the combination with a milk receptacle, of a coöperating cylinder and piston, a teat cup milk connection leading to said receptacle, a teat cup air connection, a vacuum tube, a valve seat having three atmospheric ports, two ports connected one to each end of said cylinder, two ports connected to said vacuum tube, and a port in communication with said teat cup air connection, a controller valve having ports coöperating with the ports enumerated to alternately connect the opposite ends of said cylinder to the atmosphere and to said vacuum tube and to alternately connect the port of said teat cup air connection to the atmosphere and to said vacuum tube, which controller valve is pivotally mounted and which ports are circumferentially spaced around its pivotal axis, a valve-actuating pivoted lever having a limited movement in respect to said controller valve, a tappet carried by said piston and operative on said actuating lever and a spring for normally maintaining the actuating end of the lever to one side or the other of its pivot, said tappet adapted to move the lever alternately from one side to the other of its neutral position in respect to its actuating spring.

6. In a milking apparatus, the combination with a receptacle and vacuum communicating means, of a cover provided with teat-cup connections, a valve casing carried by said cover, an oscillating valve mounted in the casing, said casing provided with a communication between the interior of the casing and the vacuum communication means, a cylinder provided with ports from its ends to said valve, carried by said casing, a double-acting piston operable therein, said valve having ports therein adapted to intermittently place the connection in communication with the vacuum means and with the atmosphere and alternately place the opposite ends of the cylinder in communication with said means and with the atmosphere, and a lost motion connection between the piston and valve whereby the valve will be moved after an initial movement of the piston.

7. In a milking apparatus, the combination with a receptacle and vacuum communicating means, of a cover provided with a teat-cup connection, a valve casing carried by said cover, an oscillating valve mounted in the casing, a cylinder carried by said casing, provided with ports from its ends to said valve, a double-acting piston operable therein, said valve having ports therein adapted to intermittently place the connection in communication with the vacuum means and with the atmosphere, and alternately placing the opposite ends of the cylinder in communication with said means and with the atmosphere, means connecting the piston to the valve whereby the valve will be moved upon the movement of the piston, and means for controlling the rapidity of the movement of the piston.



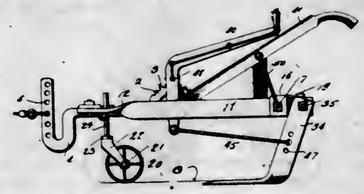
1,353,571. METHOD OF AND APPARATUS FOR FORMING LARGE CRYSTALS. OTTO DREIBRODT, Bitterfeld, Germany, assignor to Elektrochemische Werke, G. M. B. H., a Corporation of Germany. Filed June 27, 1914, Serial No. 847,787. Renewed Feb. 6, 1920. Serial No. 356,799. 7 Claims. (Cl. 127—19.)



1. The herein described method of forming crystals from a saturated solution or molten substances which comprises circulating the liquid from a liquid-containing chamber to a crystallizing chamber containing a seed crystal, and thence back to the liquid-containing chamber with sufficient rapidity to prevent adherence of smaller crystals to the faces of the seed crystal, and cooling the liquid during its flow to the crystallizing chamber.

1,353,572. AUXILIARY RAIL-SUPPORT FOR TEMPORARY USE. JAMES J. DUFFY, Chicago, Ill. Filed Nov. 1, 1919. Serial No. 334,955. 9 Claims. (Cl. 238—169.)

4. As an article of manufacture, a rail supporting yoke formed of a single piece of metal providing an intermediate portion to embrace the base of an ordinary track rail, and arms extending upwardly from each side of said intermediate portion, the ends of each arm shaped to embrace the head of an ordinary railway rail.

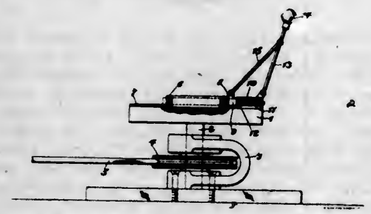


1,353,573. DEMOUNTABLE RIM. GARABED ESMARIAN and KRIKOR KAFAFIAN, Paterson, N. J. Filed June 17, 1919. Serial No. 304,748. 1 Claim. (Cl. 301—11.)

The combination with a rim having an annular flange, of a wheel felly having an annular recess in one side to receive the flange and a plurality of circumferentially arranged transverse openings, an internally threaded sleeve seated in each opening, said sleeve extending approximately half way through the felly and having one end lying flush with one surface of the felly, a washer applied to the flush end of the sleeve and felly, means for securing the washer in place, a bolt insertible in the opposite end of each opening and into each sleeve and threadedly engaged therein, an outwardly tapering squared portion formed on each bolt, and a lug extending laterally from each bolt adapted to bear against the flange when th bolts are rotated to secure the rim in place.

1,353,574. CULTIVATOR. ROMOLO J. ESPINOZA, Rosa, N. Mex. Filed Dec. 24, 1919. Serial No. 347,164. 3 Claims. (Cl. 97—10.)

1. In a cultivator, the combination with a frame having a supporting wheel at its front end, and a hand lever

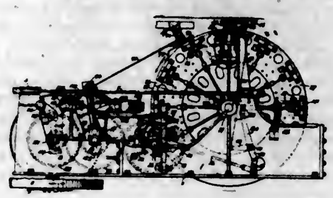


pivoted across one bar of the frame; of a scooter blade including divergent arms and standards rising from their outer ends and pivoted to the rear end of the frame, said arms having several holes within their length, and adjusting rods connected at their front ends with the lower end of said lever and having their rear ends diverging from each other and hooked for selective engagement with the holes of said standards, the rods standing wholly above the earth's surface.

1,353,575. AUTOMOBILE-HORN. MAURICE F. FITZGERALD, Winsted, Conn., assignor to The Fitzgerald Mfg. Co., Torrington, Conn., a Corportion of Connecticut. Filed June 28, 1920. Serial No. 392,289. 4 Claims. (Cl. 116—144.)

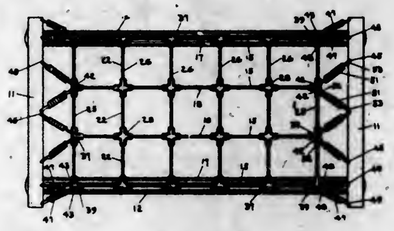
1. An automobile horn comprising a sound diaphragm, a shaft having teeth thereon, a rack engaging said teeth for rotating said shaft, an inertia wheel driven by said shaft to vibrate said diaphragm, a detent normally contacting with said wheel to hold the same from rattling, and means on said rack for moving said detent out of contact with said wheel upon the operation of said horn.

1,353,576. PROCESS OF MANUFACTURING PISTON-RINGS. HARRY S. FRANK, St. Louis, Mo. Filed July 1, 1918. Serial No. 242,719. 4 Claims. (Cl. 29—136.1.)



1. The process of forming a piston ring, which consists in rotating the ring at a high rate of speed to change the shape thereof by centrifugal force, and treating the ring while rotating to change the molecular arrangement of the material of the ring to set the same in a changed shape.

1,353,577. RAIL-CLAMP. HENRY FRAPPART and JEAN BAPTISTE BOUVIER, Kincaid, Ill. Filed Mar. 23, 1920. Serial No. 367,989. 3 Claims. (Cl. 238—10.)

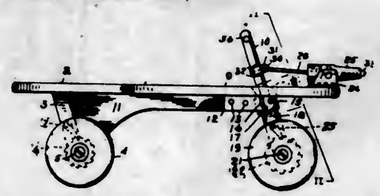


1. A rail clamp including a clamp member having a hook formation at one end to engage with the base flange of a tread rail and provided with an upright extension at its remaining end, the body of said clamp member being made sufficiently long to accommodate a bed rail placed with the head thereof between the head and base flange of the tread rail, and a wedge to be driven between the upright extension and the base flange of the bed rail.

1,353,578. MACHINE FOR FORMING PULP HOLLOW WARE. WILLIAM H. FULCHER, Oakland, Calif., assignor to The Fulcher Pulp Bottle Company, Oakland, Calif., a Corporation of California. Filed Oct. 18, 1918. Serial No. 258,674. 19 Claims. (Cl. 92—65.)

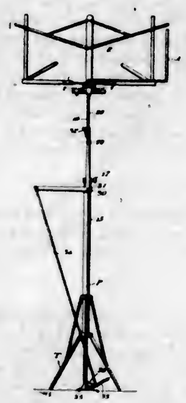
1. The combination of a mold wheel including plates and wedge-shaped blocks or partitions between said plates, side walls of adjacent partitions being parallel to form rectangular chambers having pairs of parallel sides, cores, and molds around the cores movable radially in said chambers, and means for intermittently rotating said mold wheel.

1,353,579. BED-BOTTOM. EUGENE FULLER, Providence, R. I. Filed May 3, 1920. Serial No. 378,353. 4 Claims. (Cl. 5—39.)



1. In a bed bottom, the combination with a frame, of a bed fabric comprising rods provided with enlargements upon their ends arranged in longitudinal rows, rods provided with enlargements on their ends arranged in transverse rows, and connecting members comprising radial sockets engaging the enlargements and provided with vertical slots to loosely admit the rods, and means for connecting the fabric with the frame.

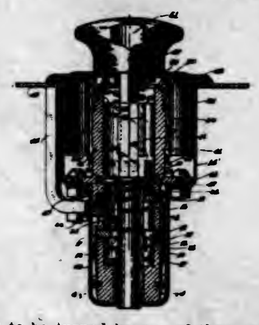
1,353,580. ELECTRIC SWITCH. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,459. 9 Claims. (Cl. 200—4.)



9. In a controlling switch construction for light and signal circuits of automobiles, a member having a flat face and carrying terminals of the light and signal circuits and a terminal for the supply circuit, said latter terminal including a finger overlying said face, and a contact carrying member movable relatively to the terminal-carrying member and having a contact positioned between said finger and face, whereby relative movement of contact and terminals will make and break the circuits individually.

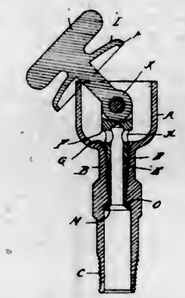
1,353,581. TOY VEHICLE. JOSEPH G. GAVLAK, Monongahela, Pa. Filed Apr. 30, 1919. Serial No. 293,665. 2 Claims. (Cl. 208—35.)

1. A device of the character described comprising in combination, a toy vehicle having an elongated body portion, wheels carried by rear end of the said body portion, a stem, carrying a wheel, mounted for rotatable and reciprocal movement in the forward end of the said body portion for steering and propelling the vehicle, a miniature cannon mounted on the extreme forward end of the said body portion, and means actuated by the reciprocal movement of the said stem for loading a missile into the the said cannon and for projecting said missile from said cannon, substantially as described.



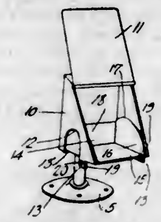
1,353,582. MUSIC-LEAF TURNER. JULIUS O. GEMSEY, Montevideo, Minn. Filed Jan. 2, 1920. Serial No. 348,752. 4 Claims. (Cl. 84—515.)

1. A music leaf turner comprising leaf turning frames mounted for oscillatory movement, eccentrically disposed fingers formed on said frames, said fingers being of progressively increasing lengths, a guide bar supported for movement toward the fingers, an actuating bar slidably fitted within the guide bar, a shoulder formed on said actuating bar, means for biasing said bar toward said fingers, and actuating means for effecting a reciprocating movement of the actuating bar whereby said shoulder will be caused to successively engage and turn said fingers to effect the turning of said frames.



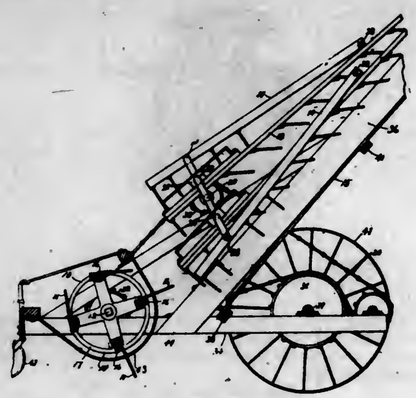
1,353,583. COMBINATION-LOCK. RAYMOND W. GRIFFITH, Milwaukee, Wis. Filed Aug. 4, 1919. Serial No. 315,207. 12 Claims. (Cl. 70—53.)

1. In a combination lock, the combination of two elements relatively rotatable with respect to each other and having an interlocking connection to prevent longitudinal movement of the elements with respect to each other except in a predetermined position, and a third element freely rotatable with respect to the first named elements



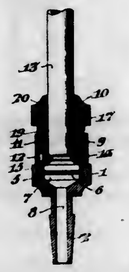
and adapted to be turned by one of them and preventing the longitudinal movement of said elements with respect to each other to unlocked position except in a predetermined position.

1,353,584. PRIMING-CUP. WILLIAM GRIKSCHEIT, Detroit, Mich. Filed Sept. 19, 1919. Serial No. 324,819. 4 Claims. (Cl. 123—187.5.)



1. The combination with a cup and a valve controlling the discharge from said cup having threaded engagement therewith, of a handle for operating said valve, and a cap for said cup mounted on said handle and adapted to be locked in engagement with the cup when the valve is seated.

1,353,585. COIN AND STAMP BOX. JOHN R. HALLEY, Nashville, Iowa. Filed July 11, 1919. Serial No. 310,001. 2 Claims. (Cl. 133—14.)

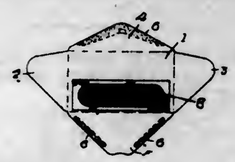


1. In a receptacle, a supported casing provided with an open front and bottom, a door hinged to the casing and normally closing the front thereof, a tray disposed between the side walls of the casing and having one end thereof pivoted to the opposite sides of the casing, and means operated by tilting the tray, for opening the door, to allow the contents of the receptacle to fall therefrom.

1,353,586. HAY-LOADER. CHARLES HARTMAN, Sandwich, Ill., assignor to Sandwich Manufacturing Company, a Corporation of Illinois. Filed Oct. 3, 1919. Serial No. 328,240. 23 Claims. (Cl. 56—363.)

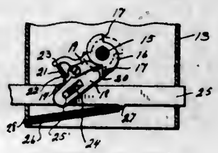
1. In a hay loader, in combination, a flexible inclined deck continuous from end to end rigidly held at its upper end, the lower end of the deck being free, gathering means delivering to the lower end of the deck, and elevating means operating over the deck.

1,353,587. SALIVA-EJECTOR. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1917. Serial No. 149,717. 2 Claims. (Cl. 32—33.)



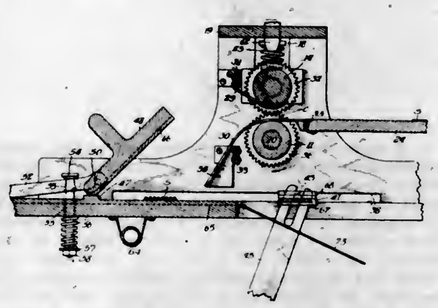
1. In a saliva-ejector having a mouthpiece, the combination with a casing having a seat, of a strainer, and a stuffing-box for said mouthpiece comprising a removable sleeve having a seat forming a stop for said mouthpiece packing, and a gland adjustably connected with said casing and arranged to force said sleeve into engagement with said strainer and yieldingly hold it upon the seat in said casing.

1,353,588. PROCESS OF MAKING WINDOW-ENVELOPS. VINCENT E. HEYWOOD, Worcester, Mass. Filed May 23, 1919. Serial No. 299,255. 4 Claims. (Cl. 93—61.)



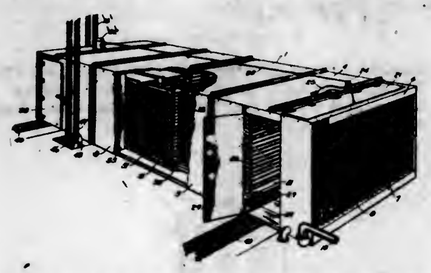
1. The improved method of making an envelop having a transparent part or window formed by applying varnish or other material upon the inner side of the envelop blank, which consists in the application of a piece of transparent paper upon the inside of the envelop blank, to extend over and cover the transparent part in the blank.

4. An improved window envelop having a transparent surface formed by varnish or other material applied to



the inside of the envelop blank, and a transparent piece of paper applied to the inner side of the blank, and covering the transparent part.

1,353,589. ELECTRICAL SNAP-SWITCH. HENRY JUDSON HOLDREDGE, Wilkes-barre, Pa. Filed June 12, 1920. Srial No. 388,434. 6 Claims. (Cl. 200—155.)



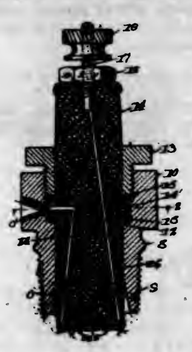
1. The combination with a rotary snap switch embodying the usual rotatable operating stem adapted when rotated to alternately place the switch in open and closed position and means for rotating said stem, of a cam secured to said operating stem and embodying a shoulder, a longitudinally shiftable bar arranged adjacent said cam, yieldable means normally holding said bar in one position, and operating means connected with said shiftable bar to be shifted thereby and adapted to engage the shoulder of said cam to shift the cam in one direction when the switch is in one position and inoperative to engage said shoulder when the switch is in the other position.

1,353,590. CRIMPING AND FOLDING MACHINE. JOSEPH W. HOODWIN, Chicago, Ill. Filed Mar. 3, 1920. Serial No. 362,944. 15 Claims. (Cl. 270—61.)

1. In a crimping and folding machine, the combination of a supporting table, crimping rolls above said table, means for feeding paper strips to the crimping rolls, said rolls delivering the crimped strips to said table, an abutment on said table, a presser bar slidable on said table to press the crimped strips against said abutment to intimately fold them, and means for exerting vertical pressure on the strips during folding thereof.

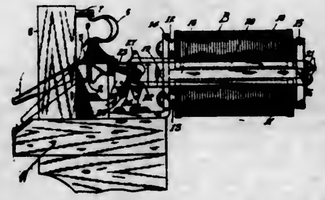
1,353,591. PROCESS OF AND APPARATUS FOR DRYING WOOD VENEER OR OTHER SUBSTANCES. JOHN F. HOPE and ERIC LAMBERT, Kansas City, Mo. Filed Nov. 29, 1915. Serial No. 63,975. 3 Claims. (Cl. 34—46.)

1. A drying kiln comprising a housing having openings in its opposite ends and having a transverse opening in its top, a heating unit located in one of the end openings, a fan mounted in the opposite opening, adapted for drawing air through and discharging same from the housing, a cover for said top opening, and a thermostatic regulator for raising or lowering said cover to admit air to the kiln, for the purpose set forth.



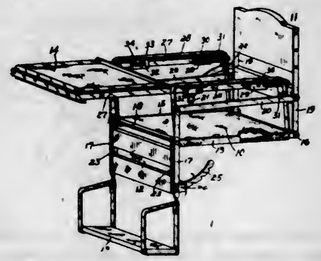
1,353,592. GARMENT-SUPPORTER FOR HOSIERY. FRANK E. HOWARD, Lamanda Park, Calif. Filed Sept. 13, 1919. Serial No. 323,539. 5 Claims. (Cl. 241—6.)

5. A supporter comprising in combination with a garment having supporter receiving means, said supporter comprising an elastic band engaging said receiving means, said band having its opposite end portions folded to form a pair of loops, means clamped upon the body of the band and being detachably and operatively connected to one end of one side of one of the loops for lengthening or shortening said loop, means connected to the end of one of the sides of the other loop and operatively engaging the body of the band for lengthening and shortening the other loop, and means for detachably connecting the two loops.



1,353,593. SPARK-PLUG. JOHN JORGENSON, Racine, Wis. Filed Mar. 15, 1919. Serial No. 282,911. 5 Claims. (Cl. 123—169.)

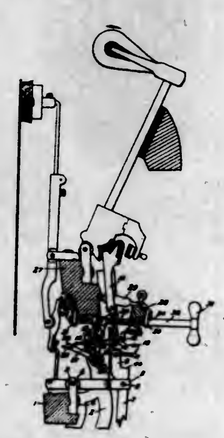
1. A spark plug, comprising a tubular plug shell, an insulating member extending therethrough, means for clamping said insulating member to the plug shell, a pair of electrodes extending through the insulating member and terminating at their inner ends adjacent the inner end of the insulating member, a plurality of contact point members extending in spaced relation from one electrode to the other, said plug shell having a sight opening extending therethrough, the outer end of one of the electrodes terminating at a point close to but spaced from the walls of the plug shell forming said sight opening to



form a visible supplemental spark gap therebetween, and a binding post mounted in the outer end portion of the insulating member and connected to the outer end of the other electrode.

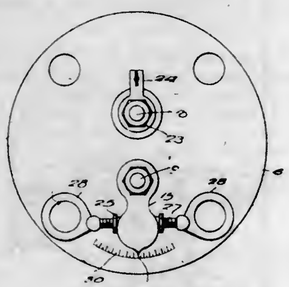
1,353,594. COMBINED ELECTROMAGNETICALLY AND MANUALLY OPERABLE ORGAN-STOP. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1915. Serial No. 2,102. 12 Claims. (Cl. 84—59.)

1. A device of the character described including a two-position stop key for use in controlling the apparatus of a pneumatically operated instrument and adapted to be moved manually from its normal position to its actuated position and vice versa, a pair of electromagnets, an armature for said electromagnets adapted to directly move said stop key from its actuated to its normal position when one of said electromagnets is energized, and to move said key from its normal to its actuated position when the other of said electromagnets is energized.



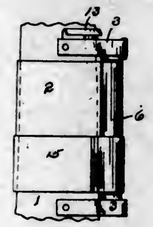
1,353,595. COMBINATION-CHAIR. FRANK KARSCHITZ, Bridgeport, Conn. Filed Sept. 12, 1919. Serial No. 323,370. 2 Claims. (Cl. 155—108.)

1. In a chair the combination with a seat having arms provided near their rear ends with pins and near their



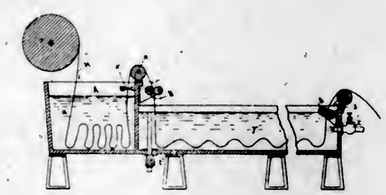
forward ends with brackets, a back and a foot rest pivoted to the respective ends of the seat, and links connecting the back and the foot rest, of a table, and side strips therefor having sliding pivotal connection on said pins, the weight of the side strips and the table being supported by the brackets.

1,353,596. PIANO-FLANGE. EMIL KOLL, Cincinnati, Ohio. Filed Feb. 13, 1919. Serial No. 276,705. 1 Claim. (Cl. 84—251.)



A piano flange having parallel front and back surfaces and a slot therein adapting the flange to be adjustably secured to a piano flange rail, said flange having a groove therein, a flange clip having an inturned end adapted to occupy the groove, a screw entering the flange rail from the front and occupying the slot, and a second screw passing through the flange clip from the front and entering the flange, said flange and clip having registering grooves on their contacting surfaces to receive the center pin of the butt.

1,353,597. SPARK-PLUG. DONALD W. LANG and ARTHUR D. VAUGHN, Eldred, Pa. Filed May 19, 1919. Serial No. 298,093. 2 Claims. (Cl. 123—153.)

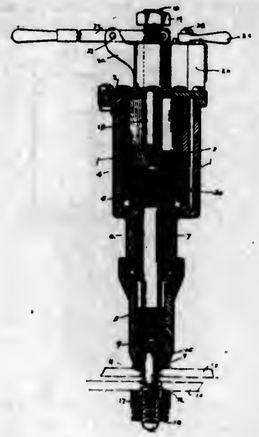


1. A spark plug including a body, a sparking point electrically connected therewith and adjustably supported thereon, a relatively stationary sparking point insulated from the body, an indicating member carried by the relatively adjustable sparking member and provided with a circular terminal, a relatively stationary screw carried by the body, and a sleeve mounted for adjustment upon said screw and having terminal flanges confining the circular portion of the indicating member for effecting adjustment of the latter simultaneously with the movement of the sleeve.

1,353,598. APPARATUS FOR PRESERVING AND PROTECTING POLES AND THE LIKE. THOMAS E. LEWIS, Fort Worth, Tex. Filed June 24, 1919. Serial No. 306,388. 8 Claims. (Cl. 189—32.)

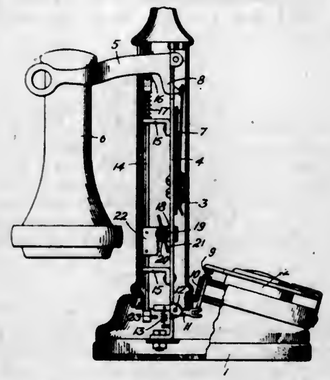
1. A preserving apparatus for poles and the like comprising a piece of sheet metal, and means for wrapping the same on the pole including a rotor, said sheet metal and rotor forming a pocket to receive preserving material against the pole.

1,353,599. COLLOID-TREATED FABRIC AND METHOD OF PRODUCING THE SAME. STANLEY P. LOVELL, Brockton, Mass. Filed Jan. 16, 1920. Serial No. 351,913. 6 Claims. (Cl. 91—68.)



1. As a new article of manufacture, a villous pile fabric, with porous colloidal material, insoluble in water, among and between the fibers of the pile.

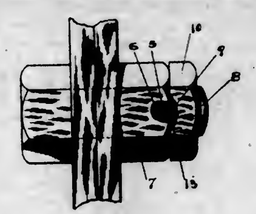
5. The method which consists in impregnating a sheet of villous pile fabric with colloidal material, insoluble in water, in diffusion or solution, passing the fabric to a pile opening mechanism, and thence to a precipitating bath; immersing the fabric therein until the precipitant displaces the solvent, precipitating the colloidal material among and between the fibers of the pile.



1,353,600. BOLTING-UP AND PLATE-TIGHTENING MACHINE. JAMES P. MCBRIDE, Seattle, Wash. Filed Aug. 20, 1919. Serial No. 318,758. 6 Claims. (Cl. 29—84.)

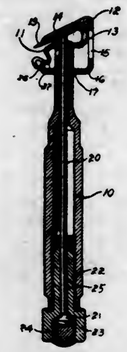
1. In a device for pulling together a pair of members which are held loosely together, the combination of a pressure cylinder having a cylinder head, a piston slidably mounted within the said pressure cylinder, a piston rod passing through the open end of the said cylinder, an extension piston rod secured to the said piston and oppositely disposed to the said piston rod and extending through the said cylinder head, means upon the said ex-

tension piston rod whereby the piston may be held against movement in one direction.



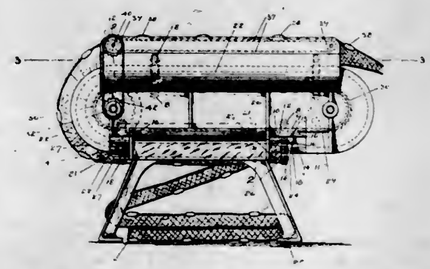
1,353,601. TELEPHONE SYSTEM. JAMES L. MCQUARRIE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1918. Serial No. 268,447. 7 Claims. (Cl. 179—90.)

1. In an automatic telephone system, a substation apparatus, an impulse-sending device therefor, means normally engaging a portion of said device for preventing operation thereof, a trip movable upon removal of a receiver from its switchhook for releasing said locking means, and means for retarding the movement of said trip whereby a definite period of time will elapse between the removal of said receiver and the release of said locking means.



1,353,602. NUT-LOCK. CARL A. MAGNUSON, Portland, Oreg. Filed Apr. 10, 1919. Serial No. 289,147. 1 Claim. (Cl. 151—34.)

A nut having a circular orifice therein; a cylindrical dog having a chamfered end and adapted for insertion within said orifice; a flat face upon the periphery of said dog parallel to the axis thereof; and an upset portion



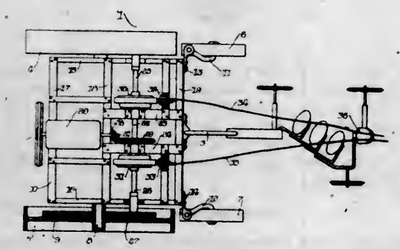
of the surface of said orifice adapted to contact with said face.

1,353,603. SAFETY-RAZOR. SETH G. MALBY, Derby, Conn., assignor to Charles H. Jockmus, Ansonia, Conn., doing business as Ansonia Manufacturing Company. Filed Mar. 22, 1920. Serial No. 367,662. 7 Claims. (Cl. 30—12.)

1. In a safety razor, a hollow handle, an adjusting screw disposed therein and provided with a hollow head, an adjusting pin carried by said adjusting screw and extending into said hollow handle and having a head disposed in said hollow head, and a set screw disposed in said hollow head and adapted to bear against said head of said adjusting pin.

1,353,604. GILL-NET RETRIEVER. CHRIST MARCHIUS, Portland, Oreg. Filed Nov. 11, 1919. Serial No. 337,250. 6 Claims. (Cl. 254—137.)

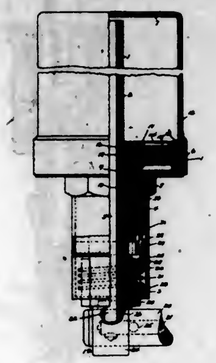
1. In a gill net retriever, a main frame; endless tracks upon said main frame; carriages traveling upon said tracks; net grasping jaws upon said carriages; means to cause said jaws to grasp the net as it is fed to the upper portion of the device; means to cause certain alternate



carriages to release the net at one end of the lower portion of the device; and means to cause the other alternate carriages to release the net at the opposite end of the lower portion of the device.

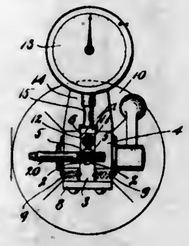
1,353,605. CHECK-HOLDING DEVICE. ANTONIO NAPOLILLO, Rivesville, W. Va. Filed Apr. 10, 1920. Serial No. 372,937. 3 Claims. (Cl. 40—11.)

1. A check holding device of the character described, comprising a body portion, an upstanding hook secured thereto, and a spring guard secured to the body portion and having a longitudinally curved end portion, said end portion having a longitudinal slot formed therein and spaced from the free end of the same, said slot receiving the end portion of the hook with the free end of the hook extending outwardly beyond the longitudinally curved end portion and the free end of such longitudinally curved end portion extending inwardly beyond the hook.



1,353,606. STEERING AND CONTROL MECHANISM FOR TRACTORS AND THE LIKE. GEORGE R. NICHOLS, Jr., Chicago, Ill.; The Peoples Trust and Savings Bank of Chicago administrator of said George R. Nichols, Jr., deceased. Filed Dec. 21, 1916. Serial No. 138,152. 6 Claims. (Cl. 180—17.)

1. In a tractor, a driving shaft, a pair of driving wheels, a pair of clutches for connecting said driving shaft independently to said driving wheels and control elements for said clutches, said control elements comprising each a lever, latch means for controlling the operation of each lever in one direction, a member pivotally mounted on each lever for controlling said latch means, and a single rein attached to each member for manipulating said latch means and lever.



1,353,607. GREASE-CUP. EDMUND NOLAN, Detroit, Mich. Filed Mar. 11, 1920. Serial No. 364,923. 7 Claims. (Cl. 184—105.)

7. The combination with a lubricating connection having a polygonal end, of a grease cup detachably secured thereto, comprising a spindle having an end engageable with the polygonal end of said connection, a barrel base rotatably mounted on said spindle, a barrel proper upon said base, a plunger within said barrel proper and adapted to be actuated thereby, said plunger threadedly engaging said spindle, a clamp having a portion threadedly engaging the connection end of said spindle and a second portion surrounding the polygonal end of said connection, a ratchet non-rotatably secured to said clamp and movable longitudinally thereof, means for yieldably maintaining said ratchet in extended position, a second ratchet non-rotatably secured to said spindle and normally in engagement with said first-mentioned ratchet, coöperating shoul-

der members upon said barrel base and second-mentioned ratchet adapted to lock said barrel base to said second-mentioned ratchet upon rotation of said barrel proper in one direction, a sleeve surrounding said barrel base and movable longitudinally of said spindle to engage said first-mentioned ratchet and disengage the same from said second-mentioned ratchet.

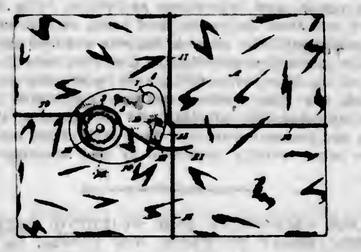
1,353,608. SCREW-THREAD GAGE. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Nov. 1, 1918. Serial No. 260,679. 3 Claims. (Cl. 33—199.)

1. A screw thread gage comprising two pairs of abutments capable of relative movement toward and away from each other and shaped and spaced to enter and fit simultaneously at separated points an accurately-formed screw thread of predetermined dimensions, the abutments of each pair being located at a fixed distance apart and having an unobstructed space between them and the abutments constituting one pair being movable lengthwise of the screw, and means for indicating the separation of the pairs of abutments when pressed against a screw placed between them.

1,353,609. SAFETY-RAZOR. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Dec. 23, 1918. Serial No. 267,886. 4 Claims. (Cl. 30—12.)

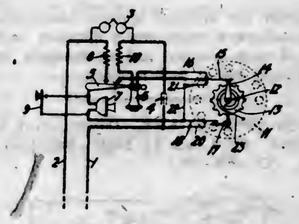
1. In a safety razor, the combination with a guard of relatively fixed opposed jaws adapted to engage simultaneously a blade placed between them and comprising

steps at the ends of the guard and an abutment crossing the plane of the blade when in operative position, and a



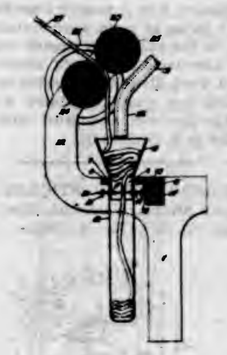
spring operating on the blade transversely to the plane of the latter for moving it into engagement with the abutment and maintaining such engagement during use.

1,353,610. AUTOMATIC CONTROLLER FOR STEERING-GEARS. CHARLES B. POST, New London, Ohio. Filed Nov. 1, 1917. Serial No. 199,666. 4 Claims. (Cl. 280—94.)



1. The combination with the axle wheel hubs and steering bar of an automobile of a casing affixed to said axle and having inclined rear walls, a looped spring member having its extremities mounted in said casing and each extremity of said spring engaging one of said inclined walls and movable thereon toward and away from the other extremity, the looped end of said spring member being pivotally attached to and movable with said steering bar.

1,353,611. PACKAGE-TIE. JAMES H. REED, Burns, Oreg. Filed Dec. 12, 1919. Serial No. 344,436. 2 Claims. (Cl. 24—18.)



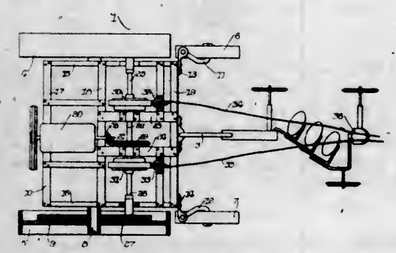
1. A package tie comprising a flexible metallic plate provided at its edge with an outwardly projecting extension integral therewith, said extension having a tapered portion decreasing in width forwardly, said extension being bent upon its inner longitudinal edge to overhang the metallic plate with said portion bent upwardly at an angle with relation to the plate, a button secured to the top of the plate in alinement with the upwardly bent portion, and a cord secured to the plate near said extension and adapted to be passed about the package and about the button with its free end inserted beneath the upwardly bent portion.

1,353,612. TELEPHONE-EXCHANGE SYSTEM. FRANK N. REEVES, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,311. 3 Claims. (Cl. 179—90.)

3. In a telephone substation circuit, a receiver, a circuit therefor, a transmitter, a shunt circuit therefor, an impulse sending device, and contents controlled by said device for opening said receiver circuit and closing said shunt circuit whenever said device is moved from normal.

1,353,613. COP-MAKING APPARATUS. JAMES H. RENTON, Philadelphia, Pa. Filed Apr. 28, 1919. Serial No. 292,125. 3 Claims. (Cl. 226—19.)

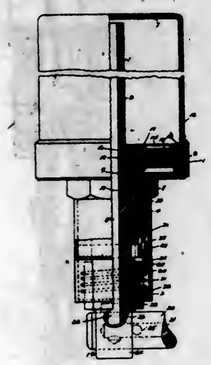
1. Apparatus of the character described including a structure for supporting a plurality of bags with their open ends at the top; air conducting means having openings positioned to direct air downwardly into the open ends of said bags and being spaced from said bags to permit yarn to be inserted into the tops of the bags and blown therein by the air; and means for feeding yarn into said bags through said space; substantially as described.



carriages to release the net at one end of the lower portion of the device; and means to cause the other alternate carriages to release the net at the opposite end of the lower portion of the device.

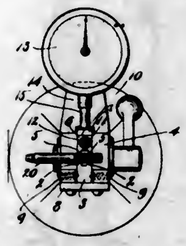
1,353,605. CHECK-HOLDING DEVICE. ANTONIO NAPOLILLO, Rivesville, W. Va. Filed Apr. 10, 1920. Serial No. 372,937. 3 Claims. (Cl. 40—11.)

1. A check holding device of the character described, comprising a body portion, an upstanding hook secured thereto, and a spring guard secured to the body portion and having a longitudinally curved end portion, said end portion having a longitudinal slot formed therein and spaced from the free end of the same, said slot receiving the end portion of the hook with the free end of the hook extending outwardly beyond the longitudinally curved end portion and the free end of such longitudinally curved end portion extending inwardly beyond the hook.



1,353,606. STEERING AND CONTROL MECHANISM FOR TRACTORS AND THE LIKE. GEORGE R. NICHOLS, Jr., Chicago, Ill.; The Peoples Trust and Savings Bank of Chicago administrator of said George R. Nichols, Jr., deceased. Filed Dec. 21, 1916. Serial No. 138,152. 6 Claims. (Cl. 180—17.)

1. In a tractor, a driving shaft, a pair of driving wheels, a pair of clutches for connecting said driving shaft independently to said driving wheels and control elements for said clutches, said control elements comprising each a lever, latch means for controlling the operation of each lever in one direction, a member pivotally mounted on each lever for controlling said latch means, and a single rein attached to each member for manipulating said latch means and lever.



1,353,607. GREASE-CUP. EDMUND NOLAN, Detroit, Mich. Filed Mar. 11, 1920. Serial No. 364,923. 7 Claims. (Cl. 184—105.)

7. The combination with a lubricating connection having a polygonal end, of a grease cup detachably secured thereto, comprising a spindle having an end engageable with the polygonal end of said connection, a barrel base rotatably mounted on said spindle, a barrel proper upon said base, a plunger within said barrel proper and adapted to be actuated thereby, said plunger threadedly engaging said spindle, a clamp having a portion threadedly engaging the connection end of said spindle and a second portion surrounding the polygonal end of said connection, a ratchet non-rotatably secured to said clamp and movable longitudinally thereof, means for yieldably maintaining said ratchet in extended position, a second ratchet non-rotatably secured to said spindle and normally in engagement with said first-mentioned ratchet, coöperating shoul-

der members upon said barrel base and second-mentioned ratchet adapted to lock said barrel base to said second-mentioned ratchet upon rotation of said barrel proper in one direction, a sleeve surrounding said barrel base and movable longitudinally of said spindle to engage said first-mentioned ratchet and disengage the same from said second-mentioned ratchet.

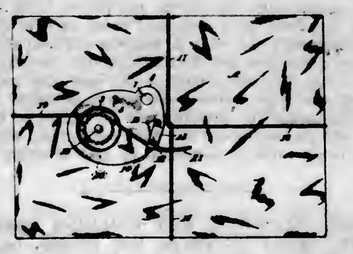
1,353,608. SCREW-THREAD GAGE. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Nov. 1, 1918. Serial No. 260,679. 3 Claims. (Cl. 33—199.)

1. A screw thread gage comprising two pairs of abutments capable of relative movement toward and away from each other and shaped and spaced to enter and fit simultaneously at separated points an accurately-formed screw thread of predetermined dimensions, the abutments of each pair being located at a fixed distance apart and having an unobstructed space between them and the abutments constituting one pair being movable lengthwise of the screw, and means for indicating the separation of the pairs of abutments when pressed against a screw placed between them.

1,353,609. SAFETY-RAZOR. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Dec. 23, 1918. Serial No. 267,886. 4 Claims. (Cl. 30—12.)

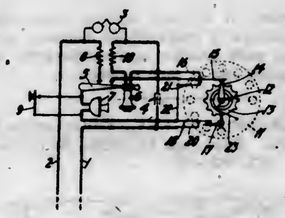
1. In a safety razor, the combination with a guard of relatively fixed opposed jaws adapted to engage simultaneously a blade placed between them and comprising

stops at the ends of the guard and an abutment crossing the plane of the blade when in operative position, and a



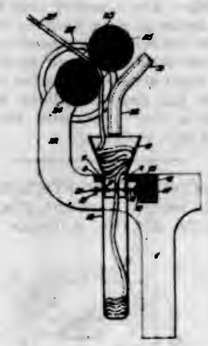
spring operating on the blade transversely to the plane of the latter for moving it into engagement with the abutment and maintaining such engagement during use.

1,353,610. AUTOMATIC CONTROLLER FOR STEERING-GEARS. CHARLES B. POST, New London, Ohio. Filed Nov. 1, 1917. Serial No. 199,666. 4 Claims. (Cl. 280—94.)



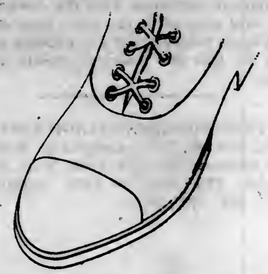
1. The combination with the axle wheel hubs and steering bar of an automobile of a casing affixed to said axle and having inclined rear walls, a looped spring member having its extremities mounted in said casing and each extremity of said spring engaging one of said inclined walls and movable thereon toward and away from the other extremity, the looped end of said spring member being pivotally attached to and movable with said steering bar.

1,353,611. PACKAGE-TIE. JAMES H. REED, Burns, Oreg. Filed Dec. 12, 1919. Serial No. 344,436. 2 Claims. (Cl. 24—18.)



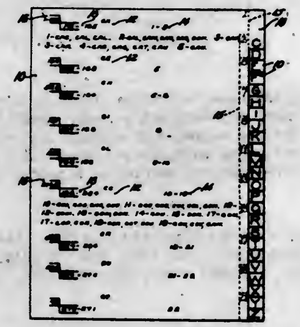
1. A package tie comprising a flexible metallic plate provided at its edge with an outwardly projecting extension integral therewith, said extension having a tapered portion decreasing in width forwardly, said extension being bent upon its inner longitudinal edge to overhang the metallic plate with said portion bent upwardly at an angle with relation to the plate, a button secured to the top of the plate in alinement with the upwardly bent portion, and a cord secured to the plate near said extension and adapted to be passed about the package and about the button with its free end inserted beneath the upwardly bent portion.

1,353,612. TELEPHONE-EXCHANGE SYSTEM. FRANK N. REEVES, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,311. 3 Claims. (Cl. 179—90.)



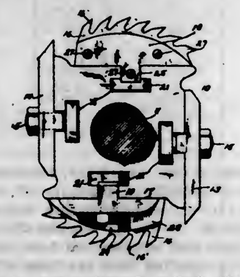
3. In a telephone substation circuit, a receiver, a circuit therefor, a transmitter, a shunt circuit therefor, an impulse sending device, and contents controlled by said device for opening said receiver circuit and closing said shunt circuit whenever said device is moved from normal.

1,353,613. COP-MAKING APPARATUS. JAMES H. RENTON, Philadelphia, Pa. Filed Apr. 23, 1919. Serial No. 292,125. 3 Claims. (Cl. 226—19.)



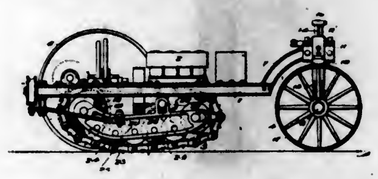
1. Apparatus of the character described including a structure for supporting a plurality of bags with their open ends at the top; air conducting means having openings positioned to direct air downwardly into the open ends of said bags and being spaced from said bags to permit yarn to be inserted into the tops of the bags and blown therein by the air; and means for feeding yarn into said bags through said space; substantially as described.

1,353,614. HOOK-LINK FASTENER FOR EYELETED WEARING-APPAREL. HERBERT ERNEST ROSS, Sydney, New South Wales, Australia. Filed Nov. 29, 1918. Serial No. 264,549. 3 Claims. (Cl. 24—73.)



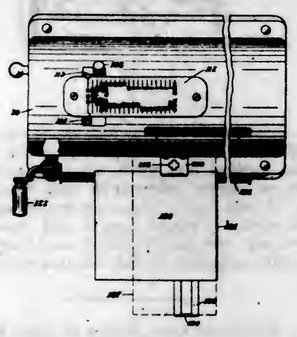
3. A fastener for eyeleted apparel comprising rigidly connected members, a transversely disposed anchor hook on one end of each member, and an inwardly bent catch hook on the other end of each member.

1,353,615. DICTIONARY-KEY. CONSTANTINE SAVITSKY, Denver, Colo. Filed June 15, 1920. Serial No. 389,223. 4 Claims. (Cl. 283—36.)



1. In a dictionary key, a master page for each letter of the alphabet, a series of main word divisions for each letter indicated on the respective master pages, a plurality of key pages associated with each master sheet, indicia in each of said word divisions referring to certain of said key pages, each key page containing a series of word roots, and page numbers associated with said roots referring to pages in a dictionary.

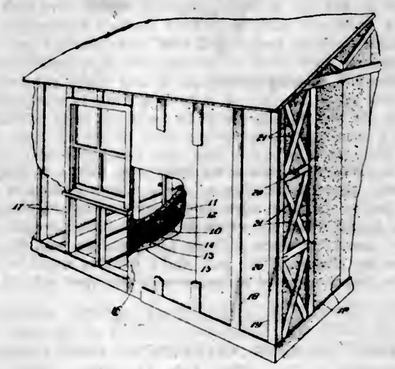
1,353,616. WOODWORKING STICKER OR MOLDER-HEAD. JOHN SHUFF, Waukesha, Wis. Filed Apr. 15, 1920. Serial No. 374,175. 4 Claims. (Cl. 144—224.)



1. In a device of the class described, the combination with a revoluble head having a slot therein, of an attaching member engageable with the revoluble head, a projection on said attaching member for engagement in the slot of said head, a cutting member, a clamping plate for securing the cutting member to the attaching member, a projection on said clamping plate for engagement in the slot of said head, and means for securing the attaching member to said head.

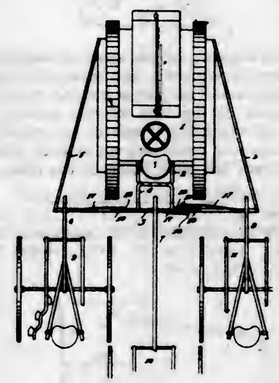
1,353,617. TRACTION-MACHINE. WILLIAM STRAIT, Appleton, Wis., assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Original application filed Dec. 10, 1913, Serial No. 805,767. Divided and this application filed Nov. 4, 1916. Serial No. 129,554. 19 Claims. (Cl. 180—9.1.)

1. In a traction machine, the combination of a main frame, a driving tractor pivoted near one of its ends as a unit in relation to the main frame, a steering unit pivotally mounted for steering in respect to the main frame, and spring mechanism supporting the main frame upon said steering unit.



1,353,618. CHECK-WRITER. LIBANUS M. TODD and CHARLES G. TIEFEL, Rochester, N. Y., assignors, by mesne assignments, to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 23, 1915. Serial No. 23,322. 26 Claims. (Cl. 197—6.2.)

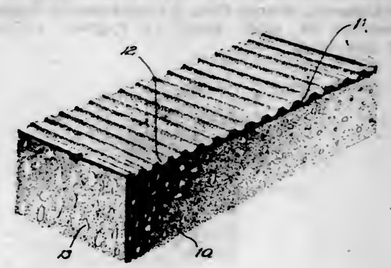
1. In a printing apparatus, the combination of a rotary type carrier provided with a plurality of type forms; a rotary platen, said type forms and platen being movable toward and from each other and being each rotatable in engagement with the other to impress and feed the work; selective mechanism for effecting a relative selective movement of the type forms and platen; operating means for rotating the type carrier; and means actuated by said operating means for effecting said movement of the type forms and platen toward and from each other, said latter means being variably controlled by said selecting mechanism.



1,353,619. MATERIAL FOR BUILDING CONSTRUCTION. HENRY W. WHITE, New Orleans, La. Filed Feb. 20, 1920. Serial No. 360,092. 3 Claims. (Cl. 154—45.9.)

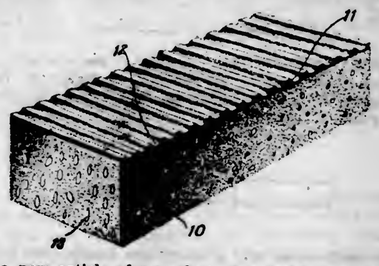
2. A sheet material for the exterior of buildings comprising, in combination, a major layer of waste fibrous material, the individual elements of which are saturated and thinly coated with bituminous material, said elements adhering at their points of contact in the mass to form

a cellular mass, a waterproof facing layer adhering to and closing the cells of said layer at one surface thereof and a backing layer of sheet material adhering to and closing the cells of said layer at the other surface.



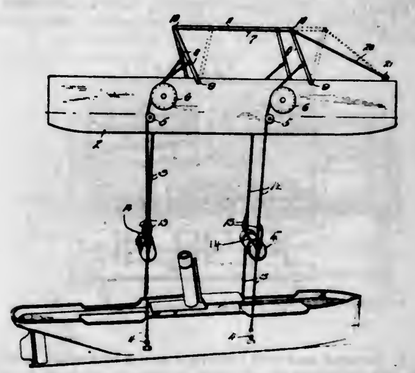
1,353,620. DRAFT CONNECTION FOR EARTH-STIRRING IMPLEMENTS. CHARLES P. ZINSER, Washington, Ill. Filed Oct. 29, 1919. Serial No. 334,144. 6 Claims. (Cl. 213—67.)

1. In a draft rigging, in combination with a tractor, a single draft-bar for attachment thereto of a series of earth stirring implements, said bar having rigid attachment to the said tractor and supported entirely thereby, and a member at each end of the draft-bar connected at one end thereto, and connected each at its other end to the tractor forward of the place of attachment of said bar, all of the parts being rigid with respect to one another and with respect to the tractor.



1,353,621. METHOD OF MANUFACTURING AN INSULATING MATERIAL. HAROLD S. ASHENHURST, Chicago, Ill., assignor of four-fifths to James J. Reynolds, Chicago, Ill. Filed Apr. 29, 1918. Serial No. 231,371. 2 Claims. (Cl. 154—28.)

1. The method of preparing a reinforced insulating block which consists in spreading on the block a relatively thin coat of plastic material having a higher heat-resisting capacity than the substance of which the block is



composed, then passing a corrugating tool over the plastic material, then allowing the plastic material to harden.

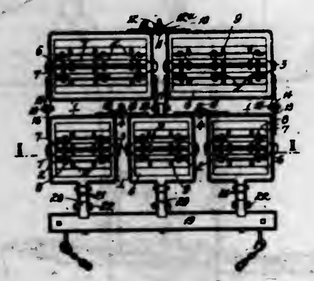
1,353,622. REINFORCED INSULATING MATERIAL. HAROLD S. ASHENHURST, Chicago, Ill., assignor of four-fifths to James J. Reynolds, Chicago, Ill. Original application filed Apr. 29, 1918, Serial No. 231,371. Divided and this application filed Dec. 30, 1918. Serial No. 268,976. 1 Claim. (Cl. 154—44.)

As a new article of manufacture, a body of porous insulating material having a ribbed surface composed of fiber asbestos permanently joined to the body during the process of manufacture thereof.

1,353,623. DEVICE FOR RAISING SUNKEN VESSELS. WALTER C. BECKWITH, Fostoria, Ohio. Filed Jan. 24, 1920. Serial No. 353,647. 3 Claims. (Cl. 114—51.)

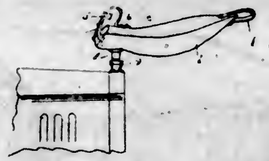
1. An apparatus for raising sunken vessels, comprising a buoyant body, a frame pivotally secured to said buoyant body, lifting cables secured at opposite ends to said frame and to said sunken vessel and passing over sheaves carried by said floating body and means for rocking said frame.

1,353,624. STAKE-HOLDER. CUTHBERT C. BERGSTROM, Denver, Colo., assignor to The Bergstrom-Brewster Motor Company, Denver, Colo., a Corporation of Colorado. Filed Feb. 24, 1919. Serial No. 278,981. 2 Claims. (Cl. 296—43.)



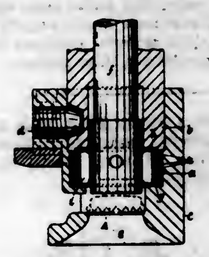
1. A stake holder, having a stake-receiving socket and a chamber, a partition between the socket and the chamber, the partition having an aperture, an outer socket wall and an outer chamber wall, said walls being on opposite sides of said aperture, a dog movable in said aperture, and a spring in the chamber and engaging the dog to project it through said aperture and interposed between the dog and said outer chamber wall, the lower end of the dog having a laterally extending ledge partially forming a pocket to assist retention of the spring in operative position.

1,353,625. PEN-BRUSH. ALBERT F. BRANDENBURG, Dayton, Ohio, assignor of one-half to Harry E. Palmer, Dayton, Ohio. Filed Sept. 18, 1919. Serial No. 324,396. 1 Claim. (Cl. 120—42.)



In combination with a hollow pen handle, and a feeder, a flexible tubular member having connection with ends of the handle and feeder member, a sponge supported within the flexible tubular member and having its surfaces contacting with the inner walls of the flexible tubular member, whereby pressure on the flexible tubular member causes material contained in the sponge to be forced into the feeder.

1,353,626. WEED AND CLOD CUTTER. HENRY A. M. BROMFIELD, Daylesford, Victoria, Australia. Filed Apr. 7, 1919. Serial No. 288,046. 6 Claims. (Cl. 55—61.)

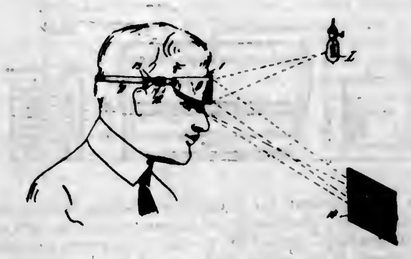


1. In weed and clod cutters, a series of loosely connected frames arranged in succeeding lines, each frame containing a plurality of ground rollers of equal diameter formed on their peripheries with a series of flattened portions, pairs of angle iron plates bolted to said flattened portions and running parallel to the axle of the rollers, and a cutting blade fitted between and bolted to each pair of said plates.

1,353,627. COLLAPSIBLE PAIL. DAVID H. BUCHER, Louisville, Ky. Filed May 29, 1920. Serial No. 385,323. 8 Claims. (Cl. 150—48.)

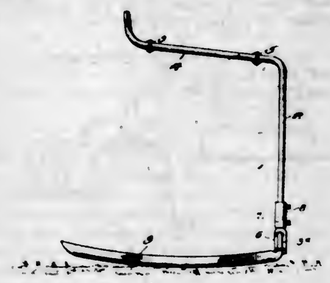
8. A collapsible pail comprising two pieces of flexible material secured together at their edges to form a flat pail having one side open, one of said pieces of material being longer than the other so as to extend beyond the latter along the open side to form a free flap for the temporary closure of the pail, and a pouring spout located in the longer piece of material near the open side of the pail.

1,353,628. SEALING APPLIANCE. AMOS CALLESON, Brooklyn, N. Y. Filed Feb. 21, 1920. Serial No. 360,344. 5 Claims. (Cl. 226—86.)



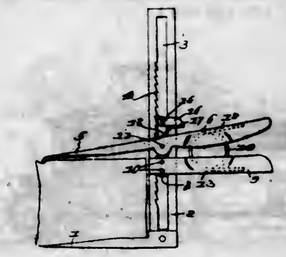
1. The combination of, an annular expansible throat-forming series of segments and means to apply, to portions of said series in planes remote from each other and transverse of the axis of the series, yielding resistance to the expansion of such series including a spring ring embracing said series and cut by both said planes and being rigid from one such plane to the other.

1,353,629. COLLAPSIBLE BOX. GEORGE A. CIBULKA, St. Louis, Mo. Filed June 27, 1919. Serial No. 307,112. 3 Claims. (Cl. 229—6.)



1. A box of the character described, comprising pivotally united back and end walls extending the full height of the box; a bottom wall closing the bottom of the box; a front wall portion pivotally united with the end walls and the bottom wall and extending a distance above the bottom wall and terminating relatively a considerable distance below the upper edges of the back and end walls; a front wall portion pivotally connected with the first-named front wall portion and having its ends free from said end walls, and being foldable upwardly into contact with said end walls to close the front of the box and being foldable downwardly away from the end walls of the box to open the box; a section in pivotal connection with the upper edge of said pivoted front wall portion arranged to fold over across the upper side of the box; a section in permanent pivoted connection with the back wall of the box foldable upon said first-named section; means for interlocking said two sections to hold them permanently across the upper end of the box; a number of perforated supports in the box pivoted to one of said walls and being detached from the other walls, adapted to fold flat against the wall to which they are pivoted to permit the box to be folded flat, and the upper one of said supports being adjacent to the upper edge of the first-named front wall portion; and a support in connection with the detached edges of said perforated supports adjacent to the opposite wall of the box and resting upon the bottom wall for sustaining said supports when the box is in use.

1,353,630. COMBINED EYE-SHADE AND REFLECTOR. GREGORIO C. COCHING, Manila, P. I. Filed Aug. 11, 1919. Serial No. 316,744. 4 Claims. (Cl. 128—21.)

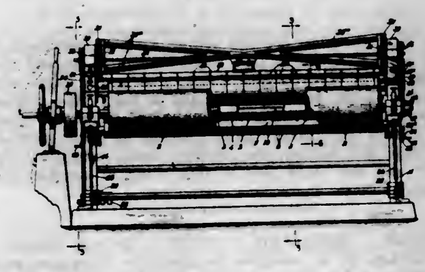


1. An eye shade comprising a frame having a mirror mounted therein with its reflecting face disposed outwardly, connecting means carried thereby, and a curved forehead engaging member mounted on its upper edge and extending in a plane at right angles thereto.

1,353,631. SCYTHE-SNATHE. D FELLOWS COLLICUTT, Columbia, S. C. Filed Mar. 3, 1917, Serial No. 152,371. Renewed Aug. 4, 1920. Serial No. 401,282. 1 Claim. (Cl. 56—325.)

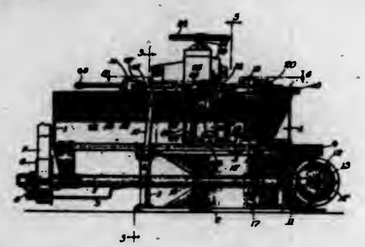
In a scythe, a blade having a tang, a plate carried by said tang and formed with a cylindrical extension, a snathe having a straight portion, 2, a sleeve having binding bolts to receive the lower extremity of said portion 2 and the cylindrical extremity of said plate, and a handle portion, 4, on said snathe extending at substantially right angles from said portion 2 in the same direction as the blade and substantially parallel with the blade.

1,353,632. CLAMP. ALONSO COONS, Wappingers Falls, N. Y. Filed Mar. 18, 1919. Serial No. 283,418. 3 Claims. (Cl. 223—54.)



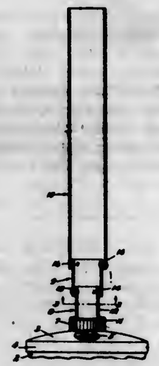
1. A clamp for the purpose set forth comprising a stationary jaw, a body member attached to the stationary jaw, a swinging movable jaw, a slide carried by the body member, the swinging jaw being pivotally mounted on the slide, and means for adjusting the slide longitudinally along the body member.

1,353,633. LIFTING-ROD COLLAR FOR SPINNING-FRAMES. JOHN THOMAS COTHRAN, Spartanburg, S. C. Filed Feb. 19, 1920. Serial No. 359,920. 2 Claims. (Cl. 118—1.)



2. The combination with a lifting rod, and rails through which the rod extends, of a collar secured within each of the rails and comprising opposed detachably connected segments defining a substantially angular opening through which the rod extends, said rod being cylindrical, and spaced bearing portions within the opening for sliding engagement by the rod, there being clearance spaces between said bearing portions for the free passage of lint through the collar.

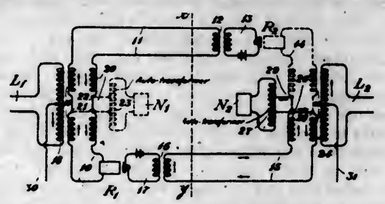
1,353,634. PROCESS OF AND MACHINE FOR WINDING ROLLS OF PAPER TOWELS AND TOILET-PAPER, &c. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to Albany Perforated Wrapping Paper Company, Albany, N. Y., a Corporation of New York. Filed Dec. 16, 1918. Serial No. 266,862. 9 Claims. (Cl. 164—65.)



1. In a roll forming machine, the combination of a drum or roll, means for guiding a web of paper thereto, grooves in said roll transverse to said web, a rotatably mounted serrating knife adapted to coöperate with said grooves, and rolls adapted to press said web against said drum or roll on opposite sides of said knife.

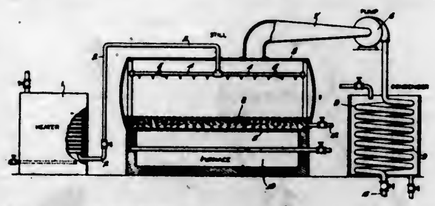
1,353,635. METAL-BENDING MACHINE. JOHN F. CRAWFORD, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1919. Serial No. 278,270. 18 Claims. (Cl. 153—40.)

1. In a machine for forming angle-iron rings, the combination of a frame, a rotary disk mounted thereon, a roll upon which said disk travels and is frictionally driven thereby, a vertically adjustable roll above said disk, a horizontally positioned roll intermediate said rolls, said adjustable and intermediate rolls being adapted to retain angle-iron material between them and said disk, and means for rotating said disk to propel said material and rotate said adjustable and intermediate rolls through frictional engagement with said material.



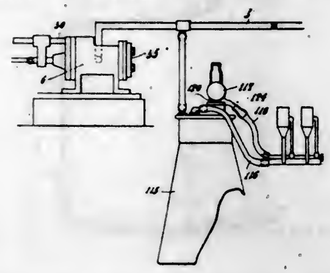
1,353,636. SMOKELESS ORCHARD-HEATER. WILLIAM ROY CRAWFORD, Pomona, Calif. Filed May 19, 1919. Serial No. 298,271. 2 Claims. (Cl. 158—91.)

2. In a smokeless orchard heater, a stack comprising a pipe section, a second pipe section mounted around the upper end of the first pipe section and spaced therefrom forming an up draft opening, and a third pipe section mounted around the upper end of the second pipe section and spaced therefrom forming a second up draft opening, the first and second pipe sections being comparatively short and the third pipe section being of considerable length and size.



1,353,637. REPEATER-CIRCUIT. GEORGE CRISSON, Hoboken, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1918. Serial No. 268,072. 10 Claims. (Cl. 179—170.)

1. In a telephone system, a pair of transmission lines, a repeater circuit interconnecting said lines, said repeater circuit including one-way paths for transmitting in opposite directions, and means for associating the ends of said paths with said transmission lines, said means comprising transformers having one winding in the transmission lines and divided windings arranged with one-half



in each path, and balancing networks bridged across the junction points of the paths at the midpoints of the divided windings.

1,353,638. APPARATUS FOR PRODUCING GASOLENE AND OTHER PRODUCTS FROM HYDROCARBONS. ALVIN A. DAUGHERTY, New York, N. Y. Filed May 23, 1917. Serial No. 170,465. 1 Claim. (Cl. 196—25.)

In an apparatus for producing gasolene from hydrocarbon oils the combination of means for heating said oils to temperatures above 700° F. and at pressures exceeding 300 pounds to the square inch; means for permitting said heated oils to suddenly expand into vapors at substantially the pressure of the atmosphere, a suction apparatus for removing said vapors from said last named means; additional heating means for vaporizing any liquid residue that may collect in said last named means; and means into which said suction means discharges for condensing into a liquid form the vapors thus produced, substantially as described.

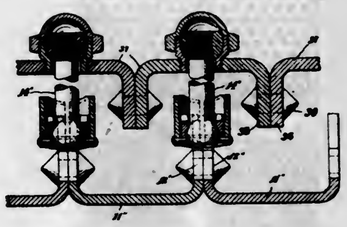
1,353,639. VACUUM MILKING-MACHINE. CLAUDE HUDSON DAVIS, Wanganui, New Zealand. Original application filed Nov. 11, 1915, Serial No. 60,893. Divided and this application filed Jan. 4, 1917. Serial No. 140,569. 5 Claims. (Cl. 31—101.)

1. In a milking machine, a milk receiving can, a pulsator comprising a cylinder open at its middle portion to the air, a vacuum connection to said cylinder from said can, a double-ended piston located within said cylinder and having a space open to the atmosphere between the ends of said pistop and having ports communicating with the ends thereof and a passage in communication with vacuum, a slide valve alternately admitting air and

vacuum to the ends of said piston in order to cause it to reciprocate within said cylinder, and means for operating said valve upon the reciprocation of said piston.

2. In a milking machine, a milk receiving can, a pulsator comprising a cylinder open at its middle portion to the air, a vacuum connection to said cylinder from said can, a double-ended piston located within said cylinder and having a space open to the atmosphere between the ends of the piston, a valve face between the ends of said piston, a nipple from said cylinder adapted to be connected to the teat-cup linings, said piston being adapted to alternately admit vacuum and air to said nipple, said piston having a port leading to the said valve face and adapted for constant communication with said vacuum connection, ports leading from the ends of said piston to the said valve face, a slide valve controlling said ports leading to said valve face and means for operating said slide valve upon the reciprocation of the said piston, substantially as set forth.

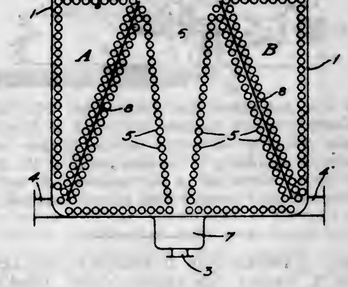
3. In a milking machine, a milk receiving can, a pulsator comprising a cylinder open at its middle portion to the air, a vacuum connection to said cylinder from said can, a nipple from said cylinder adapted to be connected to the teat cup linings, a double-ended piston within said cylinder having a space betwen said ends open to the atmosphere and an air passage open to said space, said air passage adapted to intermittently admit air to the nipple leading to the teat-cup linings, said piston having ports leading to the ends thereof, a slide valve controlling said ports to admit vacuum and air alternately to the ends of the piston in order to cause it to reciprocate within said cylinder, and said piston being adapted to admit vacuum to said nipple alternately with the air, substantially as set forth.



4. In a milking machine, a milk receiving can, a pulsator comprising a cylinder open at its middle portion to the air, a vacuum connection to said cylinder from said can, a double-ended piston located within said cylinder and having a space open to the atmosphere between the ends of said piston, and having ports communicating with the ends thereof and a passage in communication with vacuum, a slide valve adapted alternately to admit air and vacuum to the ends of said piston in order to cause it to reciprocate within said cylinder, a spring operated member pivoted in said cylinder, a wiper located at the end of said member whereby the said slide valve is caused to return when said piston has completed its stroke, substantially as set forth.

5. In a milking machine, a milk receiving can, a pulsator comprising a cylinder open at its middle portion to the air, a vacuum connection to said cylinder from said milk receiving can, a double-ended piston within said cylinder having a space betwen the ends open to the atmosphere and a port leading from said space open to vacuum and ports between the ends of said piston and said open space, a slide valve controlling said ports and means for operating said slide valve upon the reciprocation of the piston, substantially as set forth.

1,353,640. FIRE-BOX FOR BOILERS. CHARLES DUCAS, New York, N. Y. Filed July 10, 1917. Serial No. 179,639. 34 Claims. (Cl. 122—58.)

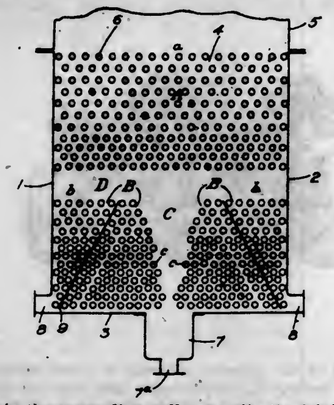


5. A steam-boiler fire-box construction, comprising a wrapper-sheet; a sectional crown-sheet; stay-bolt members movably connected at one end with the wrapper-sheet by a ball and socket universal-joint, and at the other end with the sectional crown-sheet; the sections of the crown-sheet being of substantially U-shape in cross-section and having the side walls thereof secured together; and the side walls of the crown-sheet members being provided with vertical slots to permit of expansion and contraction and prevent distortion of such member by reason of the unequal heating of the central and side walls of such section members, the universal connections connecting the stay-bolt members with the sectional crown-sheet members by their socket portions located in slots formed in the abutting side walls of the sectional crown-sheet members.

22. In combination, wrapper-sheet sections comprising channel members having inwardly turned flanges abutting

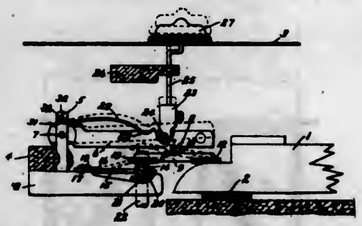
the flanges of the adjacent sections; a crown-sheet; and stay bolts having connection with said crown-sheet and the intra-marginal portion of the wrapper sheet sections.

1,353,641. SURFACE CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa. Filed Aug. 21, 1918. Serial No. 250,906. 8 Claims. (Cl. 257—43.)



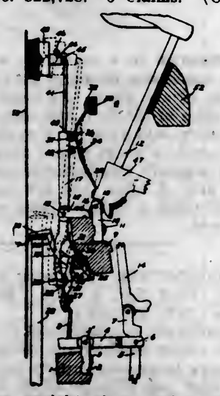
1. In combination in a condenser, a shell having an inlet port, a condensate discharge port and two non-condensable fluid offtake ports, two nests of tubes located on opposite sides of the shell and each served by one of said offtake ports, said nests being so disposed within the shell as to provide a wedge shaped fluid passage between them, and a separate longitudinally extending baffle dividing each nest of tubes into two substantially triangular banks of tubes, both banks being served by the same air offtake port.

1,353,642. CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa. Filed Nov. 8, 1918. Serial No. 261,710. 10 Claims. (Cl. 257—24.)



1. In a condenser, a substantially rectangular shell, a condensate outlet adjacent the bottom of the shell, a group of cooling tubes substantially filling the upper portion of the shell and through which fluid is adapted to flow toward the bottom of the condenser, a second group of tubes spaced from and beneath the first group arranged so that the fluid traversing the first group may enter

the top and side of the second group, and fluid extracting means adapted to draw fluid downward toward a

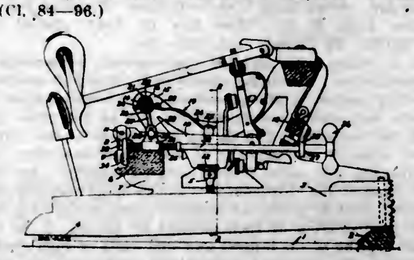


point in the group diagonally opposite the joining corners of the exposed top and side faces of the group.

1,353,643. DAMPER FOR GRAND-PIANO ACTIONS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,727. 6 Claims. (Cl. 84—217.)

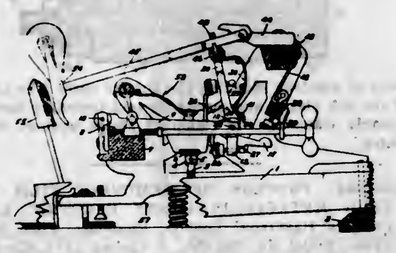
6. In a grand piano, the combination with a key, a horizontally disposed damper lever and a damper rod; of means pivotally connected to the damper lever for substantially equalizing the action touch of the key irrespective of the movement of the damper rod; said means being in permanent contact with the key and the damper rod.

1,353,644. DAMPER FOR UPRIGHT-PIANO ACTIONS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,728. 6 Claims. (Cl. 84—217.)



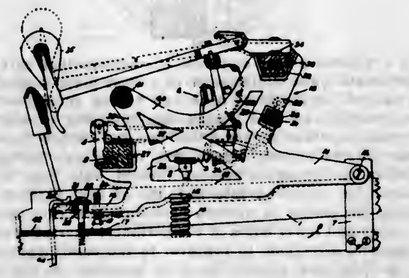
1. A damper for upright piano actions comprising a damper lever, an equaliser pivotally connected intermediate of its ends to the damper lever, a damper rod positioned to carry one end of the equaliser, and a key having means connecting it operatively with the other end of the equaliser.

1,353,645. PIANISSIMO DEVICE FOR UPRIGHT-PIANO ACTIONS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,729. 7 Claims. (Cl. 84—61.)



1. A pianissimo device for upright piano actions comprising in combination, action brackets having lower rail abutments extending backwardly from the lower ends thereof and swing supporting arms extending forwardly and opposite to the lower rail abutments, a lower action rail having rigid swing arms extending forwardly and pivotally connected to the swing supporting arms and having capstan screws extending downwardly from the rail and adapted to bear upon the lower rail abutments, upper rail abutments extending backwardly from the action brackets and in vertical alinement with the lower rail abutments, springs inserted between the upper abutments and the lower action rail, hammer rest rail abutments extending forwardly from the upper part of the action brackets, a hammer rest rail having capstan screws extending downwardly from the rail and adapted to bear upon the hammer rest rail abutment, links connecting the hammer rest rail to the rigid swings of the lower action rail and intermediate of their ends, lower action swings connected to the lower action rail and extending forwardly and bearing with their outer ends upon the piano keys, abstract members connecting with the swings carried by the lower action rail and at a proper distance backwardly of the point of bearing upon the piano keys, and jacks connected to the abstracts for operating the hammers.

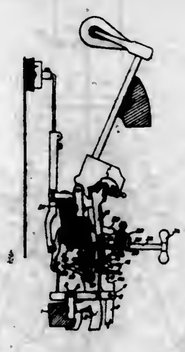
1,353,646. TOUCH-REGULATOR FOR GRAND-PIANO ACTIONS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,730. 3 Claims. (Cl. 84—96.)



3. A touch regulator for grand piano actions comprising a collective regulating rod having a plurality of slots, hooks disposed outwardly from the rod respectively adjacent to the slots, springs having coils respectively mounted upon the hooks, one end of the springs bearing operatively upon the piano action, and the other end of the spring bearing upon the regulating rod within the slots, and screws inserted through the rod and into the slots for raising and lowering the ends of the springs carried within the slots.

1,353,647. ACTION FOR GRAND PIANOS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,731. 5 Claims. (Cl. 84—26.)

1. In an action for grand pianos, a wippen pivotally mounted at one end and adapted to be operated by a piano key, a jack pivotally connected to the free end of the wippen and having an extension below its pivotal point, a heel on said extension, adjusting means mounted on the piano for engaging said heel, a stop on said wippen, adjusting means on said extension for engaging said stop, both adjusting means being adapted respectively to engage said heel and said stop to stop the vibration of the jack upon its upstroke, a hammer, and an adjustable compensating spring connected to the jack and to the shank of the hammer to exert pressure upon all the parts coming under its influence at all times.



1,353,648. ACTION-BRACKET FOR GRAND PIANOS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,732. 7 Claims. (Cl. 84—102.)

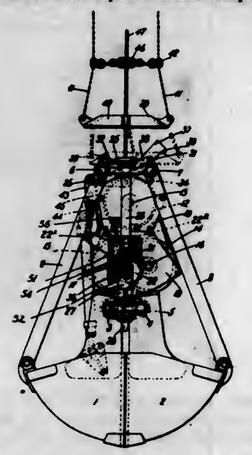
1. An action bracket adapted to be pivotally mounted at its forward end, resilient means supporting the rear end of the bracket, an adjusting screw limiting the downward movement of the rear end, an adjusting screw limiting the upward movement of the rear end of the bracket, and means operatively connecting the rear end to a soft pedal.

1,353,649. COMBINATION JACK-SPRING AND TOUCH-REGULATOR FOR UPRIGHT-PIANO ACTIONS. FRANK L. GEORGE, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,733. 5 Claims. (Cl. 84—96.)

3. In a jack spring and touch regulator for upright piano actions, in combination, brackets adapted to carry piano actions, the piano actions comprising mechanism embodying jacks, jack springs mounted upon the jacks by means adapted to be adjusted vertically whereby the

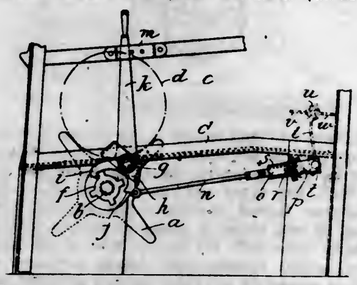
spring pressure on any individual jack may be varied, and means for collectively varying the spring pressure exerted downwardly upon the jacks by the jack springs.

1,353,650. COMBINED PAIL AND SPRINKLER. BARNETT W. GROVES, St. Petersburg, Fla. Filed Feb. 20, 1918. Serial No. 218,281. 1 Claim. (Cl. 299—102.)



A combined pail and sprinkler comprising a pail having an opening in its bottom wall, a sleeve secured in said opening and projecting above and below the bottom of said pail, the upper portions of said sleeve having inlet openings formed therein, a cap secured over the upper end of said sleeve, a spider secured in said sleeve in the same plane with the bottom wall of the pail and having a central opening and radially arranged outlet openings, a removable sprinkler member mounted on the lower end of said sleeve, a bail handle for said pail, a valve rod having a limited movement through the central opening of the spider and through the cover of the sleeve, a valve rigidly mounted on said valve rod, a flexible member connected with the upper end of said valve rod and with the bail handle of the pail, an operating ring secured in the upper portion of said flexible member whereby a finger may be inserted to raise the valve from position upon the spider without releasing the grip upon the bail handle of the pail, said valve when raised from the spider permitting the fluid from the pail to pass into and through the sleeve and through the openings of the spider, and means surrounding the valve rod between the valve and the cap of the sleeve to resiliently retain the valve in engagement with the spider.

1,353,651. GRAB. DUDLEY JAMES BARNARD, Barking, England. Filed July 14, 1920. Serial No. 396,296. 7 Claims. (Cl. 37—30.)



1. In a grab of the kind herein described, the combination of means connecting the cross-beam the power shaft and the top cross bars comprising two vertically disposed telescopic devices arranged one on each side of the grab one member of each device being carried by links mounted between the top cross bars and the other mem-

bers being carried by the cross beam and means for guiding said beam and said power shaft comprising sleeves

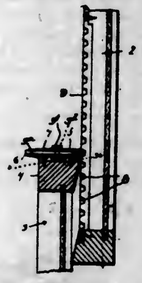
or thimbles carried by the frame in which the power sheaves are mounted and adapted to form guides for the telescopic members.

1,353,652. MEANS FOR HOLDING AND RELEASING DEPTH CHARGES, MINES, AND THE LIKE ON BOATS OR SHIPS. JAMES HAMPTON, Southampton, England, assignor of one-half to John I. Thornycroft and Company Limited, London, England. Filed May 23, 1919. Serial No. 299,322. 4 Claims. (Cl. 114—18.)

1. For controlling the discharge of cylindrical mines and the like, the combination with an inclined way embodying a pair of separated guides of a shaft arranged transversely thereto and intermediate of their length, a pair of star wheels carried by said shaft and arranged between the guides, said star wheels being so positioned that one pair of arms of each normally engages the foremost of a series of mines on the guideway and holds it at a position intermediate of the length of the guideway, an escapement wheel upon the shaft aforesaid and arranged to one side of the guideway, an escapement lever and operating means therefor adapted with movement in one direction to release the star wheels so that they can liberate the foremost mine and obstruct the travel of the mine next in order until with a movement of the escapement lever in the opposite direction, the wheels are released again, thereby permitting the wheels to move through a further angle and the arrested mine to follow the same until the normal holding position of the mine is reached.

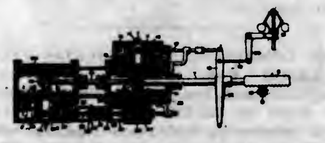
1,353,653. RAIL-JOINT-COUPLING DEVICE. JOHN HOPKINS HARNSBERGER, Catlett, Va. Filed May 25, 1920. Serial No. 384,084. 3 Claims. (Cl. 238—191.)

2. In a device of the class described, the combination with a rail, of a pair of fish plates engaging said rail, each of said fish plates provided with double beveled outer face portions, a fastening device extending under the rail and through the sides of the fish plates, said fastening device including a fixed and a detachable clamping plate, said clamping plates provided with double beveled inner



faces or portions engaging the similar outer face portions of the fish plates, and means on said fastening device for securely clamping the clamping plates against the fish plates.

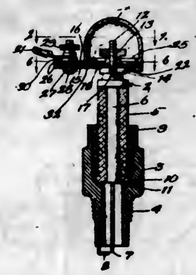
1,353,654. PROCESS OF REMOVING FILM FROM USED METALLIC-FILAMENT ELECTRIC LAMPS. FRANCIS HARRISON, London, England. Filed July 8, 1919. Serial No. 309,386. 3 Claims. (Cl. 87—5.)



1. The process of removing the film from used metallic filament electric lamps which consists in washing the inner surface of the bulb with hydrogen peroxid.

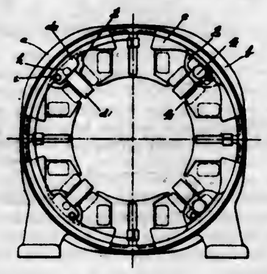
1,353,655. WINDOW-HOLDER. THOMAS J. HEADY, Cottonwood, Ariz. Filed Aug. 12, 1916. Serial No. 114,603. 1 Claim. (Cl. 292—241.)

In a window holder and lock, the combination with an upper and a lower sliding sash, of a wear plate secured to the mid rail of the lower sash and having an upper concaved surface, an oval shaped cam rotatably carried by the wear plate and covering the concaved surface thereof, a bar carried by one side of the upper sash having a plurality of V-shaped notches therein, said cam being adapted for extending into any one of said notches for holding the sashes in various positions, said cam having the upper and lower edges of the periphery thereof beveled in opposite directions to conform to the configuration of the notches, and permit the easy insertion of the cam therein, as and for the purpose specified.



1,353,656. FLUID-OPERATED MOTOR. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,939. 4 Claims. (Cl. 121—42.)

1. In an apparatus of the character described, the combination of a fluid actuated motor having a pilot valve, a

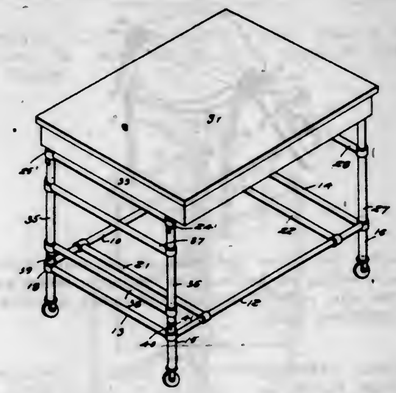


second fluid actuated motor having its moving element connected to the moving element of the first-named motor, and means controlled by the fluid pressure of the first-named motor for admitting fluid pressure to the second-named motor.

1,353,657. SPARK-PLUG INTENSIFIER. RICHARD E. HILDEBRAND, Chicago, Ill. Filed Jan. 29, 1917. Serial No. 145,043. 4 Claims. (Cl. 175—183.)

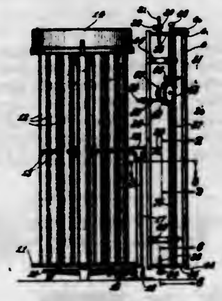
1. The combination with a spark plug, of an intensifier on the outer or exposed end of the plug having a ring-form electrode and a central electrode with an annular spark-gap therebetween and a transparent hood inclosing intensifier.

1,353,658. DYNAMO-ELECTRIC MACHINE. JAROSLAW K. KOSTKO, St. Louis, Mo. Filed Dec. 18, 1916. Serial No. 137,678. 6 Claims. (Cl. 171—252.)



4. In a dynamo-electric machine, a supporting structure comprising a ring with lateral projections and a ring attached to the said projections, yoke laminations and field poles thereon mounted between said rings, said laminations being centered by said projections, the outer surfaces of the projections being in contact with the inner edges of said yoke laminations.

1,353,659. STOCKING. WILLIAM J. LONGTIN, Philadelphia, Pa., assignor to Allen Hosiery Company, Wayne Junction, Germantown, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,857. 1 Claim. (Cl. 66—4.)

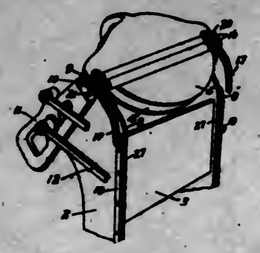


A stocking having a leg portion consisting of a continuous knitted tubular web, provided at the back with a lengthwise reinforcement stripe, having a lengthwise running line of stitches, said reinforcement and stitches constituting an emphasized seam, substantially as described.

1,353,660. SERVING-TABLE. FREDRICK P. MAIN, Cleveland, Ohio. Filed Mar. 18, 1920. Serial No. 366,770. 3 Claims. (Cl. 45—31.)

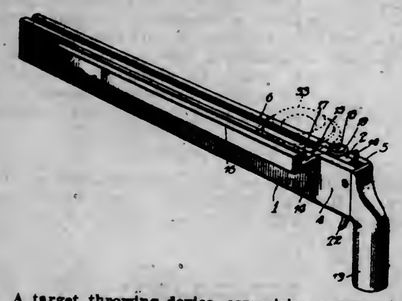
1. In a table, a base portion and a structure carried thereby and comprising a plurality of arch-shaped frame members, and a top supported by said arch members, the arch members each including one side element mounted to swing inwardly toward the center of the arch, the other side elements and the horizontal elements of the arch members being fixed rigidly with relation to the base portion.

1,353,661. MEASURING AND CUTTING MECHANISM. JOHN L. MUELLER, St. Louis, Mo. Filed July 23, 1917. Serial No. 182,337. 14 Claims. (Cl. 33—129.)



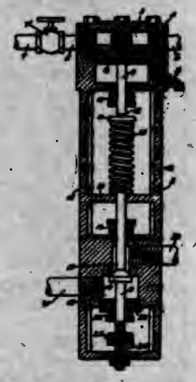
1. In a device of the class described, a dispensing carrier constructed to support a roll of goods and permit the goods to be unrolled therefrom, a support over which the goods are adapted to be drawn, constructed and positioned to form a pronounced bend in the goods, said support having a cutting slot extending therealong and at the bend formed in the goods, and a measuring device having a wheel engaging the goods at a point coincident with said slot as the goods pass over said support.

1,353,662. CHROMO-ROLLERS FOR PRINTING-PRESSES. MENELAUS G. MURUFAS, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,162. 2 Claims. (Cl. 101—195.)



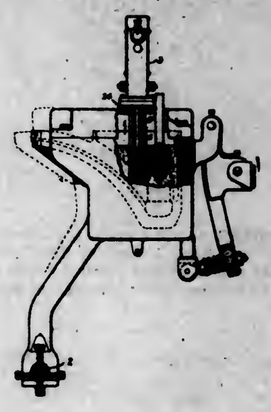
1. In a printing press, an inking plate spaced above the usual inking plate, tracks on said upper plate, ink rollers arranged to travel over the usual inking plate and the chase of the press, other ink rollers arranged to travel over said upper inking plate and said chase, additional

tracks secured to the frame of the press adjacent the usual ink roller tracks of the press, said additional tracks extending from the lower end of the tracks on said upper inking plate, and a pair of track rollers on each end of



said other ink rollers, one roller of said pairs of track rollers traveling on the tracks on said upper inking plate, and the other roller of said pairs of rollers traveling on said additional tracks.

1,353,663. TARGET-THROWING DEVICE. CHARLES H. NAPIER, Macon, Ga. Filed Feb. 6, 1920. Serial No. 356,763. 12 Claims. (Cl. 124—3.)



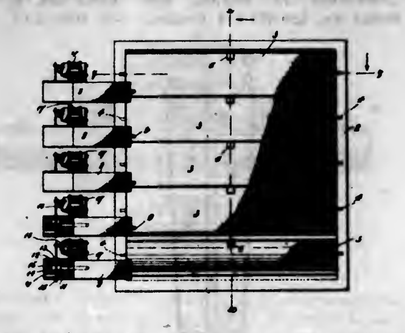
1. A target throwing device, comprising a support providing a flat surface over which a target may be caused to travel, a guide rail extending along said surface, a target discharging member adapted to move a target over said surface for discharging the same from said device, and friction means on said rail adapted to contact with the target and cause the rotation thereof during its travel over said surface.

1,353,664. AUTOMATIC FUEL-SAVER. CARL A. NORALL, Ajo, Ariz. Filed Jan. 2, 1920. Serial No. 348,981. 5 Claims. (Cl. 158—45.5.)

1. An automatic fuel regulator comprising a body frame having at one end, a steam head and at the other an oil chamber with means for connecting to a source of supply; a piston in the steam head having a stem with a valve for controlling flow of oil from the oil chamber; means for normally moving the valve toward its seat; and adjustable means on the stem for limiting its opening position.

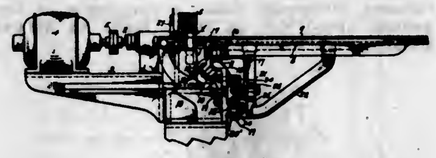
1,353,665. TEMPERATURE-CONTROLLER. ALBERT N. OTIS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1918. Serial No. 245,457. 6 Claims. (Cl. 219—19.)

1. The combination with an electrically heated melting pot mounted for movement in a definite plane and a thermostatic device for controlling the temperature of the pot mounted thereon, and having a thermostatic element projecting into the pot and an external switch element operated by the thermostatic element in a plane perpendicular to the plane of movement of the pot.



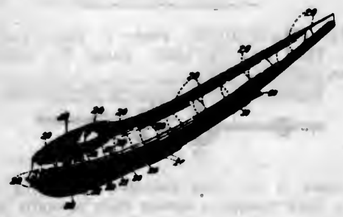
1,353,666. WING AND SIMILAR MEMBER OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed July 6, 1920. Serial No. 394,148. 10 Claims. (Cl. 244—12.)

1. In aeroplane flying machines; wings and similar members each constructed with a small forwardly located auxiliary wing, separated from the main wing to produce a comparatively narrow through slot extending substantially throughout the wing in a direction transversely of the line of flight, said auxiliary wing having its nose located at the approximate level of the nose of the main wing and said auxiliary wing having its angle of incidence less than the angle of incidence of the main wing so as to mask the leading portion of said main wing.



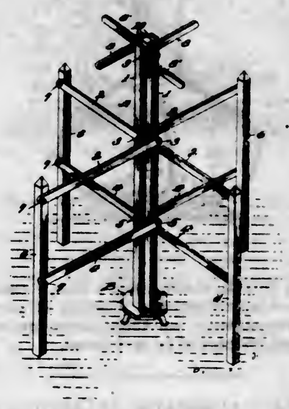
1,353,667. SWELL-BOX FOR PIPE-ORGANS. WALTER C. REED, Dalton, Mass., assignor to Philip W. Goewey, Pittsfield, Mass. Filed Nov. 23, 1916. Serial No. 132,991. 4 Claims. (Cl. 84—23.)

1. A swell box for pipe organs comprising a series of shutters each provided with means including an electromagnet for operating it independently of any other shutter, in combination with a set of brushes electrically connected respectively to the several magnets, a blade movable into and out of contact with said brushes successively, magnet-energising circuits including said blade and



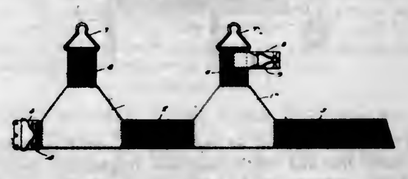
brushes, blade-operating means comprising two pneumatic motors acting in opposition to each other, and means for independently controlling said motors.

1,353,668. TRIMMING AND FINISHING MECHANISM. HOWARD REYNOLDS, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Nov. 12, 1915. Serial No. 61,033. 3 Claims. (Cl. 90—58.)



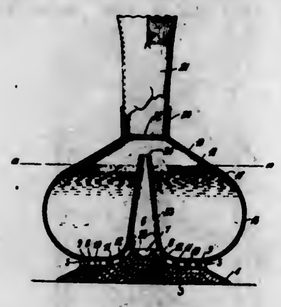
1. In a trimming mechanism, the combination of a trimmer, a frame mounted below the trimmer and closely adjacent thereto, a work support which can be freely pushed or pulled in either direction by the hand of the operator along the frame and supported thereon at one side only, a bearing and guiding surface on one of the vertical sides of the frame, a guiding and bearing surface on the opposite vertical side of the frame, these surfaces being arranged angularly with respect to each other, a second frame carried by the work support, and bearing members carried by the work support and the second frame taking against the bearing surfaces for preventing the support from tipping out of position when moved along the frame.

1,353,669. FLYING-BOAT OR OTHER LIGHT MARINE VESSEL. HUBERT SCOTT-PAINE, Southampton, England. Filed Apr. 22, 1920. Serial No. 375,881. 4 Claims. (Cl. 114—66.5.)



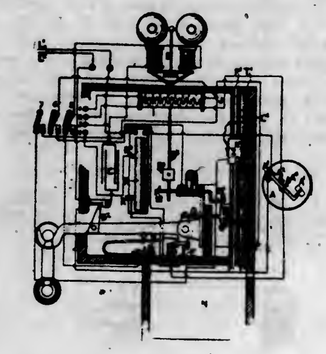
1. In a light marine vessel having laterally extending side-wings flared as to their underside at and above the level of the water-line along the fore-part of the vessel, the construction wherein the said side-wings are extended forward and around the nose to meet one another and are flared on the underside of said extension, substantially as described.

1,353,670. CLOTHES-DRIER. JOHN STRAITH, Richmond, Va. Filed July 11, 1919. Serial No. 310,142. 2 Claims. (Cl. 68—34.)



1. A clothes drier comprising a vertical supporting standard having integral longitudinal ribs formed at right angles to each other and forming elongated longitudinal triangular spaces, a plurality of vertical angular posts of a cross-sectional size to fit in said angular spaces, two horizontal arms for each post, the inner ends of the arms pivoted to the outer sides of the longitudinal ribs and their outer ends pivoted to the corresponding sides of the posts, whereby when the arms are folded the posts will fit into the elongated angular spaces of the supporting standard, for the purpose described.

1,353,671. STOCKING-SUPPORTER. CLARE MACDONALD SUPPLE, Boston, Mass. Filed Apr. 2, 1920. Serial No. 370,764. 2 Claims. (Cl. 241—1.)



2. As a new and useful article of manufacture, a stocking supporter adapted to be worn about the stocking below the knee of the wearer, and including spaced textile sections with upwardly tapered and truncated upper portions, an elastic section interposed between and permanently connecting the adjacent ends of the lower portions of the textile sections, an elastic strap permanently joined to the outer end of the lower portion of one textile section, a buckle connected through a tape section with the outer end of the other textile section, elastic sections permanently joined to and extending upwardly from the truncated upper ends of the textile sections and means at the upper end of the said upwardly extending elastic sections to connect the same to corset appurtenances; one of the said upwardly extending elastic sections being equipped with a lateral subsection carrying fastening means to connect the upper portion of a stocking thereto.

1,353,672. FLYTRAP. FRANK SWICKARD, Fort Bridger, Wyo., assignor of ninety-nine per cent. to Laura J. Swickard, Fort Bridger, Wyo. Filed Jan. 23, 1920. Serial No. 353,542. 3 Claims. (Cl. 43—122.)

1. In a fly trap, in combination, a base, a vessel on said base and forming therewith a plurality of entrance and reëntrant passageways; entrance means for said vessel and an insecticide carried by said vessel.

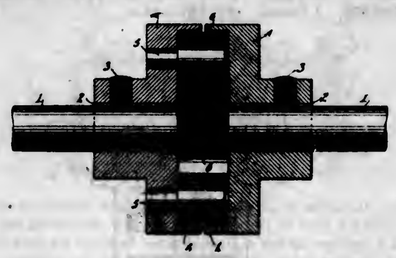
1,353,673. AUTOMATIC TELEPHONE SYSTEM. HENRY SYMES, Dunedin, New Zealand. Filed Nov. 9, 1916. Serial No. 130,423. 1 Claim. (Cl. 179—6.4.)

A telephone system of the class specified comprising the usual line and line connections, transmitter, receiver, hook arm, contact and an automatic caller, of a coin slot apparatus connected in circuit with the system and consisting of a plurality of elements having slots therein of different dimensions to receive coins of different thicknesses, a forked rod connected to and operated by the hook lever when the latter is released, the forks of the rod transversely entering the slots of the elements, a slidable rod operative by the automatic caller to make and break the circuit through the said contact and a slide having projecting means extending into the wider slot of the slotted element, the slide contact and the contacts of the elements exposed to the slots in the latter all being electrically connected with the circuits of the system for completing the circuits by the insertion of coins in the slots whereby a sender's or receiver's instrument may be converted from the usual automatic exchange operating instrument into coin-in-slot telephone instruments under operation of the person calling and person called.

1,353,674. BLOWER-PIPE, WIND-BREAK, AND SILAGE-DISTRIBUTER. ALFRED M. TAMM and JOHN TENNESSEN, Jr., Brillion, Wis. Filed Oct. 9, 1919. Serial No. 329,637. 4 Claims. (Cl. 302—10.)

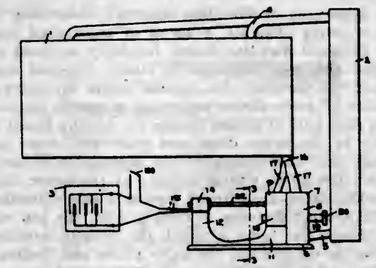
1. An attachment or device of the character described, comprising a truncated inverted substantially conical shaped skeleton frame, a reticulated body within said frame and coextensive therewith, and an annular shield within the reticulated body at one end thereof.

1,353,675. SWITCH-HANDLE. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 28, 1919. Serial No. 341,042. 4 Claims. (Cl. 200—172.)



1. A handle for rotary snap switches comprising a thumb piece recessed to form a well non-circular in cross section, a stem arranged in said well, a ratchet element fast on said stem, a coöperating ratchet element freely mounted on said stem, but engaged in said well, a spring for maintaining said ratchet elements in coöperating position, and means on said stem accessible from the outer end of the switch handle for rotating said stem, together with screw means at the opposite end of said stem for connecting the handle to the spindle of the switch operated thereby.

1,353,676. CHAIN-HOOK. PERRY D. THOMPSON, Tulsa, Okla. Filed May 11, 1920. Serial No. 380,570. 3 Claims. (Cl. 24—241.)

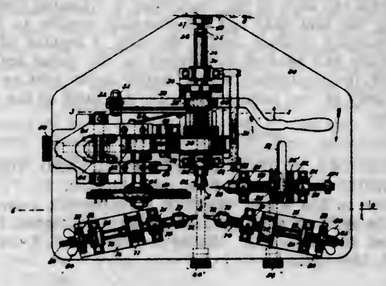


1. A hook of the class described comprising a plate having a hook therein, a second hook pivotally mounted on the plate and having a portion adapted to close the opening of the hook on the plate and means for slidingly connecting the plate to its carrying member so that said carrying member will hold the hooks in engagement when said member is slack.

1,353,677. FLEXIBLE COUPLING. GEORGE EDWARD TOMLINSON, Winchester, Ky. Filed Oct. 18, 1919. Serial No. 331,571. 8 Claims. (Cl. 64—96.)

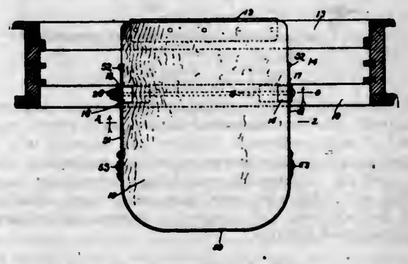
1. A flexible coupling, including a pair of supporting members, studs projecting from one of the faces of each such supporting members, and resilient means adapted to be associated with each of such studs, the resilient means associated with one of such members being adapted to engage with the resilient means associated with the opposite member.

1,353,678. ANTIFREEZE DEVICE FOR RADIATORS. JOHN TORRENT, Jr., Muskegon, Mich. Filed May 21, 1920. Serial No. 383,236. 1 Claim. (Cl. 123—175.)



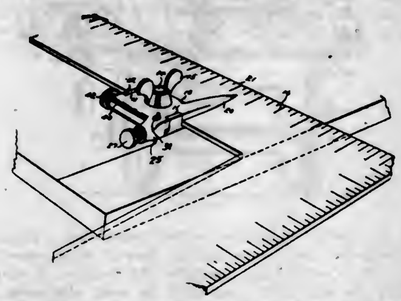
In a device of the class described, an internal combustion engine; a radiator; a conduit extended between the engine and the radiator; a casing interposed in the conduit, the casing having communicating compartments of different diameters; shafts journaled in the compartments; pumping means carried by the shafts and located in the respective compartments; means for driving the shaft of the larger compartment from the engine; an electrical motor operatively connected with the shaft of the smaller compartment; and a base plate carrying both the casing and the motor.

1,353,679. FOUNTAIN MUCILAGE-BRUSH. PETER I. VENARD, Denver, Colo. Filed Feb. 20, 1919. Serial No. 278,126. 7 Claims. (Cl. 91—67.2.)



4. In a fountain dispensing device, a barrel having an outlet in its front end, a collapsible tube in said barrel communicating with said outlet, a longitudinal presser bar in said barrel bearing against said tube, and means for moving the full length of said presser bar inwardly and at the same time moving its rear end a greater distance than its front end, whereby to feed the contents of the tube forwardly from the rear end of such tube.

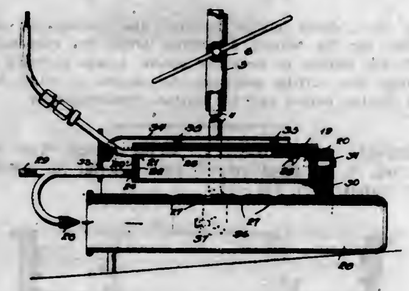
1,353,680. SHANK-BUTTON MACHINE. BEDRICH VESELY and WILHEM FAJMAN, New York, N. Y. Filed Aug. 15, 1919. Serial No. 317,802. 13 Claims. (Cl. 79—1.)



1. In a shank button machine, the combination of a holder for the button, a cutting device for coöperation with the button to form the shank, means to bring the button into cutting position, and means to rotate both the cutting device and the button simultaneously.

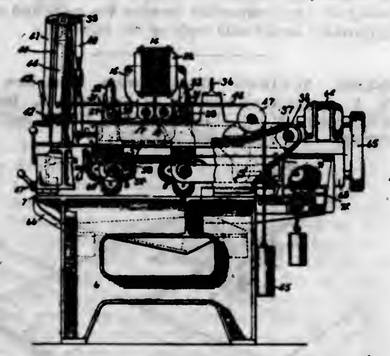
1,353,681. WINDOW-SEAT. LUIGI VIEZZI, West New York, N. J. Filed July 7, 1919. Serial No. 308,972. 3 Claims. (Cl. 304—24.)

1. A window seat, comprising a platform provided at its forward end with a hook adapted to hook onto the front edge of the window sill, two rests provided with guideways slidably engaging the sides of the platform and adapted to abut against the outer edge of the sill and to rest on the subsill, and a bolt having a nut at one end and connecting the said rests with each other, said bolt forming the only connection between the rests and serving to adjustably secure said rests on the platform.



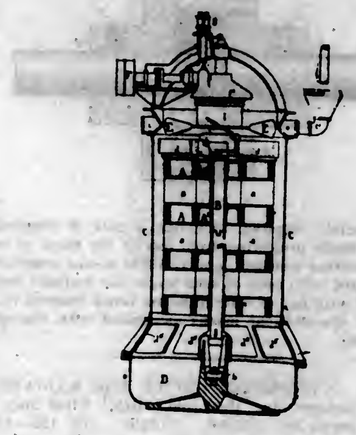
1,353,682. SCRIBER. LUIGI VIEZZI, West New York, N. J., assignor of one-half to Frederick L. Robitsch, Union Hill, N. J. Filed Oct. 24, 1919. Serial No. 332,883. 2 Claims. (Cl. 33—173.)

1. A scriber for attachment to a straight edge, square or similar drafting implement, comprising a body, a clamp-



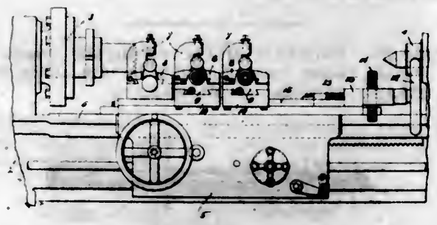
ing member adapted to coact with the under side of the body to clamp the scriber in place on the implement, the said clamping member having guide arms slidingly engaging the said body, the guide arms forming an abutment for the edge of the implement, a clamping bolt engaging the said body and the clamping member to draw the clamping member toward the body, a pointer on the said body and adapted to indicate on the linear graduation of the implement, and a scriber point held on the said body in the same plane with the point of the said pointer.

1,353,683. OIL-BURNER SYSTEM AND TORCH THEREFOR. PERCY WADE, Washington, D. C., assignor to The Weldit Company, a Partnership composed of Percy Wade and Carl L. Cameron, Washington, D. C. Filed Oct. 20, 1919. Serial No. 331,768. 5 Claims. (Cl. 158—53.)



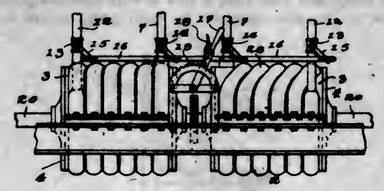
2. In combination, a cylindrical combustion chamber, a relatively smaller cylindrical retort, said retort superposed of said combustion chamber and mounted in a rectangular casing made unitary with said combustion chamber, and the said mount comprising perforations in said casing and bifurcated ends upon said retort slidable in said perforations, and means for locking said slides in predetermined relation.

1,353,684. WELDING-MACHINE. ROBERT E. WAGNER and WESLEY E. LAIRD, Pittsfield, Mass., assignors to General Electric Company, a Corporation of New York. Filed Apr. 9, 1919. Serial No. 288,780. 15 Claims. (Cl. 219—4.)



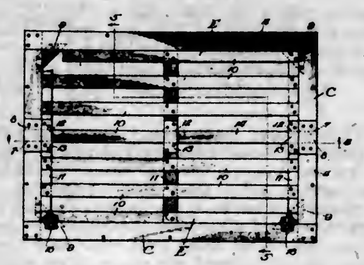
1. An electric resistance welder comprising a plurality of electrodes operable in tandem linearly with respect to the work, a coöperating electrode and a source of current having its terminals connected to said electrodes for passing current through the work between said respective tandem electrodes and said coöperating electrode.

1,353,685. APPARATUS FOR TREATING GASES WITH LIQUIDS. GEORGE HENRY WALKER, Worcester, England, assignor to Heenan & Froude, Limited, Manchester, England. Filed May 31, 1916. Serial No. 100,959. 1 Claim. (Cl. 261—85.)



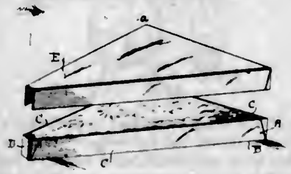
An apparatus of the class described comprising a vertical inclosing chamber, a series of superposed horizontally arranged disk-like drums revolubly mounted in the chamber and each composed of closely disposed convolutions of flat material with narrow spaces therebetween, a plurality of guide plates assembled in spaced relation between each pair of drums, means for feeding liquid downwardly to the upper drum and from the latter passing through the convolutions of the several drums and also between the guide plates, troughs at the lower edges of the guide plates, each trough having a side extending upwardly a short distance to form a weir, the top edge of each trough also being serrated, the troughs catching and holding the liquid from the guide plates and feeding it to the drums below, and means for inducing a flow of gas upwardly through the chamber and the guide plates and between the convolutions of the drums.

1,353,686. MULTIPLE-TOOL LATHE. WILLIAM W. WALLACE, Bucyrus, Ohio, assignor to Raymond C. Penfield, Chicago, Ill. Filed June 14, 1918. Serial No. 239,970. Renewed July 3, 1920. Serial No. 393,984. 2 Claims. (Cl. 82—25.)



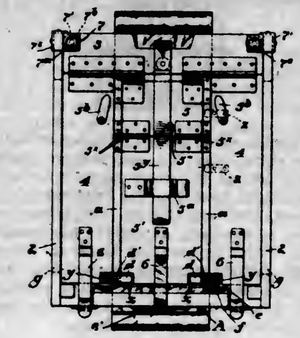
2. A lathe having means for supporting and rotating the work about an axis, in combination with a tool carriage, a plurality of tool holders mounted on said carriage for adjustment transversely of said axis, a reciprocating cam plate mounted on said carriage and connected with said tool holders to adjust them simultaneously in a direction transverse to said axis, and screw threaded means for moving said cam plate to effect said adjustment.

1,353,687. TURBINE-ENGINE. CANARD J. WALTERS, Ellamar, Alaska. Filed July 31, 1917. Serial No. 183,784. 1 Claim. (Cl. 253—47.)



In a turbine engine, a rotor having a series of pockets in the periphery thereof, each pocket having a radial end wall and an inclined bottom wall, a stator having a series of pockets in its inner periphery, said second named pockets being similar to and disposed reversely with respect to the first named pockets, an arcuate passage extending outside of said series of second named pockets, and a series of velocity increasing passages having their receiving ends leading from said passage and their discharge ends leading through the radial end walls of said stator pockets, the stator being also formed with annular transfer passages establishing indirect communication through the chamber to the succeeding passage.

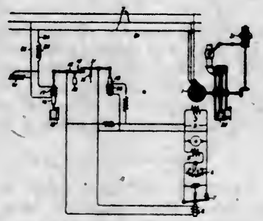
1,353,688. KNOCKDOWN CRATE OR BOX. JACOB L. WEBER, Chicago, Ill. Filed Jan. 19, 1920. Serial No. 352,283. 2 Claims. (Cl. 217—15.)



1. A collapsible crate comprising a top, a removable closure slidably disposed in said top, a bottom, collapsible ends hingedly connected to said top and said bottom and folding inwardly to permit the crate to be collapsed, sides hingedly connected at their upper longitudinal edges to said top to permit the former being swung upwardly into parallel alinement with said top and said bottom, a transverse partition hingedly connected to said bottom and normally maintained in upright position to hold said sides in operative position, a locking member carried by said top to maintain said partition in upright position, and U-shaped keepers hingedly secured to said bottom and adapted to receive the slidably disposed closure in said top to hold the crate in collapsed condition.

1,353,689. TRAY FOR LUNCH-BOXES. WILLIAM H. WILKIE, Detroit, Mich. Filed Dec. 9, 1919. Serial No. 343,534. 1 Claim. (Cl. 220—62.)

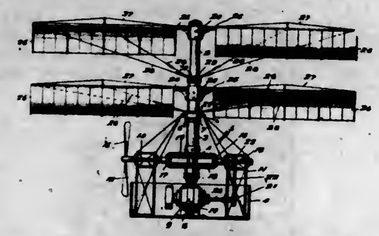
A triangular-shaped tray comprising a triangular-shaped blank bent along the longitudinal sides thereof to provide side flanges, and also bent along the base of said triangular-shaped blank to provide a base flange, said blank being notched at the ends of the base flange and toward the apex of said triangular shaped blank, said notches, at the apex portion, providing a flap, said flap being bent upward and the sides of said flap being bent against the exterior face of the side flanges, in combination with a triangular-shaped cover, the apex of which is cut away, said cover being provided with side flanges, said side flanges being adapted to bear against the side flanges of the tray, the apex flap of the tray being exposed, when the cover is in place, thus permitting said flap to be bent downward to expose the contents of the tray.



1,353,690. PROCESS AND APPARATUS FOR MAKING PHOTOGRAPHIC PRINTS. CHARLES W. WILSON, York, Pa. Filed June 21, 1917. Serial No. 176,212. 12 Claims. (Cl. 95—77.)

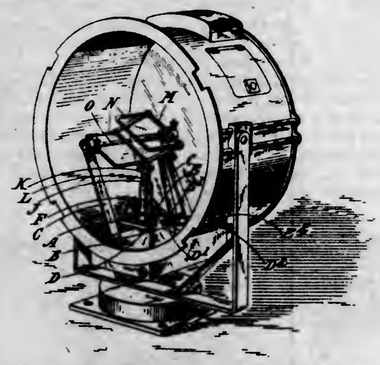
1. In apparatus for printing from photographic negatives, the combination of a frame having a front portion and a movable back and a modifying member within the frame, backed by and resting against the film and having its exposed surface adapted to receive and hold modifying material, said member together with the negative and the paper to be printed being held by and between said front and back portions of the frame and said member serving as the outer retaining wall or layer at the front of the frame, substantially as described.

11. In combination in a photographic printing frame, a main frame portion, a plurality of hinged back sections, a catch for the central section adapted to be released by pressing down thereon, and catches for the adjacent side sections adapted to act as supporting feet for the frame when set up, and releasable by raising their outer ends, substantially as described.



1,353,691. VOLTAGE-REGULATOR FOR ALTERNATING-CURRENT GENERATORS. FRED H. WINTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 1, 1919. Serial No. 280,072. 7 Claims. (Cl. 171—119.)

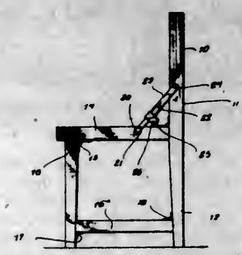
1. In combination an alternating current generator, means for operating said generator to deliver currents at



different frequencies, a regulator for said generator adapted to maintain the voltage of said generator substantially constant under varying loads when the frequency remains constant, and means responsive to the frequency of the current supplied by said generator for changing the setting of the regulator in such a manner that it will maintain a voltage which varies directly with the frequency of the current delivered.

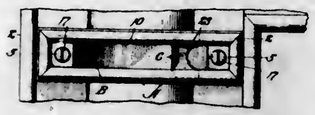
1,353,692. AEROPLANE. PAUL TIMBERLAKE WOLFE and WILLIAM HENRY BOYARD, Los Angeles, Calif. Filed Nov. 25, 1919. Serial No. 340,456. 3 Claims. (Cl. 244—19.)

1. An airship, comprising a car, a vertical post projecting upwardly from the car, tubular shafts on the posts, rotary planes projecting laterally from the vertical tubular shafts, frames on the car projecting upwardly from the car, alined shafts in said frames, means for transmitting motion from one of the horizontal shafts to the tubular shafts to turn the latter in opposite directions, means for transmitting motion from the tubular shafts to the other horizontal shafts, a propeller on one of said horizontal shafts, and means for transmitting motion to one of said horizontal shafts.



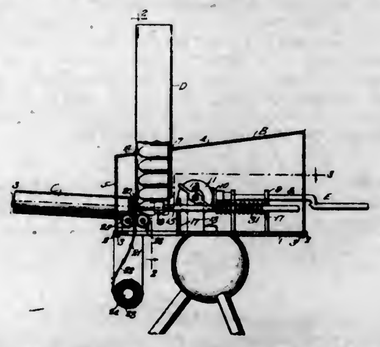
1,353,693. MAGNETIC DEFLECTOR FOR ELECTRIC ARCS IN LAMPS, SEARCHLIGHTS, AND THE LIKE. JOHN PALEY YORKE, Westminster, London, England. Filed June 25, 1918. Serial No. 241,773. 10 Claims. (Cl. 176—118.)

1. A magnetic arc deflector for an electric arc-lamp, comprising a plurality of magnetic field-producing means coöperating to form a resultant magnetic field acting on the arc, and means for imparting to the magnetic field-producing means a motion in either of two planes perpendicular to each other and transverse to the arc.



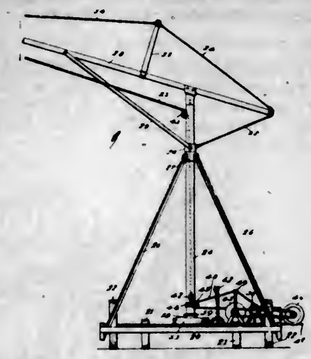
1,353,694. FOLDING CHAIR. JOHN S. ZAKRZWSKI, Fullerton, Nebr. Filed May 17, 1920. Serial No. 381,885. 2 Claims. (Cl. 155—141.)

1. A folding chair comprising a back having legs extending rigidly therefrom, a seat hingedly secured to the rear legs, and front legs each hingedly secured to the seat and capable of folding against the bottom thereof, side rungs having their opposite ends hingedly connected to the front and rear legs, a link having one end pivotally secured to the side edge of the chair seat, a link having



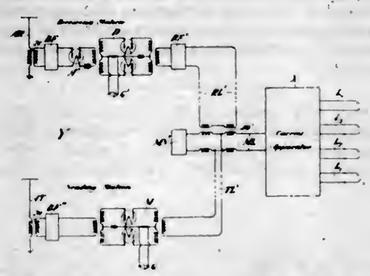
one end pivotally secured to the side edge of the chair back, a pivot connecting the adjacent ends of the link, an arm carried by and spaced from the end of the pivot carried link, a hook formed in the extremity of the arm and a latch pivoted to the bottom of the chair seat for engagement with said hook.

1,353,695. SHADE-BRACKET. ALEXANDER ZEBROWSKI, Stamford, Conn. Filed May 14, 1920. Serial No. 381,277. 2 Claims. (Cl. 156—24.)



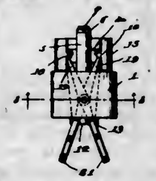
2. An adjustable shade bracket comprising front and rear plates, the former being provided with grooves in its rear face and a central opening, means for clamping the plates together, and a shade hanger projecting through said opening and having a rear portion disposed between the plates provided with means engageable in a groove in the rear face of the front plate when said plates are clamped together to secure the hanger in an adjusted position with respect to said plates.

1,353,696. TOY MACHINE-GUN. HYMAN ABRAMOWITZ, New York, N. Y. Filed Aug. 15, 1918. Serial No. 250,047. 5 Claims. (Cl. 124—13.)



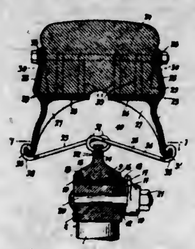
1. A toy of the class described comprising a magazine for projectiles, a feeder for a detonator tape, a projecting pin associated with the magazine, a hammer for firing the detonators of the tape successively, a cocking and releasing means for the pin and hammer, and an actuating element for the said means.

1,353,697. HOISTING-CRANE OR STACKER. RAYMOND K. ADAMS, Dwyer, Wyo. Filed Sept. 20, 1919. Serial No. 325,089. 5 Claims. (Cl. 179—170.)



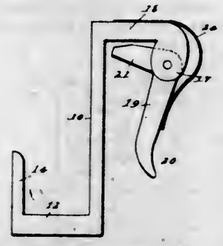
1. A hoisting mechanism of the class described having a base, a crane post revolubly mounted thereon, a crane arm carried by the post, a hoisting cable, means for securing the post against revoluble movement, a cross head having at one end a guide for said hoisting cable, a supplemental cable connected with the other arm of the cross head, and hoisting mechanism having independent drums for said hoisting and said supplemental cables.

1,353,698. COMBINED CARRIER AND RADIO SYSTEM. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,458. 4 Claims. (Cl. 250—6.)



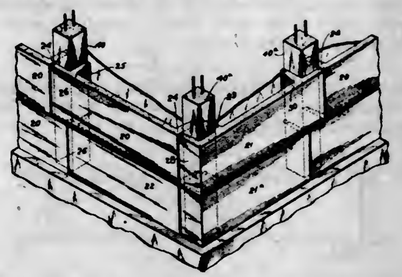
1. In a signaling system, a plurality of low frequency signaling lines incoming to a carrier station, means at said carrier station for translating signals from said lines into carrier currents, a carrier transmission line upon which said translated signals may be superposed, said carrier line extending from said carrier station to a radio station, and means at said radio station for translating said carrier frequencies into radio frequencies for radiation to a distant radio receiving station.

1,353,699. ELECTRIC PLUG. ARTHUR AGUBER, West Somerville, Mass. Filed Nov. 3, 1919. Serial No. 335,466. 2 Claims. (Cl. 173—360.)



1. A plug of the class described comprising a body, a spring collar connected with the body, a pair of arms passing through the body and pivotally connected therewith, the inner ends of said arms being connected with the collar and handles on the other ends of said arms for moving the outer ends of the arms toward each other.

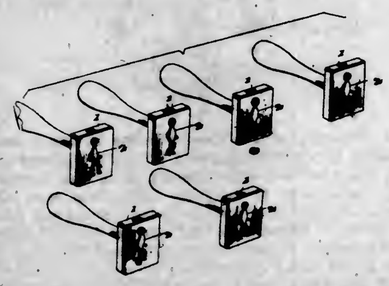
1,353,700. VEHICLE-WHEEL. WILLIAM N. ALLAN, San Antonio, Tex. Filed Aug. 8, 1919. Serial No. 316,161. 4 Claims. (Cl. 152—8.)



3. A tire comprising a removable rim having a flange, a plurality of alternately arranged clips at opposite sides of the tire provided with inwardly projecting horizontal flanges terminating at distances apart from each other, the inner extremities of the clips being reduced and formed with hooks, a plurality of flat springs having opposite hooked terminals respectively engaging and removably connected to the hooks at the inner extremities of the clips and the rim flange, and a yielding tread disposed between the clips and bearing on the flanges of the latter and connected to the outer extremities thereof.

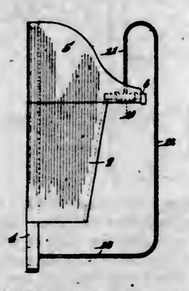
1,353,701. SEAT-HOOK. ARTHUR M. ALLEN, Hope, Ark. Filed Jan. 22, 1919. Serial No. 272,540. 2 Claims. (Cl. 155—5.)

1. The combination with a seat hook, of a pivoted member including an arm connected with the hook and projecting above and engaging the edge of a wagon body, and an arm brought into positive engagement with the side of the body under pressure exerted on the seat and transmitted through the arm first named.



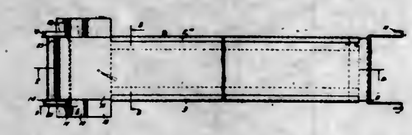
1,353,702. BUILDING CONSTRUCTION. CHARLES J. ASCHAUER, Decatur, Ill. Filed Mar. 17, 1919. Serial No. 283,090. 6 Claims. (Cl. 72—30.)

6. In a system of building construction pre-cast unitary wall blocks each block presenting at one end thereof an



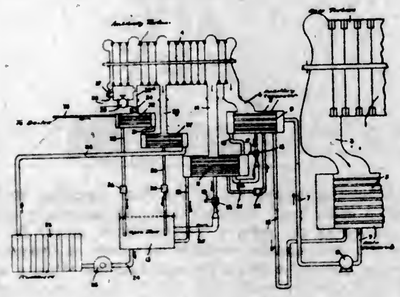
inwardly directed pocket-wall lug and presenting a second inwardly directed pocket-wall lug sufficiently distant from the opposite end for the face of the block to present beyond the end of the lug an extending member to constitute a third pocket-wall, run-in-place posts molded in said pockets and forming the sole frame-work for said wall blocks, the inner ends of said lugs and the inner faces of said posts being in a plane to adapt them to receive plaster thereon to thereby form air spaces between the plaster and the said blocks.

1,353,703. TOY. FAY LEON BABCOCK, Largo, Fla. Filed June 7, 1920. Serial No. 387,149. 4 Claims. (Cl. 101—405.)



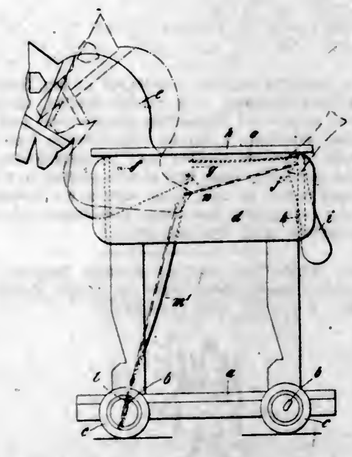
1. A toy comprising a series of elements adapted to transfer an impression onto a surface, the impression forming portions of the elements representing successive positions of an object in motion.

1,353,704. TOWEL-CABINET. WILLIAM W. BAGLEY, Chicago, Ill., assignor to Jacques Rousso, Los Angeles, Calif. Filed May 10, 1917. Serial No. 167,810. 2 Claims. (Cl. 45—32.)



1. A towel cabinet comprising a supporting shelf, there being a towel receiving opening in said cabinet behind said shelf, permitting the ends of towels on said shelf to depend therethrough; a shield arranged under said shelf below and surrounding said opening, said shield being of a depth substantially equal to the depending portion of towels; and a towel guide member associated with said shelf substantially as described.

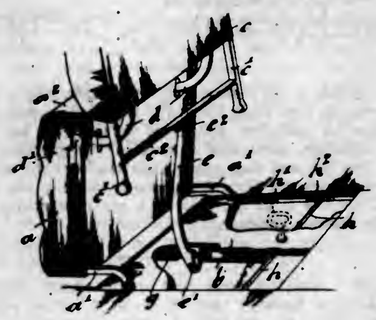
1,353,705. FILM-HOLDER. CHARLES LOUIS BAMBRICK, Brooks, Alberta, Canada. Filed Oct. 7, 1919. Serial No. 329,118. 5 Claims. (Cl. 95—100.)



1. A holder for films and plates during the time of development comprising a base, a pair of clamping members frictionally held on said base at the edges thereof, said clamping members having overhanging flanges for receiving films and plates, and means connected with one end of said base adapted to engage a tank for supporting the base and parts carried thereby when placed in a tank.

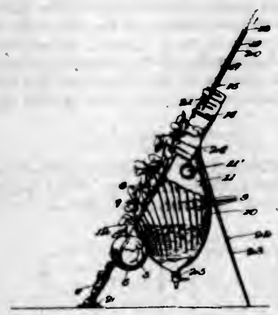
1,353,706. REGENERATIVE POWER INSTALLATION. PAUL A. BANCEL, Nutley, N. J., assignor to The Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 21, 1918. Serial No. 250,812. 14 Claims. (Cl. 60—95.)

1. In a power installation, a main power unit and condenser, an auxiliary power unit comprising a turbine, an auxiliary condenser for said turbine, a plurality of feed water heaters supplied with steam at different temperatures taken from different stages of said auxiliary power unit and means for passing the condensate from said main condenser through said auxiliary condenser and said heaters progressively so that the temperature of said condensate will be gradually raised in its passage through said heaters.



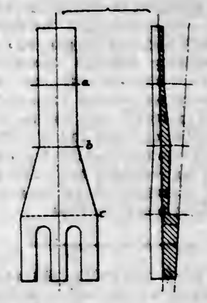
1,353,707. TOY ANIMAL. JOSEPH BARNARD, Hackney, London, England, assignor to Harris Ephraim Bloch and George Getzel Bloch, Birmingham, England. Filed Dec. 9, 1919. Serial No. 343,452. 4 Claims. (Cl. 46—45.)

1. In a toy animal, the combination of wheels for traveling on the ground, a cranked axle on which the said wheels are mounted, a pivotally mounted part of the animal, a flexible cord connecting the cranked part of the axle to



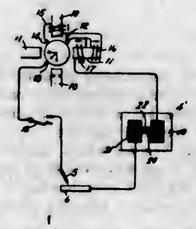
the pivoted part of the animal, and a stop limiting the movement of the said part of the animal about its pivotal support when said part is moved by its own weight.

1,353,708. SEAT OF MOTOR-CARS. JOHN HAROLD BARNETT, Tettenhall, England. Filed Sept. 27, 1919. Serial No. 326,092. 6 Claims. (Cl. 155—13.)



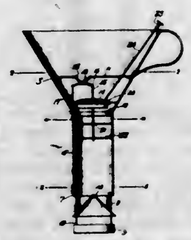
2. A seat mounted for tilting movement, a back pivotally connected to and carried by the rear side of the seat, and provided with supporting means extending below the pivotal axis of the back, and a lever pivotally connected at a fixed point below the seat and also pivotally connected to the back at a point below the pivotal axis of the back and causing the back to remain in substantially vertical position irrespective of whether the seat is in normal or in tilted position.

1,353,709. TOKEN. MARTHA VIOLA BAUER, Washington, D. C. Filed Sept. 19, 1919. Serial No. 324,859. 4 Claims. (Cl. 47—18.)



1. A token comprising an easel having a flower stem receiving opening therein, a prop foldably connected with the easel, and a collapsible water font supported upon the rear side of the easel between the same and the said prop and having its interior in communication with the opening, the font constituting means for preventing accidental folding of the prop when the font is distended by its contents.

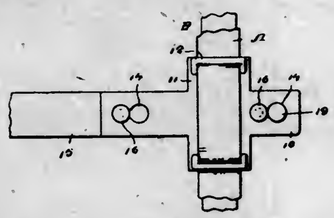
1,353,710. BLADE OR VANE FOR STEAM-TURBINES. KARL BAUMANN, Urmston, England, assignor to The British Westinghouse Electric & Manufacturing Company, Limited, London, England. Filed May 8, 1916. Serial No. 95,145. 5 Claims. (Cl. 253—77.)



2. An end supported turbine blade having the edges of a section of the outer or free portion thereof parallel while a lower portion gradually increases in width toward the root.

1,353,711. ELECTRIC WELDING AND REACTOR. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 25, 1920. Serial No. 391,721. 8 Claims. (Cl. 219—8.)

1. A system comprising a source of direct current, a load circuit supplied thereby adapted to provide wide and sudden changes in resistance, means for adjusting the current supplied from said source to said load circuit and a reactor in series in said load circuit, characterized by the fact that adjustments of said current are arranged to vary the inductance of said reactor.



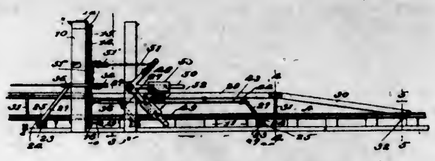
1,353,712. FUNNEL. HENRY NORBERT BERNIER, St. Eugene, De Guigues, Quebec, Canada, assignor of one-half to Jules De Froy, Timmins, Ontario, Canada. Filed Apr. 29, 1919. Serial No. 293,390. 1 Claim. (Cl. 226—37.)

A funnel comprising a body provided with a tubular extension, a valve seat at the point of intersection of the

extension with the funnel, a float slidably suspended below and on the lower end of said extension, a transverse supporting bar arranged in the body of the funnel and provided at one side of its intermediate portion with a depending V-shaped ear, a link pivotally mounted in the apex of the ear for rocking movement, a valve having a stem, a protector arranged in the funnel body at a point between the point of intersection of the tubular extension with the funnel body and said supporting bar, one end of said stem being slidably mounted through the protector and having pivotal connection with one extreme end of the link, an operating rod carried by said float operating to one side of the protector, and having pivotal connection at one end to the opposite end of said link, a manually operative rod connected with the valve, a spring embracing the rod for retaining the valve in an elevated position, said rod operating in an aperture of the bar and an aperture of the protector plate.

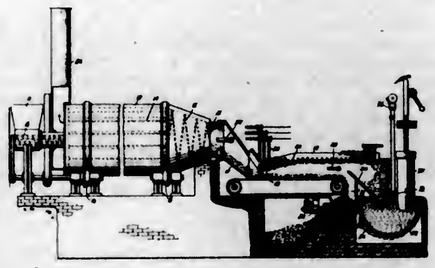
1,353,713. COUPLING DEVICE. WILLIAM O. BERRY, Caro, Mich., assignor of one-half to William F. Wallis, Caro, Mich. Filed Apr. 12, 1920. Serial No. 373,255. 2 Claims. (Cl. 213—67.)

1. A draft device comprising a plate disposed against the underside of the rear spring of a vehicle and rigidly clamped thereto, said plate being provided with keyhole slots, a draw-bar disposed against the underside of the plate and carrying headed studs engaging within said key-hole slots, and a spring pivoted at one end upon the underside of the draw-bar and having a lug engageable within the key-hole slots in advance of the studs therein.



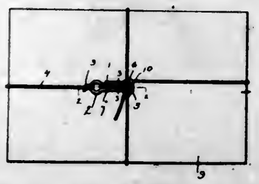
1,353,714. METHOD AND DEVICE FOR MANUFACTURING PIPE-BENDS, SERPENTINES, AND THE LIKE. RUDOLF HIERONYMUS BÖHLING, Hamburg, Germany, assignor to the Firm Rohrbogenwerk G. M. B. H., Hamburg, Germany. Filed July 16, 1917. Serial No. 180,926. 7 Claims. (Cl. 153—64.)

1. The method of manufacturing pipe bends, serpentines, and the like, which consists in drawing a pipe blank over a mandrel adapted to simultaneously bend and expaid the material eccentrically to its longitudinal axis.



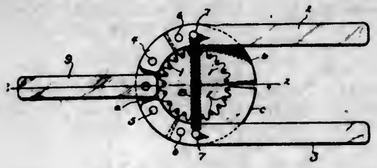
3. A draw mandrel for use in manufacturing pipe bends, serpentines and the like from a straight pipe or tube, consisting of a cylindrical body, having a projection eccentric to the axis of said cylindrical body at one end and adapted to urge the material of the pipe blank to one side and simultaneously bend the pipe, when the mandrel is drawn through the blank.

1,353,715. AUTOMATIC MINE-DOOR. CHARLES L. BOWMAN, Canton, Ohio, and JOHN J. BODY, Dante, Va., assignors, by direct and mesne assignments, to The American Mine Door Company, Canton, Ohio. Filed July 8, 1918. Serial No. 243,931. 14 Claims. (Cl. 246—307.)



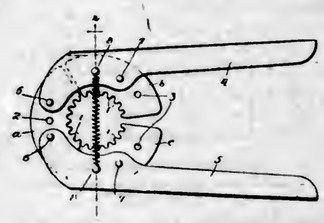
1. A device of the character described including a door, an operating bar, hinge elements swingingly supporting said bar, an operative connection between the bar and door including cushioning means for interrupting between the bar and door shock upon the bar, and means connected with the door for normally holding the door closed, the bar being movable by a car approaching the door for opening the door.

1,353,716. PRODUCTION OF IRON AND STEEL. CHARLES S. BRADLEY, New York, N. Y. Filed Oct. 5, 1916. Serial No. 123,873. 7 Claims. (Cl. 75—14.)



2. The method of obtaining values from ores, which are reducible below fusion temperature, which comprises reducing the values in finely divided ore, without fusion, by the incomplete combustion of hydrocarbon gas with a deficiency of air in the presence of the ore to be reduced, separating the reduced finely divided values from the gangue in the atmosphere of the incoming hydrocarbon gas prior to commingling of the latter with the deficiency of air for combustion, and consolidating the separated values.

1,353,717. PACKAGE-TIE. FREDERICK F. BUCHANAN and NEWMAN F. SLACK, Machiponga, Va. Filed Apr. 4, 1916. Serial No. 88,835. 1 Claim. (Cl. 24—18.)

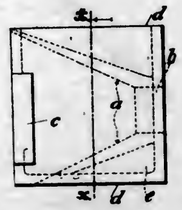


A package tie comprising a single wire bent to form an eye and a fixed jaw and spring jaw, the fixed jaw extending substantially to the eye and the spring inclined directly upward from the eye to yieldingly oppose the fixed jaw.

1,353,718. BOTTLE-CAPPING TOOL. WILLIAM W. BURESCH, Baltimore, Md. Filed July 11, 1919. Serial No. 310,171. 1 Claim. (Cl. 226—86.)

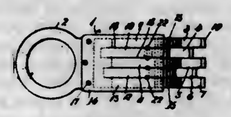
A device for attaching crimped caps to bottles comprising three arcuate crimping jaws adapted to encircle a cap, a pair of handles both pivotally connected to one jaw and each having one of the other jaws separately secured to it, and a spring for holding said jaws in closed position, said spring extending over the opening between the jaws.

1,353,719. BOTTLE-CAPPING TOOL. WILLIAM W. BURESCH, Baltimore, Md. Filed Apr. 16, 1920. Serial No. 374,398. 6 Claims. (Cl. 226—86.)



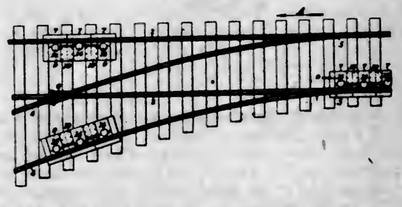
1. A device for attaching crimped caps to bottles comprising three arcuate crimping jaws adapted to encircle a cap, and a pair of handles both pivotally connected to one jaw and each having one of the other jaws pivoted to it.

1,353,720. PROCESS AND COMPOSITION FOR THE PROTECTION OF MONETARY AND OTHER DOCUMENTS. DAVID NUNES CARVALHO, New York, N. Y. Filed Nov. 26, 1919. Serial No. 340,884. 10 Claims. (Cl. 134—33.)



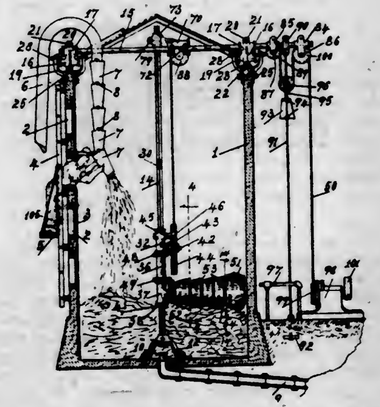
1. A composition of matter for the protection of monetary and other documents consisting of a waxy material and anilin.

1,353,721. CLOSING DIE OR BELL FOR WELDED TUBES. DOUGLAS WHIMSTER CHISHOLM, Garnkirk, Scotland. Filed Sept. 30, 1919. Serial No. 327,452. 4 Claims. (Cl. 205—28.)



1. A closing die or bell for use in the manufacture of butt welded and lap welded tubes having, integral therewith, an open trough or casing for the reception of water for cooling purposes.

1,353,722. COMBINATION-KEY. FRANCISCO CLARK, Durango, Mexico. Filed June 17, 1919. Serial No. 304,888. 12 Claims. (Cl. 70—9.)



1. A combination key comprising a main body, a plurality of fingers of identical construction movable longitudinally of the key body and independently of each other and having the ends thereof beveled extending beyond the end of the key body, means for independently positioning each of said fingers, means including a bent lip portion for holding the said key in a key hole.

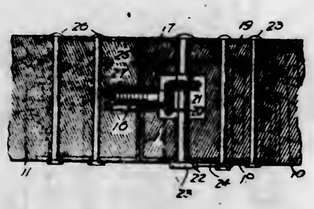
1,353,723. GUARD DEVICE FOR RAILWAYS. SIMON CLARY, Carnegie, Pa. Filed Jan. 17, 1920. Serial No. 352,061. 12 Claims. (Cl. 238—16.)

5. A guard device for rails, comprising a supporting member formed with upper and lower plates, said upper plate having a depression therein, a bearing in said member, and a wheel-engaging element in said bearing and rotatable in said depression, substantially as described.

1,353,724. ENSILAGE-PACKER. HARRY E. COBB, Springfield, Ill. Filed Aug. 18, 1919. Serial No. 318,427. 10 Claims. (Cl. 100—56.)

1. The compacter for ensilage packers, consisting of a rotative shaft; a master roller fixed on said shaft; an inner roller loose on said shaft; and interchangeable rollers loose on said shaft, between the master roller and the inner roller.

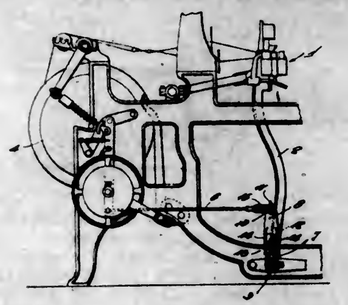
9. In an ensilage packer, the combination of frame members; sheaves supported by the frame members; a saddle adjustable on the frame members; means for



securing the saddle on the frame members; sheaves on the saddle parallel to each other; and in line with the sheaves on the frame members; a staff held by the saddle, a carriage slidable on the staff; a sheave carried by the carriage; compacters connected with the carriage and traveling around the staff; a belt running on the sheaves on the frame members and running downwardly over one sheave on the saddle, around the sheave on the carriage and upwardly over the other sheave on the saddle; and a counterweight co-acting with the belt, the sheaves on the frame-members, the sheaves on the saddle and the sheave on the carriage.

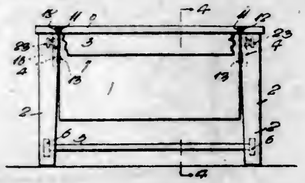
1,353,725. BUTTON DEVICE. SAMUEL COHEN and ARTHUR R. FORRESTER, New York, N. Y. Filed Aug. 27, 1919. Serial No. 320,114. 10 Claims. (Cl. 24—114.)

1. A device of the class described comprising a main button member having a head at one end and an enlarged and hollow base at the other end thereof, and a supplemental button member comprising two heads joined by a shank, one of the heads of the supplemental button member being mounted in the hollow base of the main button member and permanently retained therein in such manner as to permit of lateral, rotatable and inward and outward movements of said supplemental button member in the main button member.



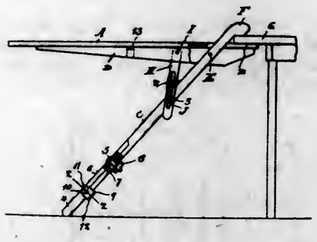
1,353,726. TIRE. CLYDE L. CUNNINGHAM, Perris, Calif. Filed Jan. 22, 1919. Serial No. 272,494. 3 Claims. (Cl. 152—23.)

2. A vehicle tire formed of separate sections, means for securing the sections together, said means including a threaded bolt embedded in the end of one section and engageable with a threaded socket embedded in the end of the adjacent section, gearing located within the tire for rotating the bolt, a pivoted dog engageable with the gearing operating means for holding the bolt against movement.



1,353,727. LET-OFF-ROD OPERATOR. WILLIAM CURRAN, Lewiston, Me., assignor of one-third to Patrick F. Tremblay, Lewiston, Me., and one-third to Henry W. Oakes, Auburn, Me. Filed Oct. 30, 1919. Serial No. 334,416. 6 Claims. (Cl. 139—59.)

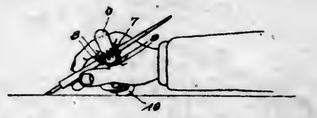
1. In combination with the lay sword of a loom, the rock shaft carrying said sword, and the operating rod for the yarn let-off mechanism; a vertical arm rising from said rock shaft, and connected with said operating rod, and a lateral arm extending from said vertical arm



to said sword and rigid with respect to both to hold them against relative movement.

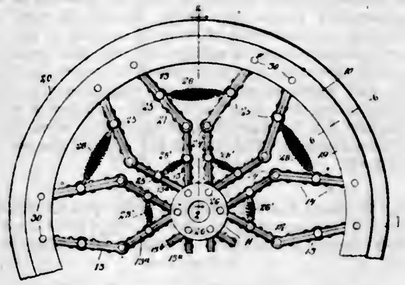
1,353,728. TABLE. CARL DENCE, Brooklyn, N. Y., assignor of one-fourth to Michael J. Joyce, Brooklyn, N. Y. Filed Oct. 2, 1919. Serial No. 327,933. 3 Claims. (Cl. 45—31.)

1. A table comprising a leg structure, and a top, said top including a rotatable central section and retractable side rails abutting said rotatable central section, said central section having a plurality of flat faces, any one of which may be brought into a position to form, in conjunction with the side rails, a continuous top, one of said side rails being hinged to the leg structure, and the other side rail being slidable, whereby said central section may be rotated when desired and held against rotation when desired.



1,353,729. FOLDING IRONING-BOARD. JOHN ADAM DICE, Espanola, Ontario, Canada, assignor of one-half to Douglas Harvey Parker, Espanola, Ontario, Canada. Filed Apr. 28, 1919. Serial No. 293,227. 1 Claim. (Cl. 68—10.)

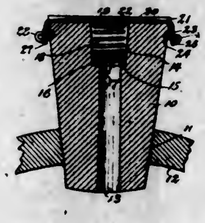
In combination with an ironing board having a supporting leg pivoted thereto and one end extended through and beyond said board, said extended portion of the leg co-operating with the board to form a clamping means, the opposite end of said leg having its upper side cut away, a U-shaped plate secured by its web portion to the terminal of said cut-away end of the leg, the arms of said plate embracing and secured to the opposite sides of said leg,



an adjustable extension slidably mounted on the cut-away portion of said leg and located between the arms of said plate, said arms forming guides to prevent lateral movement for said extension and relative to said legs, and means for holding said extension in different adjusted positions relative to the leg.

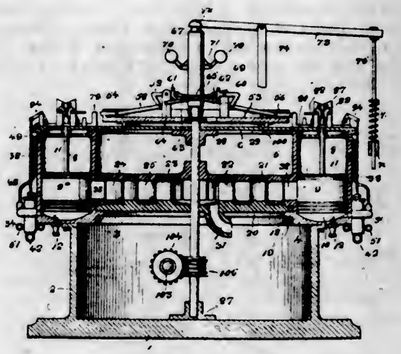
1,353,730. WRITER'S AIDING DEVICE. ADELBERT A. DISBROW, Stevenson, Wash. Filed Sept. 8, 1919. Serial No. 322,337. 3 Claims. (Cl. 120—107.)

2. A writer's aiding device comprising a bar adapted to be held in a person's hand and to support the hand above the surface to be written on, and a clamping device formed of a length of wire and comprising a seris of helical loops, portions of said wire constituting curved jaws which embrace and clamp said bar, the relation of the said clamping jaws and bar being such that the axes of the rspective loops are arranged in an arc, said loops being of a size to receive a writing instrument therethrough and coöperate in frictionally holding the writing instrument.



1,353,731. RESILIENT WHEEL. MOSES B. DISKIN, New York, N. Y. Filed Jan. 23, 1919, Serial No. 272,667. Renewed Mar. 30, 1920. Serial No. 370,047. 2 Claims. (Cl. 152—28.)

1. In a resilient wheel, the combination of a hub, a rim normally concentric therewith, a plurality of spokes extending between the hub and the rim and pivotally connected thereto, each spoke comprising two rigid links pivoted together and the spokes being arranged in pairs, the outer links of each pair of spokes being convergent toward the hub while the inner links of the same pair are substantially parallel to each other, a coil spring connected to the outer links of each pair of spokes and tending to increase the convergence thereof, and a coil spring extending from each inner link to the next adjacent inner link of the next pair of inner links, the springs aforesaid being arranged in staggered relation throughout the entire series of spokes.

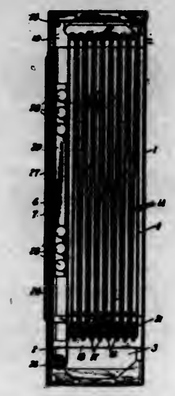


1,353,732. SAFETY-BUNG. GEORGE DOBMEIER, Buffalo, N. Y. Filed Sept. 26, 1919. Serial No. 326,550. 5 Claims. (Cl. 217—101.)

1. A safety bung comprising a body adapted to be placed in a bung hole and provided with a longitudinal passage the inner part of which is narrow and the outer part wider forming an outwardly facing valve seat between the narrow and wide parts of said passage, a longitudinally movable valve arranged in the outer wide part of said passage and engaging said seat, a spring arranged on the wide part of said passage and engaging its inner end with said valve, a follower engaging with the outer end of said spring, a retaining member arranged transversely

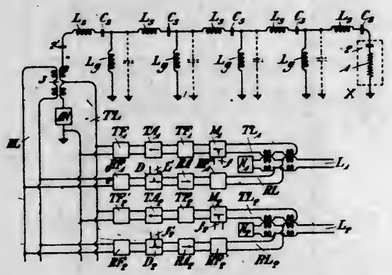
on the outer end of said body and engaging said follower, and a band secured around the outer end of the periphery of said body and connected on diametrically opposite sides with opposite ends of said retaining member.

1,353,733. GAS TURBINE-ENGINE. WILLIAM J. DODGE, San Diego, Calif. Filed June 13, 1919. Serial No. 303,909. 6 Claims. (Cl. 60—13.)



1. In a rotary internal combustion engine, the combination of a stator, a rotor coöperating therewith, turbine vanes on said rotor and stator, an annular series of stationary combustion chambers surrounding said turbine and having obliquely disposed outlets by means of which the expanding mixture is directed against said vanes, a normally locked piston in each of said cylinders, and means for unlocking the pistons as the speed of the turbine decreases.

1,353,734. EXHIBITING OR SIGN-DISPLAY APPARATUS. DARLEY B. DOYEL, Pickerington, Ohio. Filed Apr. 3, 1916. Serial No. 88,551. 1 Claim. (Cl. 40—32.)

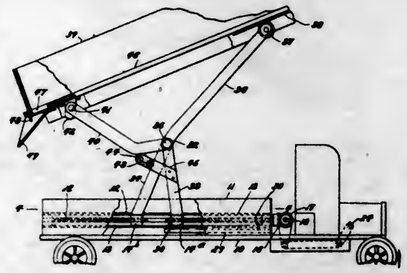


A display apparatus comprising a substantially rectangular casing, an upper series of guiding and driving rolls arranged in a common horizontal plane and geared together, a lower series of guiding and tensioning rolls, all arranged normally in a common horizontal plane, spaced parallel plates arranged within the casing adjacent the bottom thereof, each plate having a plurality of parallel slots, blocks slidably fitted in the respective slots, the rollers of the lower series being journaled in said slots, springs arranged in said slots and bearing against the blocks for tensioning the lower series of said rollers, elevating guiding rollers arranged in a higher plane than the rollers of the upper series, an endless belt passing alternately over the upper rollers and under the

lower rollers and also passing over said elevated rollers to clear the upper set of guiding rollers, the rollers of the

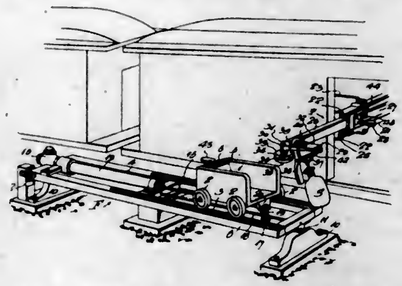
lower series being independently yieldable and means for positively driving all of said upper guiding rollers at the same speed.

1,353,735. ANTENNA STRUCTURE. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,524. 4 Claims. (Cl. 250—33.)



1. An antenna structure for multiplex transmission comprising a plurality of sections, each section including a series impedance element and a shut impedance element connected to ground, and a terminating impedance associated with the end section of the seris, the impedance elements of each section being so proportioned and related to each other that the combination will freely transmit with substantially equal attenuation a broad band of frequencies, while substantially suppressing frequencies lying outside the band, and said terminating impedance being so proportioned as to substantially prevent reflection losses due to the fact that the number of sections is not infinite.

1,353,736. AUTOMATIC FIREARM. MOUBRAY GORE FARQUHAR and ARTHUR HENRY HILL, Birmingham, England. Filed Nov. 5, 1917. Serial No. 200,327. 5 Claims. (Cl. 42—3.)

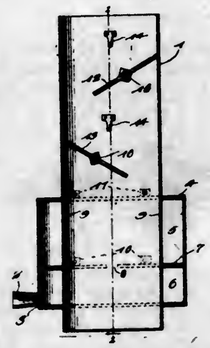


1. In an automatic fire arm, the combination of a body, lock mechanism mounted in a portion of the body, gas operated automatic mechanism having springs arranged in tubes under the barrel of the fire arm and coöperating with parts of the lock mechanism, and a tubular metallic sheath enveloping the greater portion of the barrel of the fire arm and spring containing tubes and parts adjacent thereto.

1,353,737. RAISING AND LOWERING DEVICE. JOSEPH GASSER and ALFRED H. BARBER, Trenton, N. J. Filed Feb. 21, 1920. Serial No. 360,530. 6 Claims. (Cl. 298—11.)

1. In a lowering and raising device the combination with a main frame of blocks mounted to slide in said main frame, screw rods longitudinally mounted in said main frame and having said blocks threaded thereon, a vehicle body, an interposed toggle frame connecting with said blocks and supporting said vehicle body and elevating or lowering the latter when the screw rods are actuated and in turn actuate said blocks, a supplementary frame on the main frame, a power reverse mechanism mounted on said supplementary frame and having connection with said screw rods, an operating rod mounted to slide on the main frame adjacent to one of said screw rods, pins projecting from said operating rod to be engaged by certain of said blocks and means mounted on said supplementary frame and connecting said operating rod with said power reverse mechanism for the operation of the latter when one of said blocks engages with one of the pins on the said operating rod.

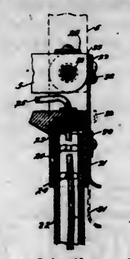
1,353,738. RAILWAY-MAIL-DELIVERING APPARATUS. OTTO M. GILBERTSON, La Crosse, Wis. Filed June 12, 1919. Serial No. 303,536. 5 Claims. (Cl. 258—10.)



1. In a railway mail delivery apparatus, a mail bag receiver open at its top and at one end, said receiver being disposed at one side of a railway, an arm extending laterally from a railway car and having a rearwardly directed portion at its outer end parallel with the railway and adapted for loose reception in a mail bag supporting ring, and a latch for holding the ring on said arm, said latch having a rearwardly movable releasing arm in front of its ring engaging portion to strike said receiver and release the latch, thereby permitting said rearwardly directed end of said arm to withdraw forwardly from the bag supporting ring.

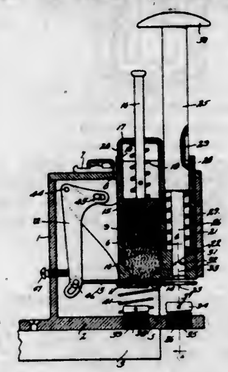
1,353,739. COLLAR-FASTENER. THOMAS J. GILLESPIE, Homestead, Pa., assignor of one-half to Harry J. Trimble, Pittsburgh, Pa. Filed Mar. 1, 1920. Serial No. 362,228. 2 Claims. (Cl. 24—101.)

1. A collar fastener comprising a body portion having projecting from its lower edge a pair of arms each having its free end bent inwardly toward the body portion, said arms arranged inwardly with respect to the ends of the body portion, and a collar retaining element projecting from the lower edge of and offset with respect to the body portion, said element arranged between and spaced from said arms and having the lower portion thereof extending toward the body portion.



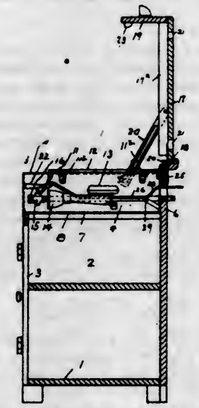
1,353,740. FUEL-SAVER. WILLIAM G. GILLESPIE, Chicago, Ill. Filed Jan. 20, 1919. Serial No. 272,127. 4 Claims. (Cl. 110—58.)

3. In a device of the character described, a smoke-pipe having ports in its walls, a drum surrounding said smoke-pipe and comprising a lower compartment and an upper compartment and being provided with air passages through which these compartments communicate with one another, the lower compartment being provided with an air-inlet which communicates with the outer air, said upper compartment communicating with the interior of said smoke-pipe through said ports, and baffle-plates spaced one above the other in said smoke-pipe and at a higher level than said ports, said baffle-plates being located respectively nearer to one side of the smoke-pipe than to the other side, the upper one of these baffle-plates having its inner edge extending over the inner edge of the lower one of these baffle-plates, thereby providing a circuitous passage past these baffle-plates.



1,353,741. WINDOW-CLEANER. MORRIS GOLDSTONE, Brooklyn, N. Y. Filed Feb. 7, 1920. Serial No. 356,923. 3 Claims. (Cl. 15—59.)

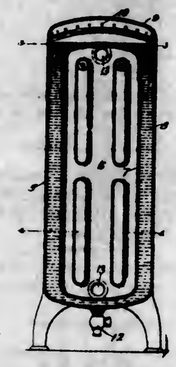
1. The combination with a cleaning machine, of a socket member pivoted thereon, means on the socket member and means on the machine adapted to co-act therewith for locking the socket member in axial alinement or at right angles to the axis of the machine, a handle having



one extremity arranged in the socket member for rotation, and means for tensioning the rotation of said handle in said socket member.

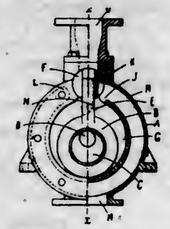
1,353,742. MARKING DEVICE. CHARLES MARSHALL GRAVATT, Port Royal, Va. Filed Mar. 29, 1920. Serial No. 369,730. 13 Claims. (Cl. 101—318.)

1. A device of the character stated, comprising a casing, a movable elevator in the casing having a reservoir therein, a plunger in the elevator, and means operated by the movement of the elevator to transfer material from the reservoir into position below the plunger.



1,353,743. STOVE. GEORGE W. GRAVES, Cincinnati, Ohio, assignor to The Graves Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 17, 1917. Serial No. 142,819. 2 Claims. (Cl. 126—37.)

2. In combination with a gas stove comprising a burner, a frame and a valve, of a cabinet in which the stove is



housed comprising a hinged cover adapted to expose the top of the stove when opened and to inclose the stove when closed; a supply pipe arranged within the cabinet when closed; valves on the supply pipe; and means preventing the closing of the cover with the valves in open position.

1,353,744. HUMIDIFYING-RADIATOR UNIT. FRED E. GROSVOLD, Eau Claire, Wis. Filed May 31, 1918. Serial No. 237,419. 3 Claims. (Cl. 237—78.)

1. A radiator unit comprising a heating chamber and a water chamber bordering the heating chamber at the top, bottom and side edges of the unit, the water chamber being perforated at the top of the unit and said unit being provided with connecting pipples.

1,353,745. ROTARY PUMP FOR PUMPING LIQUIDS. GEORGE HANDLEY, Palmers Green, England, assignor to Percy William Bullock, London, England. Filed Oct. 24, 1919. Serial No. 333,022. 6 Claims. (Cl. 103—44.)

1. A pump of the pendulum rotary type, comprising a pump body having a pump chamber formed therein, a rotor mounted in said chamber, a stem on said rotor, an oscillatory bearing through which the said stem slides, an annular chamber surrounding almost completely the pump chamber and communicating at one side with the pump chamber at a point adjacent to the oscillatory bearing, the other side of the annular chamber terminating in a blind end near the oscillatory bearing, and an inlet for liquid at an intermediate point of the annular chamber whereby the momentum of the incoming liquid may be fully utilized in insuring that the liquid shall follow the rotor and enable the maximum effective speed of running to be obtained.

1,353,746. YOKE CONSTRUCTION FOR LEAF-SPRINGS. EDWARD M. HARBERSON, Los Angeles, Calif. Filed May 22, 1919. Serial No. 298,958. 2 Claims. (Cl. 267—53.)

1. A yoke construction for leaf springs comprising the combination with an upper spring leaf and a lower spring leaf, of a clip bolt inserted downwardly through the end of the lower spring leaf and having a flat head countersunk into the upper face of the lower spring leaf, a clip having a flat portion fitting against the lower face of the lower spring leaf and having a central opening through

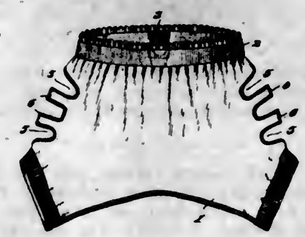
which the clip bolt extends, side portions integral with the flat bottom portion extending upwardly past the upper spring leaf, a nut upon the clip bolt, and a supporting bolt through the ends of the clip above the upper spring leaf.

1,353,747. PASTE-DISPENSING DEVICE. SUMPTER L. HARWOOD, Uniontown, Ala., assignor of one-half to Thomas R. Long, Uniontown, Ala. Filed Dec. 6, 1919. Serial No. 342,941. 5 Claims. (Cl. 221—60.)

1. A paste dispensing device, comprising a longitudinally slotted casing, a roller on the frame for compressing the paste tube in the casing, a web on the frame projecting through the slot, and a finger engaging device on the outer end of the web.

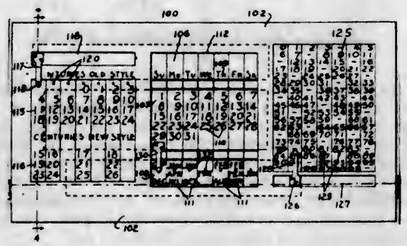
1,353,748. ELECTRICAL CONNECTION. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Feb. 14, 1918. Serial No. 217,043. 3 Claims. (Cl. 173—328.)

1. In a device of the class described, the combination of a socket member, an insulating member extending into said socket member and provided with a lengthwise bore and a transverse channel, a terminal mounted in said bore, a conductor extending into said channel and connected to said terminal, an insulating member overlying said channel, and means to secure said insulating members together thereby to hold said terminal in said bore and said conductor in said channel.



1,353,749. HAND OR ARMPIT SUPPORT FOR WATER-CLOSETS. WILLIAM JOHN HEGARTY, Lawsonville, Cork, Ireland. Filed Dec. 27, 1918. Serial No. 268,572. 2 Claims. (Cl. 4—18.)

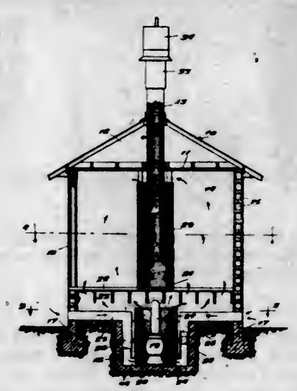
1. In combination with a water closet basin having a hinged cover, a crutch, hand or armpit support having



means to suspend the same directly from the basin, said suspending means comprising a hanger having clips to engage the top of the wall of the basin, below the cover.

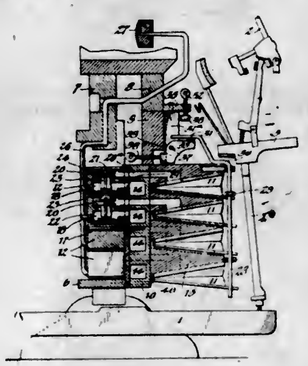
1,353,750. GARMENT-PROTECTOR. KURT HEITLER, New York, N. Y. Filed Oct. 3, 1919. Serial No. 328,153. 2 Claims. (Cl. 128—287.)

2. A garment, comprising a body including trunk and limb encircling portions, said garment being formed with a number of cut-out portions adjacent its side edges, whereby to provide openings, through the body of said garment, entirely inclosed by an integral portion of said body.



1,353,751. PERPETUAL CALENDAR. JAMES L. HUTSON, Shelbyville, Tenn. Filed Jan. 15, 1919. Serial No. 271,238. 2 Claims. (Cl. 40—107.)

2. A perpetual calendar, comprising a fixed member having an opening and provided with groups of indicating characters representing "old and new centuries" and "years in a century," movable members held movably on the said fixed member independent one of the other, one of the movable members having groups of indicating characters representing the "days of the week" and having an indicator indicating on the said "old and new style centuries," another of the movable members having groups of indicating characters representing the "names of the month" and having an indicator indicating on the "years of a century" and another of the said movable members having groups of indicating characters representing the "days of the month" and having an indicator indicating on the said "names of the month," each group of indicating characters of the movable members being adapated to appear in the said opening.

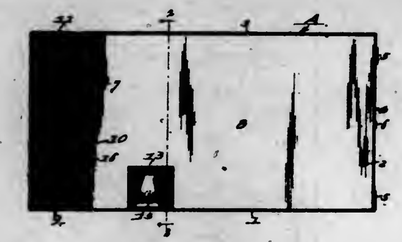


1,353,752. CURING-HOUSE FOR SWEET-POTATOES. ELIJAH JASPER ILES and ODIE LEE HASTINGS, Alexandria, La. Filed June 9, 1920. Serial No. 387,559. 6 Claims. (Cl. 98—26.)

4. A curing house having insulating walls, a heating pit, a reticulate charging floor having a central solid section above the heating pit, a cylinder rising from and having its lower end closed by the said central section, the upper end of the cylinder being open, a roof, and an outlet flue extending downwardly through the roof with its lower portion projecting downwardly into the said cylinder in spaced relation, a tube telescoping the upper outer end of said flue to form an adjustable draft extension, and means for adjusting said tube and holding the same

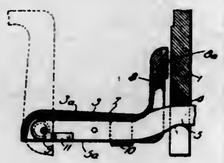
in adjusted position, including flexible connections and a controlling counterweight for said connections as described.

1,353,753. PNEUMATIC ACTION FOR MUSICAL INSTRUMENTS. CHARLES V. JAMESON, Chicago, Ill. Filed Oct. 10, 1917. Serial No. 195,666. 7 Claims. (Cl. 84—69.)



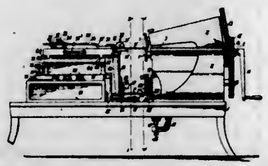
1. The combination of a pneumatic, a sticker actuated thereby and having a laterally-extending member provided with a free end portion, and stop-devices arranged above and below said free end portion for limiting the stroke of the sticker.

1,353,754. SLEEPING-CABINET. ROBERT K. JAYNE, Jackson, Miss. Filed Mar. 22, 1918. Serial No. 224,027. 1 Claim. (Cl. 5—14.)



A sleeping cabinet of the character described including a casing divided into a body receiving compartment and a communicating head receiving compartment, said head receiving compartment being provided with a screen covering to permit free ventilation therein, a lamp casing arranged within said body receiving compartment, the head receiving compartment extending the entire height and width of the casing, said lamp casing being adapted to receive therein a heating lamp for heating said body receiving compartment, a door arranged at the side of said

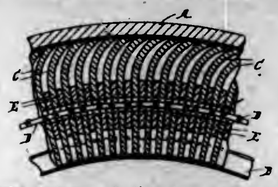
body receiving compartment for establishing access to said lamp casing, a screen covering for a side of said



lamp casing and flexible material for partially severing communication between said body receiving compartment and head receiving compartment.

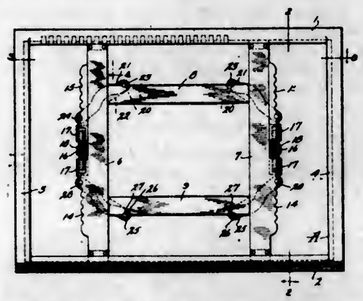
1,353,755. PIANO-PEDAL AND LIKE DEVICE. BENJAMIN H. JEFFERSON and WALTER I. KIRK, Chicago, Ill., assignors to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1919. Serial No. 280,119. 19 Claims. (Cl. 74—81.)

1. The combination of a pedal bar and a pedal attached thereto and provided with a plurality of pressing surfaces.



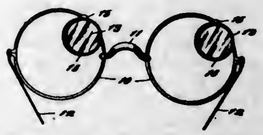
1,353,756. PATTERN-CONTROLLED MECHANISM. CHARLES JOHANSON, Dover, N. J. Filed Feb. 10, 1920. Serial No. 357,730. 17 Claims. (Cl. 164—63.)

1. The combination of a work-holding member and a tool member, one of said members adapted to have universal movement in one plane, means for securing a pattern to one of said members, and a combined pattern guide and feeding means fixed with respect to the other member for guiding the relative movement of pattern and tool and effecting the relative feed of work and tool.



1,353,757. RESILIENT TIRE. ALFRED CHRISTIAN JONASSEN and NOAH JONASSEN, Whakatane, New Zealand. Filed Jan. 30, 1919. Serial No. 274,078. 4 Claims. (Cl. 152—5.)

1. A resilient tire for wheels comprising, a flexible cover adapted to be clenched to a wheel rim; a plurality of stiff resilient leaves radially disposed within said cover, the size and shape of said leaves being such that said cover when clenched to the rim causes the leaves to overlap each other and be under compression; a plurality of

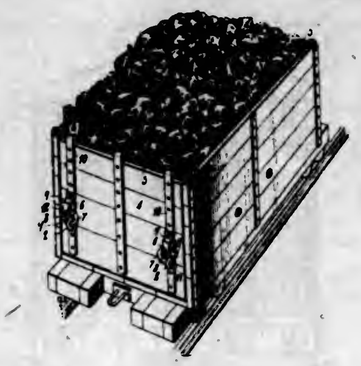


spacing disks interposed between said leaves; and an endless metallic band concentric with said cover and adapted to pass through apertures in the leaves and disks.

1,353,758. ADJUSTABLE CHASE AND LOCKUP FOR PRINTING, CUTTING, AND CREASING PRESSES. ERNEST KARL, Litchfield, Conn. Filed Mar. 9, 1920. Serial No. 364,505. 6 Claims. (Cl. 101—393.)

1. A device of the character described, comprising an outer chase, vertical bars adjustably supported in the outer chase, horizontal bars between the vertical bars, fixed notched extensions on the outer faces of the vertical bars adjacent one end of the latter, notched blocks on the outer faces of said vertical bars adjacent their other ends, turnbuckles connecting said blocks and extensions, and stays connecting the notched extensions with the lower bar and the notched blocks with the upper bar.

1,353,759. EYE-SHIELD FOR AUTOMOBILE-DRIVERS. JOSEPH F. KEITZ, Jersey City, N. J. Filed Aug. 29, 1919. Serial No. 320,635. 2 Claims. (Cl. 2—149.)

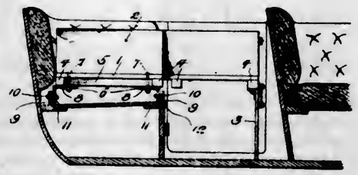


2. An eye shield for automobile drivers, including a frame having means to sustain it in position on the wearer and permit unobstructed straight-ahead vision, right and left eye shields in planes oblique to the general plane of the frame, means supporting said shields forwardly of the frame and laterally of the normal lines of straight-ahead vision for permitting of the wearer bringing said shields into oblique lines of vision.

1,353,760. LATCH FOR DOORS OF MINE-CARS. CHARLES E. KELLEY and GUSTAVE D. SPEICHER, Larksville borough, Pa. Filed Dec. 17, 1919. Serial No. 345,607. 2 Claims. (Cl. 292—202.)

1. A latch for a door comprising a chain affixed at one end, said door having a perforation therein to form with

one end of the chain a hasp and staple, a latch on the outside of the door for engaging said staple link, said latch being of U-shape and having one of its arms pivoted

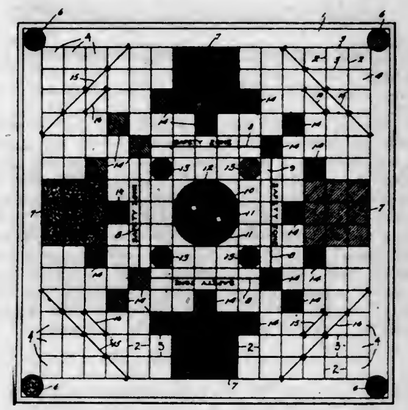


above the perforation and provided with an anvil surface and said latch being provided with a conical point for engagement with the staple link.

1,353,761. SPOOL. BERNHARD NATHANIEL KNOCHE, Valley Stream, N. Y. Filed Nov. 18, 1919. Serial No. 338,793. 2 Claims. (Cl. 242—118.)

1. As an article of manufacture, a spool for sewing cotton and the like made of a single piece of light material, comprising a barrel having a thin wall and provided with integral thread-retaining end flanges and an interior reinforcing partition integral with the barrel and having a central bore adapted to engage a sewing machine spindle.

1,353,762. HAULING ATTACHMENT FOR AUTOMOBILES. EDWARD KRUMLAND, Columbus, Nebr. Filed Mar. 27, 1919. Serial No. 285,539. 1 Claim. (Cl. 224—29.)

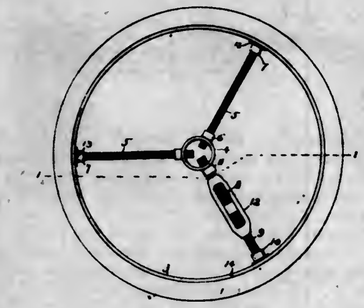


In a hauling attachment for automobiles, a platform for disposition in the tonneau of the machine, means for supporting the front end of said platform, L-shaped brackets having one arm secured to said platform for adjustment longitudinally of the same, the other arms of said brackets depending from the platform, and a pair of transverse rails secured to said depending arms for vertical adjustment, whereby they may rest upon different rear seat frames to support the rear end of said platform.

1,353,763. VIOLIN ATTACHMENT. EMILE LACOSTE, New Orleans, La. Filed Sept. 4, 1915. Serial No. 49,000. 3 Claims. (Cl. 84—44.)

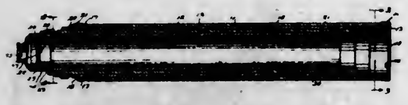
1. The combination with a stringed musical instrument body, said body having an opening in its rear end wall and also having interior supporting means in its forward end portion; of an attachment comprising a rod extending through said opening in the rear end wall of the body and having its forward end portion disposed in said supporting means of the body, tuning pins on the rear portions of the rod, strings connected at their rear ends to said pins and having their forward ends connected with the rod and also having their intermediate portions stretched between spaced supports on the rod, and means on the rear portion of the rod to close the opening in the rear end wall of the body.

1,353,764. GAME-BOARD. EMMA N. LAMBERT, Bethlehem, Pa., assignor of one-half to Priscilla C. Allana, Bethlehem, Pa. Filed Jan. 8, 1920. Serial No. 350,100. 4 Claims. (Cl. 46—63.)



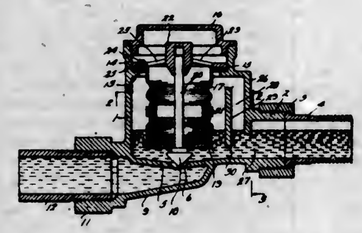
3. A game board divided by lines at right angles to each other forming spaces, diagonal lines at the corners of the board intersecting certain of the angles of said crossed lines, numerals on said diagonal lines, the numerals '1' and '2' being on one of said lines at each corner and the numerals '3', '4', '5', '6' and '7' on the other of said lines in each corner, said numerals adapted to receive thereon suitable game pieces, and other game pieces adapted to be used to knock down the first-mentioned game pieces.

1,353,765. TIRE-RIM-EXPANDING JACK. NICOLAUS LEWSEN, Portland, Me. Filed Sept. 10, 1917, Serial No. 190,168. Renewed Mar. 19, 1920. Serial No. 367,126. 2 Claims. (Cl. 157—1.)



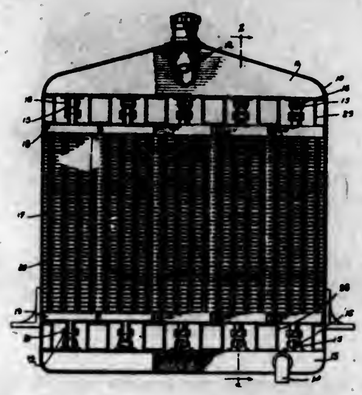
2. A tire rim expanding jack, comprising a central annular hub member having three lateral openings, radial arms consisting of threaded bolts having their inner ends detachably fitted in and loosely engaging the lateral openings of the hub, inner nuts arranged on the said arms and bearing against the outside of the hub to secure the arms in radial adjustment, outer nuts arranged on

the outer ends of the said arms, and bearing members threaded on the outer ends of the arms and engaged by



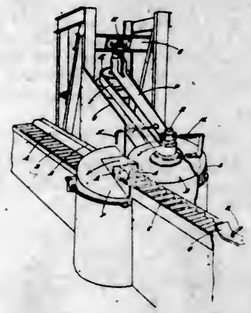
the outer nuts and adapted to fit against a rim, one of said arms being in two parts and provided with a connecting turn buckle.

1,353,766. TELESCOPE. MICHAEL LICHTMAN, New York, N. Y. Filed Dec. 26, 1919. Serial No. 347,495. 1 Claim. (Cl. 88—32.)



A telescope consisting of a plurality of concentric barrels in slidable relation to each other, an annular ring secured to one end of each barrel, an annular groove formed in each ring adapted to grip said barrels and secure said rings to said barrels, a flexible finger fixed to each of said rings, a ball on the end of each of said fingers adapted to engage one of said annular grooves when the telescope is in a collapsed position, one or more annular rings formed on each of said barrels, an annular groove formed on each of the last mentioned rings adapted to engage the balls 20 and secure said telescope barrels in a plurality of intermediate positions.

1,353,767. WATER-SEAL VACUUM-VALVE. JOHN H. LINDSAY, Brooklyn, N. Y. Filed Feb. 11, 1920. Serial No. 357,849. 6 Claims. (Cl. 236—56.)

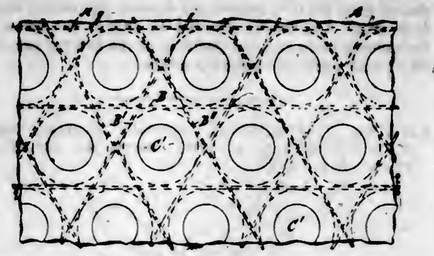


1. A valve of the character described, comprising a casing having an outlet in its bottom, and an inlet in its side at its lower end, a valve controlling the outlet, a thermostat controlling the movement of the valve, a partition wall in said casing projecting partially across the inlet, and a steam passage connecting the inlet with the upper end of the casing and having a wall extending partially across the inlet.

1,353,768. RADIATOR. LUKE LOUGHLIN, Jersey City, N. J. Filed May 3, 1919, Serial No. 294,519. Renewed Aug. 12, 1920. Serial No. 403,083. 1 Claim. (Cl. 257—129.)

A radiator comprising two headers arranged in spaced relation, tubular extensions arranged in spaced relation on each of said headers, the tubular extensions on one header being opposed to the tubular extensions on the other header, a controlling valve mounted in each of said tubular extensions, and a radiating element carried by each pair of opposed extensions and removably secured thereto.

1,353,769. MANUFACTURE OF SOLID RUBBER TIRES. COLIN MACBETH and WILLIAM EDWARD HARDEMAN, Birmingham, England, assignors to The Dunlop Rubber Company, Limited, Westminster, England. Filed June 9, 1919. Serial No. 302,920. 11 Claims. (Cl. 164—68.)



1. In an apparatus for beveling the ends of solid rubber tire strips, the combination of a rotating cutter, a support for a solid rubber tire strip adapted to position such strip in a plane inclined to the plane of the cutter and with the length of the strip extending transversely of the cutting edge, and means for effecting relative bodily movement between the support and cutter, whereby the strip will be severed and formed with a bevel end.

1,353,770. REINFORCED CONCRETE CONSTRUCTION. ROWLAND MCWILLIAMS, Glen Ridge, N. J. Filed Feb. 9, 1916. Serial No. 77,145. 7 Claims. (Cl. 72—66.)

4. A floor or other structural element, comprising a body of concrete and reinforcing tension members embedded in said concrete body and arranged in three sets,

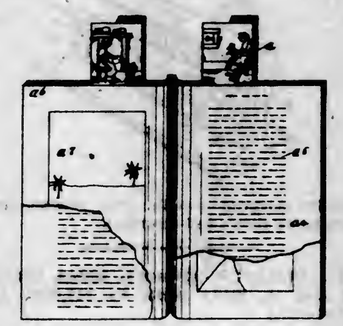
all members of the same set being parallel to one another, but at an angle to the members of the other two sets, the

members of each set intersecting those of the other two sets at different points so as to form spaces some of which are triangular and some hexagonal.

1,353,771. RAILWAY-TRACK CONSTRUCTION. JOHN MALIK, Pittsburgh, Pa. Filed Jan. 19, 1920. Serial No. 352,244. 2 Claims. (Cl. 238—141.)

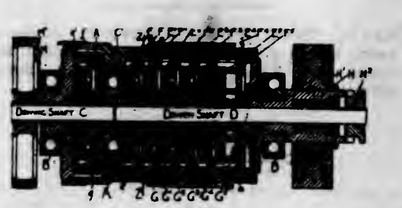
2. The combination with a railroad tie having a transverse seat formed therein by an undercut groove, of a rail resting in said seat and having dove-tailed engagement with the latter, said rail comprising a pair of longitudinal separable sections, one of said sections being provided with a rail head and being adapted to be renewed, the base of said rail being provided with a longitudinal inverted V-shaped groove, and a central upstanding rib formed on the tie centrally of the seat thereof for snug reception within the groove of the rail.

1,353,772. SNAP FOR BRACELETS. WILLIAM MAGUIRE and ALBERT BAUSCH, Brooklyn, N. Y. Filed Mar. 29, 1920. Serial No. 369,500. 2 Claims. (Cl. 24—230.)



1. A catch for flexible bracelets comprising a plate adapted to be connected with one end of the bracelet and projecting therefrom, said plate having a pair of facing integral hooks, each hook being formed with an overhanging shoulder, a coiled member having ends formed as hooks with overhanging shoulder, the coil proportioned to act as a spring, said coiled member being arranged wholly within part of the opposite end of said bracelet to said plate and positioned to snap into interlocked relationship with said first mentioned hooks when the part of said plate including the hooks are inserted in the end of the bracelet carrying the coiled member, and manually actuated means for disengaging the hooks of the coiled member from the first mentioned hooks.

1,353,773. PROCESS OF TREATING COPPER-BEARING ALLOYS. WILLIAM JUDSON MARSH, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,214. 3 Claims. (Cl. 75—18.)

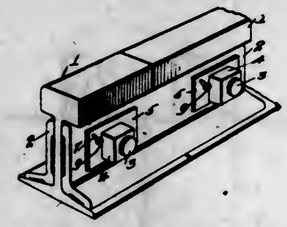


1. Process of treating copper bearing alloys, comprising reacting thereon with an aqueous solution containing cupric chlorid while maintaining the cupric chlorid content of the solution.

1,353,774. BOOK. ARNOLD TELFORD MASON, Hampstead, London, England. Filed Dec. 9, 1919. Serial No. 343,524. 3 Claims. (Cl. 281—38.)

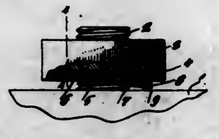
1. A book having a series of its leaves provided with overlapping portions projecting beyond a margin of the leaves and bearing illustrations adapted to produce a kinematograph effect when the projecting portions are successively caused to slip quickly by the thumb and fingers.

1,353,775. VARIABLE-SPEED TRANSMISSION-GEAR. FRED MOLYNEUX, Cadishead, England. Filed Aug. 6, 1917. Serial No. 184,718. 2 Claims. (Cl. 74—34.)



1. A variable transmission gear comprising in its construction a freely rotating internally toothed drum, a plurality of carriers mounted within said drum, a plurality of epicyclic trains of wheels mounted on the carriers within the internally toothed drum with the teeth of which each set of planet pinions mesh, a driving member or a driving sleeve to which the carrier of the first set of planet wheels is affixed and by which it is driven and a driven shaft co-axial therewith affixed to the final carrier and driven thereby, a controller affixed to the final sun wheel of the train and rotating around the driven shaft in the reverse direction to the drum, and a brake retarding mechanism applied to the controller, whereby when the rotation of the controller is retarded, a through drive is obtained, and as the controller is permitted to rotate, the speed of the driven shaft is reduced substantially as described.

1,353,776. AUTOMATIC-LOCKING SPRING-WASHER. ASBERY T. MILLS, Richland, Iowa. Filed Feb. 17, 1920. Serial No. 359,384. 2 Claims. (Cl. 151—61.)



2. A washer device of the class described, comprising an outwardly-bowed resilient body having a central bolt-receiving aperture, said body provided with an elongated aperture contiguous to said bolt-receiving aperture, a rivet slidably mounted in said elongated aperture and

provided with heads at its ends, the head at the inner end of the rivet seated in a portion of the elongated aperture,

and a roller mounted upon the rivet between its heads, substantially as shown and described.

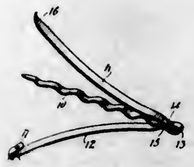
1,353,777. NUT-LOCK. GEORGE L. MOORE, Dexter, Iowa. Filed Aug. 15, 1919. Serial No. 317,800. 1 Claim. (Cl. 151—37.)

A nut having a groove formed in one face thereof, and a flexible key having a thickness equal to the depth of said groove and having one end resting solidly upon the bottom of said groove and the opposite end extending normally beyond the face of the nut and provided with a projection at its end which would project beyond the face of the nut when the key is wholly within the groove.

1,353,778. HOOP-ROLLING DEVICE. JAMES ALEXANDER MOORE, Weir, Kans., assignor of one-half to John Young, Weir, Kans. Filed Feb. 16, 1920. Serial No. 359,048. 3 Claims. (Cl. 46—38.)

3. A device of the character described comprising a frame having a manipulating handle, a hoop engaging friction roller on said frame, a hoop retaining device cooperating with said roller, guide members on the frame, rotary crank disks actuated by the roller and provided with wrist pins, and reciprocatory bars pivotally engaging said wrist pins and having slotted portions slidably and pivotally engaging said guide members.

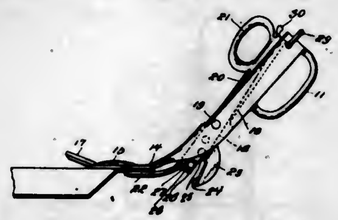
1,353,779. TROLLING-SPOON. JOHN THOMAS MOORE, Eureka, Calif. Filed Mar. 25, 1919. Serial No. 285,030. 5 Claims. (Cl. 43—45.)



5. A trolling spoon, including a main shaft, a hub rotatably mounted upon said shaft, such hub including an end portion comprising two strips of material, a spoon provided with a shank, such shank being adapted to be interposed between said strips of material, said end engaging such shaft, a decoy-holding strip adapted to engage such shaft, and means adapted to engage the spood decoy-holding strip and end portions of the hub for retaining all of said parts in applied position.

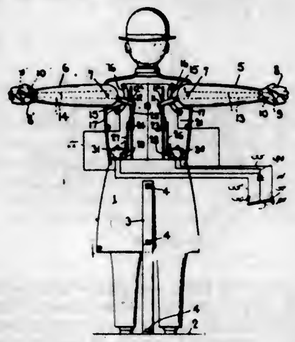
1,353,780. TOOTHBRUSH. MATILDA MUELLER, Rugby, N. D. Filed June 5, 1918. Serial No. 238,339. 1 Claim. (Cl. 15—89.)

A toothbrush including a handle, separate forwardly extending brush backs rigid therwith at the front end and disposed in planes generally at approximately right angles to each other, said brush backs being each curved longitudinally to present a concavo-convex form with the convexities of both backs at the inner sides, and bristles on said convex inner sides of the brush backs, the ends of the bristles lying in planes at angles corresponding approximately with two sides of a square so that either brush element constituted by a brush back and its bristles may be presented to a row of teeth at the inner side thereof and conform generally to its curvature and the other brush element presented to the crowns of the row of teeth, or one brush element be presented to the outer surfaces of a row of teeth and the other brush element be presented to the crowns of the teeth.



1,353,781. HAIR-WAVER. HARRY NATKIEL and ISADORE FREEDMAN, New York, N. Y., assignors of one-third to Louis Potemkin, New York, N. Y. Filed Oct. 30, 1919. Serial No. 334,533. 2 Claims. (Cl. 132—18.)

1. The herein described hair waver comprising a plurality of bars, the outermost two of which are formed from the same piece of spring material bent sharply upon itself at about the middle and said two arms having an inherent tendency to spring outward from each other at their free ends, another of the bars lying between the two aforesaid bars having one end fastened rigidly within said sharp bend at the point of connection of the first two mentioned bars, the last mentioned bar being of a sinuous form, and means to interlock the two free ends of the first mentioned bars together over the end of the sinuous bar.



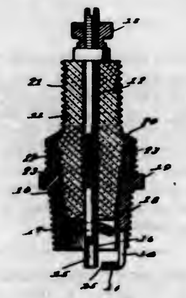
1,353,782. LIFTER. CHARLES NELSON, Skykomish, Wash. Filed June 17, 1919. Serial No. 304,861. 2 Claims. (Cl. 294—31.)

1. A device of the character described comprising a handle member terminating at one end in a finger engaging loop and provided at said end with a longitudinally extending inclined recess, the other end portion of said handle member being U-shaped in cross section whereby to provide an opening communicating with said recess, the terminal of said second named end portion being inclined and being widened at both sides to provide a jaw, a second member disposed within the U-shaped portion of said first named member and pivoted adjacent the juncture

of the U-shaped portion with one end of the recess, said second named member being disposable within said recess and terminating at one end in a finger engaging loop, and the other terminal of said second named member being widened and curved to provide a jaw coöperating with said first named jaw.

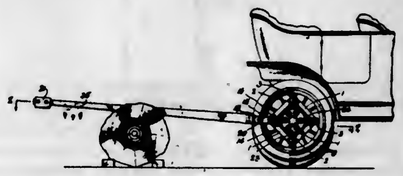
1,353,783. DIRECTION-INDICATOR. JOHN W. PATTERSON, Memphis, Tenn. Filed Mar. 14, 1917. Serial No. 154,829. 1 Claim. (Cl. 177—327.)

A direction indicator including a hollow body having a recessed shoulder, a movable arm fulcrumed in the recess adapted to move in a vertical plane, a translucent hand attached to the arm, an incandescent lamp disposed within the hand, an arcuate dielectric block, current distributing arms secured to the movable arms having current extensions and bearing blocks movable over the dielectric block, contact strips on the dielectric block at each side thereon in engagement with the movable block, a cross-head and guide, link connections between the cross head and the crank extensions, an actuating motor including a crank disk, link connection between the crank disk and the cross-head, a battery for actuating the motor and the incandescnt lamp, a movable switch arm, and switch contact adapted to be engaged by the arms for energizing the motor and the incandescent lamp simultaneously.



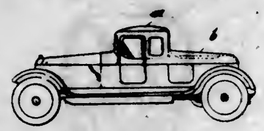
1,353,784. STOVE-LEG AND CASTER. JOHN PETERSON, North Mankato, Minn. Filed Sept. 24, 1919. Serial No. 325,831. 7 Claims. (Cl. 16—165.)

6. A device of the character described including a shank having a shoulder, a post slidable upon the shank, a caster carried by the post, the post being shiftable for projecting the caster, and a horizontally disposed locking member



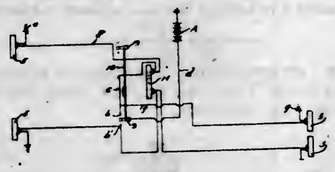
shiftable with the post but rotatable theron to coact with said shoulder for locking the post against retraction.

1,353,785. SPARK-PLUG. JOHN JELLIFF PLATT, Devon, Milford, Conn. Filed Aug. 18, 1919. Serial No. 318,246. 4 Claims. (Cl. 125—169.)



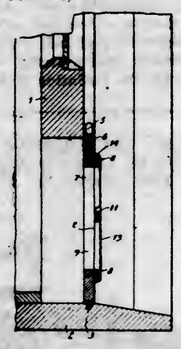
1. A spark plug comprising a shell, an insulating bushing partly fitted therein, electrodes carried by said shell and bushing respectively, and said shell and bushing being threaded exteriorly, and unitedly forming a continuous spiral passage for the radiation of heat.

1,353,786. POWER-TRANSMISSION ATTACHMENT FOR AUTOMOBILES. DREW D. ROBERTS, Perry, Fla. Filed May 22, 1920. Serial No. 383,528. 3 Claims. (Cl. 74—106.)



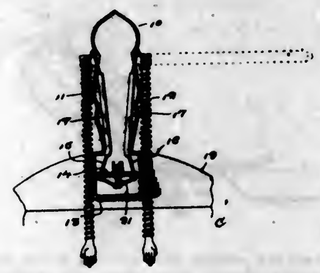
1. In a power transmission attachment for automobiles, a skeleton frame comprising relatively adjustable members, brace arms spanning the frame and adjustable thereon, legs extending from the arms and terminating in a clamping member, and a clamping member coöperating with the other clamping member for securing the frame to the spokes of an automobile wheel.

1,353,787. BODY OF MOTOR ROAD-VEHICLES. WILLIAM IVEY ROGERS, Birmingham, England. Filed July 2, 1919. Serial No. 308,122. 1 Claim. (Cl. 296—102.)



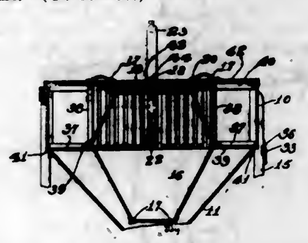
A demountable cover for a motor vehicle body having fore and rear seats, said cover being rigid and arranged to fit directly over the fore seat and to extend therefrom to the dash, and being also provided with a rear extension shaped to fit the rear part of the body and directly over the rear seat and form a boot.

1,353,788. DIRECTION-INDICATOR. ROBERT PEAY SAFELY, Oakland, Calif. Filed Dec. 19, 1919. Serial No. 345,958. 2 Claims. (Cl. 40—132.)



1. In a direction indicator for vehicles, a plurality of light housings on the front and rear of the vehicle with arrows adapted to indicate one or more directions that the vehicle is to take; a light source in each of the housings, a circuit connecting the said light sources, and dual means for selectively making and breaking the circuit to the said light sources comprising a pair of switches mounted on the instrument board of the vehicle, with means connecting the same so that the actuating of one switch will actuate the other switch.

1,353,789. WINDOW-VENTILATOR. FRANK SCELTZ, Harrison, N. Y. Filed Feb. 9, 1920. Serial No. 357,464. 4 Claims. (Cl. 98—31.)



4. A window ventilator, including a frame formed with a cut-out portion, under-cut strips attached to said frame and arranged adjacent the edges of said cut-out portion, the strips arranged adjacent the longitudinal edges of the cut-out portion being elliptically disposed one with respect to the other, and additional strips extending across the face of said cut-out portion and parallel to one of the strips extending adjacent one of the longitudinal edges of said cut-out portion, said latter strip being under-cut along the side nearest to the strip which it parallels, and a piece of material formed with a contractible band adapted to be removably applied to certain of said strips said material being held taut by means of said elliptically disposed strips.

1,353,790. AUTOMOBILE PILOT-SIGNAL. CHRISTOPHER SEALY, Brooklyn, N. Y. Filed May 8, 1920. Serial No. 379,910. 3 Claims. (Cl. 116—51.)

1. A pilot signal for automobiles having a figure provided with right and left pivotal arms, and means for mounting the same upon the hood of a car, a shaft or operating rod mounted in longitudinal relation with the vehicle and having a crank arm flexibly connected to said arms, and means whereby rocking or longitudinal movement may be imparted to said operating rod for actuating either or both of said signaling arms.

1,353,791. WASHING-MACHINE. JOHN W. SEIFERT, Houston, Tex. Filed Aug. 6, 1919. Serial No. 315,622. 4 Claims. (Cl. 68—37.)

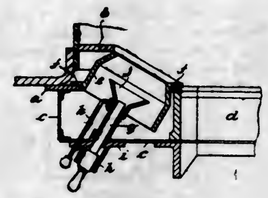
3. In a washing machine, a casing, a polygonal basket in said casing and having its sides hingedly connected, trackways in said casing, rollers carried by the hinge members of certain of the said sides and resting upon said trackways, and means for exerting pressure upon said basket at an angle to the direction of said trackways.

1,353,792. WASHBOARD. GEORGE W. SHOEMAKER, Dalton, Pa. Filed Dec. 30, 1919. Serial No. 348,335. 4 Claims. (Cl. 68—29.)

1. The combination with a washboard having an opening therein for the reception of a cake of soap, of a strip

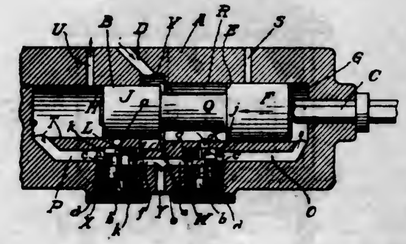
mounted back of the board and adjustable relative thereto, soap engaging means carried by the strip and coöperating means upon said strip and the uper end of the washboard for holding the strip against movement relative to the opening.

1,353,793. LOOP-TRANSFERRING DEVICE. CHARLES J. SIBBALD, CHARLES T. A. SIBBALD, and JOHN O. SIBBALD, Troy, N. Y. Filed June 18, 1919. Serial No. 305,052. 7 Claims. (Cl. 66—32.)



2. A transferring device for knitted articles, comprising two normally straight sections, fingers carried by the sections to engage the needles and receive the loops, and a ring carrier in which said sections may be held to circular form.

1,353,794. DERAILMENT-BRAKE. JAMES T. SMITH, Takoma, Wash. Filed Jan. 27, 1920. Serial No. 354,473. 2 Claims. (Cl. 246—170.)



1. A safety air brake appliance for a car comprising an auxiliary air valve located in an offset portion of the air line of the car, said auxiliary air valve serving as an exhaust valve and being normally closed, a slide rod connected with said valve and adapted to operate the latter and to move a predetermined distance in either direction, and an adjusting rod connected with said slide rod and pivoted for horizontal movement upon the car truck bolster.

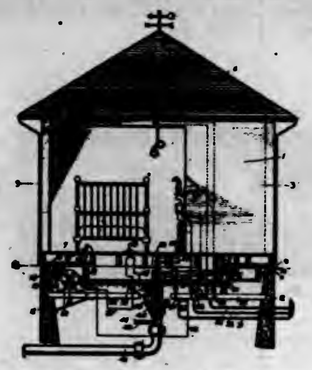
1,353,795. LIQUID-FUEL FITTING FOR FURNACE-FRONTS. LANCELOT EUSTACE SMITH, South Shields; CORNELIS ZULVER, London, and HERBERT ALEXANDER THOMPSON, North Shields, England. Filed Sept. 6, 1919. Serial No. 322,212. 1 Claim. (Cl. 158—4.)

In a furnace front capable of use with solid or liquid fuel as desired, the combination with a front plate and a rear baffle plate of a hollow cone open at both ends and interposed between said front plate and baffle plate, a casing outside the front plate and inclosing the front end of said cone, said casing forming a chamber on one side of the opening through which solid fuel is fed, and a support mounted upon the front wall of said casing to receive the burner for liquid fuel, substantially as herein described.

1,353,796. FLUID-OPERATED PERCUSSIVE TOOL. HAROLD I. STAGE, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 24, 1920. Serial No. 360,564. 7 Claims. (Cl. 121—18.)

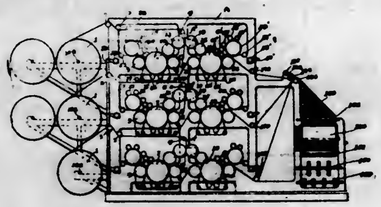
1. In a fluid operated percussive tool, a cylinder having a differential bore and a differential piston operating therein, means for constantly maintaining fluid pressure on one of the forwardly driving pressure areas of said piston and means for intermittently supplying fluid pressure to the other driving pressure areas of said piston, including exhaust passages for exhausting the fluid pressure from said intermittently supplied areas and independent differential valves for controlling said passages in accordance with the movements of the piston.

1,353,797. ELASTIC-FLUID TURBINE. CHRISTIAN STENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,077. 7 Claims. (Cl. 253—77.)



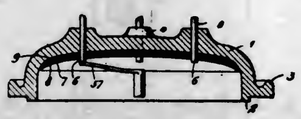
1. In an elastic fluid turbine, a bucket-carrying member, and buckets thereon which are provided with crushing strips.

1,353,798. REVOLVING HOUSE. SAMUEL MERET STEVENS, Asheville, N. C. Filed July 11, 1919. Serial No. 310,023. 3 Claims. (Cl. 20—1.)



1. A revolving house comprising a house body, means for revolving the house, a plurality of means for connecting a water supply and waste pipe, and electrical wiring to the house body, said means including a fitting for the waste pipe which is rigidly secured to the house

body and slidingly connected with the stationary pipe, and a pair of fittings for the water pipes, said fittings

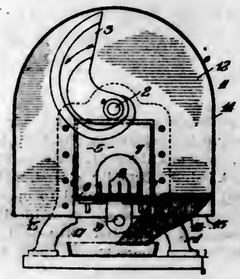


being connected with the house body and with the stationary part of the water pipe.

1,353,799. PRINTING AND FOLDING MACHINE. JOHN A. BOYCE, Chicago, Ill. Filed Oct. 17, 1913, Serial No. 796,080. Renewed Nov. 17, 1919. Serial No. 338,524. 46 Claims. (Cl. 270—6.)

3. In a printing press, a deck-driving shaft driven by a vertical drive shaft through the medium of bevel gears, a spur gear on the opposite end of said deck-drive shaft adapted to drive stationary plate cylinder driving gears through the medium of intermediate spur gears on each side of the spur gear on the deck drive shaft, and the plate cylinder driving gears positioned to drive movable impression cylinder driving gears, substantially as described.

1,353,800. PROCESS OF MOLDING COMPOSITE ARTICLES. HENRY C. EGERTON, Ridgewood, N. J. Filed May 2, 1919. Serial No. 294,315. 12 Claims. (Cl. 154—2.)

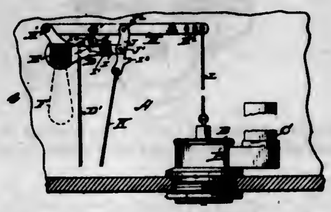


1. The process of molding composite articles which comprises simultaneously molding and uniting by heat and pressure a substantially rigid reinforcing portion comprising moldable phenolic condensation composition, a fabric layer carrying and impregnated by condensation cementing material and a fabric connector member having an exposed fibrous surface and having its other surface engaged by and united to said impregnated fabric and in subsequently molding and simultaneously uniting to said connector fabric member a facing of yieldable vulcanized rubber by a reduced heat curing treatment.

1,353,801. BAND CATSUP-CAP. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 19, 1918. Serial No. 258,881. 3 Claims. (Cl. 215—83.)

1. As an article of manufacture, a closure formed of a cup-shaped cap having an external bead or rim at the extreme lower edge, and a strip bent to form a ring with a flange on the upper edge that projects inwardly and engages the cap at the bead portion, which band has an extension on one end at the intermediate portion in the form of a tongue that laps the other end of the ring strip, such ring being arranged to have the lower edge bent inwardly against the lower wall of a bottle flange, whereby to lock the closure securely on the bottle and which band is adapted for easy removal by outward pull on the band tongue.

1,353,802. SLICING-MACHINE. WALTER CHANDLER KNAPP, Rochester, N. Y., assignor to Liberty Bread Slicer, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 18, 1919. Serial No. 283,411. 4 Claims. (Cl. 146—12.)

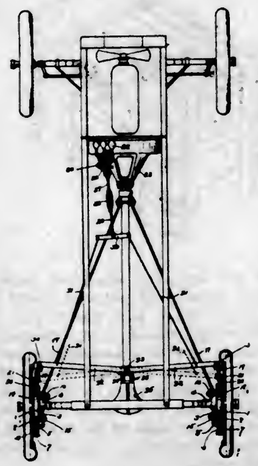


2. In a slicing machine, the combination of a frame, a knife revolubly mounted therein, a hood for protecting the knife, and a crumb chute secured to the walls of the hood and adapted to direct crumbs downwardly and inwardly to a point beneath the knife.

1,353,803. SLICING-MACHINE. WALTER CHANDLER KNAPP, Rochester, N. Y., assignor to Liberty Bread Slicer, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 21, 1919. Serial No. 284,037. 6 Claims. (Cl. 17—24.)

1. In a slicing machine, the combination of a frame, a cutter, a chute for the material to be sliced, a worm revolubly mounted in the frame beneath the chute, a pusher in the chute for feeding the material to the cutter, a pair of arms to which the pusher is secured adjacent its lateral edges, and means for operatively connecting said arms with the worm.

1,353,804. CONTROLLING MECHANISM FOR FLUSHING-VALVES. FREDERICK A. SCHOSSOW, Detroit, Mich. Filed Jan. 7, 1920. Serial No. 349,932. 3 Claims. (Cl. 4—5.)

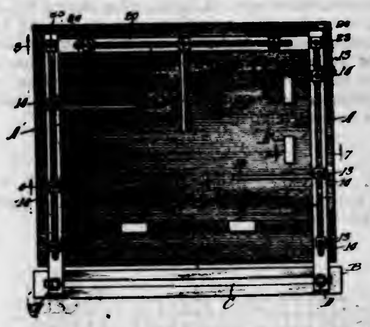


1. In a device of the character described, a tank, a discharge valve, a controlling lever from which the discharge valve is suspended, a bell-crank link, a fixed support to which said bell-crank link is pivoted, a link connection between the bell-crank link and the controlling lever, a bell-crank lever adapted to coöperate with the bell-crank link and controlling lever, whereby the discharge valve may be raised from its seat, and a float whereby the discharge valve may be raised in an open position when manually raised until the altitude of the water in the tank is insufficient to be longer effective to support the valve in its open position.

1,353,805. INITIAL DETONATING AGENT. WALTER O. SNELLING, Allentown, Pa. Filed May 6, 1920. Serial No. 379,292. 5 Claims. (Cl. 52—2.)

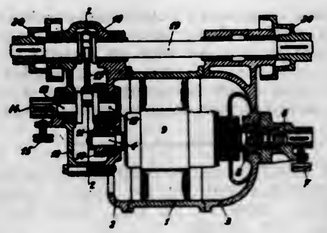
5. In the preparation of lead azid the process which comprises causing an alkali azid and a soluble salt of lead to react in a solution of glue.

1,353,806. BRAKE FOR MOTOR-DRIVEN VEHICLES. SAMUEL H. LEWIS, New York, N. Y. Filed Feb. 20, 1918. Serial No. 218,194. 9 Claims. (Cl. 188—18.)



1. Brake mechanism comprising in combination a pair of rotatable brake drums having their axes substantially in alinement, a pair of brake bands surrounding the same, means for supporting said bands, operating means connected to the ends of each of said bands, a pair of levers connected at their outer ends to said operating means, said levers extending toward each other and being pivoted at their inner ends, and means for moving said levers about their pivots to actuate said operating means.

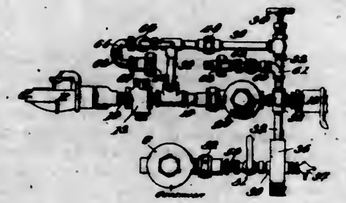
1,353,807. ROOFING-TILE AND FASTENING MEANS THEREFOR. WALTER I. CHAPMAN, Jersey City, N. J. Filed Apr. 23, 1918. Serial No. 230,241. 5 Claims. (Cl. 108—10.)



1. A tile having a marginal portion at its lower end adapted to form an overlap and a marginal portion at its upper end adapted to underlie an overlapping portion of an adjacent tile; fastening means secured to the under side of said overlapping tile and coöperating with the said marginal overlap to form a socketed seat for the reception of the underlying portion of an adjacent tile; and notches in the upper edge of the underlying portion adapted to interlock with the fastening means on the overlapping portion of an adjacent tile.

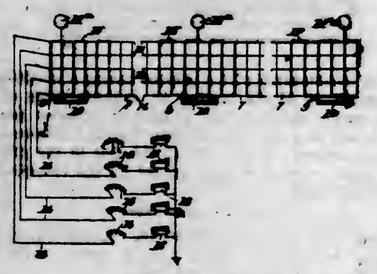
1,353,808. GRIPPER FOR PRINTING-PRESSES. ALBERT S. KOROB, Chicago, Ill. Filed Apr. 4, 1919. Serial No. 287,435. 2 Claims. (Cl. 101—408.)

1. The combination with a gripper having a longitudinal slot therein, of blocks located on opposite sides of the gripper and clamped to the gripper by a screw passing through said slot, one of said blocks having a groove in its face perpendicular to the line of the slot in the gripper, and a finger secured in said groove by the clamping action of said screw.



1,353,809. MASSAGING-MACHINE. ANTON STRAESSLE, Zurich, Switzerland. Filed Apr. 2, 1919. Serial No. 286,852. 5 Claims. (Cl. 128—63.)

1. In a massage machine, a shaft mounted for oscillatory movement and provided with a pair of stepped cones.



means to impart rapid oscillatory movement to said shaft and cones, an endless flexible band engaged with the cones and having its leads arranged in parallel spaced relation and provided with massage elements, and flexible connections between said massage elements.

1,353,810. PORTABLE TESTING APPARATUS FOR WATER-DISTRIBUTING SYSTEMS OF RAILWAY PASSENGER-CARS. HARRY A. MONTGOMERY, Baltimore, Md. Filed Jan. 14, 1920. Serial No. 351,296. 11 Claims. (Cl. 73—51.)

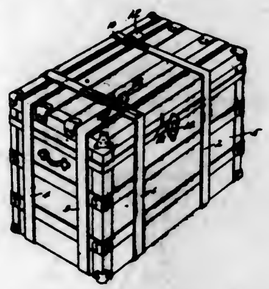
1. A portable combined with and individual testing apparatus for the water supply system of an individual railway car, said apparatus comprising a situ testing means, including a piping, brake hose coupling members, a testing reducing valve and an air gage connected therewith, operative in connection with the system for testing the governor valve of the system while in situ therein, an individual testing means including an extension connected with said piping and adapted to receive said governor valve for testing when detached from the system, and means adapting said apparatus to perform said testing functions successively.

1,353,811. GUARD. DAVID J. MUNCY, Amarillo, Tex. Filed May 29, 1917. Serial No. 171,718. 4 Claims. (Cl. 114—240.)

1. A guard comprising a metallic reticulated fabric that is covered with insulating material, a mine attached to and electrically connected with the metallic element of the fabric, a battery, the parts being associated to complete an electric circuit through the medium in which the fabric is submerged when a part of the fabric is ruptured.

1,353,812. GEAR-CASING AND BAND-OPERATING DEVICE FOR AUTOMOBILES. JOHN T. PARRISH, Duluth, Minn. Filed Oct. 20, 1919. Serial No. 331,773. 7 Claims. (Cl. 74—56.)

1. In a power transmission mechanism of the type wherein a plurality of bands are used to brake certain parts of said mechanism, of an upper section therefor having an opening therein greater in extent than the diameter of the transmission bands and a band adjusting shaft

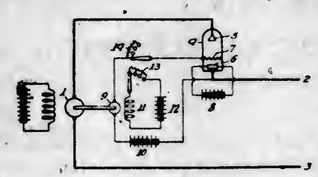


therein pivotally adjustable through the opening to permit of the bands being removed from the housing in their entirety.

1,353,813. COLLAPSIBLE RIVET-MOLD. THOMAS J. HUGHES, Seattle, Wash. Filed May 22, 1920. Serial No. 383,521. 5 Claims. (Cl. 22—123.)

1. In a rivet-mold of the character described, a stem, a collapsible mold member comprising a plurality of segments hingedly connected to an end of said stem, a sliding collar on the stem, and braces connecting said collar with the respective segments whereby movements of the collar axially of the stem will effect the expansion of said member.

1,353,814. TRUNK-BAND. RALPH TELLER EMERY, Cleveland, Ohio. Filed Mar. 12, 1920. Serial No. 365,414. 1 Claim. (Cl. 190—27.)

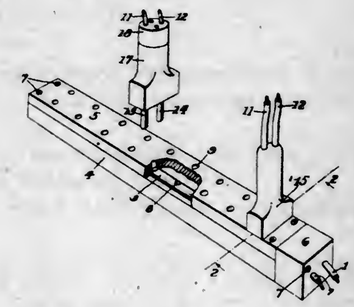


A device of the character described, comprising two pairs of parallel bands, said pairs of bands disposed at right angles to each other, both members of one pair of bands being removably connected to both members of the other pair of bands at their intermediate portion, staples and hasps on the opposite ends of one pair of bands, the other pair of bands having slots in their ends to receive the staples, and the ends of the bands having slots adapted to be locked between the ends of the bands having staples and hasps adjacent oppositely disposed corners on the upper side of the trunk.

1,353,815. CONTROLLING AND REGULATING APPARATUS. FREDERICK W. MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 13, 1917. Serial No. 142,243. 22 Claims. (Cl. 171—312.)

1. The combination of a machine for converting energy and subject to varying load and supply conditions, an

electroionic valve associated therewith to regulate said machine simultaneously with the varying conditions, and



means simultaneously responsive to said conditions and creating an electromotive force which controls the effect of said valve.

REISSUES.

14,950. ELECTRICAL SWITCH DEVICE. WILLIAM F. HESSEL, New York, N. Y. Filed Aug. 11, 1919. Serial No. 316,923. Original No. 1,296,801, dated Mar. 11, 1919, Serial No. 185,026, filed Aug. 8, 1917. 6 Claims. (Cl. 173—334.)

6. A portable tap switch base constituting a complete independent working unit free from means for operatively connecting it to a like unit, said switch-base including a rigid housing of insulating material having longitudinally extending parallel recesses formed therein, said recesses being of substantially uniform cross-sectional area throughout their length and having their longitudinal and end walls spaced from the longitudinal and end walls of said housing, and metal bars positioned within and concealed

by said recesses and provided with holes, said housing having openings formed therein communicating with said recesses and registering with the holes in said bars and adapted to direct the conducting member of a detachable plug into the holes in said bars, said switch base being free from any exposed conducting parts.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 21, 1920.

[PUBLISHED SEPTEMBER 22, 1920.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 98,642. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WEIDEMAN COMPANY, Cleveland, Ohio. Filed Oct. 13, 1916.

EUCLID

Particular description of goods.—Flavoring Extracts for Foods, Cocoa, Coffee, Crushed Fruit, Preserves, Broken Cherries, Soda-Syrup, Syrup, Extracted Honey, Soups, Soup-Meat, Canned Chicken, Boned Chicken, Corned Beef, Pigs' Feet, Tongue, Sliced Ham, Potted Ham, Sandwich-Ham, Mince-Meat, Dried Beef, Oysters, Sardines, Salmon, Lobsters, Sauer-Kraut, Canned Beans, Canned Peas, Baked Beans, Succotash, Canned Corn, Canned Pumpkin, Canned Beets, Canned Spinach, Canned Sweet Potatoes, Canned Tomatoes, Condensed Milk, Rice, Pop-Corn, Currants, Prunes, Egg-Plums, Pineapple, Peaches, Pears, Green-Gage Plums, White Cherries, Apricots, Pancake-Flour, Buckwheat-Flour, Pastry-Flour, Ginger, Cinnamon, Allspice, Cloves, Pepper, Pepper Sauce, Table Sauce, Peanut-Butter, Salted Peanuts, Salad-Oil, Olive Spread, Mustard Relish, Prepared Mustard, Tomato Mustard, Tomato Catsup, Catsup, Snappy Dressing, Rolled Oats, Raisins, Olive-Oil, Spanish-Style Salad, French-Style Salad-Dressing, Rolled Avena, Tuna Fish, Figs, Dates.

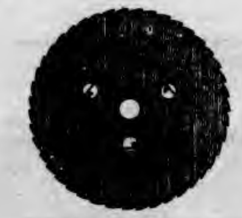
Claims use since Sept. 1, 1888.

Ser. No. 107,904. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BIG DIAMOND MILLS CO., Minneapolis, Minn. Filed Dec. 12, 1917.

BIG DIAMOND

Particular description of goods.—Wheat-Flour.

Claims use since about the 1st day of June, 1906.



Ser. No. 113,317. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) PATEK BROTHERS, Milwaukee, Wis. Filed Sept. 23, 1918.

PAT-X

Particular description of goods.—Dry, Paste, and Ready-Mixed Paints, Calcimines, Varnishes, and Painters' Enamels and Stains.

Claims use since about July 30, 1918.

Ser. No. 117,054. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) MILLER SAW-TRIMMER COMPANY, Pittsburgh, Pa. Filed Mar. 31, 1919.

Being a representation of a red disk having serrated edges.

Particular description of goods.—Printers' Machinery—Namely, Feeding Mechanisms for Printing-Presses, Machines for Cutting, Trimming, and Otherwise Treating Type-Slugs.

Claims use since Jan. 1, 1907.

Ser. No. 118,100. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) ADAM-CHRISTIAN CO., Richmond, Va. Filed May 3, 1919.

SUNSHINE

Particular description of goods.—Fruit and Flavoring Extracts, Fruit Syrups, and Crushed Fruit for Use in the Preparation of Non-Alcoholic Beverages.

Claims use since Jan. 1, 1915.

Ser. No. 120,237. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RALPH D. BROWN, Dubuque, Iowa. Filed July 3, 1919.

Particular description of goods.—Candied Popcorn Crispettes.
Claims use since May 19, 1920.

Ser. No. 120,287. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE PERFECTION AUTO PARTS COMPANY, Cleveland, Ohio. Filed July 5, 1919.

FERROLYTE

Particular description of goods.—Pistons.
Claims use since May, 1917.

Ser. No. 120,886. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SMOAK & SON CO., Reading, Pa. Filed July 24, 1919.

SKOTCHEMINT

Particular description of goods.—Chewing-Gum.
Claims use since May 25, 1916.

Ser. No. 122,047. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) KABUSHIKI KAISHA HIRO SAMPEI SHOTEN, Tokyo, Japan. Filed Aug. 27, 1919.

LAIT

Particular description of goods.—Perfumes, Incense, and Toilet Articles—Namely, Perfumed Waters, Perfumed Oils, Face-Powders, and Hair-Ointments.
Claims use since April, 1906.
